THE PHARMACEUTICAL ERA

AN ILLUSTRATED MONTHLY PUBLICATION FOR THE DRUG TRADE

Copyright, 1910, by D. O. Haynes & Co.

MAY - 6 1949
UNIVERSITY OF TORONTO

VOL. XLIII. NEW YORK, JANUARY, 1910 No. 1

THE PHARMACEUTICAL ERA
PUBLISHED MONTHLY

D. O. HAYNES & CO. - - - - *Publishers*
90 WILLIAM STREET, NEW YORK

Telephone, 2457 John. Cable Address: "Era, New York."

WESTERN OFFICE:
Room 500, Dickey Building, 40 Dearborn St., Chicago
Telephone, Central 5888

SUBSCRIPTION RATES.

United States, Cuba, Hawaii, Porto Rico, the Philippines, and Mexico . . . $1.00 a Year
To Canada, postpaid . . . . . 1.25 a Year
To Foreign Countries in Postal Union . 1.50 a Year
Single Copies . 10 Cents

ALL SUBSCRIPTIONS ARE PAYABLE STRICTLY IN ADVANCE

...mit by P. O. or Express Order or New York Draft payable to order of D. O. Haynes & Co. Add 10 cents for collection if you send check.

Published at 90 William street, Borough of Manhattan, New York, by D. O. Haynes & Co., a corporation: President and treasurer, David O. Haynes; vice-president, Ezra J. Kennedy; secretary, Edward W. Drew. The address of the officers is the office of publication, and the title is registered in the United States Patent Office.

Entered at the New York Post-Office as Second Class Matter

TABLE OF CONTENTS.

EDITORIAL: United States Pharmacopœia; Our Advertising Pages; That United Drug Co. Injunction; Gov. Hughes on the State Pharmacy Board; The ERA Album; Against an Income Tax; Soda Fountain and Candy Counter; Mr. Lamb Gives Bad Advice; The New Monthly ERA; A Great Week for Boston . . . 17
CORRESPONDENCE . . . 20
WOMEN AND THE DRUG BUSINESS, Emma Gary Wallace . . . 21

THE U.S. PHARMACOPŒIA.

As the time approaches for the decennial meeting of the Pharmacopœial Convention which shall start in motion the machinery for the publication of the Ninth Revision of the U.S. Pharmacopœia, the future status and character of that work takes on new interest and has formed the subject of many discussions on the part of pharmacists. This interest has been further accentuated by the introduction in Congress during the past month of a bill which seeks to make the Federal Government edit and publish the Pharmacopœia, which shall provide a single standard of strength, quality and purity for all drugs and chemicals. Not that many expect to see the bill in its present form become a law, for it is very loosely drawn, but they have looked upon it as the entering wedge to possible legislation which might change the entire method of pharmacopœia making that has been followed in this country for nearly a century. That the subject is of paramount interest to the drug trade, and is so considered by its most prominent men, is shown by the array of opinions which are printed elsewhere in this issue of the ERA and as such, they deserve the perusal of every pharmacist.

Ever since the present Pharmacopœia was accorded official recognition under the Federal Food and Drugs Act of 1906 there have come to the front arguments that the Government should prepare its own standards, on the ground that it was against public policy to "officialize" or adopt as a legal guide any book that was the creation of an unofficial body of men or private corporation, and whose scope and character could be changed at any time its members saw fit. Further, that as the book was prepared for a particular class it did not and could not satisfactorily represent the standard which should be expressed as law for the public at large. This may be an extreme view of the proposed nationalization of the Pharmacopœia, but for all of that, it is a belief that has been expressed by more than one individual who has studied the question.

For our part we cannot see how the Government can undertake to formulate a book of standards for drugs and medicines which will satisfactorily take the place of either the present Pharmacopœia or its successor to be issued by the Pharmacopœial Convention. The method that has been followed for so many decades is in keeping with the spirit of American self-government, and a convention made up of delegates of those for whom a pharmacopœia is indispensable, should know, if any one can know, the requirements of such a book. We believe the convention ideal to be right in principle and that it should be the one followed, however the Pharmacopœia may be pub-

lished. Owing to the great expense involved, and the important relation which such a book of standards bears to the well being of every citizen, the Government should give material aid to its publication. In a way the work has been aided by the help given the Revision Committee by the Public Health and Marine Hospital Service in compiling a digest of criticisms on the Pharmacopœia, but this is not enough. A fund to properly reimburse a Committee of Revision is needed, and if this should be forthcoming, proper arrangements could be made for an early issue of the Pharmacopœia, to be followed by supplements sufficiently frequent to keep the work in consonance with the times and representative of the best in medicine and pharmacy. The method to be followed needs careful planning and the details must be thoughtfully worked out. By giving the medical and chemical departments of the Government service and possibly State food and drug officials representation in the Pharmacopœial Convention, the work would be sufficiently National and "governmental" to warrant Congressional aid.

OUR ADVERTISING PAGES.

In this issue of the new Monthly ERA we start a new feature of our advertising service by publishing a complete Index of the Goods advertised. Our advertisers will note that this Index is not intended as a general index of all the goods that each manufacturer makes, but is confined to the goods which he advertises in this edition of the ERA. In other words, this Index is for the purpose of giving our readers an additional reference to the advertisements to be found in the current issue, and in this respect we shall endeavor to make it complete.

We wish to direct the attention of our readers to the exceedingly valuable line of advertisements which they will find in this edition. It is one of the most serviceable collections of such announcements ever presented in a drug journal, and each and every one is thoroughly up-to-date. Special attention is likewise invited to the representation of leading pharmaceutical and chemical houses, nearly all of whom are represented in this issue, and practically all of our so-called "preferred" positions are occupied by this class of advertisers.

The predominance of soda fountain advertisers is particularly noticeable, and the series of double-page announcements from representative firms in this line, appearing in the front part of the journal, will be continued throughout the year with new and attractive copy each month. Notice should also be taken of the large number of special Business Cards which we now carry, these having superseded the Classified Buyers Directory which was a feature of the weekly edition. Hereafter these cards will all be *indexed by goods*, making them still more valuable to the advertisers and particularly convenient for the use of subscribers.

It will be noticed that all pages are numbered consecutively from first to last, there being no separation of advertising and text pages, as has been our custom heretofore. This new system will be followed throughout the yearly volume. By it reference to any feature or page is greatly facilitated and possible confusion obviated. This method of numbering the pages is now followed by many leading periodicals.

THAT UNITED DRUG CO. INJUNCTION.

In our news pages will be found the interesting details of an injunction suit which will prove of great interest not only to all of the Rexall stockholders in the United States, but to co-operative practitioners and students of co-operation as it affects the retail drug trade.

Upon their face the papers filed in court disclose an attempt to nullify one of the cardinal principles upon which this co-operative concern—the United Drug Company—was originally founded, that of giving the stockholders exclusive control of the sale of the products manufacturerd by their company. If the officers of the company can refuse to sell to a big concern like the Riker Company any of its products without enforcing new restrictions not contemplated in the original plan, what is there to hinder them from applying the same restrictions to their stockholders all over the country?

In this new departure of the Rexall management it is fortunate that the stockholder selected for this treatment is the owner of a large number of stores and a wealthy corporation, which not only is willing to fight for its rights, but is amply supplied with the sinews of war. It is a curious commentary on how some things are done and how good deeds may soon be forgotten, to learn from the legal documents filed in this case that this co-operative venture probably would not have survived its birth but for the influence and support, both morally and financially, of the shareholder which it now forces into court to secure an adjudication of rights which were originally guaranteed to every Rexall stockholder. The outcome of this litigation will be awaited with more than ordinary interest.

GOV. HUGHES ON THE PHARMACY BOARD.

While Governor Hughes is worrying much less about the New York State Board of Pharmacy and its status than is the case with Assemblyman Conklin's clients who have been haled before the courts, the Governor nevertheless found time to send the following paragraph about the board to the Legislature in his annual message this month:

"I have formerly called attention to our anomalous system of supervision of the sale of drugs under the present Board of Pharmacy. The bill passed at the last session with relation to this matter was disapproved, as it *did not provide for a board of suitable powers, the members of which should be properly designated by* and amenable to State authority. I submit this subject for your further consideration."

This message discounts the statement that the Governor would approve an Act giving the appointing power to the Board of Regents and clearly indicates that he believes and wants the Executive to have the power of appointment without any interference or advice by the State Pharmaceutical Association, a position which the ERA has believed he held, although others have disputed the contention. Significant also is the "more power" suggestion. That means that the Governor disapproves the present lenient and ofttimes merciful method of sending around inspect-

ors, warning careless druggists and cautiously and quietly proceeding against wilful violators of the law through a civil suit for the $50 penalty. The Governor probably believes that it would be better to give the board power to send a uniformed policeman after the drug trade crooks, cart them off to a police station in a patrol wagon and send them to the cells in default of bail just like less dangerous and at present less favored criminal suspects.

Taking into consideration the Governor's latest message, the sentiment which has been created in the public prints against the board on account of its disposition to deal in a kind-hearted way with offenders, the failure of approval of so many bills and legislative Acts, the ERA suggests that the whole situation can be clarified and the long fight ended by the passage of a short bill briefly embodying the following points:

1. Oust the present Board of Pharmacy. Authorize the appointment of a new board by the Governor, without any restriction whatever.
2. Place the examinations under control of the State Board of Regents, the Pharmacy Board to conduct the practical part of the examinations.
3. All fees to be paid into the State Treasury. The board's expenses to be provided for by Legislative appropriation.
4. Make violations of the Pharmacy Law a misdemeanor, subject to police prosecution and give the employees of the board police powers. Make the penalty fine and (or) imprisonment and give all police magistrates jurisdiction.

Such a law would undoubtedly satisfy many persons who are opposed personally to present members of the board, although it would not please those whose dislike has been aroused through penalization. It would satisfy the public and would serve to put an end to the adulteration of drugs in this State, for the Governor could be depended upon not to appoint to office any of the active opponents of the present board. There would be a new deal all along the line.

THE ERA ALBUM.

Many of our subscribers will be pleased to hear that we will soon resume the publication of this pictorial feature of the ERA. The general style in which these portraits and views were previously published will be followed, with some minor modifications to make the section both more attractive and to comply with the postal regulations.

We have on hand a large number of photographs which have been supplied by our subscribers, and these will be worked up into plates and printed as fast as possible. We hope that other subscribers who have not sent in their photographs will now do so. In each case we request you to furnish us with a cabinet size photograph and see that your name and address are plainly written on the back thereof.

AGAINST AN INCOME TAX.

Governor Hughes in trenchant fashion has voiced his disapproval of the proposition to so amend the Federal Constitution as to permit the imposition of a general income tax. This proposition was ordered submitted by Congress at its last session to the legislatures of all of the States. If a majority approve, the amendment will be submitted to the people. In his message to the New York Legislature Governor Hughes urges disapproval on the ground that such a tax would be an invasion of State rights.

The same objection is applicable to the Corporation Income Tax so far as corporations not doing an inter-State business are concerned. That of course could not be raised against the enforcement of the law in the cases of large concerns doing a business outside of their home States. While there are numerous objections to this law the long promised test cases have not been started and there is a belief that the large and wealthy corporations will pay the tax without contest and seek compensation in the details which they will learn of the inside affairs of their smaller and less fortunate rivals through the disclosures which the latter will have to make in their reports to the Government and which will be public records open to the inspection of anybody.

SODA FOUNTAIN AND CANDY COUNTER.

Confectionery is considered by many druggists as a most profitable side line, for it is one that can be easily installed, the initial outlay to start it is not great, and it can be adapted to the requirements of any class of customers. We have therefore no apology to make for introducing in this issue of the ERA a department which we have designated as the "Soda Fountain and Candy Counter" and in which we shall endeavor to give such hints and suggestions as will prove both helpful and informative to ERA subscribers.

The soda fountain is a recognized part of the equipment of nearly every drug store and the candy counter, if properly cared for, will soon become one of the most attractive features to the majority of people who enter the store. Experience has shown this to be especially true of the drug stores in small towns where country people are in the habit of congregating. The Americans are the largest consumers of sugar in the world and they all love sweets. The enterprising druggist who operates a candy counter knows this and he is the man who is making money out of his knowledge.

MR. LAMB GIVES BAD ADVICE.

Thomas Lamb, of Brooklyn Borough, New York City, has given his critics an excellent weapon of attack on the purposes of the Retail Druggists' Protective Association of that borough through his circular letter advising druggists in New York State not to pay the $2 registration fee imposed upon them by law. Mr. Lamb raises the point that this is a tax upon honest men to punish dishonest men, forgetting that this is a fundamental principle of all government. It would be quite ridiculous to seek out and tax the law-breakers of the country in order to detect, prosecute and incarcerate them. The tax collectors would find the prisons of the country mighty poor places in which to raise the revenue necessary for the maintenance of law and order.

In advising the druggists to break one law Mr. Lamb does not necessarily suggest that they disobey other laws, but if the laws are to be disregarded why not wipe them all off the statute books? Mr. Lamb has his remedy in the State Legislature and his arguments at Albany would receive more attention and

consideration if he were to go to the State Capitol without the handicap of having urged others to violate the law.

THE NEW MONTHLY ERA.

This first edition of the new Monthly ERA will give our readers some idea of the general lines which we propose to follow in the development of the publication. As we have had but one week in which to produce this number, it necessarily lacks some elements of completeness which will follow in later ones. As stated in our last issue, we expect to make each monthly edition of the ERA better and more complete than its predecessor, and the number of new features and departments which we have planned to introduce will require several months for their completion.

Our plans for the new Monthly ERA are very broad and comprehensive, and we will not be satisfied until they are all in practical operation. In the meantime, we trust our readers will continue to favor us with their many valuable suggestions, as they have in the past, for it is only by such close co-operation with his readers that an editor is able to best serve them.

A GREAT WEEK FOR BOSTON.

Marking scientific progress in America in a most gratifying manner was the week's work just done in Boston by the American Chemical Society and the American Society for the Advancement of Science. More than three thousand members attended the two annual conventions and no fewer than one thousand papers were presented—a most remarkable record. Boston was entitled to the distinction of taking care of this great gathering of delvers in the realms of research and higher educationalism.

A significant feature was the confirmation of the formation of a pharmaceutical division of the American Chemical Society, a branch which has had many warm advocates and not a few critics among pharmacists. Now that it has taken on an existence all should join in making it a useful section of the parent society and of benefit to the profession of pharmacy. Besides this innovation, it was pleasant to observe that in the two conventions pharmacists were more active and consequently better recognized than heretofore.

Chemist Solves Source of Aurora Borealis.

Dr. W. L. Dudley, head of the department of chemistry of Vanderbilt University, Nashville, explained before the convention of the American Association for the Advancement of Science in Boston the other day, that he had discovered the mystery of the aurora borealis. He attributes this puzzling phenomenon to a new gas which he calls "neon." Dr. Dudley exhibited to the scientists the only sample of neon in this country and explained that it takes 100 tons of air to form a pint of the new gas. The doctor has discovered that the friction of neon against mercury in a Crook's tube produces a new light and when held near a wireless coil Hertzian waves illuminate the gas.

Dr. Dudley made an experiment on the steamship Baltic with the wireless apparatus and came to the conclusion that at the magnetic poles of the earth neon, under high pressure because of the cold, is acted upon by magnetic currents, thus producing the aurora borealis, a phenomenon that has always puzzled scientists. Dr. Dudley's explanation is said to be the only satisfactory one that has ever been offered.

CORRESPONDENCE

Mr. Conklin Exonerates Mr. Platt and Will Confine Efforts to Changing Method of Electing Board.

Editor The Pharmaceutical Era:

I must demand that you correct the statement in your issue of the 23d instant in reference to Senator Platt. It is absolutely false. I did state that I had been requested last year by several members of the Legislature, among whom was Assemblyman Yale, to permit the insertion of peroxide of hydrogen in the class in which it appeared in my bill. In regard to Senator Platt, I only stated that I had talked with him generally about the provisions of my bill and had understood that he would give it his support in the public health committee. He never made any requests in regard to the pharmacy law, was never in any way interested in it except as I called it to his attention, and had nothing to do with the insertion of any provision therein.

Furthermore, I have no desire to shift responsibility for this or any other provision of my bill. The bill was introduced under my name and I accept full responsibility for every feature of it. I can see no reason why peroxide of hydrogen should not be classed with other household remedies. I trust this is sufficiently explicit.

I am not interested, however, in amending the present law in any particular, except as to the method of selection of the members of the pharmacy board. I shall confine my endeavors in the next Legislature solely to this effort.

Permit me to say that the members of the alleged board, in whatever legislation they advocate, cease their efforts to secure the allowance of the use of wood alcohol in external preparations. Very truly yours, ROBERT S. CONKLIN.

New York, December, 1909.

[The reporter's recollection, as well as that of other persons present at the Kings County meeting, is that Mr. Conklin mentioned Mr. Platt as suggesting the hydrogen peroxide "joker." It is possible that in the heat of the debate Mr. Conklin was a victim of an attack of lapsus linguæ, but the ERA, in any event, is glad to set him right before his readers. The ERA does not understand his reference to the board's alleged effort to promote the use of wood alcohol. That also may be due to a misunderstanding.—ED.]

Questions for Mr. Culley to Answer.

Editor The Pharmaceutical Era:

In answer to the suggestions given by my good friend, John Culley, of Ogden, Utah, in the ERA of December 23, 1909, page 655, I beg to make reply inasmuch as I don't believe that his suggestions could or would be attempted by the average druggist. For instance:

(1) How much money can you save on a 2 per cent basis when the money costs you 1 per cent at the bank?

(2) Does it not take as much bookkeeping to keep track of your outstanding notes as it does to keep track of your accounts?

(3) Where does the better credit come in when you have to borrow from Peter to pay Paul, or, in other words, to borrow from the bank to pay your bills.

(4) The druggist who pays cash obtains no better goods than the one who buys on 60 days time.

(5) I cannot for the life of me see any more independence in owing the bank than in owing the wholesaler. Wholesalers know the amount of business you are doing and can tell the source your capital comes from. How many druggists are able to make daily deposits? Think it over.

Jamaica (L. I.), N. Y. RALPH E. HUGHES.

Will Help the Sunday Closing Movement.

Editor The Pharmaceutical Era:

The excellent article by Mrs. Wallace, "The Conservation of the Sabbath," which appeared in the ERA of the 9th instant, will, I am sure, help the Sunday closing movement greatly. Permit me to express my thanks and appreciation to the ERA and to Mrs. Wallace for the great service in behalf of the good cause. Fraternally yours, J. G. BONE.

Scranton, Pa., Dec. 26.

Women and the Drug Business.

By Emma Gary Wallace.

Occasional arguments have appeared from time to time urging the special fitness of women for the pursuit of Pharmacy. Their steadiness, neatness, reliability and energy have been dwelt upon with convincing truth. Their legitimate place in the profession has been clearly defined, and yet the number who seriously enter the ranks each year is comparatively small.

There must be a reason for this, and we find upon close inspection that there is not one but several.

Young women looking about for a suitable and congenial line of study to fit them for their life work seldom, very seldom have their attention directed to Pharmacy unless they chance to be daughters, sisters or near relatives of retail druggists.

The printed articles which set forth the advantages of women in Pharmacy usually appear almost exclusively in our own trade journals and do not fall under the eye of the average woman reader. The arguments are all among ourselves as it were, and do not reach the unattached young woman student who might be influenced thereby.

Advertisements of Colleges of Pharmacy usually appear likewise in drug journals, and so the publicity used, as a rule, reaches drug people and few others.

It was a matter of some surprise to the writer that among the numerous women graduates of a good co-educational university no trace could be found of a single one having later entered the study of Pharmacy. Only a very small percentage of the students graduated were able to live lives of leisure and yet many of them specialized in some particular line after obtaining their degree. It would seem that with a foundation of several languages, physics, considerable chemistry and botany that the step to Pharmacy ought to have been a short one.

In this particular school the finely equipped laboratories teem with bright-eyed girls every month of the college year. They elect chemistry because they like it—and then are generally successful in obtaining high standings, too.

By far the greater portion of the young women holding high school or college diplomas have to make some calculations upon a means of livelihood, and with the serious problem of drug-store help in view, it would seem as if here supply and demand might meet. Recently a group of young women were discussing the

Possibilities of the Various Vocations.

"Why do you not plan to study Pharmacy?" they were asked.

"Why, we never even thought of it," was the answering chorus. "What do you think are the chances of the average woman's meeting success? Not the exceptional woman, remember, who would succeed anywhere?"

"For a woman with the determination to succeed and with a natural liking for the business, there is no reason why she should not get along as well here as elsewhere," was the reply.

"Teaching certainly is overcrowded," said one.

"Private secretaryships and library positions are few and difficult to get," remarked another.

"There are not nearly enough civil service positions to go around," added a third.

"Medicine and law are expensive and difficult in which to obtain a foothold. Why not Pharmacy?" queried another with enthusiasm. "Millinery, dressmaking, stenography and nursing do not appeal. I have no talent as an artist or a musician, but I should dearly love the cheery, skillful, accurate work of a drug store. It combines the scientific with the practical and brings one in contact with people at the same time. Wish I knew how to go about it."

There are many young women in exactly the same position, who never have had their attention pointed in that direction, or who cannot afford to go to college, particularly in the beginning of their course of study. They possess sterling qualities and would do excellent work if given a chance.

Difficult to Obtain Positions.

It is rather a difficult matter in many places for women clerks to obtain positions in good stores where they may gain their elementary experience and earn a small amount at the same time.

Many proprietors of stores in neighborhoods where women have never appeared behind the drug-store counter hesitate to employ one for fear the trade will not like it, or for fear the young woman may not prove satisfactory and willing to work. Possibly at some previous time one has been tried and found incompetent or otherwise unsatisfactory, or there may be a plain unreasoning prejudice against the innovation.

Let us look at these objections from a business standpoint. Customers come to a store to be served. If such service is rendered in a prompt, dignified and business-like manner, and each one of the store force is attending to his or her business with quietness and despatch, there cannot possibly be an unfavorable impression.

Most naturally a new girl would be given work of minor importance and an inconspicuous part of the front store service, if any at all, until she arrived at a fair degree of familiarity with the stock and routine of the business.

A young man apprentice would not be given important work until he had acquired some experience. And yet, one druggist hired a girl who had never stood before a counter of any kind before and left her entirely alone for several hours the very first day. Her own good judgment and ingenuity saved the situation, although she declared afterwards she had alternate attacks of chills and fever the entire time she was in charge. Such a course was neither fair to her nor to himself, even if the business was not a large one. Nothing is more embarrassing than to receive simple calls and not know what the goods are or where to find them.

Women Like to Buy of Women.

If the business is a well-ordered one the trade will not object and a large portion of the feminine part of it will be delighted to have a woman attendant of whom they may purchase supplies which they would otherwise purchase in department or dry goods store.

It is a fact that both these latter classes of stores sell quantities of articles the trade in which rightfully belongs to the drug store, and their supply of which comes through the regular channel of the druggists' wholesalers. They absorb this trade because women prefer and sometimes insist on a woman attendant.

The plea that the young woman may not prove satisfactory and willing to work, depends very largely upon the astuteness of the employer in reading human nature. There are shiftless, thriftless, vain, self-conscious girls whose early training and inherent disposition preclude the likelihood of success in any line, but the girl who will willingly face the long hours in a drug store and undertake to break new ground for herself, is pretty likely to have good timber in her make-up.

It has been said that the women physicians who were the pioneers in the medical field were exceptionally conscientious, capable and skillful. It took courage and decision and foresight to enter the profession at all in those days and few weaklings tried it. The same holds largely true of the woman pharmacist today, she may prove a failure, but the chances are she will not. There are a goodly showing already who have done well for themselves and others.

Not Everybody Can Be Successful.

It is very certain that all the people who enter each calling in life are by no means successful, and so the woman druggist ought to be allowed an occasional failure to her credit without seriously affecting the situation as a whole.

The man who employs one young woman in his retail business and then condemns the whole of womankind as drug-store assistants because that one did not please him is like the traveler who landed in France and seeing three red-headed women, drew out his note book and entered the observation, "All the women in France have very red hair."

There always have been failures and doubtless always will be, but the very large percentage of eminent successes among the women who have entered the field of drugs is most encouraging.

It takes patience and tact and judgment to be a good employer, and it takes adaptability and studiousness and industry to be a good employee.

There is room for the woman in Pharmacy—the right kind of woman. There is an opportunity for some well-planned advertising among high school graduates especially, by schools desiring to secure students in pharmacy and an opportunity for a large number of young women to learn a business which is both congenial and desirable. In the active field of business life, they must be given a fair chance, and then it is but fair to believe from past records that the grade of service they will return will pay back the interest taken in their progress, "some an hundredfold, some sixtyfold and some thirtyfold."

An Era of New Things.

By George Rice.

We are in an age of new things. The druggist is compelled to buy and install new apparatus each year. And it pays to do so from a financial point of view, as I will strive to show in this article. I have had the advantage of considerable travel and have taken observation of the progress of things in drug stores. I have noted new forms of show cases, improved types of soda fountains, up-to-date plans for plate fronts for exhibiting goods, ingeniously planned money-making contrivances of the nickel-in-the-slot order for installation in stores, fancy additions to the stock of sample cases of soaps, toilet waters, and so on. In some of the drug stores some very good assortments of commercial goods are carried, so well put up in show cases and arranged so attractively that they do not hinder the business of selling medicines. The handling of railway tickets, the carrying of the plan of theater seats for the entertainment at night, the system of selling automobiles and handling insurance on commission, all require the addition of new things in the line of furnishings and processes. Sometimes the druggist with his modern equipment of cigars and tobacco outdoes the rival tobacco store next door. The reason is that the up-to-date druggist has put in the most approved lines of goods in the most modern manner.

The introduction of numerous self-selling articles has opened a channel for new goods in the money-making line for the druggists. Often the commonest of things make the most cash. For years a penny-in-the-slot match delivery has been needed. Matches have been gotten down so cheaply that quite a nice little box of matches is now passed out of a machine to the party who drops a penny into the slot. There are single delivery match devices, but the package delivery at a cent a package is the kind that takes and the kind that makes the most money in the long run.

But the articles just mentioned are of the commercial variety and can be handled through the firms dealing in the same. There is another line that appeals to the thinking druggist of today, for the reason that unless he keeps in touch with progress he is liable to get left behind in the advance of trade. For illustration, in going through the country I found instances of whole store fronts torn out for the purpose of putting in new and better lighting and exhibiting facilities. The dingy window is no longer attractive to the average patron. The patrons of the drug stores of today look for cleanliness, and this attribute of success is exhibited to best advantage when there is a big plate of front, and plenty of light. Things are painted white or finished in some bright tint, instead of the dark, dust colors of old.

Druggists of my personal acquaintance tell me that they have been obliged to remodel many things to harmonize with advances made by their competitors. One tells me that he looks for the time when the brilliantly lighted and plate front prescription room will be put out where all can see. His friend in the pastry business nearby, got a big run on hot cakes by making and cooking the cakes in the front window where all could see the operation.

The druggist has not only undertaken to improve the appearance of his store with plate glass frontal, but he has also put in much new furniture. You can find easy chairs and nice tables in some of the stores. There are good accommodations for the public. People are given to understand that they are welcome, whether they intend to patronize the establishment or not. It is a new order of things. The old-time druggist did not care to have a lot of people tracking snow or mud into the store while waiting for a car. Nowadays, the folks waiting for cars are provided with seats near the hot or cold soda fount and frequently quite a little paying trade is gathered from the waiting throngs.

The up-to-date druggist does not always admire music. Sometimes he is annoyed if the persons living overhead play a piano too much. Nevertheless, I observed that quite a number of the druggists had had electrically driven self-acting musical contrivances put in. These musical devices will play quite a liberal piece of music for 5 cents or a penny. The druggist gets a good percentage of the commission on the musical instruments, and this fact, no doubt, hardens his hearing to musical tones that he may not like.

But another factor is the lighting of the store. The lighting agents of the electrical concerns, the gas-arc people, the patent carbide gas and gasoline inventions, are all represented by the agents who call and demonstrate how you can get better light than you have and save the cost of the plant in six months by using their system. It is true that many of the lights are fine. In fact, you can increase your business with the addition of some of the powerful lights that are in use now, as all know. It is hardly necessary to explain that the druggist should discard the dim lights he found suitable 15 years ago, and establish the better and stronger lights of today. The live druggist knows this fact all too well.

But above all else, the main features of the drug store should be the drugs, chemicals and general supplies. These are put up better than formerly. The package system has grown. The old style bulk method has given way to convenient containers in which the preparations of many sorts are in readiness for service. The people look for these. The people know little about drugs, but they know when they are getting modern furnishings. Even the wrapping and bottling methods are observed with keen eye by the public. I know of lots of compounds that are selling well because when the contents of the fancy jar are gone, the jar is a most handy thing to have. Or when the beautifully finished hardwood scented box is empty, the box makes a first class article for use for household purposes.

And the druggists keep on inventing and improving. The progress is wonderful and promises to be still greater. Some years ago the advertising canvasser considered it hardly worth while to call upon a druggist for an advertisement, except for a local paper. Today the advertising men get quite encouraging results for advertising matter from the druggists for the trade journals, magazines and popular weeklies.

A REASONABLE ARGUMENT.

A college dean, a city lawyer, the president of a woman's club of large size, and a thinking housekeeper were recently seated at table together.

The subject of trading at home versus patronizing mail order houses came up for discussion, together with the possibility of a parcels post.

The three first mentioned expressed astonishment that there was anything of moment to be thought of on the side of a duty to home institutions, and two of the number confessed to being offenders in this particular, while the city lawyer declared his intention to spend his money wherever he pleased.

The quiet little housekeeper said little in such brilliant company, but being asked for her opinion said simply, "Our grocer and druggist carried us over a very hard winter when we might have suffered for food and my wee Jamie died for want of medicine, unless we had accepted charity, and you know that is hard for people who are temporarily embarrassed.

"I should despise myself, if now, that we have recovered our fortune, that I should forget my friends in my time of need and send my custom to strangers. Even if I saved a few pennies by purchasing goods of unknown quality, I should lose my own self-respect.

"Then, too, this is a Charity Social and Bazaar which we are patronizing, and I know for a fact that the business men of the town have been liberal donors. We expect their co-operation in the things which make for local well-being, why should they not expect our loyalty in return?"

Giving the Druggist Her Trade.

There was a new clerk at the corner drug store.

"Will you please let me have a stamp?" smiled the woman. The clerk laid one on the counter and took the money.

"I wish," said she, "that you would weigh this letter. Maybe it takes more than 2 cents." He weighed it.

"Only 2 cents, madam," he said. Then, taking the stamp up from the counter where she had left it lying, he added politely, "Allow me to put it on for you," and he did.

"You are so nice," said she, "that I'm going to begin to buy my postcards here, too."—*New York Press.*

Making a Million Dollars a Day.

First Man—"I know a man who told me in strict confidence that he was making a million dollars a day in the retail drug business."

Second Man—"Great Guns, where is he located?"

First Man—"Group three, Ward B, State Insane Asylum."

The $500 Prescription.

By Joel Blanc.

The heavens seemed aflame and as the heat fell upon the agonized city it brought with it a moisture not unlike that of scalding steam, as if water thrown by the gods, to quench the fire above, had turned to vapor and then descended to earth to torment humanity. In front of the poor little drug store the cobble-stones of the wretchedly paved street shone like balls of white hot metal. Lifeless, so far as any actual breeze was concerned, yet the air seemed to have acquired a movement of its own, rising in shimmering eddies and swirls from every brick of the walk. The lamp-posts and all metal things were blistering hot, and each sheet of glass, and every curtained window threw back a glare as from an open crematory door. The leaves from the parched trees hung downward and still, like funeral drapery for the dead, while the few who passed along the torrid street slunk in the shadows, like ghouls looking for their prey. Occasionally a passing cloud would cast its moving shadow o'er the earth, one of many that for three days had passed, and in passing mocked the human hope for rain.

Within the little drug store, partially darkened by the drawn curtains, death seemed even nearer. The two poor show-cases seemed to have gathered from the superheated air a grime of ages that gave them the appearance of sarcophagi in some catacomb, while the bottles and jars above were as funeral vases holding the ashes of the dead—and over, and through all, the heat, the awful heat!

Standing in a far corner, coatless, collarless, with the open shirt showing the hollow of the emaciated, narrow chest, stood the master of the store, or rather, the slave of it. As the thin hand went up to wipe the perspiration from the brow, the sockets below seemed tenantless, until one caught the dull glimmer of the agony reflecting, deep set eyes.

There was the clang of a gong, but even that seemed to come slowly and dully to the ears, forcing its vibrations through the obstructing humidity of the awful day. There was the crunch of rubbered wheels upon the stones as an ambulance passed by. The druggist looked toward the open door and muttered, "Another sun-stroke, the fourth in this neighborhood today."

Then he turned and moved towards the door leading into the living rooms. Prostrate upon the matting of the floor, clothed only in a little shirt, he saw the form, almost the skeleton, of a child. Gasping for breath, its puny arms tossing as if to create a cooling current in the air of this earth inferno, it seemed but a ghastly manikin. Above this, what was left of a fever-stricken boy of seven, hovered the suffering mother, with fan and glass of cooling drink in hands. One glance, a glance that seemed to gather to his face more lines of agony, and the druggist turned and walked back into the store. He touched the pan of the scale and quickly drew away, for the contact almost burned his palm. The heat, the heat was everywhere and God—seemed nowhere.

Still in his ears there burned the words that the doctor had spoken but a few hours before: "The boy is convalescent, but you must get him out of this. His mother must take him to the mountains and keep him there for the summer. A week of this weather will kill him!"

"To the mountains for the summer!" and with the words there came from the druggist's lips a bitter laugh that sounded like the death rattle from a human throat. He opened the cash drawer and glanced at the few coins within. From his pocket he extracted a few bills of small denominations. "All I have in the world and the boy must go to the mountains for the summer or—or—die."

The druggist bowed his head upon his arms and through the clinging, perspiration-soaked clothing might have been seen muscular tremors which indicated an agony too deep to reach the lips in sobs. Suddenly he looked up, for some one had entered the store.

Approaching from the open door, was the figure of a young man, a young Hercules. Tall, broad-shouldered and symmetrically limbed, this being seemed to have come from some Elysium, rather than from the sun-stewed hell without. The white canvas shoes, flannel trousers, soft, fine linen shirt and flowing tie, with blue serge coat and wide brimmed Panama seemed to disdainfully repel the waves of volcanic heat. The druggist knew him, or rather, knew of him. He was the son of the man who owned the great carpet mills located a couple of blocks away. Young as he was, those words of contemptible implication, "Man about town" and "Lady killer" were already spoken of him. Such was Fred Harrison.

Taking a prescription from his pocket, Harrison handed it to the druggist, saying, "Fill this for me."

The druggist took the prescription and read it. It was well written, and indicated that the writer was a skilled practitioner, but it was on plain paper and the physician had not signed it. "I cannot fill this," said the druggist, as he handed back the paper.

"Why? Because it is not signed?"

"No! That is not the only reason. Do you know what it is?"

"I ought to. I paid enough for it. Here, take this and keep the change. Fill it for me please." As he spoke, Harrison had taken a roll of bills of large denomination from his pocket and laid a twenty-dollar bill upon the counter.

The druggist pushed the bill back to Harrison and answered simply, "No."

Harrison did not pick up the bill, but instead, he placed four more twenties on top of it. "There! There's a hundred. Fill the prescription."

"Don't! Don't tempt me. Only God knows how much I need the money, but I can't, I will not fill it!"

Harrison took out his roll of money and stripped off a hundred-dollar bill. "There. Two hundred. You must fill it. I must have it!"

The druggist picked up the prescription, turned, as if to go to the back of the store to fill it, hesitated and then again faced Harrison. "I will not! It's a powerful abortive. It means murder!"

As the druggist spoke there was a shadow in the doorway leading to the living rooms and then the shadow, his sick child, entered the store. The little fellow was so weak that he had to steady himself against the shelving as he approached. The bare, thin little legs bent even beneath the load of the emaciated body. The tiny, claw-like hands seemed like the talons of a bird. As he reached his father, the boy placed his hands upon his parent's arm and looking up into his face said, "Oh papa! I am so hot! When will you send mama and me to the mountains, as the doctor said you must?"

The father's face became distorted with agony, but ere he could speak to the child his attention was attracted by the voice of Harrison. He had added more money to the pile upon the counter. "Five hundred! Five hundred to fill one prescription. Five hundred to save the life of your child! Now, will you fill it?"

The druggist trembled from head to foot. He seemed to have forgotten the heat. He appeared to be shivering with a chill. Bending over his child, he kissed it and said, "Go back to mama. I have a prescription to fill."

After he had helped the child into the living room, the druggist disappeared, but only for a moment.

From behind the prescription case came a greatly changed man. His head was erect, his shoulders squared and his eyes seemed to have come forward within their sockets, and to shine with a new light. Confronting Harrison, the druggist spoke: "For the last time, no! I will not fill this prescription! For that five hundred dollars to save my child's life, I would sell you my body, give up my life, but I cannot, will not, save the life of my child by helping you to murder yours. I cannot, I will not sell you my honor, my soul, even to save the life of my child!"

As the druggist spoke, Harrison at first looked at him in amazement. Then a wave of emotion spread over his handsome face as he bowed his head in shame, but he gathered up the money and prescription and turned away. As he reached the door he seemed about to fall, but recovering his balance, he leaned heavily against the frame. As the druggist looked toward him he noticed that the sun no longer shone, for the sky had become overcast with clouds. For a moment Harrison buried his face in his hands, then he returned and faced the druggist. Without a word he took the prescription from his pocket, tore it to bits, and threw it upon the floor. Then he reached across the counter and grasped the druggist's hand and spoke: "You have taught me to understand both the glory and agony of fatherhood, you have shown me the magnificent strength of virtue and the contemptible weakness of sin. Here, take this five hundred, as a loan, if you want to call it that. If you choose, your son can pay it to my child, when they are grown. I am going to be married tomorrow!"

The druggist walked to the door with Harrison. As they reached it a swirl of cold wind dashed some rain drops in their

faces. Then the cooling, saving torrent came, and all humanity rejoiced. To them the rumbling of the distant thunder seemed like the pealing of an organ in some great cathedral, while the play of far-off lightning was the glitter of candles on the altar of God. And so they stood there, hand in hand, no longer the rich and the poor, but both rich and both pure—rich in each other's friendship and pure in fatherhood.

THE DRUG TRADE IN GREAT BRITAIN.

(From Our Regular Correspondent.)

LONDON, Jan. 1.—The year 1910 opens with an outlook for British pharmacists which is not altogether promising. Twelve months ago it was hoped that the new Poisons and Pharmacy Law, which went into force on April 1, would improve the position very materially, but this hope has hardly been realized. The new Act gave the qualified individual the sole right to the use of the title of Pharmacist, so that he would have a means of distinguishing himself from corporations consisting of unqualified persons owning drug stores, which latter were allowed to continue the use of the title "chemist and druggist." Unfortunately, however, the law did not restrict the use of the sign "Pharmacy" to pharmacists and the result is that any company or any unqualified trader may call his store a pharmacy. Consequently the title pharmacist loses much of its significance, for the distinction between the two words is too fine for the public to distinguish. At present the large corporations—like Boots, which owns about 400 shops in different parts of the country—have not adopted the sign Pharmacy and it is doubtful whether they will.

Poison Licenses Issued Recklessly.

Another respect in which the new Act has been a source of trouble arises out of the provision which gave local authorities the power to grant poison licenses to seedsmen, florists and ironmongers to sell horticultural and agricultural preparations containing arsenic and nicotine. It was intended that these licenses should only be granted in districts where there were not enough pharmacists to supply the demand, but as a matter of fact the licenses have been granted recklessly and in agricultural districts chemists have lost a considerable part of their trade.

In these two respects the working of the new Act has been unfortunate, but on the other hand there are features of the Act which are admirable. For instance it is now required that in every store where poisons are sold, there shall be exhibited the certificate of the person in charge and this regulation has been rigorously complied with. This is very helpful to the Pharmaceutical Society in its administrative capacity for it enables it to see at a glance whether the shop is in charge of a qualified person.

Must Use Their Own Names.

An important point which has recently been raised in connection with the practice of Pharmacy is the use of trade names. It is an old standing custom with many pharmacists who purchase old-established stores to continue the use of the name of the firm by which the store is known to the public. It is required, however, by the Pharmacy Law that all poisons sold by retail shall be labelled with the name of the seller—that is, the name of the owner of the shop where the poison is sold, and it was recently held in the court that the trade name is not sufficient. If a person is trading under a name that is not his own name he will therefore be obliged in future to have printed on all poison labels his own name as well as the trade name.

The Campaign Against Secret Remedies

has been pursued with considerable vigor during the year without producing any noticeable effect on the sale of these articles which reaches enormous proportions. It is probable that early in 1910 a Parliamentary committee may be appointed to inquire into the whole question, as the British Medical Association and other important sections of the community are strongly urging the government to take steps to place the traffic under legislative supervision. The British Medical Association has in fact published a book stating the composition of most of the popular remedies on the British market. Some thirty or forty thousand copies of this book have been sold, and as may be imagined, its circulation is not increasing the [illegible] held by the public.

Deaths by poisoning in Great Britain are remarkably numerous [illegible] official report for 1908 which has just been issued, that year was no exception, for no less than 1060 deaths were caused by poison. In the majority of the cases (588) the poison was taken with suicidal intent; in 268 cases the poison was taken by accident and in 200 cases death followed the use of an anæsthetic administered prior to surgical operation. The most "popular" poison among suicides was oxalic acid which was used with fatal results in 128 cases. This was followed by carbolic acid, which was taken by 98 "suicides." Opium, laudanum and morphine were used in 60 cases of suicide, hydrochloric acid in 76, potassium cyanide in 35, hydrocyanic acid in 28 and ammonia in 11. The poison which was most frequently taken in the cases of accidental death was opium and its derivatives which proved fatal in 47 such cases. Carbolic acid taken by mistake caused the death of 24 persons, hydrochloric acid 13, ammonia 9 and chlorodyne 8. Of the fatal anæsthetics, chloroform was used in 98 of the cases, ether in 16, A.C.E. mixture in 6, chloroform and ether in 4, ethyl chloride in 2, nitrous oxide in 1, and stovaine in 1. In 81 cases the kind of anæsthetic used was not stated, but it is safe to assume that in the majority of these chloroform was employed.

THE CIGAR A DRUG—ITS REMEDIAL VIRTUES.

Prof. Heebner Tells the Court That Tobacco is Prescribed for Constipation—Sunday Suit is Won.

The limit of absurdity was sure exceeded in Judge Morson's Court, Toronto, says the *Canadian Pharmaceutical Journal*, when the appeal of W. H. Lee against a police court conviction by Magistrate Denison for Sunday selling of cigars came up for a hearing recently. Absurdity characterized the evidence, at least, and the ruling appears to partake of a similar nature. We submit a portion of the evidence and only regret that such stuff should come from the teaching staff of the O.C.P., adds the *Journal*.

Professor Heebner was first on the stand.

"Is tobacco a drug?" he was asked.

"I should certainly call tobacco, in any form, a drug."

"Prescribed for what?" Judge Morson asked him.

"Constipation for one thing, as a nerve sedative; it is also used for poultices," he answered.

"I would call it a stomach disturber," laughed the judge.

"In some instances—perhaps in the form of cigarettes," was the smiling answer.

Dr. Chambers, called by Mr. Curry, told the court he used tobacco.

"Do you use it as a drug?"

"I use it because of the tobacco habit."

"How, pipe or cigars?"

"Cigars."

"Do you use cigarettes?" asked Judge Morson.

"Sometimes."

"So do I," admitted Judge Morson, "but I do not use them as a drug."

"Is the tobacco habit a bad habit?" he asked Dr. Chambers.

"With some people. It is much the same as morphine with some persons."

"Did you ever prescribe it, doctor?"

"Yes."

"It what?"

"Constipation," Dr. Chambers told him.

"Do druggists keep it as a drug?"

"Well, there's the question," he evaded.

"Is it necessary for druggists to keep it as a drug?"

"I think so; nearly all do."

"For what would you prescribe a cigar?" Judge Morson asked Dr. Dwyer, the next witness.

"For constipation. Used that way it is quite a common thing," he declared. "Tobacco is a regularly recognized drug. After a meal it is the best thing some men can have."

Here is Judge Morson's finding in full:

"On the evidence, I find that tobacco is clearly a drug, frequently prescribed by physicians in the form of a smoke, and therefore conviction on the ground that tobacco is not a drug is wrong. It could be shown that a cigar was sold by a druggist, not as a drug, but for the pleasure of a smoke only. I think that it would be an offense under the Lord's Day Act. But it is the duty of the Crown to prove this. There is no duty, in my opinion, imposed upon the druggist to inquire for for what purpose the cigar is sold, any more than in the sale of any other drug."

Shall the Government Control the U.S. Pharmacopoeia?

Prominent Pharmacists, Including Members of the Revision Committee, Officers of the A.Ph.A. and Other Organizations, Wholesalers, Manufacturers and Retail Merchants Discuss Coudrey Bill—Preponderance of Sentiment Opposed to Change in Method, But Congressional Aid Welcomed by Many.

Officers of the Pharmacopoeal Convention of 1900, Photographed at Washington, D. C.

Since the enactment of the Pure Food and Drugs Act by Congress in 1906 no measure introduced in that body has aroused more discussion in both the circles of scientific pharmacy and the realm of commercial drugdom than the bill presented by Congressman Coudrey, of St. Louis, having in view the object of establishing a single standard for drugs and chemicals, violation to be a criminal offense and the United States Pharmacopœia to be edited, published and controlled by the Federal Government. The full text of this bill, H.R. 13859, was printed in the ERA of December 23, 1909, page 643.

With the view of obtaining the opinions of all of the affected interests the ERA recently invited many of the prominent men in the profession and in the trade, ranging from the theoretical to the practical, pharmacopœial revisers, college professors, officers of pharmaceutical associations, wholesale and retail druggists, manufacturers and in fact all of the allied interests, to express their views on the bill. The answers received represent every branch of pharmacy in its various ramifications and no more complete and interesting, as well as instructive symposium of informative criticism has ever before been printed in connection with a measure such as Mr. Coudrey has fathered in Congress.

Making an intelligent summary of these many opinions is a difficult task to undertake, for, while the majority are opposed to Government control of the Pharmacopœia there are many who favor Federal aid. The reasons given for the conclusions reached are varying in their character and are in many instances quite as interesting as are the suggestions for bettering and improving the Pharmacopœia. The preponderance of sentiment seems to be against any change in the method of publication, but aid both by Federal officials in the work of preparation and by Congressional appropriation of funds would unquestionably be welcomed by those who have given thought to that branch of the subject.

There does not seem to be anywhere any serious demand for the passage of the Coudrey Bill, while it has provoked some very strong opposition. The consensus of opinion seems to be that it is more of an entering wedge for what may follow than anything else. The provision making deviation from standards a criminal offense is one that will arouse intense antagonism if the measure is pressed for passage, for no account is taken of the possibilities of honest and unintentional errors being made by those who would be affected by the provision should the bill become a law.

It is interesting to note that there is a greater degree of general satisfaction with the present Pharmacopœia in all directions than had seemed to be the case in view of the numerous criticisms and suggestions for improvement that have been made in the full, free and frank discussions regarding the Pharmacopœia which have been such important features of the meetings of most of the pharmaceutical associations for several months.

IN ACCORD WITH IDEAL OF SELF-GOVERNMENT.

Dr. A. B. Lyons, Member of Committee on Revision of U.S.P. and Chairman of A.Ph.A. Committee on U.S.P., Detroit, Mich.:

Replying to your question: "Should the Government edit and publish the United States Pharmacopœia?" I offer the following as a very incomplete exposition of my individual opinion, from which those I have talked with here do not dissent.

In the first place, what is the U.S. Pharmacopœia? It certainly is not in any sense a scientific treatise. The articles which it names as constituting the materia medica may or may not have real therapeutic efficiency. Physicians themselves, who alone are competent judges of such matters, hold widely diverging opinions regarding the action and uses of even the best known drugs. Confessedly medicine is an art which has not yet passed beyond the empirical stage, at least as it is taught in the schools and practiced by the rank and file of the profession. The remedies which one physician considers indispensible another pronounces worthless.

The U.S. Pharmacopœia is simply an enumeration, with concise descriptions, of those articles which physicians in America of the "regular" school of medicine are accustomed to prescribe, and which pharmacists dispense when so prescribed. It is only thus that it comes to be a book of standards, since it is through its definitions that the prescriber has assurance that his intention shall be carried into effect.

To whom should be entrusted the important work of gathering the data for successive editions of the Pharmacopœia? Obviously to the professions it is intended to serve. "Government" can ascertain the facts which necessitate changes from time to time in such a book only by consulting the physicians and pharmacists of America—not some particular group of college professors who may be supposed to embody all the scientific knowledge the world has gathered with regard to

medicine and therapeutics. There exists now an organization of physicians and pharmacists thoroughly representative of these two professions, which is charged with the task of gathering all the facts and of keeping the Pharmacopœia thus, by frequent revisions, an exponent of the existing status of the therapeutic art. Under such a system the United States has made its Pharmacopœia the model which other countries whose Pharmacopœias have been issued under governmental authority are in large measure making their pattern.

The American plan, moreover, is in accord with our accepted ideal of self-government. The convention for the revision of the U.S. Pharmacopœia is a representative body of delegates from the various medical and pharmaceutical associations of our country, State and National. The Revision Committee is in turn elected by this representative body. Their task is a difficult and responsible one, and they are therefore elected with reference to their fitness, and that by men in position to know their qualifications. The system would seem to be ideal, and it has worked so well that when the Food and Drugs Act was drawn up the Pharmacopœia thus prepared was unhesitatingly declared the authority on standards of drugs, and such declaration met with the universal approbation of the American people.

To be sure, our solons were not quite clear in their minds about the relative merits of the U.S. Pharmacopœia and the National Formulary, and gave also to the "standards" of the latter work the same legal authority, when in fact standards therein are like hens' teeth. "Government" was dealing with a subject which it understood very imperfectly, and gave unwittingly an illustration of its unfitness to meddle with the question of standards in medicine. Incidentally also it made apparent the possibility, by some judicious lobbying, of smuggling into a seemingly purely beneficent law a scheme for graft—the little joker which Acts of Congress occasionally conceal.

If the Government were to attempt to make a Pharmacopœia, it would first of all look for a thoroughly scientific basis on which to build. Such a basis does not at present exist, and endless confusion would be the inevitable outcome of the attempt, unless the old system were after all permitted to go on.

The suggestion that the United States Government publish a book of standards for all drugs and chemicals is not a bad one, provided that the drug standards were to be made those fixed by the Pharmacopœia, so that the new publication would not in any sense supersede the Pharmacopœia. It would rather serve as a reference book for Government inspectors and others who wished for this particular information in condensed and authoritative form.

The function of government as regards standards of any sort is not to create new usage, but simply to define the intent of that already existing.

INADVISABLE TO CHANGE METHOD OF CONTROL.

Dr. Charles A. Crampton, Chief Chemist Internal Revenue Department, Washington, D. C.:

I have your letter asking for an expression of my views concerning the advisability of relegating to the Government the function and duty of editing and publishing the United States Pharmacopœia, with the object of establishing one standard for all drugs and chemicals.

In reply I would say that it appears to me highly inadvisable to wrest the control and conduct of this important publication from the hands of the medical and pharmaceutical professions. They are the interests most vitally concerned in the matter, and they have executed the task and trust committed to them with fidelity and success in the past, as shown by the regular decennial revisions for nearly a century, covering a period which has been marked by great activity and great advances in the healing art.

This does not imply, however, that changes in the character and methods of its production are not desirable; from the nature of things it must be a creature of changes, in order to meet the changing demands of scientific advances, and to fit it for the changing purposes it serves. It should not be changed simply for the sake of variety and novelty, however, or to fit the passing needs of the hour; but all changes should be based upon a wise and conservative policy, and with a definite and well-considered purpose in view.

It seems to me that a wise and conservative change would be such legislative action by the Federal Congress as should give the Pharmacopœia official sanction and authority, without making its publication a direct function of the Government. Perhaps this could be accomplished by means of an incorporation act, as in the case of the National Academy of Sciences; perhaps better in some other way. Congress has already manifested its approval of the work as an authority by incorporating it as such in the Pure Food and Drugs Act. No doubt its weight and usefulness as an authority would be greatly increased by recognizing it as the production of a body of men organized for the promotion of the good of the public, by setting forth its aims and purposes, and by defining broadly the manner in which these purposes should be carried out. It might very easily, however, weaken its weight as an authority if Congress were to impose upon any administrative officer or official the entire duty and responsibility of preparing and publishing the work. The courts, and especially juries, are very sensitive of anything that savors of bias in prosecutions of citizens for violations of the laws; and this tendency would lessen the credence that would be accorded to any authority which had its origin solely in a governmental source, however impartial it might be.

This is not to say that Government interests should not be represented in the preparation of the Pharmacopœia; in view of its increased and increasing importance in several of the functions of the Government, a very strong advisory representation of the different departments affected upon the governing board of the publication is highly desirable to all interests concerned. The claims of the medical branches of the Army and Navy to such representation was early recognized by the Pharmacopœia conventions themselves, without suggestion, so far as appears, by the departments, and these were soon followed by the Marine Hospital Service. Representation should now be accorded to the Bureaus of Chemistry, Plant Industry, and Animal Industry, of the Department of Agriculture, and possibly others. My own office has frequent occasion to use pharmacopœial standards in the administration of the laws governing the sale of liquors, and the tax free use of alcohol in the arts and industries, etc.

The above should be considered simply as an expression of my views as an individual and not an official utterance.

STRONG OBJECTIONS MADE TO COUDREY BILL.

Dr. N. S. Davis, of Chicago, Member of the Revision Committee of the U.S.P.:

Here are a few reasons why I do not approve the Coudrey Bill. Several other reasons might be given, but these are sufficient.

The present method of preparing and publishing the Pharmacopœia is sure to satisfy the medical and pharmaceutical professions best, for both are well represented and various parts of the country are represented. Moreover the United States Government is represented through its various medical corps. If issued by Government the Pharmacopœia will represent the views of one editor or possibly a small board, but will not represent the combined views of many of the representative men of both professions.

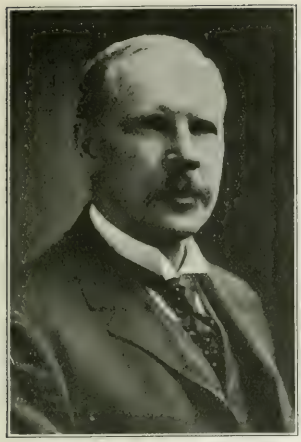
Many researches are made by sub-committees of the revision committee or by chemists or pharmacists working under them. This work, which is very important, is done by some of the best investigators in the country and is more authoritative than work done by Government employees.

It is important that the Pharmacopœia represent the needs of physicians and pharmacists, which it is sure to do if they prepare it.

Unless the Pharmacopœia is revised annually or oftener all drugs cannot be standardized as this proposed bill would have them, and newly discovered drugs cannot be purchased or used. Therefore advances and improvement in therapeutics and pharmacy will necessarily be checked or prevented.

Too frequent revisions of the Pharmacopœia would destroy its value as a standard because the standard would be constantly changing. The present decennial revisions are not frequent enough, but annual or semi-annual revisions, such as would be needed if every drug must be standardized before used by physicians, are not desirable.

The contents of all proprietary remedies should be known and published, but this should in no way be connected with the Pharmacopœia.



DR. H. H. RUSBY, New York, president of the A.Ph.A.

GEO. M. BERINGER, Camden, U.S.P. and N.F. committees, A.Ph.A.

E. G. EBERLE, Dallas, Tex., president-elect of the A.Ph.A.

CO-OPERATION WELCOMED, BUT NOT CONTROL.

Dr. H. H. Rusby, President of the A.Ph.A., Dean of New York College of Pharmacy of Columbia University and Member of Committee on Revision U.S.P.:

In reply to your request for an expression of opinion as to the desirability of the publication of our Pharmacopœia by the Federal Government, and as to the merits of the Coudrey Bill, providing for such publication, I will say that by the present method of Pharmacopœia revision, the revisers have the benefit of the deliberations of a convention continuing for nearly a week, its members being the authorized representatives of all incorporated medical and pharmaceutical associations, and colleges and schools, besides those from the Government departments most interested. I cannot conceive of any method that would be more general and thorough in its presentation of all interests and views. It is the admiration and envy of all pharmacopœia makers abroad, who act under the national system. I firmly believe that any method of Government publication that excluded this feature would result in a book that would be, comparatively speaking, a failure.

On the other hand, publication by the Government could eliminate the element that has resulted in previous failure to supply a satisfactory book by the present method. This element is the want of such an amount of money as is absolutely necessary to thoroughness in revision work. It is not at all certain, nor even very probable, that the convention will adopt the only feasible plan for securing such necessary funds.

The above considerations lead me to believe that some plan of co-operation between the Government and the convention would afford the best possible basis for securing the desired result.

As to the bill now before Congress, perhaps the less said about it the better. Its every feature shows the unfitness of its author to deal with so serious and complicated a subject. The relations between commercial and professional principles and interests are so numerous and so close and delicate in this case as to demand something more than even a good knowledge of the subject matter concerned. Whoever takes charge of this proposition should be one of long and close experience with the applications of the Pharmacopœia, as well as readily familiar with its provisions, and he must then know enough to wait until the proper time for action shall have arrived. President Taft has indicated his intention of asking Congress to provide a National Department of Health, and it is not likely that so greatly needed a reform will be neglected. Such a department would be the natural and proper authority to have charge of any Government interests in the Pharmacopœia. Any arrangement whatever which anticipated this proposed readjustment would seem to me to be premature and unwise.

BELIEVES PRESENT SYSTEM IS THE BEST.

E. G. Eberle, President-elect and Member of Committee on U.S.P. of the A.Ph.A., Dallas, Texas:

I am fully impressed with the importance of the bill introduced in Congress relative to the editing and publishing of the Pharmacopœia by the Government, and beg to say I am not fully prepared to express myself on this subject. It is not a surprise, for doubtless many have shared the opinion with me, even before the Pure Food and Drugs enactment, that this would be suggested and eventually result in the laying down of standards for drugs, chemicals and their preparations directly by the Government. Whether this will be through such a publication as the Pharmacopœia now is, or whether it will be more specifically and distinctly a book of standards, including also commercial drugs, etc., remains to be seen. The Government is devoting more and more attention to public health matters.

Conservatively speaking, I do not anticipate the passage of such a measure at the present time, but it is quite difficult to prognosticate what Congress may do, for we must be ready for surprises even from this source. I do not think the Government is in position to handle the proposition satisfactorily, surely not without serious consideration which will require time. Personally I have doubts whether Federal control will ever be advisable, for I believe that the Pharmacopœia should be revised and be under the direct supervision and control of those for whom the book is intended, through a very general representation of all these interests. Government assistance is highly desirable, but to me it seems the present method with increased interest on the part of the medical organizations and of the manufacturers will bring the best and most practical results. I thank you for this opportunity and appreciate your interest in this important matter.

PAST AND FUTURE REVISIONS OF THE U.S.P.

George M. Beringer, A.M., Ph.M., Chairman Committee on Standards, Member of Committees on U.S.P. and N.F., Member of Council, Etc., of A.Ph.A., Camden, N. J.:

The proposition that the Government shall confiscate, edit and publish the United States Pharmacopœia and the National

Formulary does not appeal to me either as dictated by wisdom or warranted by existing conditions. We have no reason to believe that Government ownership of these books is approved by a very large percentage of those connected with the practice of medicine and pharmacy or in the commercial and manufacturing interests directly concerned. Of course, the proposition probably has the backing of certain over-zealous employees of the Government who desire to impress their authority and possibly their ultra-radical and impractical ideas upon these standards.

The United States Pharmacopœia has been successfully revised eight different times, and each revision has shown a decided improvement and a proper advance. The method of revision is in keeping with the precepts of freedom and representation in legislative matters that are looked upon as the cardinal principles of American institutions and liberty. The criticism that this system is antiquated and no longer serves its purposes is one that might be applied with equal force to our constitutional methods of National and State legislation and the fallacy of which is demonstrated by the results.

Now, on the eve of the ninth revision, the most favorable conditions exist, and we have every reason to anticipate a thorough and critical revision. Unprecedented is the interest shown by all branches of the medical and pharmaceutical professions, and of the trade interests concerned in importing, collecting, manufacturing and handling drugs. Very general is the demand of all these varied interests for representation in the coming convention and on the Committee of Revision, and it is only fair to assume that with a committee of experts selected to represent the best knowledge obtainable from these sources there will result a book of standards that will reflect the advance in medicine and pharmacy and be acceptable as the legal authority.

It must be conceded that the ninth revision must be prepared under conditions not previously existing and that each statement must be carefully weighed as a legal enactment setting forth the truth and must be fair alike to the consumer, prescriber, dispenser, manufacturer and the Government, and protect all of these interests from fraud, impractical standards, errors, unwarranted interference with honest and correct business methods, and improper prosecutions.

The Committe on Revision should be composed of experts representing all these various interests with a fair representation from the Government departments. The personnel of this committee must be jealously guarded and it must be composed of men of unquestioned character, integrity and probity, who cannot be influenced by special interests. With such a committee the very best results can be expected and certainly a political Pharmacopœia prepared under Government domination would not be comparable to such a work.

A Pharmacopœia that represents the views of those best acquainted with all the interest that it conserves should be at once the best and most practical book. In those foreign countries where paternalism is associated with imperialism and the Pharmacopœia is prepared under Government management, there is much criticism of the representative character of the pharmacopœial commission and the impracticability of many parts of the work. No one can deny that the United States Pharmacopœia prepared by a system representative of our free institutions is the peer of any of these foreign works, and in some of its features is decidedly in advance.

Government control would minimize the value of the work of individual study and experimentation and remove the incentive for much of this excellent though gratuitous work, thereby closing many of the avenues that today are concentrating their efforts toward improvements in the Pharmacopœia.

The National Formulary is essentially a guide to the dispensing pharmacist, and to carry out its intended scope and sphere of usefulness it must be necessarily prepared by practical pharmacists. Government control of formulas and methods of manipulation and compounding is a most un-American idea, an exhibition of the worst form of paternalism and smacks strongly of the ridiculous. The measure proposed by Representative Coudrey exhibits in his as well as in other features the lamentable lack of acquaintance with true conditions of medical practice and the trade in drugs that is so often apparent in the halls of legislation.

Equally objectionable is the feature that would forbid the use of [illegible] drugs and chemicals for manufacturing purposes, which would place our manufacturers at a disadvantage in obtaining their raw materials for many of their products, which when completed fully comply with the official requirements. The regular procedure of manufacturers would by this Act be declared "criminal."

Rather a stupendous proposition and an interminable undertaking is the proposed requirement that the United States Government shall in the United States Pharmacopœia "have a complete test for purity and strength of all drugs and chemicals, whether generally used or not." Such a Pharmacopœia would be a unique medley.

While the crudities and inconsistencies of this measure as submitted should condemn it from serious consideration, it behooves the drug interests to be continuously on their guard that some such piece of foolish and impractical legislation be not enacted.

SAFEST IN THE HANDS OF THE PROFESSIONS.

Torald Sollmann, M.D., Member Council on Pharmacy and Chemistry, American Medical Association, Cleveland, Ohio:

I regret that I have not arrived at a fixed opinion regarding the publication of the Pharmacopœia by the Government. The present arrangement, however well it may work in practice, appears to be theoretically incorrect. Congress has practically delegated its law-making function, in this respect, to a commission which is entirely independent of Congress. On the other hand, many of the features of the Pharmacopœia are safest in the hands of the professions, rather than in those of the Government. Possibly the second plan which you mention may be the best. Your question could be answered more specifically, I think, when the function and scope of the Pharmacopœia and National Formulary have been more sharply defined.

TRADE INTERESTS SHOULD NOT INTERVENE.

Dr. L. F. Kebler, Chief, Division of Drugs, Bureau of Chemistry, Department of Agriculture:

Your favor at hand in which you request me to express an opinion as to the desirability of the Government editing and publishing the United States Pharmacopœia and the National Formulary, and in reply desire to state that while I am personally satisfied with the present status of the two publications, it is desirable to state that if dealers interested in products recognized by these two authorities endeavor to influence adversely the standing and high character of these two publications to the degree that they are endeavoring to evade responsibility under the Food and Drugs Act, it is my opinion that the editing and publishing of these two volumes must be removed from the direct influence of trade interests as far as possible.

MANY OBSTACLES IN THE WAY OF CHANGE.

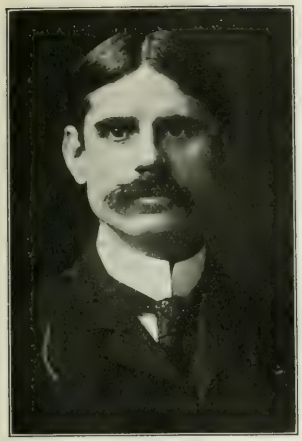
Prof. Charles H. LaWall, Philadelphia College of Pharmacy, Member Committee on National Formulary, A.Ph.A., Philadelphia:

Relative to the Coudrey Bill, amending section 7 of the Food and Drugs Act, I would say that in its present form, if I have seen a correct copy of it, it does not really merit serious consideration, as its framer evidently is not familiar with either of the works in question. It reminds me very much of our Pennsylvania law, which requires preparations to conform to the standards and tests of the National Formulary, when as a matter of fact, the N.F. contains neither standards or tests.

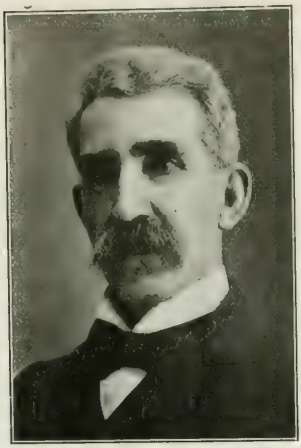
The subject of governmental revision, considered in the abstract, looks very favorable, but there are so many obstacles that I do not see how such a radical change could be considered seriously for the approaching revision.

Dr. Murray Galt Motter, Secretary Pharmacopœial Convention, Washington, D. C.:

A recent Presidential order prevents me from in any way meddling with National legislation. What opinion I may have with reference to Congressional action must be kept in the background.



Prof. H. V. ARNY, Cleveland,
dean Cleveland School of Pharmacy.



Prof. L. E. SAYRE, Lawrence, Kan.,
member of the revision committee.

Prof. I. V. S. STANISLAUS, Phila.,
dean dept. of pharm., Med.-Ch. College.

MIGHT AS WELL EDIT DICTIONARIES.

Prof. H. V. Arny, Dean of the Cleveland School of Pharmacy, Member A.Ph.A. Committee on National Formulary:

Relative to the Coudrey Bill, I beg to express the opinion that it will be a sorry day for pharmacy when our present democratic method by which the Pharmacopœia is revised, is replaced by a commission appointed by the Government, and for this reason I most earnestly hope that the day of Government revision may be long postponed.

The plan of the Government to publish a book of standards independent of the U.S.P. and N.F., which at first blush seems not wholly bad, will in effect mean the ultimate extinction of both the U.S.P. and N.F., for whenever the standard adopted by a Government chemist, differs from those of the Pharmacopœia and N.F., the provisions of the two last works will of course be practically nullified.

As to the rather wide-spread statement that it is essential that the Government should publish the two books used as standards of pharmacy and medicine, because employed to enforce the food law, has no more reason than would be the statement that the Government should publish a dictionary, because from time to time court decisions hang on the meaning of a certain word.

CONDITIONS NOT RIPE FOR FEDERAL CONTROL.

Prof. I. V. Stanley Stanislaus, Ph.G., B.S., Ph.D., Dean Department of Pharmacy, Medico-Chirurgical College, Philadelphia:

In my opinion the time has not yet come for the Government to take up work of this kind; at any rate, the various departments concerned do not at the present time appear to be organized in a manner to satisfactorily carry on the work of the revision. There is no doubt that with the Government resources behind it, the work of the revision could be made more thorough—and it should. There seems to exist an idea in some minds that the U.S.P. and N.F. could not be published as economically by the Government as by private concerns; nothing could be farther from the truth, in my opinion. The bureaus could not only publish the standards as economically as at at the present time, but what is equally important and perhaps more, they could publish them more promptly and frequently.

Since—for above considerations—it seems impracticable to have the Government revise the U.S.P. and N.F., could not some plan of co-operative work between the Government and the practicing physicians and pharmacists be adopted?

With the immense amount of valuable material collected by the various "committees on adulteration and sophistication and drug status" in the various States of the Union, could not one of the Federal bureaus act as a "clearing house" for devising standards and methods of ascertaining or maintaining the same, all based on the above consensus of practical opinions of practical men, from personal contact? It seems logical this could be done, it is found practical in the old world.

Further, is it not true that the Pure Food and Drugs Act of 1906, can be so amended as to recognize other standards, i. e., such as can be formulated for practical commercial purposes by the Bureau of Chemistry—and then the authority of the U.S.P. and the National Formulary would amount to about as much as an icicle on the other side of the River Styx.

While I am of the firm opinion that no Federal department is at the present time in a position to undertake the work of the revision single-handed, we should seek the co-operation of the Government, for be it as it may, in the near future the work of the revision will be done by that authority, for they are there in office, to care for the welfare and well-being of the people.

In conclusion permit me to state that I regard H.R. Bill 13,859 as a crude, ambiguous, careless, illiterate jumble, a thorough exhibition of what the English language should not be, yet, I must draw attention to the fact that it is a sign of the times, and that even though defeated, other bills will be presented which *will* be passed.

COUDREY BILL NOT TO BE TAKEN SERIOUSLY.

L. E. Sayre, Dean, School of Pharmacy, University of Kansas, Lawrence, Member of Committee on Revision of U.S.P.:

I have noticed the somewhat remarkable bill introduced in Congress. It does not seem to say what it means to say, and if it said what it meant it would be a still more remarkable document.

To be brief, I cannot believe that the United States legislative bodies will seriously consider the bill. It may secure some temporary impetus from the promoters who seem to be posing—for public good—we have many striking the attitude of "Reform" just now who have their motives deeply rooted in selfishness.

I cannot take the time to discuss the point, but I wish to say: The Government cannot afford to take a step backward

in the U.S.P. and N.F. standards. It cannot afford to antagonize the pharmaceutical chemists and scientific men who have labored so successfully for them. It cannot afford to adopt an expensive, unscientific method, as compared with the past, for revising these National standards. And it cannot afford to place itself in the position of confiscating a property which belongs to a corporation heretofore favorably recognized by the United States.

SHOULD REVISE U.S.P. AND N.F. AT SAME TIME.

Franklin M. Apple, Ph.G., Former Chairman of Section on Practical Pharmacy and Dispensing of the A.Ph.A., Philadelphia:

I wish to be recorded as favoring the plan heretofore followed in revising and issuing the U.S.P., viz.: it is wise to stick to that which has proven to be meritorious rather than to experiment with an untried plan, the details of which have not been published for careful thought and meditation. The last edition of our U.S.P. is internationally conceded to be the best of pharmacopœias, hence why think of following some new plan of action, unless it be to gratify the ambitions of some party or parties who have not been accorded the notice or authority they crave?

Unquestionably the pharmacists and medical men realize more fully the importance of the Pharmacopœia than any other class of men, hence it is reasonable to presume that they will produce a more practical book than can be compiled by those not so familiar with the subject.

If our National legislators had shown abilities to produce legislation that gave anything like as universal satisfaction to the people as the last Pharmacopœia did to those guided by its contents, a greater respect for their efforts would be manifest than is the case. The time intervening between this date and the time when the next Pharmacopœia should be issued and distributed is entirely too short to think of following any new plan of procedure. "Never swap horses in the middle of the stream" is as true today as it was when this adage was first uttered.

The N.F. and the U.S.P. should be issued at the same time and date, especially so if the views of Professor Oldberg are to be seriously considered—and they should either be revised by the same body of men or by two bodies of men working in close harmony. This will undoubtedly necessitate the A.Ph.A. relinquishing its right to the N.F., but satisfactory and just arrangement can undoubtedly be made for that action. The proposed receipt book could and should be compiled and distributed by the A.Ph.A., which is the only National pharmaceutical association worthy of sponsorship for such a publication.

In conclusion, I wish to state that I think that the interests that have superintended the revising and publication of the U.S.P. have not proven unworthy of the trust reposed in them, hence they should not be replaced by another lot of men who must be viewed more or less as experimenters at this important work.

MUST BE NO POLITICS IN REVISION METHODS.

Philip Asher, M.D., Dean of New Orleans College of Pharmacy, New Orleans, La.:

The pharmacists and drug interests of this country have never been confronted with a question of greater importance than Representative Coudrey's bill introduced in Congress to amend the Pure Food and Drugs Act, authorizing the Government to edit and publish the United States Pharmacopœia.

This question is of such paramount importance that it deserves greater thought and consideration than the few days time given to the writer and should be made a special order of business at the next Pharmacopœial Convention, provided that at that time the bill is still in committee.

If we had been suggested the Government prepare and issue a book of standards for all drugs and their preparations and chemicals, thus superseding the U.S.P. and N.F., such a procedure would not be out of place and would in no wise interfere with the functions of the aforesaid works, but the editing and publishing of the U.S.P. should not pass beyond the control of a revision committee—one free from governmental supervision. The U.S.P. is primarily a publication almost wholly pharmaceutical and which among its compilers rank the medical profession, the greater part of the work is performed by those of pharmaceutical training.

Pharmacists must not lose their individuality. Already too many inroads have been made in this respect. Within the pharmaceutical ranks there are many well qualified to publish a Pharmacopœia of the people and for the people, that governmental aid is unnecessary, except such recognition from Congress that the U.S.P. is a legalized standard.

It is only too well known the annihilation that *politics* has caused in the various pharmaceutical bodies and that boards of pharmacy in some States have been composed of men of political pull and whose qualifications as examiners and guardians of the public welfare are nil, and what is true of State affairs would be even more so in National. The desire for political recognition would in this last condition become even keener, with the result that the cardinal object of this gigantic undertaking would be lost.

The words of the eminent chairman of the present revision committee of the U.S.P. are hardly cold regarding attempts at bribery and would not such rumblings be greater and perhaps in this case upon justifiable grounds, if the publishing of the U.S.P. is placed in political domain?

The revision committee of the Eighth Decennial Revision of the U.S.P. has performed a monumental task, largely a labor of love and which redounds to the glory and progressiveness of American pharmacy. The few errors contained therein are excusable in a work of such magnitude and certainly are not sufficient to detract from its completeness, so what plausible reason can be assigned that it should be placed under Government control?

The revenue derived from its sale cannot be insufficient to meet every demand of those practically interested in its revision. Since the adoption of the Pure Food and Drugs Act the sale of the Pharmacopœia has been greatly increased and it is safe to predict that the next edition will be in still greater demand, not alone from pharmacists and chemists but by the various manufacturers of foodstuffs.

A bulletin issued, let us say, by the Department of Agriculture giving complete tests of descriptions for each drug and preparation would be in keeping with the advancement of the times. This bulletin could even go into more detail of the methods of testing than would be permissable in the U.S.P., especially regarding those, impossible for lack of special apparatus, to be conducted by the average pharmacist. Such a bulletin would serve as a standard in forensic questions, as only such standards would be adopted as have been proven absolutely correct by a competent corps of chemists.

NO OCCASION FOR FEDERAL INTERFERENCE.

L. D. Havenhill, Ph.M., Professor of Pharmaceutical Chemistry, School of Pharmacy, University of Kansas, Lawrence:

I see no occasion for governmental interference with the issuance of the U.S.P. The Food and Drugs Act of June 30, 1906, recognizes the Pharmacopœia official at the time—and it seems to me that it is the prerogative of those who are governed by the provisions of this book to say what it shall contain and when it shall be official—a condition which I believe already exists to a far greater degree than possible under governmental supervision. It will be time enough for the Government to step in when it is evident to the majority of the American people that the medical and pharmaceutical professions of the United States have degenerated to such a degree that they are no longer able to serve them.

At the present time the United States Government has rewarded the worthy efforts of these time-honored professions with its recognition and has placed at their command the one thing that they have needed, the power of enforcement. For it now to deprive them of the right to revise and publish the U.S.P. without showing just cause would indeed be an unusual procedure for the Government, "of the people, by the people and for the people."

S. L. Bailey & Son, Pioneer, Ohio:

Decidedly no. There are enough well developed brains in the fraternity to revise the U.S.P., giving us a much more satisfactory work than we could expect from any board appointed by a Congressional committee.

SAMUEL L. HILTON, Washington, of legislative committee of A.Ph.A.

WM. JAY SCHIEFFELIN, New York, chairman prop. committee, N.W.D.A.

CHARLES H. HUHN, Minneapolis, president of the N.A.R.D.

SHOULD HESITATE TO CHANGE THE REVISERS.

William Jay Schieffelin, President of Schieffelin & Co., New York, Chairman Committee on Proprietary Remedies, National Wholesale Druggists' Association:

In reply to your inquiry regarding my opinion of the Coudrey Bill, I wish to say that I think it premature and very badly drawn. The question is one of such great importance that hasty action would be disastrous.

The high standard attained by our Pharmacopœia is an evidence of the value of the services of the present Revision Committee and should make us hesitate to lose these services.

A measure which would add the authority and the facilities of the Government to the experience of our Revision Committee would be of advantage, but it would be a very different measure from the abrupt bill which we are considering.

GOVERNMENT SHOULD PAY COST OF PRINTING.

Charles H. Huhn, President National Association of Retail Druggists and President American Druggists' Syndicate, Minneapolis:

In my judgment, it would be unwise for the Government to take full control of the editing and publishing of the United States Pharmacopœia, a work which, it is agreed, is the very best of its kind and character in the world, edited for nearly a century by the progressive Pharmacists and Physicians of the Nation. It has, without governmental interposition, attained such a prominent place in the world of Pharmacy and Medicine as a standard for purity and strength of drugs and chemicals, which prompts the thought "Let well enough alone."

While Pharmacopœias of other countries have been edited and published under control of government, they have admittedly not reached the same high standard for scientific and practical purposes, such as the U.S.P. represents. An invidious assumption might therefore be justified, viz., that Federal control of the U.S.P. would be dangerous, and might result in retrogression and general impotency.

The U.S.P. as now edited is the work of love of men representing high and important professions, for the establishing of high and undisputed standards by professional representatives, who prepare and administer medicaments for the preservation of health and the saving of life. No other motive impels the minds and hearts of the revisionists of the U.S.P. Therefore, leave the work of research and test to the professions of Pharmacy, Medicine and Chemistry in peace and harmony, as has been the custom of nearly a hundred years.

If, however, the Federal Government desires to aid and assist in expediting the publication of the U.S.P., then let it suffice that such aid and assistance come in a monetary appropriation for the purpose of hurrying the decennial additions into the hands of the professions, who have most need of the same.

This might be accomplished by adding to the duties of a bureau, already established, the quick assembling of data from the members of the authorized committee on revision by the franking of letters and follow-up letters, to slow members of the committee, by an appropriation by Congress for remunerating the members of the committee so that each may receive compensation for the valuable service rendered. So far and no farther would I acquiesce in Government control of the U.S.P.

As for double standard of strength and purity of drugs and chemicals, I would place myself in direct opposition to the suggestion. "Forget it" and stick by the single standard. If at first it appears wrong, then it can be made right by periodical amendments, and in the meantime, the public good will not suffer.

By way of postscript, let me add that the good public is receiving so much gratuitous service from the pharmacist and physician, that I feel amply justified in the suggestion that the public treasury defray the expense of publication of the U.S.P. to the very cent, and distribute it gratuitously to all who can furnish satisfactory credentials of title to such favor. The Horse Doctors and Agriculturists enjoy such governmental recognition, why not the Physicians and Pharmacists who deal with the health and life of humanity?

OPPOSES STANDARD TO REPLACE U.S.P.

Samuel L. Hilton, Chairman of A.Ph.A. Committee on National and State Legislation, Washington, D. C.:

I have carefully gone over the bill introduced by Congressman Coudrey, providing for the publishing and editing of the "U.S. Pharmacopœia or the National Formulary." While this bill is poorly drawn, is ambiguous and does not provide for an appropriation, which would be absolutely necessary for carrying on this work, it can be amended and corrected in committee before it is reported, provided the committee decides to report the bill favorably.

As to the Government publishing and editing the U.S. Pharmacopœia, I am decidedly opposed to such a move. The interests in this country are so diversified and the field to be covered so large that I believe better results can be obtained

by the present method that has been followed for nearly 100 years than by the Government assuming control, editing and publishing the Pharmacopœia. The Government should be well and largely represented and should co-operate in every way with the medical and pharmaceutical professions to make the coming revision of the U.S.P. the best and the most perfect Pharmacopœia ever published in any country.

If the Government should take control of the U.S.P. and N.F. what department would perform the work? The Department of Agriculture is the best equipped. This department is at present charged with the enforcement of the "Food and Drugs Act," the duties being executive, not legislative nor judicial. Both of these books are the standards for drugs under the provisions of this Act. The Department of Agriculture should not be burdened further, nor do I believe that those who are charged with the enforcing of the standards should do more than assist in preparing them; further it would open the doors for severe criticism by those who are opposed to the enforcement of the Food and Drugs Act.

No other branch of the Government service except the Public Health and Marine Hospital Service is in a position to undertake this task, and I am sure Congress will not be willing to appropriate money sufficient to establish a separate bureau for the purpose of properly carrying on such work. It has been suggested that the results of the revision committee's labors be submitted as rapidly as the various sections of the work are completed to the laboratory of the Public Health and Marine and Hospital Service, for the purpose of trying out all processes, formulas and standards and reporting the results thereof before publication. This branch of the Government service has at present general supervision of the standards for viruses, serums, toxins and analogous products, and prepared the present standard for Antidiphtheric Serum recognized by the U.S.P. VIII and has performed an enormous amount of work on this and other allied subjects. The laboratory is in a position to test all processes, formulas and standards with accuracy and dispatch if it receives an additional appropriation from Congress, thereby reducing the expense incident to Government publication, making the U.S.P. thoroughly representative of Government as well as private interests and establishing standards, processes and formulas that can be relied upon. I believe this to be an excellent suggestion that can be carried out and will be productive of good results. I am sure this bureau would co-operate and all that the Government departments desire is to be represented in the making of the Pharmacopœia.

The editing and publishing of the Pharmacopœia by governments is nothing new except in this country. In most of the foreign countries this plan is followed, but those competent to judge declare that there is not a Pharmacopœia the equal of the U.S. Pharmacopœia. In my judgment this is due to the fact that in this country the views of those most interested, from every quarter, are obtained and these views are carried out by representative men of the medical and pharmaceutical professions as a labor of love, unhampered by politics or any other influences, solely for the purpose of benefiting humanity. The representatives of the medical and pharmaceutical professions are more familiar with the demands and requirements of these standards from a practical standpoint than would be a small committee of Government scientists who would more likely consider the theoretical part only, therefore, I am decidedly opposed to the Government editing and publishing the Pharmacopœia.

In regard to the Government preparing and issuing a book of standards to supersede the U.S.P. and N.F., I am opposed to it. If anything of this kind should be done there would be no further use for these standards and the Government might as well publish the U.S.P. The objections I have just made apply equally well here and with even greater force.

J. Q. Emery, Former President Association of State and National Food and Dairy Departments, Wisconsin State Dairy and Food Commissioner, Madison, Wis.:

Believing as I do that the definitions or standards in the [illegible] should be scientific and not political—that is, formed strictly in accordance with scientific principles and not as a result of political pull—I very strongly favor the present plan of preparing the United States Pharmacopœia to that of turning the matter over to the National Government.

CRIMINAL BRANDING OBJECTIONABLE FEATURE

H. A. B. Dunning, of Hynson, Westcott & Co., Baltimore, Member of A.Ph.A. Committee on National Formulary:

Regarding the desirability of turning the Pharmacopœia and National Formulary over to the United States Government and the Coudrey Bill, I will state that I do not feel prepared to give an opinion on the first proposition until I have heard the matter thoroughly discussed. In regard to the law proposed, I might state that its provisions do not appeal to me. Even if the Pharmacopœia or National Formulary should be given over to the control of the Government, I am not in favor of these books being encumbered with all the miscellaneous drugs and chemicals used in medicine in this country, nor do some of the other suggestions seem wise, as, for instance, branding, as criminal acts, instances when drugs or chemicals of different standards than those of the Pharmacopœia or National Formulary are used.

Regarding the suggestion that the Pharmacopœia or National Formulary and all other formularies be superseded by a book of standards, issued by the United States Government, I cannot see of what value such books as the Pharmacopœia or National Formulary would then be to the interest holding them, unless they were so altered as to become commentaries on the Government book. I am obliged to confess that this subject is new to me and as I am never in favor of radical movements, except in extreme cases, it seems best, to me, that no laws be considered until the pro and con of such measures be thoroughly discussed in current pharmaceutical and medical literature.

IS LEGITIMATE OUTCOME OF PURE DRUGS LAW.

George Merrell, President of the William S. Merrell Co., Cincinnati, Ohio:

We are in accord with the movement to place in the hands of the Government the editing and publishing of the U.S.P. and other works upon which the standard of drugs and chemicals is based. Such a movement, in the judgment of the writer, is the legitimate accompaniment of the Pure Food and Drugs Act. In connection with the proposed bill, however, there should be established a commission, whose function shall be not only to establish an officinal standard, but it should also take into account the practical value of every formula introduced into the U.S.P., or other authorized work, nor should any formula be recognized as officinal unless duly examined and tested, and approved by a commission appointed by the Government. In short, all publications by private individuals or corporations should be eliminated and their encroachment upon the proprietary rights of others disregarded entirely in making a standard work for the guidance of the medical profession and drug trade. Such a commission should have upon it representatives from the kindred professions of medicine and pharmacy, men of high standing, whose judgment would be accepted without question, and whose compensation should be liberal enough to make it possible for them to give all the time necessary to the consideration of every question submitted to it.

NO SOUND ARGUMENT FOR SUGGESTED CHANGE.

F. C. Godbold, Chairman of the Council, American Pharmaceutical Association, New Orleans:

The Pharmacopœia is the common property of the pharmacists and physicians of the country, it is edited and published under their supervision and by members of their professions and it is superior to any book of the kind published anywhere in the entire world. We may be able to improve it, and no doubt will, but while it is recognized as our legal standard by the Government, I do not believe that it could or would be improved if issued by the Government, for the Government bureaus are not made up of pharmacists and physicians having the kind of experience so essential to the preparation of the Pharmacopœia that is possessed by the representatives of these professions who are chosen to serve on the revision committee. I know of no good, sound argument why the Government should attempt to deprive us of what is rightfully ours, and I am strongly opposed to the proposed change.

HENRY C. BLAIR, Phila., president Philadelphia Branch, A.Ph.A.

ERNST O. ENGSTROM, of Pittsfield, Mass.

Dr. JOHN F. HANCOCK, Baltimore, former president of the A.Ph.A.

ADVOCATES DEPARTMENT OF PUBLIC HEALTH.

Henry C. Blair, President Philadelphia Branch, American Pharmaceutical Association:

Certainly the Agricultural Department is not the one to have charge of either the enforcement of drug laws or the making of standards. A Department of Public Health should be established. It should have charge of enforcing drug laws. It should have charge of making and publishing standards. It should be entirely free from politics. It should have an appropriation of funds sufficiently large for doing the work thoroughly. It should have power to secure the services of competent pharmacists, chemists, physicians and others to do the work of making a book of standards for drugs.

Unless the men who make the U.S.P. and N.F. are well paid and held responsible for doing the work in a specified time we cannot have first-class books.

The head of such a department as I have mentioned should be a broad-minded man who knows medicine and pharmacy. If such a man cannot be secured, then one who knows pharmacy from a practical point of view would be best, but above everything else he should be absolutely honest.

Unless such a department is created it would be better to allow our standards to be made by the committees having them in charge at this time.

DOUBTS POSSIBILITY OF ANY IMPROVEMENT.

Ernst O. Engstrom, Pittsfield, Mass.:

The proposed law, "that the Government should edit and publish the U.S.P.," I do not believe should pass. The present method used in formulating, editing and publishing the U.S.P. has produced a book which has no superior and hardly any equal among the foreign Pharmacopœias issued under government control.

Every doctor, pharmacist, manufacturing pharmacist and teacher in schools of medicine and pharmacy who is interested in his calling feels it a personal duty to contribute of his knowledge towards the making of the U.S.P. the best book of its kind in the world. The medical and pharmaceutical press feel more at liberty to offer suggestions and criticism to the present revisors of the U.S.P. than they would to Government appointees. The present revisers being elected by the different delegates (a representative body of nearly all interests) must naturally listen to and consider all suggestions made by their constituents.

The German Empire, which has a number of states using the same "Pharmacopœa Germanica," is the country in Europe which may best be compared with ours. They have constantly added to their number of revisers from different parts of the country and by this action prove the need of a large committee of revision in order to enable them to cover all interests. In fact, although the German Pharmacopœia is printed under government control, they are gradually drawing nearer to our system in editing their Pharmacopœia.

In the smaller countries the few copies actually in demand would cost a great deal more than any private body of men would be willing to pay. Therefore the probability to lose money besides time and labor will naturally deter men of ability from taking up this work and the public being benefited by it, makes it obligatory on the part of their respective governments to take it up. This condition does not exist here, consequently it is better to let well enough alone.

The compensation for each individual contributor to the U.S.P. from a financial standpoint is comparatively small and paid for partly by the honor of being one of the contributors. I fear if the Government should establish a commission a number of so-called experts with political influence would be appointed and the interest now shown by the rank and file would be lacking. We small retailers would have to keep still and accept whatever these learned men gave us.

United States is so large, the interests and conditions governing each portion so different, that free expression of ideas should be encouraged. I doubt if a Government commission large enough to accomplish this end could be established. Unless an improvement over present conditions could be made, which I doubt, the U.S.P. should be edited and published as at present.

ABHORS POSSIBLE POLITICAL ACTION.

Dr. J. F. Hancock, ex-President A.Ph.A., Baltimore:

The Pharmacopœia of the United States, since its first publication in 1820, and in all of its decennial revisions, has been in keeping with the spirit of medical and pharmaceutical progress. The first edition and the revised editions of 1830 and 1840 were the work of physicians in all sections of the United States, except that of 1840, when the co-operation of the colleges of pharmacy was invited and accepted, but the real work of revision and publication belong to the medical profession. In the revision convention of 1850, colleges of pharmacy and other pharmaceutical organizations were requested to send delegates, which they did, and valuable assistance was then given by pharmacists, since which time pharmacists have been conspicuous in revision work, and have

hold important positions in the preparation and issue of the Pharmacopœia.

The work has never been, and is not likely to ever be entirely satisfactory to all concerned, yet each decennial edition has been a credit to American medicine and pharmacy. There is no need of change in the method of revising and publishing the U.S. Pharmacopœia. For the Government of the United States to undertake the revision and publication, as proposed, would be a fatal error, not that the physicians in the service of the Government are not able representatives of their profession, but their sphere of action would not represent the needs of medicine and pharmacy in all of the cities and hamlets of our country. The Pharmacopœia should be both scientific and practical to meet the needs of the profession and all classes of citizenship.

The U.S.P. should be a book of select formulas, that will represent the best interest of medical and pharmaceutical practice in all parts of the United States, with a view to uniformity of strength of potent ingredients and quality of finished product. It is intended primarily for the physician, and secondarily for the pharmacist, as manufacturer and dispenser, in order that the latter may keep in stock, ready for prompt dispensing of the preparations required by the physician in his general practice.

Until recently it was a matter of confidence of the physician in dealing with the manufacturer and dispenser. Now the Government has come to the assistance of those in need of medical treatment, by the enactment of law, compelling a uniform standard of strength and purity, so that both the physician and the patient are protected. This law—the Pure Food and Drugs Law—and the standard for the preparations of the Pharmacopœia and National Formulary, is being duplicated by the Legislatures of the several States.

It is now desirable that the State laws should harmonize with the law of the general Government. This is as far as the Government and State should go in the matter of the Pharmacopœia and National Formulary.

As for the decennial revisions of the Pharmacopœia, the delegates representing the medical colleges, medical associations, the Army, Navy and Marine Service, together with the delegates from colleges of pharmacy and State pharmaceutical associations are, in my judgment, the most representative and capable to discharge the duty of editing the Pharmacopœia of the United States.

As citizens let us give aid in preventing confusion of ideas and complication in legislation; by so doing we will help to perpetuate the integrity and honor of an ideal Government. Let us hope that the American Medical Association and the American Pharmaceutical Association may never enter the arena of partisan politics to demonstrate the prowess of their strength. The lobby in legislative halls is the bane of good government.

GOVERNMENT BOOK OF STANDARDS NOT NEEDED

C. Mahlon Kline, of the Smith, Kline & French Co., Philadelphia:

I beg to acknowledge receipt of your letter referring to a bill which has been introduced in Congress to the effect that the Government should edit and publish the United States Pharmacopœia with the object of establishing one standard for all drugs and chemicals, and asking me to express an opinion on this subject.

If you refer to a bill which has lately been introduced and which is known to us as the Dusal Bill, we do not think it is to be taken seriously and is so impracticable as not to merit discussion.

If, however, you refer to the general plan of having the Government issue a book of standards, I would say that I am heartily opposed to such a change being made.

My reasons for this opposition are that the present method of issuing the Pharmacopœia has been highly satisfactory to all parties concerned and has led to the publication of a book which is considered superior to all other Pharmacopœias and a credit to the country. Why, therefore, should we change from a method which has given such excellent results?

The doctors and pharmacists who perform the work under the present arrangement are men engaged in the active practice of medicine and the dispensing of drugs. They, therefore, know best the requirements of medication and the proper dispensing of drugs in every day use. They are drawn from the whole United States, and therefore represent neither West nor East, North nor South. Should the Government issue this work it would probably be the work of a few men, neither active medicinal practitioners nor druggists engaged in active dispensing, and located in one small part of the United States.

The Government revisers, not depending for a living on the articles which they would standardize, would not be interested in carrying out those economies which we all realize are of great importance to the consumer as well as the producer.

Lastly, I would be opposed to such a step on the ground that there is no occasion for the Government to be called upon to burden itself with work which is already so ably done.

PRESENT METHODS EMINENTLY SATISFACTORY.

Frank G. Ryan, President of Parke, Davis & Co., Detroit, Mich.:

Speaking officially from the view-point of the business interests of our house, it makes not the slightest difference to Parke, Davis & Co. who edits or publishes the Pharmacopœia, provided the work is performed with due skill, knowledge and reason. If the present method of revising the Pharmacopœia decenially is superseded by governmental revision, our interests will not be affected in any way.

Speaking as a citizen and as a pharmacist, I am opposed to the change. The present methods of revision are eminently satisfactory. The work is done by a *corps d'elite*. There is no better talent or higher character in the country. And our Pharmacopœia sustains easily any comparisons that can be made with the pharmacopœias of other lands. Since private enterprise—the enterprise of medical and pharmaceutical societies and colleges—is performing this task with signal diligence, learning, enlightenment and practical grasp, why turn it over to the Government? There is something to be lost: what is to be gained?

There is some weight in the argument that since the Pharmacopœia and the National Formulary now have the force of law they should be revised and published by the Government. But logically, if the Pharmacopœia and the National Formulary be *legislative* in character, Congress and not some bureau of the executive department of the Government should do the revising, because all legislative powers are vested in Congress. But pharmacopœial revision by Congress would be impracticable. The argument is not convincing.

GOVERNMENT CONTROL WOULD BE MISFORTUNE

Fred B. Kilmer, of Johnson & Johnson, New Brunswick, N. J.:

Go where you will on this earth, the United States Pharmacopœia is acknowledged to be the grandest and best of all the pharmacopœias of the world. Its supremacy has been brought about by the united self-sacrificing, painstaking efforts of the representatives of medicine and pharmacy who have given their labors without pecuniary reward, unhampered by any influence except a desire to give the best that is in them for the benefit of the art and science of medicine.

We have only to compare our Pharmacopœia with those produced by "government authority" to see wherein our own Pharmacopœia has the advantage. The taking over of the Pharmacopœia by the Government will mean that all this great resource will be dissipated and the Pharmacopœia will simply become an arbitrary standard. While our Pharmacopœia has its faults, while the system by which it is revised has its drawbacks, it stands out clearly as a representative work.

In the forthcoming revision we do need the assistance and the powerful facilities of the Department of Agriculture, its great corps of experts and laboratories; we need the assistance of the Bureau of the Marine Hospital Service, the medical departments of the Army and Navy, the Customs Service and the Department of State. But these should come in and work side by side with the representatives of medicine and pharmacy.

Our experience with the bureaus of this or any government has taught us that a pharmacopœia or a book of standards issued from such a source will be arbitrary, unsatisfactory and will not represent the life and vigor of our present work. I believe that few manufacturing pharmacists, few thoughtful practitioners of pharmacy or medicine will approve of any

measure which will pass over to the Government the editing of the United States Pharmacopœia or the issuance of a book of standards which will supersede the Pharmacopœia or the National Formulary.

PRESENT REVISION COMMITTEE IS EFFICIENT.

Donald McKesson, of McKesson & Robbins, New York:

We are in receipt of your favor of the 21st instant in regard to the proposed changes in the United States Pharmacopœia, and take pleasure in making a few suggestions in regard to them.

The object of the U.S.P. is to prescribe the standard of drugs in the condition in which they are used in prescriptions or administered to the ultimate consumer. Standards for the crude sources of these articles are not only unnecessary, but hamper the manufacturer and increase the cost of the finished product without raising its value.

In line with this principle many of the standards for crude drugs should be replaced by closely defined standards for extractives, active principles and powdered drugs. The necessity for descriptions of powdered drugs microscopically examined is already well recognized.

Comment on excipients for tablets which are liable to cause decomposition of their active principles should be added where expedient. It is to be hoped that the U.S.P. Revision Committee will accept the recommendation of the various pharmaceutical and drug trade associations to publish the comments on present standards and recommendations for changes that they have before them, in order that they may receive the benefit of the mass of evidence available from those especially fitted by specialized experience to have a more intimate knowledge of individual articles than is possible for the members of the committee to possess.

It is questionable whether it is now advisable to transfer the control of these standards to the Government. The present committee is representative and highly efficient, and more permanent than any Government board which is liable to sudden and complete change under political exigencies.

It is to be recommended also that the present Revision Committee be awarded adequate compensation in order that they be justified to give sufficient of their time and their best attention to the important work in hand.

The N.F., as an official standard, in prescribing the make-up of compounds, hinders progress and improvement. It is only necessary that the ingredients be standard and the label correct and sufficiently descriptive. It is, of course, understood that some few of these compounds, by reason of popular and long usage, should be controlled, and these might be properly introduced into the U.S.P.

Many obsolete and inert articles and such as are not medicinal should be eliminated and such new articles as have been proven efficient and available should be added.

WOULD DESTROY THE USEFULNESS OF U.S.P.

George B. Kauffman, of the Kauffman-Lattimer Co., Columbus, Ohio:

In answer to your request for expression of opinion regarding the proposition that the Government shall take hold of the publication of the United States Pharmacopœia, have to say that in my opinion such a move would in large part destroy the popularity and usefulness of the Pharmacopœia. The present method of revision and publication is such as to enlist the interest and aid of the drug and medical professions throughout the entire country, and the Committee of Revision has the benefit of the widest possible experience.

Should the Government undertake the publication of the Pharmacopœia, the work will doubtless soon become the expression of but few experts who would lack contact with actual trade and practice, and would proceed on strictly scientific lines. It would also offer opportunity for undue influences.

I also hold the same opinion with regard to the proposition that the Government shall issue a book of Standards. The position which the Pharmacopœia has received in law gives it as much authority as it could possibly have, although published directly under the authority of the Government, and there appears to be no advantage to be gained by publication should the Government undertake this work. I feel that it would be a very unfortunate move.

NOT EXPEDIENT NOW TO CHANGE THE PROCESS.

Prof. W. A. Puckner, Ph.G., Chief Secretary, Council on Pharmacy and Chemistry, A.M.A., Chicago:

It is my opinion that eventually the United States Government will take a very active part in the revision of the United States Pharmacopœia. It is also my opinion that at the present time it is best that no radical change be made in the method of its revision. Since the Pharmacopœia has for its sole object the protection of the American people and the promotion of their health it is important that the people, through their representative, the United States Government, should have a very prominent part in its preparation. For this reason the Pharmacopœia will eventually, I think, be issued by, or under, the close supervision of the Government. This control should, I believe, be exercised by the proposed "Department of Health" with the co-operation of the other departments of the Government which are concerned. But I also believe that, until such a department of health, or its equivalent, has been placed on a sound footing, a more acceptable standard can be obtained if the present process of revision is adhered to in the main.

ENTIRELY IMPRACTICAL AND INADEQUATE.

George D. Rosengarten, Vice-President of Powers-Weightman-Rosengarten Company, Philadelphia, Member A.Ph.A. Committee on Standards for Non-Official Drugs:

In our opinion "Bill H.R. 13,859," that has been introduced in Congress to the effect that the Government "should" edit and publish the United States Pharmacopœia, with the object of establishing one standard for all drugs and chemicals, is entirely impractical and inadequate. It is well known that the Pharmacopœial Convention will take place in May, 1910, and immediately thereafter the Revision Committee will take up the question of formulating the Pharmacopœia of 1910. We believe that this work can be done much more effectively by those who at present constitute the convention for the purpose of revising the United States Pharmacopœia, than if it were left to political appointees.

PRESENT DISCUSSION IS OF GREAT VALUE.

Chas. S. Martin, of Nashville, President of the National Wholesale Druggists' Association:

In view of my official position and having appointed a special committee on legislation who will consider the subject of the revision of the Pharmacopœia and an official book of standards under the Pure Food and Drugs Law of the United States, I would prefer not to anticipate their action by expressing my opinion on this subject at the present time. I am very glad to note, however, that you are inviting an expression of the views of representative firms and individuals on this important subject and am confident that same will prove of great value to our committee on legislation, as well as giving important information to members of Congress in legislating on this subject.

DECLARES SENTIMENT FAVORS COUDREY BILL.

H. A. Cary, Secretary-Treasurer Dusal Chemical Co., New York City:

In regard to the amendments introduced by Congressman Coudrey, of St. Louis, on the Food and Drugs Act, I have just received a communication from a physician which reads as follows:

"The question briefly stated is: shall we through sordid interest or indifferent ignorance allow a great wrong to continue without raising our voice for immediate correction of this evil? No one dare deny the necessity of standardization of all drugs. Who can be more competent morally, scientifically and financially to standardize all drugs or agents used as medicaments, than the Federal Government?"

I am pleased to personally know these sentiments are held by physicians and druggists who know the condition of drug traffic and the motive and letter of my amendments.

THEORY & PRACTICE

Determination of the Strength of Glacial Acetic Acid.

P. A. W. Self proposes the following method of determining the strength of glacial acetic acid by titration with alkali as a simple way in which all danger of loss of acid during weighing and titration can be avoided:

Into a tared bulb of thin glass furnished with a capillary opening (conveniently made by drawing out a narrow test tube at an inch or so from its closed end) introduce a convenient quantity of the acid by the well-known expedient of warming the bulb and allowing to cool with the end of the capillary dipped below the surface of the acid. Then seal the capillary and weigh. Next place the bulb in a strong stoppered bottle containing an amount of standard alkali in excess of that required by the acid, stopper the bottle, break the bulb by vigorous shaking, and finally titrate the excess of alkali in the usual way. Working in this way, the author states, there is obviously no danger whatever of loss by volatilization, while the extra time and trouble needed are almost inappreciable. The degree of accuracy which can be obtained is therefore only dependent on the factors common to all volumetric determinations.

Pills of Sodium Cacodylate.

E. O. Rowland, in a paper read before the Edinburgh Chemists' Assistants' and Apprentices' Association, gave the following formula for the preparation of sodium cacodylate in pill form, the pills so made being white, and retaining their shape without going damp. For pills containing ½ grain of sodium cacodylate the quantities are:

Sodium cacodylate	3 grains.
Powdered tragacanth	1 grain.
Powdered sugar	2 grains.
Wheat flour	6 grains.

Divide into 12 pills.

The sugar forms a syrup with the moisture present, and its value is evident if an attempt be made to mass with flour alone. The mixed ingredients are worked vigorously together for a few minutes, and rolled and rounded with a very little French chalk. It seems likely that other deliquescent salts would work well on similar lines.

Toxicity of Aniline Derivatives.

According to Hildebrandt, the toxicity of the toluidines varies with the position of the methyl group. Thus o-toluidine causes the separation in the urine of the coloring matter of the blood, while dimethyl-o-toluidine, which is the most poisonous of all, not only has an action upon the blood, but also causes fatty degeneration of the inner organs, such as the liver. The introduction of one atom of bromine into the *p*-position does not affect the toxicity, but if two atoms of bromine are introduced into the complex, the toxic action of the compound upon the blood is entirely prevented, while its effect in producing fatty degeneration is reduced, though not altogether checked. Dibromodimethyl-o-toluidine is more poisonous than tribromoaniline. It thus appears that a most important factor in the toxicity of aniline derivatives is the presence of the methyl group in the *o*-position *(Journ. Soc. Chem. Ind.)*.

Tincture of Iodine in Kansas.

Prof. L. D. Havenhill, chief of the department of drug analysis, Kansas Board of Health, in reporting the examination of 58 samples of tincture of iodine and other preparations, makes the following summary: "About 74 per cent of these tinctures contain potassium iodide. The maximum quantity of iodine found, calculated for one liter of tincture, is 88 grams; the minimum, 12.7 grams. For potassium iodide, the figures are, respectively, 89 grams and 10.6 grams. About 56 per cent of the tinctures which contain potassium iodide are within 10 per cent of the official requirements in iodine strength." The comment is made that "these results seem to indicate that something besides the Pharmacopœia is necessary to secure uniformity in tincture of iodine."

WOULD PROHIBIT LIQUOR SALES BY DRUGGISTS.

With Use of Alcohol as a Medicine Declining Its Sale in Drug Stores Should be Further Restricted.

BOSTON, Jan. 3.—One of the most radical recommendations regarding legislation on druggists' licenses is contained in the annual report of the Boston Board of License Commissioners. The board recommends that druggists be prohibited from selling liquors in any form except upon a physician's prescription, and that the druggist be permitted to sell only pure alcohol under the present form of regulation. Then the board contends that if such action is not taken by the Legislature, that the fee for druggist's license, which is now $5, be increased to $100.

"The records of the hospitals," says the report, "and the testimony of physicians, together with the admissions of the druggists themselves, show that alcoholic liquors are used with ever decreasing frequency in sickness, and that therefore the necessity for the present form of druggists' licenses no longer exists. Many of the Boston druggists have expressed to the board their dislike of the liquor side of their business and in some cases have consented to sell only on physicians' prescriptions. In suburban districts, where, from the absence of some form of liquor license, the demand for liquor from drug stores is very noticeable, the board has been repeatedly urged by citizens of repute to grant druggists' licenses even where reports made to the board have shown an undue amount of sales; such is the case especially in suburban districts adjoining no-license towns or cities.

"The continuance of the present system is, in the opinion of the board, a distinct hindrance to a permanent improvement of the liquor traffic, inducing as it does contempt for the law and encouraging hypocrisy and deceit. The board earnestly recommends that with the exception of pure alcohol, now so commonly used in sickness, no liquor shall be sold by druggists except on physicians' prescriptions. For the sale of pure alcohol it again recommends a special license with an annual fee not to exceed $10. If it be deemed unwise to restrict druggists in accordance with the board's recommendations, then the board asks that it be allowed to fix the annual fee for druggists' licenses at some sum not exceeding $100."

ERA COURSE IN PHARMACY.

Graduates for December 1, 1909.

Matriculation Number.		*Examination Grade, p. c.*
5673.	D. Preston Cranmer, Baltimore, Md.	98
5929.	R. M. Winters, Santa Barbara, Cal.	98
6020.	John H. Kintner, Easton, Pa.	96
6333.	C. T. Whiddon, Penelope, Texas	98

The above graduates will receive diplomas within a short time. A large and very handsomely engraved diploma, printed on artificial parchment, with the graduate's name engrossed, especially suited for framing, will be furnished to all those who request it for the sum of $2. Those desiring the latter should forward the necessary fee to THE PHARMACEUTICAL ERA.

The Era Course in Pharmacy.

Begin the new year by enrolling as a student in the ERA COURSE IN PHARMACY and use to good advantage time and money which were formerly wasted. The ERA COURSE is a home study course in Pharmacy which is divided into ten parts with recitations and examinations by mail. Thorough instruction is given in General Chemistry, Theoretical and Practical Pharmacy, Botany and Materia Medica. The cost of the course, including a year's subscription to the ERA, is $10. A prospectus will be sent by the publishers of THE PHARMACEUTICAL ERA to any one who applies.

New classes are organized each month and now is an excellent time for students to enroll, because the ERA COURSE can be most profitably and advantageously studied during the long winter evenings.

Without Protest Druggists Give Up Liquor Permits.

BOONE, Iowa, Jan. 3.—Because they have been remiss in filing with the county auditor the necessary requests and signatures the druggists of this place have been enjoined from further selling liquor and have, without a murmur, given up their permits. No fines were assessed, it being plainly evident to the court that there were no intended violations of the law.

Vermont State Ph.A. at Prospect House, Lake Bomoseen, June, 1909.

? QUESTION BOX ?

THE OBJECT of this department is to furnish our subscribers and their clerks with reliable and tried formulas, and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc. Requests for information are not answered by mail, and ANONYMOUS COMMUNICATIONS WILL RECEIVE NO ATTENTION; neither do we answer questions in this department from non-subscribers.

In this department frequent reference is necessarily made to information published in previous issues of The Era, copies of which, if not out of print, may be obtained for 25 cents each.

Elixir of Guarana and Sumbul.

(G. G. P.)—Try the following:

Fluidextract of guarana	3	fl. ounces.
Fluidextract of sumbul	1 1-3	fl. ounces.
Aromatic elixir	3	fl. ounces.
Purified talcum	4	drams.
Compound elixir of taraxacum, enough to make	16	fl. ounces.

Rub the fluidextract of sumbul with the talcum, then add the fluidextract of guarana, aromatic elixir and compound elixir of taraxacum, gradually and in the order named, and under constant trituration. Allow the mixture to stand for 48 hours, and filter. Then add sufficient compound elixir of taraxacum to make the whole measure 16 fl. ounces. Each fl. dram represents about 12 grains of guarana and 5 grains of sumbul.

Elixir Lactated Pepsin with Bismuth.

(G. G. P.)—The Canadian Formulary gives the following formula under the above title:

Pepsin (1 in 3000)	175	grains.
Pancreatin	17½	grains.
Diastase	17½	grains.
Glycerin of bismuth	5	fl. ounces.
Lactic acid	30	minims.
Hydrochloric acid	1	fl. dram.
Glycerin	2	fl. ounces.
Distilled water	5	fl. ounces.
Tincture of cudbear	2	fl. ounces.
Purified talcum	1	fl. ounce.
Aromatic elixir, sufficient to make	40	fl. ounces.

Mix the acids with the glycerin and water, add the pepsin, pancreatin and diastase to the mixture and macerate with frequent agitation until solution is apparently effected. Then add the glycerin of bismuth and tincture of cudbear, and sufficient aromatic elixir to make 40 fl. ounces. Thoroughly incorporate the purified talcum and filter.

Glycerin of bismuth is made as follows:

Bismuth and ammonium citrate	11 oz., 308 gr.
Glycerin	10 fl. ounces.
Strong solution of ammonia	q. s.
Distilled water, sufficient to make	40 fl. ounces.

Triturate the bismuth and ammonium citrate with 8 fl. ounces of distilled water and 3 fl. ounces glycerin, and gradually add to it just enough strong solution of ammonia to dissolve the salt and to produce a neutral solution. Then add the remainder of the glycerin and sufficient distilled water to make 40 fl. ounces.

Encaustic Painting.

(T. F. B.)—According to Ure's Dictionary of Arts and Manufactures, "encaustic painting" is a mode of painting with heated or burnt wax which was practiced by the ancients. The wax, when melted, was mixed with as much color, finely powdered, as it could take up and then the mass was spread on the wall with a hot spatula. When it became cold the designer cut the lines with a cold pointed tool, and other colors were applied and melted into the mass. Many modifications of the process have been employed. Among the moderns, the term has been improperly given to some cements, which have nothing of the encaustic property about them.

As an adjective, the term is used to designate an object which has been colored or painted and having the lines fixed or determined by the agency of heat, as "encaustic tile." Any dictionary should give you a correct definition of the term.

To Tan Small Skins for Rugs.

(H. G. Co.)—We have had no practical experience in tanning and the best we can do to help you out is to give the following method, taken from our files: If the pelt is fresh, scrape off every particle of fleshy and fatty matter on the inside at once. If it is dry, soak it in cold water for a few hours, or until the substance is soft enough to remove, and then proceed in the same manner until all fatty and other matters are removed from the skin. Next, make a paste as follows: Borax, potassium nitrate, and sodium sulphate, equal parts; water sufficient to make a thin paste, and apply it plentifully and evenly to the inside of the pelt. This is best done with a brush, using about 4 ounces to an ordinary sheepskin. Double the pelt on itself, skin side inwards, and put away in a cool place for from 24 to 48 hours, according to the thickness of the pelt. A foxskin will need about one day, while a heavy sheepskin will require two days. Wash off the material with cold water, scrubbing with a brush, and then apply a mixture of 1 part of borax, 2 parts of sodium carbonate, and 4 parts of common soap melted together over a

slow fire. An old tan brush will answer for the application of this mixture. Fold again, and put away as before, for the same length of time. Next, make a solution of 4 parts of alum, 8 parts of sodium chloride, and 2 parts of sodium bicarbonate, in 32 parts of tepid water, and into this put the skin, and leave for from 12 to 24 hours, according to the thickness of the pelt, as before. Finally, rinse off with tepid water, press off surplus water, getting rid of as much as possible, and tack the skin in a shady but warm place to dry. It will then be found perfectly warm and pliable, except, possibly, in the thicker parts around the neck. To make the skin white and pliable throughout, finish off with sand paper and pumice stone. The same result is sometimes claimed by a much shorter process—simply covering the inside with a mixture of common salt, alum, borax and saltpetre in equal parts, folding and putting away in a cool place for a couple of weeks, but the product is not pliable, and very inferior in every way.

Massage Cream With Stearic Acid and Casein.

(J. F. S.)—The following formula has been published under the title of "rolling cream":

Stearic acid	4 ounces.
Glycerin	4 ounces.
Water	16 ounces.
Potassium carbonate	1 dram.
Boric acid	4 drams.
Casein, soluble	1 ounce.
Powdered tragacanth	15 grains.
China clay	3 ounces.
Carmine solution	q. s.
Perfume	q. s.

A similar formula, which contains no casein, is the following:

Stearic acid	30 drams.
Glycerin	15 ounces.
Potassium carbonate	5 drams.
Sodium bicarbonate	1 dram.
Water	30 ounces.

Heat all the ingredients together on a water bath for three hours, then remove from the fire and stir until cool. When nearly cool add any desired perfume in sufficient quantity to give the desired odor.

A number of other formulas were published in the ERA during the past year.

Cement for Porcelain Letters on Glass.

(H. G. Co.)—Here is a formula that has been recommended for fastening porcelain letters on glass:

Crude turpentine, melted and strained	3 parts.
Linseed oil	3 parts.
Copal varnish	15 parts.
Oil of turpentine	2 parts.
Fish glue, dissolved in smallest quantity of water	10 parts.
Precipitated chalk	10 parts.

Carefully melt the turpentine (Canada balsam will answer) and varnishes together, in a large vessel, and over a slow fire (to avoid danger from boiling up), stir, remove from the fire, and add the fish glue and oil of turpentine, stirring until homogeneous, and then stir in the chalk. Clean the surface of the glass, and of the letters if necessary, by the use of ammonia and whiting, and then apply the cement while hot, keeping it so on the water-bath, and holding the letters to place until they have become firmly enough attached to remain in contact of themselves. Do not leave too thick a layer of cement—the thinner the layer, up to a certain degree, the better will be the union.

More About Bebees or California Bees.

C. E. Dawson, M.D. Covington, La., sends the ERA the following communication:

"In answer to the inquiry, 'What are Bebees or California Bees and where may they be obtained,' which appeared in the ERA of December 16, 1909, page 623, I will say that quite a number of farmers in this section have them.

"The beer made by pouring sweetened water in a vessel containing this yeast and allowed to stand until fermentation takes place is known as California beer. The people who use it here do not seem to know that it possesses medicinal properties, but take it in hot weather merely as a cooling beverage.

"I am unacquainted with the origin of bebees, but in the summer of 1881 I took dinner with a farmer living 12 miles from this place, and California beer was served. I liked the beer so well that I took a supply of the yeast home with me and kept the beer for a while, but neglected to feed my 'bees' and hence lost 'seed.' I have never tasted California beer since 1881. I will secure some of the bébées in a few days and in a short time will soon be able to supply individuals with sufficient to give them a start, as the bees multiply rapidly.

"Y. F. Horville, an old farmer living near this place, told me a few days ago that when his mother lost 'seed' she got a fresh start from the kernel of May hawseed (the May haw is a Southern fruit, that ripens about the last of April or the first of May, and is very acid). He says that by taking the kernel from the fresh hawseed, letting it dry and then grinding it to a powder, placing it in a vessel and adding sweetened water, the bébées are soon formed. This was done, Mr. Horville says, when he was a boy and he may have forgotten, as it has been many years since he reached that age. However, I give his explanation for what it is worth."

A. Starkweather, druggist, of Palmer, Ill., referring to the same inquiry, writes under date of December 21, 1909:

"I have before me a clipping from the ERA of August 1, 1907, which gives a description of 'California Beer Seed,' which, I think, if you will republish it, will give something along the line of the information wanted."

The description referred to is as follows:

California "bees" or "beer seed" is the name given to a preparation of beer yeast or to the mother of vinegar (mycoderma aceti), and depending upon the source and mode of manufacture, is said to resemble pearl sago or shreds of gelatin. Another name for it is "California ferment," and it is used with sugar and water for making domestic beer. A correspondent some years ago contributed the following method for preparing it:

To 1 ounce of finely bolted corn meal 4 ounces of sweetened water is added, the containing vessel is placed in a warm place for 48 hours, when the water is drained off, and a pint of fresh sweetened water is added to the sediment remaining in the vessel. Within a few hours' time fermentation begins, small explosions taking place at the bottom of the jar, and as the bubble of air rises rapidly to the surface it carries with it particles of the fine meal which slowly sink to the bottom to be again shot upward by the liberation of gas bubbles. The water may now be drained off, and a half-gallon of sweetened water added to the seed (for the yeast begins now to assume a granular form) will be converted into a delicious beer in 24 hours. The seeds grow rapidly and may be subdivided and neighbors supplied. If wheaten flour is used instead of that from Indian corn, a few more days of renewing the sweetened water is required, but the result is the same, except that the granulus (the seed) are larger.

In an examination of this peculiar ferment made a number of years ago, Dr. C. V. Riley said (ERA, November 1, 1892, page 271): "The action is due to a bacterium and a fungus, the species of which in our American substance have not, as Professor Galloway informs me, been settled definitely. It is similar, if not identical, to the so-called 'ginger beer plant' of Europe, and in this case Marshall Ward, in the Proceedings of the Royal Society (Vol. L. No. 304, London, 1891), determines the organisms involved as Bacterium vermiforme and Sacchararomyces pyroformis. Charles L. Mix, in the Proceedings of the American Academy of Arts and Sciences (Vol. XXVI), speaks of this subject under the following title: 'On a Kephir-like Yeast found in the United States.' He summarizes the European literature concerning the milk ferment of the Caucasus, and concludes that the American ferment is almost, if not quite, identical with the European kephir, in which the bacterium is Dispora caucasica, and the fungus is Saccharomyces cerevisiæ. Beyerinck, in the Centralblatt fur Bacteriologie (Vol. VI, page 44), describes the Saccharomyces as a new species, making it distinct from cervisiæ and giving it the name of 'kefyr.' This name Mix adopts for the American fungus, although this name seems to be provisional. For the present we can do no better than to accept Mix's conclusions."

This is an interesting subject and one which apparently needs further elucidation. We should be glad to hear from any one who has further information to communicate.

Some clerks seem to think that taking a post-graduate course consists of learning to sow wild oats

Members of Massachusetts Ph.A. at Swampscott in June 23-25, 1909.

SELECTED FORMULAS

Petroleum Hair Tonic.

Heavy petroleum	5 ounces.
Solution of ammonia	3 ounces.
Jockey club bouquet	2 ounces.
Tincture of cantharides	8 ounces.
Eau de cologne	3 ounces.
Distilled water to	60 ounces.

Shake well before use.

Cold Cream (French Codex).

Spermaceti	60 grams.
White wax	30 grams.
Almond oil	215 grams.
Rose water	60 grams.
Tincture of benzoin	15 grams.
Otto of rose	10 drops.

Melt the wax and spermaceti in the oil on a water bath, pour into warmed marble mortar and stir until nearly cold; add the otto; then incorporate, a little at a time, the rose-water and tincture of benzoin, previously mixed and strained through linen.

Dentifrice Elixir.

Oil of cinnamon	1 gram.
Oil of star anise	2 grams.
Oil of cloves	2 grams.
Oil of peppermint	8 grams.
Tincture of benzoin	8 grams.
Tincture of guaiacum	8 grams.
Tincture of pyrethrum	8 grams.
Tincture of cochineal	20 grams.
Alcohol, 80 per cent	1000 grams.

Mix and filter after 24 hours.

Worm Powders.

(1)

Powdered scammony resin	2 drams.
Sugar of milk	1 dram.
Calomel	1 dram.
Santonin	1 dram.

Dose, 3 to 6 grains.

(2)

Calomel	12 grains.
Santonin	12 grains.
Powdered jalap	36 grains.

Mix and divide into 12 powders.

Perfuming Book Almanacs.

Any perfume may be used, but the following is good: Coumarin, 10 grains; vanillin, 10 grains; heliotropin, 10 grains; ionone, 10 minims; hyacynthin, 5 minims; essence of musk, 30 minims; otto of rose, 5 minims; absolute alcohol, 1 fl. ounce. Distribute this evenly on sheets of blotting paper; place the sheets in a closed box (a biscuit tin answers well) with the almanacs for 24 hours or so. The perfume is said to be almost inexhaustible. Absorbent cotton may be used to hold the perfume. On placing the perfuming material in the bottom of the box it should be covered with a couple of sheets of dry blotting paper, the almanacs piled loosely on top, the lid of the box securely fixed, and the whole placed in a warm room. A lilac perfume may be made thus: Terpineol, 2 fl. drams; oil of lignaloe, 20 minims; oil of bergamot, 10 minims; heliotropin, 20 grains; alcohol, 2 fl. ounces.

Pansy Cream.

Quince seed	3 drams.
Glycerin	3 ounces.
Boric acid	15 grains.
Carbolic acid	1 dram.
Alcohol	4 ounces.
Glycerite of starch	5 ounces.
Tincture of benzoin	1 dram.
Water, enough to make	40 ounces.

Macerate the quince seed in about a pint of water overnight and strain through muslin without pressure. Dissolve the boric acid and mix the carbolic acid with the glycerin, add the glycerite of starch, and mix with the quince seed mucilage. Add the tincture of benzoin little by little to the remainder of the water, and then mix with the balance of the mixture. Perfume with extract of pansy blossom.

Horse Liniment.

Oil of amber	2 fl. ounces.
Camphor	4 fl. ounces.
Carbolic acid	3 fl. ounces.
Oil of sassafras	4 fl. ounces.
Oil of tar	2 fl. ounces.
Oil of turpentine	2 pints.
Crude petroleum	5 pints.

Mix and dissolve.

Cough Balsam.

Oil of anise	½ fl. ounce.
Oil of thyme	2 fl. drams.
Powdered camphor	½ ounce.
Benzoic acid	½ ounce.
Raw linseed oil	2 fl. ounces.
Alcohol	1 pint.
New Orleans molasses	12 pounds.
Water	4 gallons.

Mix the oils of anise and thyme, and rub up with the camphor until liquefied. Add the benzoic acid to the alcohol, and mix the two solutions, then add the linseed oil. Filter if necessary. Heat the molasses and water together until a homogeneous mixture is obtained, which finally mix with the alcoholic solution.

Paste Grate Polish.

Good Ceylon graphite	25 pounds.
Lampblack	3 pounds.
Common treacle	1 pound.
Soft soap	12 ounces.
Alum	2 ounces.
Water	11 pints.

Dissolve the soap and alum in separate portions of the water. Pass the graphite and lampblack through a fine sieve, and grind with the treacle alum solution and soap solution until a homogeneous paste is formed.

THE QUIZ MASTER

A MONTHLY SERIES OF PRACTICAL AND EDUCATIONAL QUESTIONS FOR DRUG CLERKS AND STUDENTS, WITH THREE CASH PRIZES EACH MONTH FOR THE MOST CORRECT ANSWERS.

THREE PRIZES of $5.00, $3.00 and $2.00 respectively, will be paid each month to the three persons submitting the largest number of correct answers to each monthly series of questions. In the event of a tie for any of the prizes offered, such prize will be equally divided among the successful contestants. This competition is open to all who may desire to compete.

ANSWER BY NUMBERS and write your answers upon letter size paper (8x10 in.), one side only, with your Name and Address at the top of each sheet. Also number your sheets.

ALL ANSWERS for each month's series of questions must be sent at one time, and must be with us not later than the 15th of the following month.

CORRECT ANSWERS to each series of questions and the names of the three contestants who have been awarded the prizes will be published in the Era, after the close of the respective contests.

WE INVITE our readers to send us their questions for publication in this department, particularly questions related to the practical work of drug clerks.

ALL COMMUNICATIONS relating to this department should be kept separate from other correspondence, and addressed to

The Quiz Master
Care The Pharmaceutical Era 90 William St., New York

Correction.

Question No. 41 of the December Series, through a typographical error, was incorrectly stated in the ERA of December 30, 1909, page 691. Contestants will please correct it to read: "What are three vegetable drugs which contain emulsin?"

January Series, 1910.

1—What is an official vegetable drug which is (a) an anthelmintic; (b) a diuretic; (c) an anodyne; (d) a cathartic?

2—What is a tonic?

3—What are the ingredients in compound tincture of gentian?

4—What are the English equivalents for the following Latin contractions: (a) chart.; (b) f.s.a.; (c) garg.; (d) post prand.?

5—What is the official Latin name for (a) carbolic acid; (b) aqua fortis; (c) Donovan's solution; (d) sal benzoin?

6—What is the official average dose of lead acetate, soluble ferric phosphate, solution of magnesium citrate, aromatic spirit of ammonia?

7—Why should soap not be used as a base for suppositories containing metallic salts?

8—What is the botanical source of (a) santonica; (b) stramonium?

9—How many fluidounces at 25° C. in 8 ounces (avoir.) of U.S.P. sulphuric acid? Show work.

10—When pure and fresh what is the color of most volatile oils?

11—What is aloin? What is the appearance of this drug?

12—What are sternutatories? Name four vegetable drugs of this class.

13—What is a salt mouth bottle?

14—What is the advantage in having the name of the patient upon the prescription and the label?

15—In the directions for preparing exsiccated alum the Pharmacopœia says "Place the alum in a tared shallow dish," etc. What is meant by the word "tared"?

16—What is the chemical formula for antimony and potassium tartrate? What is a method for preparing this salt?

17—Why are the doses usually smaller for medicines administered hypodermatically, than the doses of the same medicines introduced into the body by other methods?

18—What is a cerate?

19—What is the per cent by weight of boric acid in a saturated aqueous solution of this acid? Show work.

20—What is your idea of the proper style of label for prescription use? Give reasons.

21—What color changes result from the action of a few drops of concentrated sulphuric acid and a fragment of manganese dioxide upon a sample of strychnine sulphate?

22—What is the solubility in water of (a) red mercuric oxide; (b) calcium chloride; (c) methyl salicylate; (d) sugar?

23—What are two U.S.P. liquids whose odors closely resemble the odor of oil of wintergreen?

24—What is the external therapeutic action of iodine?

25—What is meant by the term "bumping" as applied to boiling liquids?

26—Until the doctor arrives what temporary aid would you give to a person who had fainted?

27—Ether is used in the preparation of what two U.S.P. spirits?

28—What are some other oils than olive oil to which the name sweet oil is sometimes applied?

29—What is briefly the treatment in case of acute poisoning by arsenic?

30—Why is the use of wood alcohol in medicinal preparations prohibited?

31—What simple chemical test will distinguish borax from sodium carbonate?

32—What action does heat have upon lime water?

33—What are plasters as designating a class of official preparations?

34—What are four official drugs which are obtained from the animal kingdom?

35—Where are the Molucca Islands? What are two spices which are chiefly obtained from these islands?

36—How does red mercuric oxide differ in chemical composition from yellow mercuric oxide?

37—What occurs if a piece of metallic zinc is suspended by a string in a strong solution of lead acetate?

38—What is structural botany?

39—What are the chief active medicinal principles in (a) senega; (b) belladonna leaves?

40—How many avoirdupois pounds in eight apothecary pounds? Show work.

41—What is sublimation?

42—What are two official drugs prepared by sublimation?

43—What methods of making tinctures are recognized by the Pharmacopœia?

44—What constituents of a prescription are termed "the basis"?

45—Why is a Wedgwood mortar, the inner surface of which has worn smooth, not suitable for the trituration of drugs?

46—How can the inner surface of a Wedgwood mortar, which has become smooth, again be made rough?

47—What is meant by an amorphous substance?

48—Is it proper to dispense boiled linseed oil on an order calling for linseed oil?

49—Why is methylene blue inconvenient to dispense?

50—Why should thermometers stand for about two years before they are used?

Competitors, Please Notice.

The above fifty questions is the complete series for January, and all who desire to compete for the prizes should see that their answers are received by the Quiz Master not later than February 15. Do not send your answers in parts, but mail them all at one time, and be sure to follow the instructions given at the head of this department. Answers in the handwriting of the competitors are desired, although such answers transcribed on a typewriter will be accepted. Careful penmanship is to be commended and this as well as neatness, order and spelling will be considered in grading the papers and awarding the prizes.

The judges of the November contest of the Quiz Master's

Department have awarded the prizes as follows:

First prize, $5, to Emil G. Souba, Hopkins, Minn.

Second prize, $3, to Elsie Day, Lincoln, Neb.

Third prize, $2, to Weldon E. Tibbetts, Milltown, Me.

Contestants wishing to know the grades which they have made in the November contest may obtain this information on request by sending two cents for postage to the Quiz Master.

THE QUIZ MASTER.

First Prize Winner in Three Contests.

The State of Minnesota has always been noted for the industry and intelligence of its people and it is therefore not surprising that a Minnesota young man, Emil G. Souba, has made the remarkable record of having been awarded first prize by the Quiz Master in three successive contests. Mr. Souba is a representative of the type of young men who are working their way through college, for he tells us that he is paying his college expenses with money saved while he was drawing a salary, and adds that he has used the prize money awarded him by the Quiz Master to purchase books which he needs in his study of pharmacy.

EMIL G. SOUBA.

Mr. Souba graduated from the high school of Hopkins, Minn., in 1906, when but 17 years of age. During the next year he took a commercial course in a Minneapolis business college, receiving his diploma in June, 1907. He then obtained employment in the collection department of the Minneapolis Threshing Machine Company, with which concern he remained until September of the following year, when he resigned his position to enter the College of Pharmacy of the University of Minnesota, where he is now a member of the senior class.

The papers which he has submitted to the Quiz Master represent most careful preparation and indicate that he has been a diligent student during the few years he has been studying pharmacy. No doubt his thorough preliminary education has been an important factor in his rapid advancement since entering college and argues well for the advantages of such an education. Mr. Souba is a young man who will unquestionably be a credit to the profession of pharmacy and will no doubt be heard from again later on.

Questions and Answers, November Series.

1—What is nutmeg? What are the official preparations containing nutmeg?

Nutmeg is the kernel of the ripe seed of Myristica fragrans. Vinegar of opium, aromatic powder, compound tincture of lavender, aromatic tincture of rhubarb, and troches of sodium bicarbonate.

2—What incompatibility exists between most acids and ichthyol?

The product ordinarily known as ichthyol is ammonium ichthyol-sulphonate; when this product is combined with acids the latter unite with the ammonia forming a dark resinous mass consisting of ichthyo-sulphonic acid which is precipitated.

3—What occurs when magnesium carbonate is strongly heated?

When strongly heated, magnesium carbonate is decomposed. Magnesium oxide is formed and carbon dioxide and water are expelled. The decomposition is expressed by the following equation: $(MgCO_3)_4.Mg(OH)_2.5H_2O = 5MgO + 4CO_2 + 6H_2O$.

4—What two official tonic tinctures are not incompatible with preparations of iron?

Tincture or calumba and tincture of quassia.

5—In compounding prescriptions what two classes of substances should be weighed upon counterpoised watch-glasses instead of directly upon the metallic scale pans?

Hygroscopic and corrosive substances.

6—What is the difference between wool-fat and hydrous wool-fat?

Hydrous wool-fat is wool-fat mixed with not more than 30 per cent of water.

7—What is the official Latin name for (a) balsam of fir; (b) yellow jasmine; (c) henbane; (d) mandrake?

(a) Terebinthina canadensis; (b) gelsemium; (c) hyoscyamus; (d) podophyllum.

8—How many cubic centimeters of a liquid can be dispensed in a bottle having a capacity of two fluidounces? Show work.

59.159 + cubic centimeters. 1 Cc. = 16.23 minims. 2 fluidounces = 960 minims. Then $960 \div 16.23 = 59.149 +$ or 59.149 + cubic centimeters.

9—In describing the fineness of a powder, why is it necessary to state the gauge number of the wire of the sieve through which the powder was sifted?

The thickness of the wire affects the size of the meshes; the size of the latter varying indirectly as the diameter of the wire is increased or diminished. It is therefore necessary to state the gauge number of the wire in order to have the meshes uniform.

10—Why is lime water an antidote for oxalic acid and the soluble oxalates?

It forms an insoluble salt of calcium oxalate, which may be removed with the stomach tube.

11—What do the following abbreviations, as used in the Pharmacopœia, indicate: (a) T.S.; (b) V.S.; (c) 2N?

(a) Test solution; (b) volumetric solution; (c) double normal volumetric solution.

12—Why are ultramarine and Prussian blue sometimes found in cane sugar?

They are sometimes added to sugar by refiners to "blue" the sugar for the purpose of concealing the yellowish tint occasioned by insufficient refining.

13—What substances are used in making syrup of calcium lactophosphate?

Precipitated calcium carbonate, lactic acid, phosphoric acid, orange flower water, sugar and water.

14—What temperature does the Pharmacopœia mean by the term "gentle heat"?

Any temperature between 32° and 38° C. (about 90° to 100° F.).

15—What reaction occurs in making compound solution of chlorine, according to the official formula?

Several reactions are possible and the proportion of free chlorine to oxidized chlorine, which may be formed, is variable. The following two equations are the most commonly used to represent the reactions: $KClO_3 + 6HCl = KCl + 3H_2O + 3Cl_2$.

$2KClO_3 + 4HCl = 2KCl + 2ClO_2 + Cl_2 + 2H_2O$.

16—What are stimulants?

Stimulants are medicines which increase functional activity.

17—What are five official substances which may cause an explosion when triturated dry with potassium chlorate?

Sulphur, iodine, calcium hypophosphite, charcoal and sugar.

18—What is "Distilled Extract of Witchhazel"? To what is its therapeutic action due?"

It is the official hamamelis water. To the alcohol contained in it.

19—What impurities may be found in condensed steam from boiler pipes, which is sometimes substituted for distilled water?

Iron and oil.

20—What objection is sometimes made to the use of orris root in tooth powder?

Some authorities claim that particles of the orris root become lodged between the teeth, and the subsequent decomposition of this root may cause the teeth to decay.

21—When prescriptions are written in Latin the names of the ingredients are generally written in the genitive case; under what conditions would it be possible for them to be in the accusative case?

In case the name of the ingredient is the direct object of the verb "take" instead of the preposition "of." Thus a prescription written in Latin for 10 pills of asafœtida would be as follows:

℞ Pilulas asafœtidae No. X.

The English translation is—You take ten pills of asafœtida.

22—Why should special care be taken to have bottles in which hypodermic solutions are dispensed free from all dust or insoluble particles?

Particles of dust or other insoluble matter introduced into the body through the agency of a hypodermic solution would

be a source of irritation and might produce serious or fatal results.

23—What are three important official substances used as ointment bases?

Benzoated lard, petrolatum, and hydrous wool-fat.

24—What means would you employ to disguise the taste of castor oil a dose of which is to be taken immediately by a customer in the store?

Several methods are used for disguising the taste of castor oil. In stores having a soda fountain the oil may be taken floating on the froth of sarsaparilla syrup mixed with carbonated water. Or the oil may be mixed with an equal amount of glycerin and strongly aromatized with a volatile oil.

25—What is the approximate percentage of alcohol by volume in (a) chloroform liniment; (b) aromatic syrup of rhubarb; (c) spirit of camphor; (d) compound tincture of cardamom?

(a) Chloroform liniment, 48 per cent; (b) aromatic syrup of rhubarb, 7.4 per cent; (c) spirit of camphor, 86 per cent; (d) compound tincture of cardamom, 48 per cent.

26—What is the strength of hydrogen dioxide water when freshly prepared? What substance is freshly added to this water to retard decomposition?

About 3 per cent by weight of absolute hydrogen dioxide. Acetanilid.

27—How can stains of ferric chloride frequently be removed from the inside of a bottle?

By rinsing the bottle first with nitric acid, and then with water.

28—What is the average dose for codeine sulphate; salol; compound licorice powder; tincture of belladonna leaves?

Codeine sulphate, ½ grain; salol, 7½ grains; compound licorice powder, 60 grains; tincture of belladonna leaves, 8 minims.

29—What action does tincture of ferric chloride have upon the teeth?

Tincture of iron will corrode and blacken the teeth.

30—What is the difference between spirit of ammonia and ammonia water?

Spirit of ammonia is an alcoholic solution while ammonia water is an aqueous solution of ammonia gas (NH_3). Each solution contains 10 per cent. by weight, of the gas.

31—Licorice is an ingredient in what two official tinctures?

Tincture of aloes and tincture of aloes and myrrh.

32—A druggist wishes to prepare 150 Cc. of one in one thousand solution of mercuric chloride solution by diluting a sufficient quantity of a one in ten solution; how much of the one in ten solution will he use, and how much water? Show work.

Use 1.5 Cc. of the one in ten solution, and 148.5 Cc. of water. If the finished solution will contain 1 part of mercuric chloride in 1000 parts, then $1 \div 1000 = .001$ or .001 grams in 1 Cc. of the finished solution, and $150 \times .001 = .15$ grams in 150 Cc. Since every 10 Cc. of the concentrated solution contains 1 gram of mercuric chloride, it would take as many times 10 Cc. to represent .15 grams of this salt as .15 grams $\div$ 1 = .15. Then $10 \times .15 = 1.5$ or 1.5 Cc. of the concentrated solution. 150 Cc. — 1.5 Cc. = 148.5 Cc. of water to be added.

This problem may also be solved by proportion as follows: 150 : X : : 100 : 1 = .15 grams of mercuric chloride in 150 Cc. of finished solution. Then .15 : X : : 1 : 10 = 1.5 Cc. of concentrated solution necessary. 150 Cc. — 1.5 Cc. = 148.5 Cc. of water to be added.

33—Soap makes a very effective temporary antidote for what class of preparations? How do you explain its antidotal properties?

For mineral acids. Mineral acids decompose the soap and the alkalies contained therein combine with and neutralize the acids. Some soaps contain free alkalies which also combine with acids.

34—Why should digitalis leaves not be kept in stock very long?

Digitalis leaves rapidly deteriorate.

35—What are at least four of the more common impurities sometimes found in sulphuric acid.

Lead, arsenic, nitric and hydrochloric acids.

36—What is the difference between cacao butter and cocoanut oil?

Cacao butter is a fixed oil expressed from the roasted seeds of Theobroma Cacao. Cocoanut oil is a fixed oil obtained from the cocoanut, the fruit of a species of palm, Cocos nucifera.

37—What is the objection to applying flaxseed in the form of a poultice directly to an inflamed surface?

Since flaxseed applied directly is not sterilized it tends to act as a culture medium for bacteria and causes the infection to spread. A piece of sterilized gauze should intervene between the flaxseed and the inflamed surface.

38—Why should plaster of Paris be kept in a dry place?

Plaster of Paris absorbs moisture which causes it to become granular and also to lose the property of hardening with water.

39—What is the objection to using alcohol as a solvent for potassium permanganate?

The alcohol is decomposed by the potassium permanganate, manganese dioxide and monoxide being precipitated and the alcohol oxidized to aldehyde and acetic acid.

40—What occurs when a solution of potassium hydroxide is added to a solution of zinc sulphate?

Potassium hydroxide precipitates zinc as zinc hydroxide, a white precipitate, which is soluble in excess of the alkali forming potassium zincate ($Zn(OK)_2$).

41—What is the fruit of a plant?

The fruit consists of the matured ovary and contents, and may include other organs external to the pistil, but connected with it.

42—What are four tinctures, the strengths of which were reduced in the present Pharmacopœia?

Tinctures of belladonna leaves, kino, lobelia and veratrum.

43—What is formaldehyde? What is the strength of the official solution?

Formaldehyde is a colorless gas obtained by the oxidation of methyl alcohol. Not less than 37 per cent by weight of absolute formaldehyde.

44—When and by whom was chloroform discovered?

Chloroform was discovered by Dr. Guthrie in the United States in 1831, and about the same time by Soubeiran in France and Liebig in Germany.

45—What official water, the base of which is not a volatile oil, is made by trituration with talc?

Camphor water.

46—What is the official Latin names for (a) sulphonal; (b) phenacetin?

(a) Sulphonmethanum; (b) acetphenetidinum.

47—What is the difference in meaning between the term "true weight" and "apparent weight"?

True weight is weight determined in a vacuum, while apparent weight is weight determined in air. The buoyancy of the air interferes to some extent with the correct calculation of the weight of substances weighed in air, and weight so determined does not have a constant value owing to variations in the density or changing conditions of the atmosphere. In ordinary dispensing atmospheric conditions are not considered.

48—What is the objection to dispensing prescriptions in partly filled bottles?

It sometimes gives the impression to the customer that he is getting short measure.

49—What occurs when chrysarobin is shaken with lime water?

A violet to blue coloration is produced.

50—Spirit of camphor contains approximately 86 per cent by volume of absolute alcohol; how would you calculate from this data the approximate amount of U.S.P. alcohol necessary to make one gallon of spirit of camphor? Show work.

7.24 + Pts. U.S.P. alcohol. 128 (fl. ounces in 1 Gal.) $\times$ .86 = 110.08 fl. oz. absolute alcohol in one gallon of 86 per cent alcohol. 100 fl. oz. $\times$ .949 = 94.9 fl. oz. absolute alcohol in 100 fl. oz. of U.S.P. alcohol. 94.9 $\div$ 100 = .949 or .949 fl. oz. of absolute alcohol in 1 fl. oz. of U.S.P. alcohol. 110.08 $\div$ .949 = 115.9 or the number of fl. oz. of U.S.P. alcohol which would contain 110.08 fl. oz. of absolute alcohol. 115.9 $\div$ 16 (fl. oz. in 1 pt.) = 7.24 + or 7.24 + Pt. of U.S.P. alcohol.

This problem can also be solved by proportion as follows: 86 : X : : 94.9 : 1, in which X = .906 gal., the amount of official alcohol necessary. .906 gal. = 7.248 or 7.248 pints (8 the number of pints in 1 gal. $\times$ .906).

Young America's Troubles.

Kind Old Gentleman—"Why, why little man, what is the matter? All those tears?"

Little Boy—"Boo-hoo, just look at me, me muver has bobbled me hair, an' how do I know but nex' thing she'll want to shave me!"

Christmas Window Which Attracted Much Attention in Gridley Ill.

Photograph of a Holiday Window Display Designed by J. Earl Taylor, Ph.G., of the Pharmacy of Dr. J. A. Taylor & Son, Gridley, Ill., Which Proved to be a Magnet in Drawing New Patrons to the Establishment.

ADVERTISING HINTS

SIGN TRANSFERENCE AND WINDOW PAINTING.

Squeegeeing Signs.

Quite frequently the druggist may have highly ornamental show cards advertising toilet and other specialties, which would prove very attractive if placed against the window glass, provided they were on thin paper. In the following will be found description of a simple method for reducing the thickness of show cards and signs, a method not unlike that of squeegeeing photographs. This method should only be used with signs printed or lithographed in permanent colors.

Take the sign or show card and soak it in clean water until thoroughly saturated. While the sign is still wet and limp place it face downwards upon a smooth sheet of glass. Take extreme care to see that the glass is absolutely clean and free from any particle of adhesive matter. Squeegee or rub down the sign upon the glass by going over the back of it with a photograph print or other small roller, or by rubbing with the handle of an all-metal spatula or some other rounded and smooth metal tool. Rub from the center towards the edges and corners so as to force out every particle of air from between the paper and glass.

If the sign is of cardboard or very thick paper, take a sharp, round-pointed blade and split the paper at one corner. At first force the blade only below a small layer of the entire thickness of the paper. Turn up this split corner and peel the paper forward, removing, before it tears, as large a flake as possible from the upper surface of the paper. Repeat the operation, beginning at each of the four corners, peeling off the entire surface of the back of the sign until nearly all but the face coating layer has been removed. Then with a rubber eraser or the ball of the thumb or finger rub down all the inequalities until a smooth and even semi-transparent sheet has been secured. Have at hand a bowl of water and a sponge so that the sign may be kept thoroughly wet at all times. When reduced to the desired thickness, strip from the glass.

Fastening to Window.

Cover the face smoothly with a thin solution of gum tragacanth or cold starch paste. Place the paper against the window and squeegee on to the glass. Immediately after the squeegeeing, paint around the edges of the paper with a thin line of cement, thick paint or glue. This prevents the entrance of air between the paper and the glass and assures permanent, smooth adhesiveness.

Painting Frames.

Transparencies that have been squeegeed to the window may be surrounded with scrolls or frames made with colored water paint, with whiting, water and dry colors, regular mixed paint or with pieces of colored soap. If care is used in selec-

tion of the sides it will make [illegible]
sign itself is [illegible]

Painting Outlines.

It is not a difficult matter to paint a figure or letter directly upon the glass provided one can trace the outlines of the figure or letter thereon. The following is a reliable method of outlining. Procure a tracing wheel such as is used by dressmakers. With this go over all the lines of the picture or sign which you wish to duplicate upon the window. After such treatment every line will be indicated by the small perforations. Place the perforated picture or sign against the glass, face in. Fasten smoothly in position with a few gummed price tickets. Take a can of talcum powder and thoroughly dust the talcum through all the perforations of the figure or sign. Be careful to hold each part of the paper firmly against the glass as it is dusted. Where there is any doubt of the powder having penetrated, rub over the dusted perforations gently with the finger. Remove the paper very carefully and upon the window glass will be found distinct outlines for guidance in painting.

Reduction and Enlargement.

The druggist may often have a picture or fancy sign which he wishes to duplicate upon a glass or other surface in dimensions either less or greater than his pattern. If one desires a 24-inch reproduction from a 12-inch model, proceed as follows: Over the face of the model draw thin lines one-quarter of an inch apart, thus covering it with quarter-inch squares. Take a sheet of paper twice the size of the model and rule it into half-inch squares. It will be easily seen that if each part of a line of the model which lies within a certain quarter-inch square is exactly doubled in proportions within the corresponding half-inch square that the copying of all the lines within their corresponding squares will give a reproduction of the original sign and which is twice its size. On the other hand, to reduce from a model, merely demands a reversal of the measurements of the ruled squares. The novice will be surprised to find how little natural artistic ability is necessary to make a fine copy of a picture or sign by this method. After the copy is made, its outlines may be traced upon the glass with the aid of tracing wheel and powdered talcum, as described.

A Novel All-Night Advertisement.

The foregoing reminds us of a novel piece of advertising done by a Kentucky druggist. He procured a large sheet of plate glass, about three by four feet, and upon it he painted or lettered various advertisements. This piece of glass was kept out of sight during the hours when the store was open, but just before closing it would be placed within the window and braced up so as to press directly against the window glass. An electric light was left burning directly behind the glass and the light, shining through the darkness of the almost deserted business street, made a most noticeable, glaring spot.

The signs were almost invariably painted in red. One of the most striking figures used was a red "devil" as high as the glass. The lettering read, "Try our Lucifer Laxative."

While these signs were actually seen by only those who were out late at night, or rather, by those who were abroad early in the morning, the signs were much talked of. People would go out of their way to see the druggist's latest "night-hawk," and many funny stories were told of the manner in which these startling signs affected those who were under the mellowing influence of the grape. Sometimes a flash-light was used in connection with the signs to increase their effectiveness.

Strip Glass Signs.

Writing of the movable glass in the window brings to mind the clever uses to which a Washington druggist puts a strip of glass which is about ten inches wide and three feet long. To one side of this strip he fastens "cut-out" letters to make such announcement as he may desire and then backs the letters with paper of different colors. The letters are white in color, the central section of the glass, about 18 inches, being backed with crimson paper, the ends being backed with black paper. The next day, without changing the lettering, he may reverse the backing colors; making the center of black and the ends of red or he may change the colors, making the center of purple and the ends of orange. Generally this strip sign is lettered and backed so as to make the colors harmonize with the color scheme of the window trim or of the goods exhibited. Sometimes it is suspended close to the window [illegible] from the window ceiling or placed upon an easel. The ingenuity of the druggist and his chief clerk seems to put that strip of glass to an endless variety of uses.

CHEMISTRY BUILDING OPENED AT ANN ARBOR.

University of Michigan Adds Former Students to the Faculty and Prescott Club Holds Meeting.

ANN ARBOR, Jan. 3.—On account of the chaotic condition of both the old and new chemistry buildings, the first meeting of the Prescott Club was not held until the Friday previous to the holiday vacation, at which time the doors of the new building were thrown open. The feature of the evening's programme was an address delivered by Prof. Wilbur L. Scoville, of Parke, Davis & Co.'s research laboratory at Detroit, and formerly professor at the Massachusetts College of Pharmacy. Professor Scoville talked on the little things in pharmacy not noticed by the average pharmacist, but which are nevertheless a great convenience to the customer. He illustrated his remarks with a number of small bottles and boxes and gave numerous instances where such things had proved a great aid in business.

The Prescott Club was organized in 1908 and proved a great success during its initial year. It has for its purpose the general improvement of the school and to further this idea the programme of the meetings usually includes an address by an out-of-town speaker and short talks on current topics of pharmaceutical interest by several of the members. To make the occasion one of sociability, a spread always follows in the latter part of the evening. The club's membership is open to all pharmacy students in the university.

Fern L. Shannon, B.S., '09, was recently elected instructor in theoretical pharmacy, and Kenneth W. Tracy, Ph.C., '08, appointed assistant in pharmacognosy to Dr. J. O. Schlotterbeck.

The December dance given by the students of the School of Pharmacy proved a great success. The hall was handsomely decorated in yellow and blue.

New Standard Certificate of Death.

Beginning with January 1, 1910, the New York State Department of Health requires the use of the recently Revised United States Standard Certificate of Death. This form has been approved by the United States Census Bureau, and by the American Public Health Association, and came into general use in a large number of States on January 1. The adoption of a uniform certificate is expected to greatly facilitate the study and comparison of mortality statistics. No additional questions are asked, except that fuller details of occupation are requested. Upon the back of the certificate are paragraphs giving detailed instructions as to the sort of information required in the statement of occupation and in the statement of cause of death.

Taking a Mean Advantage of Johnny.

Johnny—"Mamma, I just hate that cod liver oil, and I'm not going to take any more."

Mother—"Why, my dear, the bottle is only half gone, you must not stop now."

Johnny—"If I am a good boy and take it without any fuss, will you promise, I needn't take any more when the bottle is empty?"

Mother—"All right, my son."

Johnny takes oil industriously three times a day for three months without discovering that his bottle is being constantly replenished from another one hidden away on the top closet shelf.

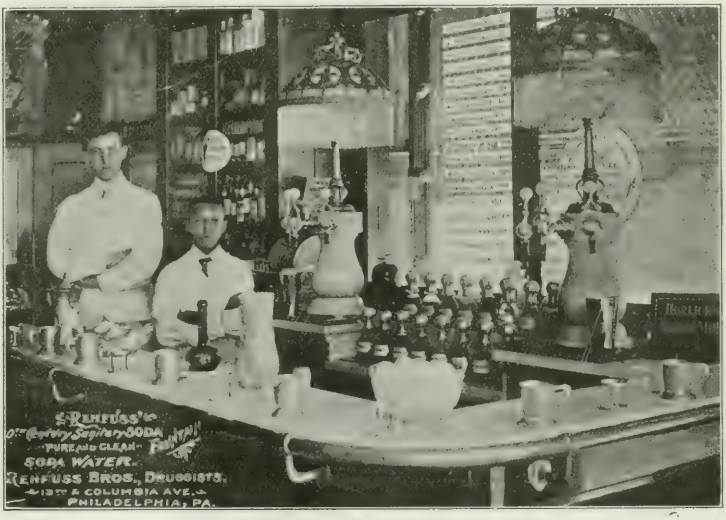
Keep Busy, But Do Not Hustle Too Hard.

Samuel N. Wickersham, the Pittsburg druggist who is 92 years old and in the best of condition for a man of his years, ascribes his good health and present activity to his having kept busy, according to an exchange, which comments as follows: "But constant activity doesn't have that good effect in all cases, as the records of our sanitariums show that those institutions are full of people who are there because they kept too busy. It isn't well for even the hustling American to overdo himself, and in fact any one who has passed the three score and ten milestone had better lie back and take it easy."

The SODA FOUNTAIN and CANDY COUNTER

Blizzard in Philadelphia Gives Rushing Trade to Hot Soda Dispensers.

During the blizzard which raged in Philadelphia on Christmas and the following day and which resulted in almost the complete tie-up of the city's transportation facilities, drug stores equipped with hot soda apparatus did a rushing business and incidently were life-saving stations for thousands of storm-bound pedestrians. Scores of drug stores kept open all night for the benefit of the unfortunates who waited for hours for cars or for some other means of transportation to their homes and while waiting found food and drink at the soda fountain.



One of the druggists who found the facilities of his fountain taxed to their utmost in order to supply the wants of belated citizens was Charles Rehfuss, whose store is located at the corner of 13th street and Columbia avenue. The snow storm which started in the morning and continued without interruption until noon the following day, covered the streets to the depth of 22 inches, soon halted the street car as well as the train service. Thousands were obliged to walk to their homes or waited for hours on street corners in the hope that a car would eventually come along.

To these weary, cold and hungry pedestrians, the sight of the brilliantly lighted drug store with its handsome fountain, promised warmth and refreshment and, in Mr. Rehfuss' case, the principal end of the business done during the evening was that about the soda counters. Hot chocolate, bouillon and broth were the favorites, although not a few ordered cold drinks. Short work was made of the crackers which were set out with each order and not a few munched candy while they waited for the storm to abate or for some means of reaching their homes. And it was not all a cold, business proposition either, for about midnight an aged woman was carried into the store by two stalwart policemen. She had been found almost unconscious in the snow a short distance away. Hot drinks soon revived her, however, and when she was able to give her name and address, it was found that she lived but a short distance away.

There were several instances of this kind and many a druggist played the Good Samaritan on Christmas night. Among those who sought shelter at the drug store of Smyser & Scott, at Germantown and Chelten avenues, was a woman with a three-months old baby. Both were quite exhausted by the long and fruitless wait for a car. Hot malted milk for mother and baby soon put the little one to sleep and when friends arrived with a sleigh in response to a telephone message, both were able to continue their journey.

Never before, in all probability, did hot soda figure so prominently in an emergency as it did during this storm in Philadelphia where, according to all reports, the effects were most severe.

FORMULAS!

In this department will be found each month a number of soda fountain formulas in addition to the complete and varied assortment published every month in The Soda Fountain, which journal contains much other information of value to druggists who own and operate fountains, serve lunches or sell confectionery.—Editor Era.

Through the courtesy of the Hawaiian Pineapple Growers' Association of New York, the ERA is given permission to print the following formulas which were submitted in the recent prize competition offered by the association through the advertising columns of *The Soda Fountain*. Three prizes were awarded, viz., $25, $15 and $10, these amounts going to the respective authors of the first three formulas printed below:

Hawaiian Pineapple Kiss.

Take three 12-ounce glassfuls of fresh purple grapes and one 12-ounce glassful of granulated sugar. Boil the sugar and grapes together until they make a heavy syrup and then strain through a colander to remove the seeds and skins, the syrup being used as a "grape dressing."

Then take a cone of Hawaiian pineapple ice cream (if necessary, supply your ice cream manufacturer with Hawaiian pineapple to make the cream), put it into a large silver or glass sundae dish, pour around the bottom of the ice cream cone ¾ of an ounce of the above fresh grape dressing, sprinkle 2 teaspoonfuls of ground or chopped walnuts over the top of the ice cream, and over the walnuts put a ladleful of crushed Hawaiian pineapple; then top off with a tablespoonful of whipped cream, a little shredded cocoanut and a whole cherry, and serve, placing a saucer under the sundae dish and a small

spoon alongside of the saucer. Also serve the customer with a glassful of ice water.

Hawaiian Pineapple Delight.

Take a 4 ounce sherbet glass, and in the bottom of each place a red cherry; then add a small dipperful (some) of orange ice with a liberal amount of grated pineapple, then a sprinkle of nuts and two more cherries, placing the latter so that they will rest against the side of the glass; then add a dipperful of half vanilla and pistachio ice cream, and place a red cherry on top; put two pineapple sugar crisps on each side of the cherry.

Belle Hawaiia (a Pineapple Sundae).

Into a tall 8-ounce goblet put one No. 16 dipperful of chocolate ice cream, over which pour a small ladleful of crushed or grated Hawaiian pineapple. Then put a No. 16 dipperful of vanilla ice cream on the pineapple and add a spoonful of marshmallow. Top off with a cube of pineapple which should be cut from thick, luscious slices of Hawaiian pineapple. By following the plan of not mixing any other fruits or strong flavored syrup with this sundae the delicious taste and delicate flavor of the pineapple will be retained.

Hawaiian Parfait.

Take an ordinary mixing glass and put into it 1 disherful of vanilla ice cream and 1 disherful of smooth pineapple ice; add 1 fruit ladleful of grated Hawaiian pineapple and a fruit ladleful of whipped cream. Then with a mixing spoon proceed to frappe the mixture well together. Put the frappéd mixture into a fancy 10-ounce stem glass and top with a little whipped cream and a maraschino cherry. Serve in a flat dish with spoon and wafers on the side.

Fruit Salad Ice.

Hawaiian pineapple, grated; maraschino cherries, angelique, green, cut into small squares, of each, equal parts; mix and, if necessary, dilute with equal parts of cherry and pineapple syrup. Serve over a cone of ice cream and top with whipped cream and a maraschino cherry.

Pineapple Dream.

Put one small ladleful of ice cream in a sundae dish and pour over it 1 ladleful of Hawaiian crushed pineapple; then over this sprinkle 1 teaspoonful of chopped pecans, top off with whipped cream and sprinkle with powdered sweet chocolate. Charge 10 cents.

Nancy Brown Sundae.

Place one layer of Hawaiian sliced pineapple on a cup or plate and over it put one eight-to-the-quart scoopful of pineapple sherbet and vanilla ice cream together; around the base of the cone in the form of a triangle lay three slices of angel food cake. Top off with whipped cream and a cherry. Sells for 20 cents, is a repeater, and has been the hit of the season.

[NOTE.—In the January number of *The Soda Fountain* additional formulas in this series will be printed.—ED.]

SOME CONTRIBUTED AND SELECTED FORMULAS.

Cleopatra.

Orgeat syrup, 2 ounces; cream, ½ ounce; yolk of 1 egg; shaved ice, ¼ glass; carbonated water, enough to fill 12-ounce glass.

Raspberry Lemonade Syrup.

Raspberry juice, 500 parts; cherry juice, 50 parts; sugar, 900 parts; citric acid, 20 parts. Boil the juices and sugar together to make a syrup, carefully removing the foam and impurities. Dissolve the citric acid in sufficient water, and add the solution to the syrup.

Texas Fruit Punch.

Put a large cake of ice in a punch bowl and add the juice of 3 lemons and 3 oranges, 2 quarts of claret syrup, 1 quart of champagne syrup and half an ounce of fruit acid; then add to the mixture thin slices of 1 orange and 1 lemon. Use a ladle and serve 2 ounces in a phosphate glass, filling with carbonated water.

Lemon Cream.

Beat up well the whites of 3 eggs and the yolk of one, and add them and sugar together; add the juice of 2 large lemons or 3 small ones, half a cup of water and half a pound of loaf sugar powdered fine. Mix these smaller thoroughly and then add a quart of whipping cream (sweet) the same way; when warm, put in the rind of 1 lemon, peeled very thin. When it thickens well, remove the lemon peel, and take the cream off the fire. On no account must it be allowed to boil. Serve in custard cups, or glasses.

Frozen Fruits.

Take the ripest of raspberries, currants or strawberries, as desired; press the fruit through a hair sieve into an earthen crock. To every 5 pounds of pulp, add 2½ pounds of sugar, 1 quart of water and the juice of 2 lemons or oranges. Freeze in the same maner as you would ice cream, and when frozen, put it at once into porcelain lined cans, or some earthen vessel, well packed in ice and salt.

Hot Cocoa.

Cocoa, 8 ounces; cornstarch, 1 ounce; sugar, 5 pounds; water, 5 pints. Dissolve the cornstarch in water brought to a boil and add the cocoa previously mixed with the sugar. Place 1 ounce of the mixture in a cup, fill with hot water and top off with whipped cream.

Tomato Bouillon.

Use 1 ounce of tomato bouillon (any good brand) in a 7-ounce cup of hot water, season with celery salt and serve. By adding a small amount of rich, sweet cream a tomato puree is made.

Lady Fingers.

Sugar, 1 pound; flour, ¾ pound; butter, 6 ounces; whites of 10 eggs. Beat the egg whites, add the sugar and then the other ingredients. Flavor with vanilla and a little almond essence. Dust with powdered sugar.

Rainbow Sundae.

Take an 8-ounce short stem cocktail glass and pack it with vanilla ice cream up to within a quarter inch of the top. Now take a pointed soda spoon and from down the inside of the glass take out a spoonful of ice cream on three different sides. Into the cavities thus made pour claret syrup in one, pineapple syrup in the second and mint syrup in the third. Then over all put a small ladleful of crushed cherry fruit and top off with a maraschino cherry. Serve on a flat dish with spoon and two wafers.

1909 BIG SODA FOUNTAIN YEAR IN CHICAGO.

More New Ideas in Beverages Than ever Before and December Breaks the Record for Ice Cream.

CHICAGO, Jan. 1.—The new year of 1910 is here. That of 1909 is but a memory, yet one most pleasing and prosperous to the soda fountain owners of Chicago. During its life many new ideas were introduced, all of which proved successful to the many patrons of Chicago's confectioneries and drug stores where fountains are installed. But with the coming of the new year the soda dispensers of the city are imbued with the spirit of excelling in their line of trade that of the previous year and are already busy concocting new and toothsome delicacies.

The Yuletide season found the stores full to overflowing with holiday shoppers, and although candy was very much in demand, the hot soda, chocolate, malted milk and other hot drinks did not lack in favor, and the artists behind the marble slabs were kept busy fixing up the palatable dishes. Everything served had a tinge of Christmastide, if it were not the name it was a suggestion of the Kris Kringle holiday in the way of mistletoe and holly wafers, or something equally as attractive and in harmony with the spirit of this season. The shops were gayly decorated in Christmas fashion, and from the fine displays shown and the expressions from the patrons, the boys must feel well repaid for their efforts in this line.

During the month of December more ice cream and ices were served than in the same month during any previous year in Chicago. At some of the fountains as much as 20 and 25 gallons were sold daily, an exceptional record for the cold season that has been prevalent in the city of late. These dishes were named with appropriate regard to the occasion and found much favor among the patrons.

Reconstructing North Dakota A.C. Laboratory.

E. F. Ladd food commissioner and State chemist, has been very busy lately making plans and perfecting arrangements for a new laboratory to replace the one recently burned at the North Dakota Agricultural College and Experiment Station.

FINE NEW PHARMACY FOR GEORGE B. EVANS.

Fountain Will Have Conspicuous Position—Druggist an Enthusiast for Good Soda Water.

Conservative business men in Philadelphia are commenting favorably upon the announcement that George B. Evans, one of the most prominent retail druggists in that city, is preparing to open a new store at 1219 to 1223 Market street. Like his other four stores in the center of the city, a handsome soda fountain of the latest type will occupy a prominent position in the new place. Mr. Evans is often referred to as "the department store druggist," owing to the similarity of his business system to the methods of the large department stores.

In perhaps no department has his success been more conspicuous than his soda fountains. "Evans' Soda" has become so popular that a score of competitors in the neighborhood, in some instances, the owners of grocery, department and confectionery stores and even restaurants, have hastened to follow in his footsteps and install modern apparatus.

But Mr. Evans declares that his business at his fountains is steadily increasing and he has no hesitation in saying that outside of the direct profit, he considers his fountains among the best mediums for attracting trade to his store. And now he proposes to establish a store at a location which many declare is passed by more people than any one spot in Philadelphia in the course of a day. In addition to being in the very heart of the business section, it is midway between the Pennsylvania and the Reading Railroad terminals and within a stone's throw of City Hall. On the opposite side of Market street, just above Tenth, is another of the Evans' stores, while just around the corner, at 1106 Chestnut street, is a second.

GEORGE B. EVANS, of Philadelphia.

Trade conditions vary at these stores, although they are so close together, and while the majority of the 13,000 persons who have "charge" accounts deal at the Chestnut street store and the bulk of the business done in Market street is with the persons from the country and the suburbs who come in for one day's shopping, Mr. Evans has found that when it comes to good soda water, it is all cash and what suits one suits all. For this reason, the fountain in the proposed new store, to be opened shortly after the first of the year upon the completion of alterations, will occupy a conspicuous position that it may contribute in the development of the new establishment just as it has done with the stores already established.

Mr. Evans at present conducts stores at 1106 Chestnut street, 17th and Chestnut streets, Eighth and Arch streets and 1010 Market street. The opening of the new place will be followed by the closing of the store at Eighth and Arch streets. In the vicinity of the latter, the neighborhood which was formerly largely occupied by retail stores, is steadily giving way to wholesale and manufacturing establishments.

Pure Food Show to Be Held in Milwaukee.

Milwaukee's pure food show, to be held under the auspices of manufacturers and dealers, will be opened at the city's new $500,000 Auditorium some time late in March or early in April. A recent meeting of merchants, manufacturers, druggists and others interested in pure food products, decided upon the time of holding the show and completed various arrangements. There will be lectures and music and many features to provide instruction and entertainment.

Nebraska Doctors Who Dispense Must Label Bottles.

The Food and Drug Commissioner of Nebraska has ruled that physicians are as much bound by the terms of the Food and Drugs Act as are pharmacists. Consequently a physician who dispenses his own medicines must equally observe the labelling requirements, and must, for instance, state the presence of cocaine, alcohol, morphine, acetanilid, etc., on any medicine which he prepares and hands to his patients.

SOME POINTS IN THE SERVING OF EGG DRINKS.

St. Louis Dispenser Furnishes Hints That Will Be Appreciated by Soda Fountain Operators.

Will Kavanaugh, who recently went to St. Louis and found a place at the Wolff-Wilson fountain, one of the most popular in that city, believes the chance for immediate success lies in the egg drinks. "There ought to be more of them drunk," he says, "and I think that one reason they are not more in demand is the dispenser's fault.

"One great fault with the egg drinks of today is a lack of common sense in the preparation. A dispenser is inclined to follow his idea of the formula given him and never look at the result.

"Take the malted milks set on the counter. How many of them do not leave a lot of uninviting dregs in the glass? It is a case of more of the powder than the carbonated water will 'take up.' This may not look important in itself, but I believe that it is just as important to give the customer a pleasant impression of his drink at the end as it is at first sight. The size of the glass at this fountain is likely not to be the same as the size of the glass at that one. Hence, the amount of powder should be changed. No customer likes to see a lot of dregs in a glass, besides the drinker is likely to think too little carbonated water or milk was used and that he is not getting his full drink. Another item that is to be considered, is the cost of the powder so used. Any up-to-date proprietor insists that the fountain must turn a profit and likely the dispenser's wages will fit the profit. If the dispenser can save $1 a week by putting just the right amount of powder in the glass and get 25 cents of that, he is doing something for himself.

"For myself, I try to watch that all of the time and keep just on the edge of the dregs so that I know that the customer is getting a full rich drink. This can easily be carried too far and 'thin' the drink served, which will cut the trade in a hurry.

"Again, there is the left-over in the shaker. The ideal way is not to have any 'left-over,' but if there is, the best thing to do is to throw it away. I do not believe any customer likes to see the tools sitting on the counter while he or she is drinking. The same care that is required to even the amount of powder to dissolve or the amount of syrup to sweeten the drink, will regulate the amount of carbonated water necessary to fill the glass to a tablespoonful. With that amount left, it is not hard to make a bluff at pouring it all in the glass and when that is done, the customer is satisfied. A dispenser who permits himself to have a lot of left-over will soon find that he is using half enough again for each drink or that he is serving something at two-thirds strength, either of which methods is wasteful and does not draw the least trade.

"The person who comes to the counter and buys a glass of drink expects a glass full. If you are going to give more, cut the price and advertise it and go after the trade that appreciates it.

"I never had any trouble with eggs," said Mr. Kavanaugh. "I was taught to break them in sight of the customer, and if a 'mistake' occurs, I put the glass into the cleaning water at once and then set it aside for further attention. I take another glass and another egg and get busy.

"Should a customer complain of a drink after it is prepared, there is no need of argument. Only two things remain to be done. One is to put up a new drink and keep the customer, the other is to insist the egg is good, save the price of that drink and lose a customer. I always took the former. I never lose a chance to mention to an egg customer in a passing way about 'getting eggs direct from the farm each morning.' It helps to give the impression of freshness, you know.

"Chocolate is another thing that is likely to be permitted to

run to dregs. Every one knows that the coffee drinker objects to 'grounds' in the cup, although they were considered a necessary evil a few years ago. I have not been able to convince myself that a discriminating public likes 'chocolate grounds' any more than he or she does the coffee sort."

GROWING POPULARITY OF CANDY IN BIG CITIES

Philadelphia an Example of the Effects of Legislation That Gives the People Pure Confectionery.

In addition to being one of the largest candy manufacturing centers in the world, Philadelphia, as the result of statistics taken during the recent holiday season, has also proven to be one of the largest consumers of sweets. In fact, the modest Quakers, it has been figured, consumes during the holiday period, 125,000 pounds of candy each 24 hours. This is about one-third of the local output in that period and as all previous records were broken during the past season, the fact is very strongly emphasized that the many safeguards thrown about the manufacture of confectionery by city, State and Federal legislation, has served to make candy more popular with all classes.

According to the estimate of two leading confectionery manufacturers of the Quaker City, beginning December 1 and running up until Christmas eve, there were 1000 barrels of sugar made into candy in Philadelphia each day. This was equal to 365,000 pounds, while among the principal accessories were approximately 100 cases of chocolate of 100 pounds each; 3000 pounds of walnuts and about the same amount of peanuts, almonds and pecans with a proportionate amount of cocoanuts. Of the latter, about 20,000,000 were brought into the port during the year 1909, of which about 5,000,000 were used in Philadelphia, many of them for Christmas goods. Flavoring extracts was another of the important ingredients.

The placing of these sweets upon the market was the work of 25 regular candy manufacturers other than the candy-making departments of the large department stores and the small retailers; 150 jobbers and more than 2500 retail dealers, not including the hundreds of small stores where confectionery is only one of the lines handled in a comparatively small way.

Record-Breaking Year for Fountain Industry.

While only a general estimate of the amount of soda water consumed in Philadelphia during the holiday season and the entire year could be gained, manufacturers of fountains and of syrups and supplies declared that not only were there more fountains in operation than any previous year but that old fountains were making way for new and more convenient apparatus, while the old custom of closing up the fountain during the winter months was now almost a thing of the past.

In fact, in the allied confectionery and soda water business, 1909 is regarded as a record-breaking year by manufacturers and dealers of Philadelphia. Of the score of big candy shops along Chestnut and Market streets, in the shopping section, almost without exception, the soda fountain is to be found occupying the most prominent portion of the store with the candy counters extending from it.

HEGEMAN CO. BUYS NEW BECKER-ICELESS.

Splendid Fountain Installed in Corporation's Pharmacy in Largest Apartment House in the World.

The residents of the largest apartment house in New York City—and that means the largest in the world—are now being served with delicious sodas and other fountain dainties right in their own building. This apartment house, the Belnord, is twelve stories in height and occupies the entire block between 86th and 87th streets and Amsterdam avenue and Broadway. The building itself is a model of architectural beauty and its service and appointments are the finest in New York.

Hegeman & Co.'s Belnord store is one of the handsomest in the city and not the least of its attractions is their magnificent 30-foot Becker-Iceless. The fountain was designed and built on special lines throughout, and aside from the unique attraction of the great apartment house, itself, a visit to Hegeman's elegant store and a study of the artistic lines of the apparatus will well repay any lover of the beautiful in soda fountain construction.

AGED DRUGGIST AN EARLY FOUNTAIN OWNER.

Reached Ripe Old Age of 90 and Held Philadelphia Record for Continuous Service in Retail Trade.

Alonzo W. Parsons, for 65 years engaged in the retail drug business in Philadelphia and one of the first owners of a soda fountain in that city, died on December 30 at the age of 90 years. Of old Revolutionary stock, Mr. Parsons, when a young man, served a term on the old Missouri, the first steam-propelled American war vessel, but early in the forties he forsook the Navy for the more peaceable calling of the pharmacist and in 1844, soon after being graduated from the Philadelphia College of Pharmacy, he started business.

At the time of his death he carried on the drug business at Franklin and Callowhill streets. His record for continuous service in the retail business has never been excelled in Philadelphia. He was the owner and for many years operated one of the first soda fountains manufactured by the late Charles Lippincott. It is the only one of this antique type known to be in existence and was recently presented to A. H. & F. H. Lippincott, Inc., Philadelphia, who now have it on exhibition in the window of their factory.

Ludwig Mond, Ph.D., Chemist and Scientist, Dead.

Dr. Ludwig Mond, noted scientist and chemist, who died recently in London, was born in Cassel, Germany, in 1839. He gained his early education at the Polytechnic School in that city, and later studied under Kolbe in Marburg. In 1864 he settled in England, where he perfected his process for the recovery of sulphur from alkali waste. Nine years later, Dr. Mond and J. P. Brunner, M.P., established works for the manufacture of an alkali by the Solvay process.

Many of Dr. Mond's scientific achievements have proved of commercial importance. Notable were his process for the manufacture of chlorine by the ammonia soda process and his efforts to recover the largest amount possible of ammonia from the burning of fuel in gas producers. He was a member of many scientific societies and in 1888 was president of the Society of Chemical Industry. In 1895 he visited this country at the time of the society's annual meeting held that year in New York City.

In 1866 Dr. Mond married his cousin, Miss Friederika Loenthal, and had two sons, Robert Ludwig and Alfred Moritz. By his will, Dr. Mond directs his trustees, after his wife's death, to pay $250,000 to the Royal Society, and $250,000 to Heidelberg University, both for endowment and research in natural science and for allied purposes.

Death of Thomas Doliber's Wife.

BOSTON, Jan. 3.—Mrs. Ada Ripley Doliber, wife of Thomas Doliber, president of the Mellin's Food Company of North America, died today at her home in Brookline, aged 55 years. She was the daughter of the late Charles H. Heath, of Brookline, and was married to Mr. Doliber in 1876. Beside her husband, she leaves two daughters, Mrs. Henry R. Hedge, of Brookline, and Mrs. W. A. Robinson, of New Bedford. Mrs. Doliber was much interested in philanthropy, and was president of the South End Day Nursery of Boston. She was also secretary of Hannah Goddard Chapter, D.A.R., of Brookline.

Obituary Notes.

—GEORGE D. BORTON, a prominent pharmacist of Camden, is dead, aged 62 years, of apoplexy. In addition to his activity in pharmaceutical affairs, Mr. Borton was a member of the New Jersey Legislature in 1883, being recognized as a leader of the Democratic party. President Cleveland appointed him Assistant Collector of Customs at the port of Philadelphia and subsequently he was clerk of the District Court. He was equally prominent as a Mason. A widow and one son survive.

—BENNETT L. SMEDLEY, for many years a prominent pharmacist of Philadelphia, but who relinquished that profession and became active in politics, is dead of apoplexy, aged 70 years. He was graduated from the Philadelphia College of Pharmacy in 1862. In the early eighties he served on the old Pharmaceutical Examining Board of the city and County of Philadelphia.

—THOMAS BRAUN, one of the pioneer pharmacists of Chicago, died recently at his home.

MOSTLY PERSONAL

Prof. Chandler to Retire, After Years of Activity.

The very recent announcement that the resignation of Chas. F. Chandler, A.M., Ph.D., M.D., LL.D., D.Sc., from the department of chemistry of Columbia University has been accepted to take effect June 30, 1911, and that his resignation as professor of organic chemistry in the College of Pharmacy of the City of New York, if which institution he is a vice-president, is now under consideration, has proved a shock to the students and faculty of the university and its affiliation that will not soon be alleviated. So long has Professor Chandler been a member of Columbia University's faculty that it will be hard indeed to realize this connection will soon be at an end. In 1864 he was invited, at the suggestion of Charles A. Joy, then professor of general chemistry at Columbia, to come to New York City and take part in the formation of the School of Applied Science, now known as the Columbia University School of Mines. He accepted this offer and was assigned to the department of chemistry. Since that time he has served the university and the City of New York with distinction.

PROFESSOR CHARLES F. CHANDLER, portrait presented to Columbia University in April, 1905, to commemorate the completion of forty years of service.

Charles Frederick Chandler was born at the residence of his grandfather, Nathaniel Chandler, in Lancaster, Mass., December 6, 1836. His paternal ancestors were descended from Wm. Chandler, who came from England in 1637 and settled in Roxbury, Mass. As the boy grew up he attended lectures on scientific subjects, among others those by Agassiz. In 1853 he entered the Lawrence Scientific School of Harvard, having previously graduated from the New Bedford high school and completed a year's private study of the classics. At Harvard he received instruction from Horsford, Agassiz and Josiah P. Cooke, each a master in his chosen department of science. This instruction was followed by a course in the University of Goettingen, where he studied chemistry under Woehler, the pupil of Berzelius, and where, in 1856, he received the degree of doctor of philosophy for his researches in mineralogical chemistry. From Goettingen he went to Berlin and became the private assistant of Rose, studying also physics under Dove, applied chemistry under Magnus and mineralogy under Gustav Rose.

In 1857 he returned to the United States and was invited by Professor Joy, first to become his assistant at Union College, and later, as was stated above, become head of the chemistry department of the Columbia School of Mines. Without salary he began the delivery of the lectures on qualitative analysis, stoichiometry, quantitative analysis, applied chemistry and geology. In 1865 he received the title of professor of analytical and applied chemistry and became dean of the scientific factulty. Some years later, upon the reorganization of the school, the chair of general chemistry was given to him, and in 1872 he became adjunct professor of chemistry and medical jurisprudence in the College of Physicians and Surgeons, succeeding four years later to the full professorship.

Soon after Professor Chandler's advent to New York City he was asked to assist in the development of the College of Pharmacy of the City of New York, and in 1866 he became professor of organic chemistry in that institution, giving one or two lectures a week during the college term. In the same year he was invited by the Metropolitan Board of Health to make studies of sanitary questions affecting the health of New York City, and so satisfactory did his work prove that the office of Chemist to the Board of Health was created especially for him. In this capacity his work has been of the utmost importance and his examination of the milk and food supply of New York City resulted in enormous benefits to the community. His masterly investigations, however, of the water supply of the leading cities of the country, have perhaps won for him the greatest distinction. In 1873 he received the honorary degree of M.D. from the University of New York, and that of LL.D. from Union College about the same time.

In 1870 Professor Chandler and his brother, Prof. William H. Chandler, of Lehigh University, began the publication of the *American Chemist*, a journal which, due probably to lack of proper financial support, continued for only four or five years. The initial step toward the formation of the American Chemical Society was made by the *American Chemist* when it published the proceedings of the celebration of the anniversary of Priestley's discovery of oxygen.

When the first New York State Board of Health was established in 1879, Professor Chandler was made a member and became chairman of the sanitary committee.

Professor Chandler is a life member of the Society of Chemical Industry of which he served as president in 1899. He is also life member of the chemical societies of Paris and Berlin, is a member of the National Academy of Sciences, fellow of the N. Y. Academy of Sciences, American Association for Advancement of Science, and American Philosophical Society.

Professor Chandler possesses a direct and vigorous style of delivery and a happy faculty of pleasing his hearers that has made the students enrolled in his university courses look forward with impatience to his next lecture. It is needless to say this his permanent absence from the lecture room and the laboratory will be a source of constant regret to those who were so fortunate as to work with him.

—MISS EVANS MONTGOMERY, who has acquired the Malone drug store in Larkspur, Cal., went to that town with high recommendations recently and was cordially welcomed. She is a graduate of the University of Oklahoma, and has an experience as a pharmacist extending over a period of 14 years. Before going to Larkspur she was identified with the Anglo Pharmacy with Dr. Keenan, San Francisco.

—JOHN FARRELL, druggist of Cameron, W. Va., was the victim of a holiday accident which resulted in the amputation of one of his feet. Mr. Farrell was cast for the role of Santa Claus at a Christmas celebration at the home of relatives in Littleton and when boarding a moving train to go there accidently slipped and fell partly under the wheels. He was taken to a hospital at Wheeling and given the necessary surgical attention.

—DR. H. M. WHELPLEY, dean of the St. Louis College of Pharmacy, was a recent victim of the grip.

—L. T. CHABOT, drug clerk at Burnham's pharmacy, New Auburn, Me., left recently for a two weeks' vacation in California.

—A. B. WOOLSEY, of Woolsey & Stewart, druggists, Oswego, N. Y., was a caller on old friends in the Metropolis a few days ago.

—S. T. DOUGLAS, salesman for Eli Lilly & Co. in this city, has returned from his home in Indiana, where he spent the holidays.

—S. J. CLARK, formerly druggist at Cornwall-on-the-Hudson, N. Y., is now spending the winter with his family at Tampa, Fla.

—THE ALFRED VOGELER DRUG COMPANY, of Cincinnati, O., celebrated the 50th anniversay of its entry into the wholesale drug field on January 1.

—W. H. NEWTON, of Milford, Conn., salesman for Eli Lilly & Co., spent New Year's day with friends in Flatbush, Brooklyn Borough, New York.

—A. G. SHOWER, who has been representing Meyer Bros. Drug Co. in the Northwest, has been transferred to the sponge

department of the company and his territory will be general, including the Pacific coast.

—W. H. MEYERS, of Scranton, Pa., representative of Eli Lilly & Co., at Philadelphia, Pennsylvania, together with his wife, spent the holidays in this city.

—FREDERICK K. STEARNS, president of Frederick Stearns & Co., manufacturing pharmacists, of Detroit, Mich., was a visitor in New York during the holidays.

—N. NICHOLAS, until very recently head of the correspondence department of Parke, Davis & Co.'s New York office, has left this position to enter the fire insurance business.

—FREDERICK F. ATTE, New York, recently contributed $50,000 to the Lowell, Mass., General Hospital, his benefactions to that institution now amounting to $200,000.

—DR. E. R. LAENEC, head of the department of experimental medicine of Parke, Davis & Co., Detroit, Mich., was a visitor at the New York branch during the past week.

—DR. FRANK M. READE, Richmond, Va., member of the city council, has been appointed by the Medical Society of Virginia as a representative to the Pharmacopœial Convention.

—W. H. SHEFFE, one of the leading druggists of Charlottesville Va., has prchased a fine country place near-by at Red Hill and in the future will devote a part of his time to farming.

—C. GOTTLOB KOLB, of the firm of Schering & Glatz, this city, has retired from active business and the concern will be continued under the same name by the remaining partner, Carl F. Stiefel.

—A. M. HOPPER and wife have returned from their honeymoon spent in Gary, Ind., and Indianapolis. Mr. Hopper will resume his duties as representative of Eli Lilly & Co. in lower Manhattan.

—R. T. GIBBS, who represents the Meyer Bros. Drug Co. in Texas, spent most of his holidays in bed in St. Louis, having been a victim of malaria during a business visit. He has returned to his home at Monroe, La., and will resume work shortly.

—JOSEPH T. W. COBLE, a graduate of the Buffalo College of Pharmacy, '05, and some time with Druggist F. M. Weaver, Oklahoma City, Okla., has been elected dean of the faculty of tue department of pharmacy, Epworth University, in the same city.

—PROF. JOHN URI LLOYD acted as toastmaster of the New England Society's annual banquet at the Business Men's Club in Cincinnati recently. Professor Lloyd is president, and at the election of officers, following the dinner, was elected as one of the members of the executive committee.

—F. P. BAILEY, of F. P. Bailey Drug Co., Inc., Zanesville, Ohio, recently celebrated his 50th year as a practicing pharmacist. With the exception of 12 years spent in Sandusky, Mr. Bailey's business life has been spent in Zanesville, and at the present time he is proprietor of one of the most profitable drug stores in southeastern Ohio.

—C. L. DUFF, of Clay City, Ill., who has been working the Illinois route of Charles H. Jenner for the J. S. Merrell Drug Company during Mr. Jenner's long illness, has been assigned to the 'Frisco railroad territory in Missouri for that company. Mr. Jenner is again looking after his own territory and seems in excellent health after a nervous attack.

—GEORGE F. POST, of Chanango Forks, N. Y., chairman of the publicity committee of the Commercial Travelers' Auxiliary of the New York State Pharmaceutical Association, on January 1 became associated with the J. Hungerford Smith Company, of Rochester, after having been for about five years a representative of Borden's Malted Milk Company, New York.

—FELIX HIRSEMAN, former president of the German Apothecaries Society, New York, who, with Mrs. Hirseman, is traveling in the South, writes from St. Augustine, Fla., that he is enjoying the balmy weather of that region and at the same time contrasting his experiences with those of his former colleagues in the Metropolis, who are tramping around in the snow.

—MISS HAZEL GALLAGHER, daughter of Mr. and Mrs. John C. Gallagher, of Jersey City, spent the holidays in Washington, D. C., as the guest of Mr. and Mrs. J. Leyden White. She was also entertained by Mr. and Mrs. S. L. Hilton, and was greeted by a number of the younger set of Washington drug circles on January 2, at the apartment of Mr. and Mrs. White.

—REPRESENTATIVES of Parke, Davis & Co. who visited the New York office during the holidays were: Joseph Litster, O. P. Ross, J. E. Rogers, A. D. Howell, C. C. Mitchell and H. B. Putnam, of New York State; A. J. Staudt, W. Vought, W. B. Hamaker, B. Cooling, H. T. Mundorf and J. C. Pennell, of Philadelphia; W. P. Rich and Charles F. Kelly, of New Jersey; G. L. Buell and Thomas F. Heffneren, Massachusetts; E. F. Gardner, Rhode Island; A. G. Hostetter, Pennsylvania, and C. G. Maynard, Vermont.

—FRANK T. GREEN, for many years professor of chemistry in the California College of Pharmacy, and also professor of chemistry in the Department of Medicine of the University of California, has been elected dean of the former institution, to succeed the late William M. Searby. Professor Green has been actively identified with the development of the mineral resources of California.

—GEORGE N. CROFT, who has been representing Lippincott, of Philadelphia, in Atlanta since September 1, 1909, has resigned and will hereafter represent the American Soda Fountain Company in connection with George T. Smith. Mr. Croft represented the American Soda Fountain Company in the Atlanta territory for a number of years prior to September 1, 1909, and is well and favorably known to the trade.

—SINCLAIR JACOBS, son of Joseph Jacobs, Atlanta, Ga., was recently elected vice-president of Jacobs' Pharmacy. Sinclair Jacobs is a recent graduate of the Philadelphia College of Pharmacy and by a singular coincidence won the Sadtler medal which was captured by his father 30 years previously. Joseph Jacobs will continue as president of the pharmacy. Charles A. Smith was elected secretary and general manager.

Sanitol's Ex-President Surprises an Archbishop.

ST. LOUIS, Jan. 2.—Archbishop J. J. Glennon, who recently celebrated his silver jubilee, today learned that several boxes sent him during the celebration contained pictures valued at approximately $25,000. The pictures, 144 in all, are copies of Tissot's Bible studies of New Testament characters, and were presented by Herman C. G. Luyties, a millionaire chemist. The Old Testament pictures in the same series recently were purchased by Jacob H. Schiff, of New York, for $32,000, and presented to the Astor Library. The boxes had been stored in the basement of the archiepiscopal residence without opening.—*Philadelphia Public Ledger.*

Merrell Forces Hold "Family Dinner."

ST. LOUIS, Jan. 3.—The "family dinner" of the J. S. Merrell Drug Company took place at the Southern Hotel December 28 and Col. C. P. Walbridge, president of the company, presided. The guests were department managers and salesmen and of these 41 were present and regrets from several detained at the last moment were read. There was no set programme and "shop talk" from all who had anything to offer for the "good of the order" was expected. Without assigned topics, there was enough talking to pass the evening pleasantly.

New York Branch, A.Ph.A.

The third annual meeting of the New York branch of the A.Ph.A. will be held Monday evening, January 10, at 8.30, in the New York College of Pharmacy building, 115 West 68th street, Manhattan. The following programme will be carried out: "Camphor Liniment, Pharmacally and Legally Considered," by George A. Ferguson; "The Essential Oils of the U.S.P.," by Paul Jeancard and Conrad Latie (abstract of English translation by C. A. Mayo); "A Note on the Assay of Opium," by E. L. Patch (to be read by the secretary).

Manhattan Judge Upholds State Board.

Assemblyman Conklin, attorney for Alfred Schletter, 2226 Pitkins avenue, and Charles K. Benjamin, 294 Brook avenue, demurred in the cases being prosecuted against the latter by the New York State Board of Pharmacy, claiming that the board had no legal right to sue and that it had no legal existence. Both sides submitted briefs to Justice Blake, of the Municipal Court, Manhattan. Mr. Conklin's demurrers were overruled and $5 costs charged in each case.

Brooklyn Druggist Held on Board's Complaint.

Charles Rubin, a druggist, of 64 Hamilton avenue, Brooklyn Borough, was charged in the Borough Street Court recently before Magistrate Tighe with selling adulterated drugs. The charge was made by Chief Inspector of the State Board of Pharmacy Thomas Rogers, who declared his assistant had twice bought adulterated goods from the druggist. The accused was held for examination.

Injunction Suit Over a $250,000 Order Demand by Mr. Liggett.

Big New York and Boston Company Goes to Court to Enforce Its Right to the Exclusive Sale of Rexall Remedies—Some Interesting Inside History Revealed.

EDWARD D. CAHOON,
first president of the
United Drug Co.

Former Attorney-General of New Jersey Secures Injunction to Prevent President of United Drug Company From Cutting off the Supplies of the Wm. B. Riker & Son Co., of Manhattan and Brooklyn, and the Jaynes Drug Company, of Boston—Some Very Tart Correspondence Entered on the Court Records in Trenton—First President's Story of the Formation of the Big Co-operative Drug Combination Tells a Tale of Vicissitudes and Powerful Help Given by Present Complainant Through Liberal Purchases of Goods, Endorsement of Credit and in Various Other Ways—Basis of Formation was Co-operation and Exclusive Right to Sell Goods.

LOUIS K. LIGGETT,
present president of the
United Drug Co.

TRENTON, N. J., Jan. 3.—An action which involves the fundamental principles of co-operative business organizations and seeks to test the legality of an attempt to compel a member to sell products of the value of $250,000 within the calendar year 1910 has been begun in this State and the papers have been placed on file in the Chancery Office here. A preliminary injunction, recommended by Vice-Chancellor James E. Howell, has been approved by Chancellor Mahlon Pitney, the return day being set for Tuesday, January 11, at the chambers of the vice-chancellor in Newark.

Former Attorney-General Robert H. McCarter, of New Jersey, one of the leaders of the bar in this State, made the motion on behalf of the drug firm of William B. Riker & Son Co., operating ten drug stores in Manhattan Borough and six in Brooklyn Borough, New York City, as well as eight in Boston, Mass. Associated with Mr. McCarter is Albert E. Seibert, of New York City, who has been prominently identified with drug trade legal affairs in the metropolis and formerly attorney for the United Drug Company.

Blanket Injunction Restrains Rexall Officers.

The defendant is the famous Rexall co-operative drug company, legally designated as the United Drug Company, with headquarters in Boston, but incorporated under the laws of New Jersey, which brings it within the jurisdiction of the Chancery Court of this State. The order of injunction restrains the Rexall concern, "its officers, employees, attorneys and agents," from "selling, giving or furnishing, at wholesale, retail or otherwise, any article manufactured and sold by it, to any individual, firm or corporation, or joint stock association or company," in Manhattan, Brooklyn or Boston, "so long as and while the defendants shall fail to sell such goods" to the Riker stores "for prices and on terms and conditions uniform with the prices, terms and conditions made to the other stockholders of the defendant."

Story of the Origin and Development of Rexall.

The complaint is voluminous. It gives a lot of interesting history of the formation of the Rexall co-operative association. After stating the fact of the incorporation of the United Drug Company in New Jersey in November, 1902, the complaint says:

The United Drug Company is, and ever since its organization has been, operated as a co-operative concern, the distinguishing and constant features of its policy having been that the articles manufactured and sold by it have been sold exclusively to its own stockholders at uniform prices, and on uniform terms, and that not more than one of its stockholders has been at any time located in any one city or town. Its stockholders are nearly all retail druggists, located in all, or nearly all, of the cities and towns of any considerable size of the United States, excepting the Southern States, and such druggist stockholders are regarded and referred to in the publications and literature of the defendant, as agents for the sale of the articles manufactured and sold by it. For agency purposes, the United Drug Company has always treated the Boroughs of Manhattan and Brooklyn, in the City of New York, as separate and distinct cities or towns.

Branching Out Into Many Side Lines.

The United Drug Company has, by dint of careful and shrewd management, built up and developed an enormous business, prosecuted in the manner hereinabove set out, and consisting generally of the manufacture and sale of medicines and specifics of almost every known variety, the manufacture and sale of candies, perfumery, and many other articles not strictly drugs, but, from a business standpoint so related thereto as that they constitute suitable merchandise for a drug store; that in the manufacture and sale of much of the product of the defendant, it has used trade marks or trade names, such as "Rexall," "Liggett's," "Saturday," "Harmony," and others, which have acquired, and now enjoy a great reputation in the trade, which the defendant by shrewd and judicious advertising, has stimulated and promoted so that the goods manufactured and sold by the defendant have acquired a high character, and are much sought after by the purchasing public, and the right to purchase the same from the defendant, and to be its agent in any city or town is a valuable one largely sought after by retail druggists, and such right is a valuable asset of any retail drug business, the possessors thereof practically enjoying the right to acquire from the defendant at manufacturers' prices, all of the articles manufactured and sold by the defendant, and to sell the same at considerable profit, and yet keep within the limits of the prices of the general retail trade.

Your orator and other stockholders and agents of the defendant have displayed, and are accustomed to advertise and display in their stores the fact that they are selling the goods with the trade names and trade marks of the defendant, and such fact is not only a drawing card to purchasers of these goods, but experience shows that customers attracted to the stores which enjoy the privilege of selling the defendant's goods, not only purchase the goods manufactured and sold by the defendant, but also make other purchases of other goods which such stores have on hand, with the result of great profit to such stores.

Riker Company an Original Stockholder.

The complaint sets forth that at the formation of the United Drug Company the Riker Company paid cash for 40

shares of stock, which it still owns, together with 40 shares then issued to the Jaynes Drug Company, of Boston, and 40 shares then issued to the Boston Drug Company, Ltd., of Brooklyn, making 120 shares of original stock which the Riker Company now holds. The complaint then quotes the following by-law adopted by the stockholders of the United Drug Company November 15, 1906:

"As long as any individual firm, or corporation remains the owner of at least one share of the common capital stock, and fully keeps and performs all his or its agreements with the company, such individual, firm, or corporation shall retain, as far as this company can control the matter, the exclusive sale within the territorial limits of his or its city or town, if he or it so desires, of all the articles manufactured and sold by this company."

Commenting on the by-law the complaint says:

Such by-laws or one of practically similar import and effect, has been in force ever since the organization of the United Drug Company, and one expressed the purpose and plan under which the United Drug Company was formed, promoted and organized and in accordance with which it has from the date it commenced business to the present time, conducted and carried on its business.

The Riker Company sets out that it has complied with all the requirements of ownership of stock, agency activity, etc., having purchased and sold large quantities of Rexall goods, but that in December, 1909, the United Drug Company notified the Riker Company that unless the latter would guarantee the purchase of $250,000 worth of goods in 1910 the agency would terminate. Regarding this the complaint says:

The defendant has no right to cease selling your orators goods manufactured and sold by it in the three said localities, nor has it any right to attach any such conditions as are set out in such notice, either as to the amount of the required purchases by your orators of the defendant, or the method in which your orators shall conduct and carry on their said business. No condition as to the quantities of goods to be annually purchased is exacted by the defendant of its other stockholders and agents, and all of such stockholders and agents have a right to expect and require uniform and similar treatment from the defendant.

Cause of Suit as Told in Affidavits.

Accompanying the complaint several affidavits were presented to the Chancellor. One is by Alfred H. Cosden, president of the Riker corporation. He testifies in effect as follows:

Since Wm. B. Riker & Son Co. became the agent in Manhattan for the sale of the articles manufactured and sold by the defendant, the relations of the complainants and the defendant have been solely that of purchasers on the part of the complainants and seller on the part of the defendant and there never has been any agreement between the complainants and the defendant nor any obligation as purchaser, stockholder or otherwise resting on the complainants or either of them which has not been fully and fairly kept, performed and discharged.

The only question at any time has arisen between the parties has been as to the quantity of goods purchased by the complainants from the defendant. On this one point the defendant claimed that the complainants should purchase $75,000 of the defendant's products during 1909, and an extended correspondence, too bulky to set herein, ensued between the president of the defendant and myself, he insisting that the complainants should purchase that amount of goods and I denying on behalf of the complainants that any obligation to take the goods existed, and finally, still maintaining that no legal obligation existed, I wrote him that the complainants would adopt his view of the matter, and accordingly offered to place with the defendant an order sufficient to bring the complainants' purchases for the year (1909) up to the amount of $75,000.

Ready to Place an Order for More Than $20,000.

President Cosden then submits this letter offering to order enough to make up any deficiency:

Dec. 3, 1909.

Louis K. Liggett, United Drug Co., Boston, Mass.

Dear Mr. Liggett: Referring to my letter of the 18th ultimo, acknowledged by you under date of the 20th ultimo, but to which as yet no reply has reached me, I write you regarding our purchases from you during the current year.

In July last you wrote me that in the first six months of this year, our purchases from you were at the rate of $51,456.46 for the year. It is my understanding that the five following months, making up eleven months of the year, have not brought up the rate for the year to $75,000. We have done and are desirous of doing everything that could be reasonably asked of us in the circumstances, whether under legal obligations or not. In this spirit, I write to advise you that we are ready to place an order with you for the whole difference remaining between our total purchases to the 30th ultimo and the amount of $75,000, toward which we have been earnestly striving that is to say, we will take from you this month whatever quantity of goods may be required according to your records to make our total purchases for New York, Brooklyn, and Boston for the year the sum of $75,000. We are now making up the detail for the order, and upon advice from you as to the total amount to be covered, the order will be promptly sent forward.

Awaiting your prompt advice, yours very truly,

WM. B. RIKER & SON CO.
by A. H. COSDEN, President

President Liggett Demands a $250,000 Guarantee.

Mr. Cosden's affidavit next quotes a letter from President Liggett, of the Rexall Company, dated December 10, in which he offers the alternative of a $250,000 guarantee or "get out" of the company. This is an extract:

We wish to inform you that before this order is placed we deem it fair that you should know that this company will not renew its 1909 contract for the year 1910, except that you guarantee a bona fide business to us, at our selling prices to you, of $250,000 for the year 1910, and the further agreement on your part not to sell our goods in any cities other than New York, Boston and Brooklyn, and then only to your retail customers.

Should you not see your way clear to make such an agreement with us we are willing on January 1, or before that date, to purchase from you the shares of United Drug Company stock which now appear on its books as being owned by your company or companies, and pay you therefor the book value of said shares.

President Cosden answered this ultimatum in a characteristic manner in the following brief note dated December 16:

Our right to buy and sell your goods does not depend upon any arrangement made with reference to the present year [1909] and is not affected thereby. We shall expect your company to fulfill its legal obligations to this company during the year 1910 and thereafter.

Replying to another letter of a routine nature Mr. Cosden, on December 18, wrote as follows to Mr. Liggett:

We do not regard the statement contained in your letter of the 10th instant of your intentions with reference to this company for 1910 as in any way affecting your obligation to sell your goods to this company. As a stockholder of your company, this company is entitled to the exclusive right to deal in your goods in this city, and we repeat that we shall look to your company to fully perform its legal obligations to this company during the year 1910 and thereafter.

Mr. Cosden, in his affidavit, tells of the advertising that the Riker Company has done to increase the public knowledge of Rexall goods and in addition to the distribution of booklets, samples, etc., all of which was done without expense to the company, the Rikers gave window displays to the Rexall goods which were worth more than $300 a week, as the company could command that figure for its windows.

EARLY HISTORY OF THE REXALL ENTERPRISE.

First President Tells How Object of Present Attack Gave Strength of Its Support to the Company.

Affidavits also are submitted made by Edward D. Cahoon, treasurer of the Riker Company; Edward O. Ladd, assistant treasurer of the Jaynes Drug Company, of Boston; Jerome A. Crane, Manhattan manager; Harry W. Weed, Brooklyn manager, and John S. Alley, manager of the Jaynes Drug Company, of Boston. With the exception of Mr. Cahoon's affidavit they are of formal character. Mr. Cahoon, as first president of the United Drug Company, throws some interesting sidelights on the struggles that attended the formation of the Rexall co-operative enterprise. Mr. Cahoon has been connected with the Riker corporation since it was organized in 1892. He was one of the incorporators of the United Drug Company, in November, 1902. His affidavit tells the story:

At the first meeting of the board of directors of the United Drug Co. I was elected president and continued as president down to October, 1904. Said corporation was projected as a co-operative manufacturing concern, with the object of enabling retail druggists who should become members of the concern by purchase of its stock to make greater and additional profits on the drugs and patent medicines handled and sold by them.

To this end it was fundamentally designed on the organization of said co-operative concern that none of the products of said concern should be sold to other than its own stockholders and that not more than one stockholder of said concern should be located in any one city or town.

By this means it was planned to enhance the relative importance in each city or town, and it was also planned that each stockholder of such concern should, through the working of such fundamental design and plan, in addition to making a retailer's profit on the sale of such products, also make a manufacturer's profit thereon through his participation as stockholder in the manufacturing profits of such co-operative concern.

A further and fundamental feature of such co-operative concern was that all the stockholders should be furnished the products of such concern at uniform prices and on uniform terms. In pursuance of the plan of organization of said concern its stock has been sold to retail druggists located in most of the cities and towns of consequence throughout the United States, excepting in the Southern States, and the said concern consequently has a large number of stockholders who are distributed over a large area. • • •

How Rikers Helped the New Concern.

Prior to the organization of the defendant I attended a great many meetings of those interested in the proposed corporation,

(Continued on Page 64)

Newly Elected Officers of the New York State Board of Pharmacy.

JOHN HURLEY, Little Falls, elected president.

Dr. GEO. C. DIEKMAN, Manhattan, elected second vice-president.

S. A. GROVE, Buffalo, elected first vice-president.

ALBANY, N. Y., Jan. 3.—The business transacted by the New York State Board of Pharmacy at its annual meeting held today was almost entirely of a routine character. Two new members took their seats on the reorganization of the board, these being Dr. William C. Anderson, who succeeds Frederic P. Tuthill, of Brooklyn, and Lee W. Miller, of Niagara Falls, who succeeds Herbert M. Groves, of Jamestown. Warren L. Bradt, of Albany, who has long been the secretary and treasurer of the board, was also sworn in as a member from the Middle section to succeed himself.

The board elected these officers: President, John Hurley, of Little Falls; first vice-president, S. A. Grove, of Buffalo; second vice-president, George C. Diekman, of New York; secretary-treasurer, Warren L. Bradt, of Albany. The officers of the several branches are as follows: Eastern—Chairman, Clarence O. Bigelow, 106 Sixth avenue, New York City; secretary, Joseph Weinstein, 115 West 68th street, New York City; Middle—Chairman, Byron M. Hyde, 202 Main street, East Rochester; secretary, Warren L. Bradt, Eagle and Howard streets, Albany; Western—Chairman, James A. Lockie, 415 White Building, Buffalo; secretary, Geo. Reimann, 405 Genesee street, Buffalo.

President William Muir, in his annual report, stated that 1909 had been a momentous year in the history of the board and this was caused mainly by the recommendation of the Governor in his annual message to the Legislature last January to the effect that the laws regulating the board be revised. Various conferences had been held in which representatives of the board took part, but none of the bills which were drafted and introduced into the Legislature was enacted. President Muir spoke highly of the work of the National Syllabus Committee and the benefit that is to be derived from it will become more apparent and appreciated as time goes on. Dr. Henry L. Taylor, of the Department of Education, was complimented for his labor on behalf of the syllabus committee in compiling statistics of the history of pharmacy since its beginning in the State, and a recommendation was made that his report, read at the annual meeting of the State association at Richfield Springs last June, be printed in the minutes of the board.

In closing his report, President Muir said that experience had demonstrated that the present statute was practical, effective and workable, and with a few amendments the law might be called ideal. "Under its administration much more has been accomplished in this State than in any other State in the Union to eradicate evil, correct error and to advance the standard of pharmacy with beneficent results to our citizens."

Secretary Bradt's report showed the total number of store certificates issued to be as follows: Pharmacies, 4452; drug stores, 41; permits, 723. The number of apprentices registered was 250, of whom 12 were females.

During the year the Eastern Branch examined 238 applicants, of whom 180 were granted pharmacists' licenses and 23 druggists' licenses. The Middle Branch examined 97 applicants, 37 of whom passed as pharmacists and 28 as druggists. The Western Branch examined 126 applicants, 42 of whom passed as pharmacists and 52 as druggists. The total number of licenses granted by all branches of the board during the year was 362, 12 of which were issued to women.

The committee on inspection, complaints and prosecutions reported that during 1909 visits had been made to 5259 pharmacies, 496 general stores and 364 towns and cities. During the year 2524 samples and 113 prescriptions were collected from pharmacists and others doing business within the territory of the Eastern Branch and 425 samples were collected from pharmacists within the jurisdiction of the Middle Branch, or 2716 in all. Of 2438 samples analyzed which had been collected in the Eastern section, 186, or 7.64 per cent, were found not to comply with the standard. As compared with the 1908 report, this shows a decrease of 2.3 per cent. Of the 278 samples from the territory of the Middle Branch, 57, or 20.41 per cent, were found not standard, an increase of 6.62 per cent over the preceding year. This increase of deficient samples from the Middle section was explained by the fact that all samples collected during the year had been taken mainly from stores suspected of handling adulterated drugs. As a whole, the report showed that there had been during the year a marked decrease in the sales of adulterated drugs within the State, and this was attributed by the board to the more rigid inspections under the law.

CONFERENCE OVER PROPOSED PHARMACY BILL.

Long Discussion Over Power of Appointment and Number of Members of Board—No Continuous Tenure.

At the hearing of the legislative committee of the New York State Pharmaceutical Association held in the rooms of the Board of Trade, 203 Broadway, Manhattan, December 30, all the new matter in the proposed amended pharmacy law was read and thoroughly discussed. Thomas Stoddart, president of the association and chairman of the committee, explained that the bill had been reconstructed by Senator Henry W. Hill, of Buffalo, according to the instructions laid down at the former conference held at the Hotel Belmont. Numerous changes were made in the draft presented, one of the most im-

portant of these being that relating to the appointing of members of the Board of Pharmacy.

As read, the bill provided that after August 1, 1910, the board shall consist of five examiners, two of whom shall be residents of New York City. As changed, the board shall consist of nine examiners, four of whom shall be residents of New York City. Further provisions, the changes in which are in parentheses, are that "at the first annual meeting of the association, after this Act takes effect, there shall be 15 (27) licensed pharmacists nominated by ballot whose names shall be submitted to the Governor (Regents), immediately thereafter, from which number the Governor (Regents) may (shall or must) appoint five (9) of the nominees, who shall constitute the board of pharmacy, and whose term of office shall begin August 1, 1910, one (three) of whom shall hold office for a term of one year, one (three) for a term of two years, one (three) for a term of three years, and so on, the fifth for a term of five years. The successor of the member whose term of office shall have expired, shall be appointed for a term of 5 (3) years. A vacancy in the office of any member, caused otherwise than by expiration of term, shall be filled by the Governor (Regents) for the unexpired term of such member. Thereafter, at each annual meeting of the New York Ph.A., 5 (9) licensed pharmacists shall be nominated by ballot, whose names shall be submitted to the Governor (Regents) from which number the Governor (Regents) may appoint one of the nominees to suceed the member whose term of office expires on the following July 31. Members of the State Board of Pharmacy shall be ineligible for reappointment for one year after the expiration of their respective terms of service." This last provision was stricken out, as was that requiring that the secretary of the board be a graduate in pharmacy.

The placing of the power to appoint members of the Board of Pharmacy and the restriction of this power to a certain number of nominees and to a certain locality proved the bone of contention. The consensus of opinion was that it would be far better to have the members of the board appointed by the Board of Regents, a permanent body, rather than by the Governor, who only holds office for two years, thereby keeping pharmacy as much as possible out of the hands of politicians.

Ulrich Wiesendanger said he thought the Governor wouldn't stand for the appointment of members by any other than himself. A. S. Downing, first assistant commissioner of the Department of Education, replied to this by stating that the Governor told him recently it didn't matter to him who appointed the Board of Pharmacy so long as it was appointed in the right manner. Mr. Downing said that his department didn't want to appoint the board, but would accept the responsibility if the bill became law. He also said that the Governor didn't care if the Brown Bill was altered so as to place the power of appointment with the Regents. As to the insertion of the word "must" or "shall" in place of "may" in the clause "the Governor may appoint 9 of the nominees," he knew that both the Governor and the Regents would object to such a restriction. If from 27 licensed pharmacists out of an association membership of perhaps 1400, 9 nominees must be appointed as members of the Board of Pharmacy, it was almost a certainty that 5 or 6 of the nominations would be compromises. The Governor or Regents would want the best men on the Board of Pharmacy and might desire to go outside of the 27 men nominated.

Mr. Downing drew attention to the fact that if the Regents appointed the Board of Pharmacy the ultimate responsibility would be shifted to the Board of Regents. Rules drawn by the former body would be submitted to the Regents and if not suitable could be returned for modification. It was quite likely, he added, that the Governor would have something to say in his message in regard to the pharmacy law.

Dr. W. C. Anderson, of the Brooklyn College of Pharmacy, favored placing pharmacy as far as possible under the Regents. The prerequisite law was the first step in this direction. He also favored an unrestricted power of appointment.

The provision requiring $2 annual registration fee was strongly condemned on the ground that the principle was wrong. Lawyers, doctors and other professional men paid a much lower annual fee. To some of those present it appeared in the light of a tax on honest men to enforce the law against dishonest men.

The bill provides that inspectors be licensed pharmacists and on this point there was considerable difference of opinion. Dr. Mayo, Dr. W. C. Anderson, Prof. Rusby and H. A. Herold did not think it necessary that all inspectors should be licensed, basing their arguments on the ground that a licensed pharmacist will not always sell to a licensed pharmacist, that an inspector with such qualifications would gain the ill-will of the retail trade and would be too well known to gather samples for analysis. Also that a licensed man might have favorites. Dr. Rusby said that he knew many inspectors and the best among them were not licensed pharmacists. In defense of the bill's provision were Commissioner Downing, President Stoddart and a number of others. C. H. Hitchcock proposed that the Rhode Island law be followed in this case. This law provides that the inspectors be licensed pharmacists and that such other assistants as are necessary be appointed.

The section regarding working hours and sleeping apartments was condemned by several as beneath the dignity of the profession; a pharmacist could sell his time and services as he pleased. Dr. Rusby expressed himself of the opinion that pharmacists should only work for a certain length of time, as their work had to do with the lives of those to whom they sold medicines and to prepare such medicines required a fit condition of health.

That part of the bill relating to adulterations received considerable criticism, Dr. Rusby claiming that if it went into effect as worded, New York State would be flooded with adulterated drugs, and F. E. Holliday asserted that it would mean the entire relabeling of drugs on hand.

Objections were raised to that part bearing on violations. Mr. Wiesendanger said violations were covered in three different ways in the bill, one of these classing a violation as a misdemeanor. The bill will be modified so as to bring violations under the head of misdemeanor, thus making it a State affair. The poison schedules were criticized as being antiquated and requiring revision.

OBJECTIONS TO N. Y. BOARD NOT SUSTAINED.

Attorney-General Says Bellinger Can Test Constitutional Question in His Supreme Court Appeal.

Much interest was manifested by the druggists of New York City in the announcement in the ERA of December 30 that Attorney-General O'Malley had denied the application made by Melvin E. Bellinger, a Brooklyn druggist who was recently penalized in $50 for permitting an unregistered clerk to sell medicines, asking for leave to bring action against the New York State Board of Pharmacy, claiming that the members of the present board are usurpers, intruders and unlawful holders of public office. All the members of the board were cited to appear before the attorney-general and a hearing was granted by the latter on December 8. Robert S. Conklin appeared as attorney for Bellinger, Henry A. Petersen for the Eastern branch of the board and Harold D. Alexander for the Middle and Western branches.

At the hearing, Mr. Conklin contended that there was nowhere on file in any public office the certificate of election of the present incumbents of the board, showing that they were members of the board. He also claimed that the law was unconstitutional in view of the fact that no definite course was specified as to manner and mode of election.

The respondents showed that the oath of office of each member had been filed with the Secretary of State at Albany and also explained to the Attorney-General as to how elections were conducted. It was argued that the Board of Pharmacy had a right to make rules and by-laws pursuant to the pharmacy law to provide the form of election.

Attorney-General O'Malley, on December 28, decided that it would not be expedient to allow an action or proceeding to be brought at this time on behalf of the people against the Board of Pharmacy to oust and displace the members of such board, and that the application of Bellinger to bring such action or proceeding be denied. The Attorney-General rendered this decision, claiming that Bellinger could himself raise the constitutional question in his case pending in the Supreme Court before the appellate division, second department. He expressed no opinion on the arguments advanced by the attorneys of either Bellinger or the board.

Assemblyman Conklin, when asked by an ERA representative for his opinion of the Attorney-General's decision, said he thought the opinion spoke for itself. The decision took neither side of the case, merely stating that it was deemed inexpedient at the present time to allow action to be brought.

3,000 Scientists Attend Two Great Meetings in Boston.

American Chemical Society Inaugurates New Division of Pharmaceutical Chemistry and Professor Stevens, of the University of Michigan, is Elected as the First Chairman—Boston Pharmacists Dine Professor Remington More Than a Thousand Papers on Pertinent Questions.

BOSTON, Jan. 3.—In the week which has just closed Boston entertained the greatest number of scientific men in its history. Over 3000 delegates registered during the six week days as attendants at the annual meetings of the American Chemical Society and of the American Association for the Advancement of Science. Meetings were held in Boston and Cambridge, in 36 different sections, and the total number of papers presented exceeded 1000.

A feature of special interest to pharmacists was the formation of a division of pharmaceutical chemistry of the A.C.S. which was effected on Thursday with the election of the following officers: Prof. A. B. Stevens, of the University of Michigan, Ann Arbor, Mich., chairman; J. M. Francis, Detroit, Mich., vice-chairman; Dr. B. L. Murray, of New York City, secretary; Prof. J. P. Remington, of Philadelphia, and Prof. Edward Kramers, of Madison, Wis., executive committee.

The officers which the American Chemical Society elected for the ensuing year are: President, W. D. Bancroft, Cornell; councillors-at-large, A. D. Little, Leo H. Baekeland and Dr. W. L. Dudley, Vanderbilt University; directors (two years), A. D. Little and E. G. Lowe; secretary, Prof. Charles L. Parsons, New Hampshire State College; treasurer, A. P. Hallock, New York City; librarian, Daniel D. Berolzheimer, New York City.

Prof. Nichelson, of Chicago, Elected President.

Prof. A. A. Nichelson, of the University of Chicago, was chosen president of the American Association for the Advancement of Science. These were elected vice-presidents: Mathematics, E. H. Moore, University of Chicago; physics, E. B. Rose, Bureau of Standards, Washington, D. C.; chemistry, G. B. Frankforter, University of Minnesota; mechanical science and engineering, A. Lawrence Rocth, Boston; geology and geography, J. M. Clarke, State geologist, Albany; zoology, J. Reighard, University of Michigan; botany, R. A. Harper, University of Wisconsin; anthropology and psychology, R. B. Dixon, Harvard; social science, T. E. Burton, Cleveland, Ohio; physiology, F. G. Novy, University of Michigan; education, A. Ross Hill, president of the University of Missouri. L. O. Howard, of the Smithsonian Institute, was elected permanent secretary; Prof. F. E. Clements, of the University of Minnesota, general secretary; Prof. J. E. Zeleny, University of Minnesota, secretary of the council. Fred C. Croxton, Washington, D. C., was elected secretary of the social and economic science section. It was voted to hold the next convention at Minneapolis and St. Paul.

Boston Pharmacists Dine Prof. Remington.

A dinner was given on Tuesday to Prof. Remington at the Boston City Club, and plates were set for 40. In the company were the leading men of the State and city in pharmacy and the trade, both wholesale and retail. The illness of President C. Herbert Packard, of the New England section of the American Pharmaceutical Association, was a matter of much regret, and in his absence the honor of presiding fell to John G. Godding. Beside Professor Remington, other guests were Dr. Harvey W. Wiley, of Washington; Professor Parsons, of the chemistry department of the New Hampshire State College; ex-President William F. Sawyer, of the Massachusetts College of Pharmacy; Professor Rosengarten, of Philadelphia; Professor Hartman, Ernest O. Engstrom, president of the Massachusetts State Board of Registration in Pharmacy, and Professor Nickerson, former professor of botany in the Massachusetts College of Pharmacy.

Professor Remington spoke about the work of decennial revision of the U.S.P. Dr. Wiley said a few words on the National Pure Food and Drugs Law. Other speakers were: Ernest O. Engstrom, Professor Parsons, W. F. Sawyer, Professor Nickerson, Treasurer Godding and Irving P. Gammon.

Others present were: Charles H. Davis, D. O. Wolff, C. F. Nixon, A. A. Burnham, W. C. Durkee, W. H. Puffer, W. S. Briary, J. Arthur Bean, H. F. Hawthorn, H. Heinritz, F. S. Schmidt, Charles F. Ripley, John Sawyer, William S. Flint, Peter J. McConnie, Fred L. Carter, W. H. Glover, F. O. Guild, E. L. Patch, E. L. Patch, Jr., Max Cramer, Dr. Perry, H. J. Brunnell, W. W. Bartlett, W. F. Sawyer, J. F. Finneran, Dr. J. W. Baird, L. D. Drury, Prof. E. H. La Pierre, C. A. Stover, L. A. Thompson, Prof. J. O. Jordan, F. F. Ernst, Dr. Frank Piper and A. Newton.

Fifty Per Cent of U.S.P. Deals With Chemistry.

In speaking of the revision of the U.S.P. before a section of the American Chemical Society on Wednesday, Professor Remington said:

"In Washington in May 1900, the United States Pharmacopœia Committee met to revise the book, and the American Chemical Society was extended an invitation to send delegates to the convention at the next decennial meeting, May, 1910. This was merely a lucky thought because at that time the Food and Drugs Act had not been passed and the work had not assumed the importance that it now has. At that time the Pharmacopœia was merely a reference book for such manufacturers as cared to use it. If their goods were above standard they advertised the fact, if they were below they ignored it. The law passed in 1906 requires all food and drugs to be up to the U.S.P. standard or to state on the label wherein they fall below. The result is to make the book of the most importance as the universal standard throughout the country."

Mr. Remington's careful study of the last Pharmacopœia showed that more than 50 per cent of the work dealt with pure chemistry, which gave a clear idea of the amount of work to be done by the chemists. He appealed to the members of the society to take up this matter, and said in closing: "While the health of the American Nation touches her very existence, may I not plead that the American Chemical Society rise to the importance of the subject and give its best labors and members to the service of making the next revision of the United States Pharmacopœia the best in the world."

Appeal to Chemists to Aid Revision.

"Chemists of the country should vitally interest themselves in the revision of the U.S. Pharmacopœia, which is the official Government classification of the standard qualities for drugs and chemicals. The health of the American nation touches her very existence and this health largely depends on the correctness of the book without which the food and drugs laws are useless. The book is not known to many of the general public, but its importance cannot be over-estimated and unless the chemists of the country rise to give their best endeavors for the much needed revision the danger to the public through misdirected legislation of drug regulation will be appalling."

George D. Rosengarten, of New York, chairman of the delegates from the American Chemical Society to the American Association for the Advancement of Science, took advanced ground in declaring that "the medical profession should be sole arbiters in the matter of selecting medicines to be added to the Pharmacopœia, as well as those which should be deleted."

"Will Make All Drugs Artificially."

Predicting that soon all drugs and medicines will be made artificially, C. Loring Jackson, presented an interesting paper on "The Constitution of Curcumine." The speaker described his experiments concerning the coloring matter of various herbs and other medicinals.

Mr. Jackson said: "Some investigations have previously been made on the substance curcumine, the coloring matter of the herb turmeric, commonly employed in analytical work, but no careful study of its constitution has ever been made by other investigators. After more than a year of work on this compound an iodine compound was finally isolated which was heretofore unknown to chemists, and it was possible by analysis of this compound to assign a formula to curcumine. Although the use of this particular substance is entirely technical, the investigation offers a new opening for the manufacture of artificial drugs, and, as Professor Whitney said in commenting upon the paper, it is for this reason of the utmost

[illegible] as well as drugs and medicines will be made artificially."

President Wilson R. Weaver, of the society, in commenting on the paper, during the general discussion that followed, said that these experiments [illegible] a new opening for the manufacture of artificial drugs.

Chemical Compound vs. Mechanical Mixture.

Louis Kahlenberg, retiring vice-president of the division of chemistry of American Association for Advancement of Science at Harvard University, spoke on "The Past, and Future of the Study of Solutions," saying in part:

"There is experimental proof against the ionic theory, the latest modern triumph of chemistry. The fact that the act of solution is really a chemical and not a physical phenomenon has been lost sight of by many of the able investigators of the dilute school. This serious mistake is worse than worthless, as it is misleading. A solution is a chemical compound of variable composition and not a mechanical mixture. We can no more attempt to answer the question why certain solutions conduct electricity and others do not than we can say why metal conducts and a bar of sulphur does not. These solution theories are not tenable as an explanation of the experimental phenomena observed or as a working hypothesis. If two solids, antimony-trichloride and camphor, be mixed together, they form a syrupy liquid. The same is true of antimony-trichloride and chloral-hydrate. But if cane sugar is used instead of camphor or chloral-hydrate, no liquid is formed. The question of why this is true is an idle one. Why does carbon burn and platinum not? We can only say it is because of the specific nature of the substances themselves. An electrolyte is the same as any other solution except that it conducts an electric current. We are entirely ignorant of the reason of this conduction."

Will Revolutionize Shipment of Fruits.

F. B. Carpenter, of Richmond, Va., at the meeting of the American Chemical Society, created considerable surprise by his recital of the great advance made in ripening fruit and bringing buds into bloom prematurely by the use of chemicals.

"Experiments have just been completed at the Arizona Agricultural Station," said Mr. Carpenter, "by which buds have been brought into full blossom for commercial purposes weeks before their natural time by the use of chemicals and the ripening of fruits has been hastened in the same way. It is believed that this process will result in shipping green fruits and ripening them on their arrival at their destination not only without loss but in a better condition as a food than when shipped in a ripe or half-ripe state.

"There are several fruits, such as dates, which hitherto it has been impossible to ship except in a preserved condition, that will now be as available to all the world in their natural states as bananas are today."

At the well attended general meeting on the third day of the convention of the American Chemical Society, papers were read by many of the leaders of chemical thought in the country, and a report of the international committee on atomic weights was presented by F. W. Clark, of the committee.

Value of Chemistry as College Course.

That chemistry, unlike the classics, deals fundamentally with the life of a living people, was the keynote struck by Dr. Lyman C. Newell, professor of chemistry at Boston University, in his address before the convention on "The Function of Chemistry in College Education." Dr. Newell said in part:

"The attitude of recent books and articles dealing with problems of the American colleges is pessimistic, capricious and whimsical. In vivid contrast to these rather destructive criticisms stand the chivalrous addresses of the men who recently have been inducted into the presidential chairs of the colleges.

"A general course in chemistry furnishes a peculiarly serviceable kind of information, its fabric of facts being a comparatively modern product. Unlike the classics and much history, chemistry takes the student not much farther back than the times of his grandfather. It deals with the life of a living people, and has a vital share in the large questions of sanitation and conservation, as well as of the physical welfare of all.

"The guiding principle underlying a general course of chemistry in a large institution is personal supervision. The lecture hall, class room, and laboratory cannot run themselves, nor can good results be expected from a minimum of personal presence. A small amount of teacher cannot transform a large amount of student."

Seeking the Source of Color.

The cause of color was discussed by Richard S. Curtiss, of the University of Illinois, in the section of organic chemistry, saying: "If we consider optical results in the light of recent ideas of the constitution of atoms, we must seek the final cause of color in a disturbance of the equilibrium of electrons within the atoms. Such a disturbed equilibrium might produce or affect ether vibrations of the order of those which produce color. Every appearance or change of color of a compound in salt formation is to be ascribed to molecular arrangement. A colored substance is one which has absorbed ether vibrations of a certain definite wave length. An eye of greater sensitiveness than ours would seek color in such substances as benzene, whose absorption bands in the ultra-violet are only discernible by their effect on the photographic plate."

EARLY HISTORY OF THE REXALL ENTERPRISE.

(Continued from Page 60)

probably fifteen or twenty in number, one of said meetings being held in Chicago and the remainder in the City of New York, and the complainant, Wm. B. Riker & Son Co., incurred considerable expense for traveling and entertainment in connection with such meetings.

When the defendant was preparing to manufacture, the complainant, Wm. B. Riker & Son Co., gave to it a great many valuable formulae for recognized remedies having a large sale. When the defendant was ready to sell goods the complainant, Wm. B. Riker & Son Co., ordered freely and laid in and kept up a large stock of its goods and in a number of instances paid for the goods in advance of their delivery in order to assist the defendant financially.

When the defendant commenced manufacturing it was in a building in Boston leased by the defendant from a corporation having its headquarters in the City of New York, and at the time negotiations for such lease were in progress said corporation applied to the complainant, Wm. B. Riker & Son Co., for information as to the standing and credit of the defendant and finally made the lease largely in reliance upon the fact that the complainant, Wm. B. Riker & Son Co., was interested in the defendant and that I was the president of the defendant. Thereafter the officers of the complainant, Wm. B. Riker & Son Co., many times were applied to for information as to the credit and financial responsibility of the defendant and many houses in the drug trade specially stated that they would sell goods to the defendant on credit only because of the interest of the complainant, Wm. B. Riker & Son Co., in the defendant and of my connection with the defendant as director and president.

Scope of Business Now Has Wide Range.

The articles made and sold by the defendant cover a considerable range. Originally the defendant was exclusively a drug manufacturing concern, but as its stockholders multiplied and its opportunities for marketing its products increased it added new lines, so that now it furnishes to its stockholders not only a complete line of medicinal remedies, made on approved formulae, but also numerous preparations for external application, other articles now commonly handled by retail drug stores. The candy, perfume and many other articles are sold under a number of trade names and trade marks, such as "Liggett's," "Saturday" and "Harmony," but all the medical remedies and some other articles are sold under the trade mark "Rexall."

All the products of the defendant are of high quality and have ready sales and the "Rexall" remedies in particular have a wide and favorable reputation and a great demand for them exists. Because of the quality and reputation of and the demand for the articles made and sold by the defendant and because the formulae on which many of said articles are made are secret and unknown to the complainants and the exclusive property of the defendant, the right to handle said articles has been valuable to the complainants and they are desirous of retaining said right and exercising the same to the utmost.

N.Y.R.D.A. Celebrates Birth of 1910 in Royal Fashion.

The banquet and dance held on New Year's Eve at Westminster Hall, 75 Lenox avenue, by the New York Retail Druggists' Association, was a tremendous success. Dancing began at 8.30 o'clock and continued until within fifteen minutes of the New Year. At this time, members and guests, 240 in number, took their places at the tables, but were hardly seated when all lights in the building were extinguished for three minutes or more. The uproar which followed was terrific and did not cease until the serving of the banquet. All attempts at speechmaking were drowned in cries of "Happy New Year! Leave it till next year." Dancing was resumed after the banquet and continued until 4 o'clock, but even at that hour the merrymakers were reluctant to leave for home.

Dr. Polk, his son, and Miss Lewin kindly consented to entertain the members and their guests and their efforts gained much applause. Dr. Polk and Miss Lewin sang, and Mr. Polk, who is an accomplished violinist, rendered a solo.

DIAMOND DYES

The Best Kind of Advertising

Selling Diamond Dyes is the best kind of advertising for your store.

For it not only brings new customers into your store, but gives you a chance to satisfy them—to tie them to you.

For Diamond Dyes never fail. They always give the most satisfactory results, and make satisfied customers.

Have a complete assortment of colors on hand, and get the full benefit of our national advertising campaign.

HERE IS THE TRUTH ABOUT DIAMOND DYES

It is a chemical impossibility to color Silk and Wool (animal material) and Cotton and Linen (vegetable material) equally as well with the same dye.

Any DYE Chemist will tell you this fact. Of course it sounds easier to trust to luck and use one dye for both. But remember, an economy is not real economy unless it is successful. Do not be misled by imitations of Diamond Dyes.

Recommend Diamond Dyes to Your Customers
They Will Thank You for It

NOTE—A, advanced; D, declined; C, correction; N, new.

See page 86 for Price List Changes and page 88 and following pages for Prices Current.

NEW YORK, Jan. 3.—The wholesale trade in drugs and chemicals is very quiet, owing to the tendency to order light at the turn of the year which, with many pharmacists, is the annual inventory season. It is too early in the month to say just what will happen, but the indications are all very favorable for an active market later on. The perplexing uncertainties of the tariff situation of last year are absent from the conditions which confront the buyer just beginning the new year, and he can now go ahead placing his orders reasonably sure that the business interests of the country will enjoy a certain measure of immunity from early change. Of the staple drugs, opium is reported dull, with quotations nominally unchanged. Quinine remains quiet but steady. Cubebs are firm with the consuming demand apparently lighter than on the date of our last report. Menthol continues in good demand and is higher. Quince seed is still steadily held. There is also a moderate export inquiry reported for American root drugs.

OPIUM—The market is quiet without any change in value. In Smyrna the market is reported quite active with sales amounting to 130 cases for the week ending December 10, and the opinion there is that higher prices must rule later on. The arrivals in Smyrna for the week ending on the date just mentioned amount to 1781 cases, against 1941 cases at the same period last year. The stock in all the primary markets since 1906 at the beginning of December is reported as follows: 1906, 2655 cases; 1907, 2556 cases; 1908, 3060 cases; 1909, 1015 cases. A cablegram from Smyrna on Friday last would make the spot desert cost here $5.90 per pound, and jobbers are quoting usual druggists' quality at $6.10@$6.25 for natural, $7.10@$7.25 for granulated and $7.10@$7.25 for U.S.P. powdered.

QUININE SULPHATE—A fairly good demand is noticed at regular prices for lots as wanted, but there is no particular inquiry for large amounts. The last Amsterdam sale of Amsterdam bread of cinchona bark off at 10.80 florins, a price about the same as that of the previous sale. The bark shipments for the first half of December were comparatively small, being only 520,000 pounds. The bark auctions to be held in that market during the present year have been scheduled as follows: January 13, February 17, March 24, April 28, May (no sale), June 2, July 14, August 25, September 29, October (no sale), November 3 and December 8. The demand for bark has been active, the prices which prevailed at the sale held in Amsterdam on December 9 being about 4 per cent higher than those which were obtained at the previous sale, and notwithstanding the offerings were light, nearly the whole amount was sold. The quantity to be offered at the auctions scheduled for this month and next will very likely be smaller, and if an active demand for quinine should set in, a firmer and possibly higher market must be looked for. In this market manufacturers' prices are steadily maintained on the basis of 14c. for bulk in 100-oz. tins.

QUINCE SEED—This article has been very scarce for some time and rather off grade. A duty of 10 cents per pound is exacted on importations and a recent shipment of handsome red French seed is offered in quantity lots at $1.10 per pound. For small parcels $1.50@$1.60 per pound is asked.

ASAFETIDA—Remains unchanged, although values are firm for standard grades. The imports are not large and stocks in foreign markets are reported low. Indications point to continued high prices. Jobbers quote extra select at 90c.@$1.00 per pound, and good to fair quality at 70@80c. per pound.

JUNIPER BERRIES—Primary markets report an active demand and great scarcity of good quality. Prices remain unchanged at 9@11c. per pound.

MENTHOL—Strong cables on Friday from primary markets have caused jobbers to mark up quotations to $3.25@$3.50 per pound and the general situation seems to indicate still higher prices.

ERGOT OF RYE—Both Russian and Spanish of good quality are reported to be in fair supply with prices ranging from 55@60c., as to quantity.

BUCHU LEAVES—Short variety is extremely scarce and firm at 75@80c. for the small lots available. The first arrival of new crop reported in London on December 29 consisted only of about 2000 pounds and no further parcels are offered from Cape Town. Long buchu is also stronger in sympathy with price quotations for short.

BAY RUM—The market is firmer, but without any change in value. The tendency, however, is upward and higher prices are not improbable. In barrel lots it is quoted at $1.50 per gallon, and all other sizes are on this basis.

LACTUCARIUM—The quantity of German produced this year has not been large. Primary markets are very firm and with a good demand the tendency is upward.

BLUE MASS—A slight advance is reported, 55@60c. per pound being quoted. Powdered, 60@65c. per pound.

HOMATROPIN—A revision of quotations has been effected, 35@40c. per grain being quoted for the alkaloid.

OIL CUBEBS—Owing to scarcity of berries oil of cubebs is considerably higher, $3.25@$3.50 per pound being asked.

EUPHORBIA PILULIFERA—Is in very short supply on the spot and quotations have been advanced to 30@38c. per pound.

LINSEED OIL—Owing to high prices consumers of linseed oil are holding off and consequently demand is light. Values are firm, however, jobbers still quoting 73@83c. per gallon for raw and 75@85c. for boiled. Flaxseed markets rule very strong with a good demand for seed from mills.

SHELLAC—The market retains a fairly steady tone, owing to the firm condition of the primary sources of supply. Heavy shipments are looked for during the next few months and there is a good prospect of a strong consumptive demand.

DIGITALIS LEAVES—Still continue scarce with none offered from abroad. For prime quality 40@50c. per pound is asked.

MESSINA OILS—Dull markets are reported, but there is no selling pressure and prices are without quotable change. Lemon, orange and bergamot are cabled very firm in the Messina market.

STAR ANISE SEED—Is in moderate consuming demand, and moving in a jobbing way at 33@38c. per pound, as to quality and quantity.

KAVA KAVA—Stocks are small and prices high. According to advices received from primary markets a few days ago, no fresh purchases can possibly arrive for several months.

COPAIBA BALSAM—South American is firmer and quotations for the better grades of pure have been advanced by importers. Jobbers quote 55@60c. per pound. Central American is scarce and the demand active, but prices remain unchanged at previous quotations.

SULPHONMETHANE—This pharmacopœial product, for which there is considerable demand, is now quoted by jobbers at $3.75@$3.85 per pound and 32c. per ounce.

SULPHONETHYLMETHANE—This product is also being prescribed and can be obtained at $6.25@$6.35 per pound; single ounces, 45c.

$100,000 IS OFFERED FOR DISCOVERY OF A CONSUMPTION CURE

Added impetus has been given the hunt of noted scientists and physicians in all parts of the world for a cure for tuberculosis by the announcement that a prominent Yale Alumnus has offered a prize of $100,000 to the first person who discovers a cure for the victims of the great white plague.

The $100,000 prize has been placed in the hands of trustees. These men, together with some twenty prominent physicians, will compose the jury or commission which is to decide the merits of the cures submitted.

It is understood that the commission will meet four times a year in New York City and pass upon the cures that are submitted for the prize. These remedies have numerous tests, all of which are set down in the rules regarding the offer, and it must take a two-thirds vote of all the jury to award the prize.

In order to prevent the commission being bothered with bogus remedies, one of the conditions is that remedies must have been in use for at least five years, and that there must be testimonials from authoritative persons that cures of tuberculosis have been made with it.—*From Philadelphia North American, Nov. 23, 1909.*

Eckman's Alterative may be obtained from jobbers.

Write us for special local newspaper offer over dealer's name.

Many of the principal druggists throughout the United States are now running the advertising and report excellent results. Sales, in many instances, show a gain of several hundred per cent.

PROOF

for Eckman's Alterative

Not claims, not theory, but actual evidence of cured people shows what this wonderful remedy will do.

Better than experiment, better than theory, is the actual evidence of people who have been given up by reputable physicians, and who have been restored to health through the use of

Eckman's Alterative

Not alone ordinary throat and lung trouble, but cases that have been pronounced actually tuberculosis (consumption) by authorities have yielded to the extraordinary virtues of this remedy, which is gaining world-wide attention.

HERE IS EVIDENCE:

Philadelphia, Jan. 28, 1909.

Gentlemen: About 10 years ago I began to be troubled with a cough. This gradually became worse, until it annoyed me so much I could not sleep, together with night sweats and pains in my chest. I commenced to worry, as I was losing my appetite and had become so thin and weak I could not attend to my household duties, so I consulted a physician, who pronounced my disease Tuberculosis or Consumption. Not being satisfied, I was examined by the physicians of the Polyclinic Hospital, and they also pronounced my disease Consumption. My sputum was examined and found to contain Bacillus. I was then advised by the physicians to go to a Consumption Hospital, and by taking good care of myself might live a year. While making preparations to go to this hospital my nephew called to see me and would not allow me to go until I tried a remedy he had heard of,—Eckman's Alterative. As I had given up hope of getting well, I allowed him to get it for me, as it might be a temporary relief. This was about nine years ago when I commenced taking the Alterative. Before I had taken the medicine three weeks I had marked relief; night sweats ceased, pain in breast relieved, cough became loose and easy, fever left me and I commenced getting well until my health became normal. I have been in excellent health now over eight years, and I am completely cured.

(Signed)
(Mrs.) MARY WASSON,
225 S. 4th Street,
Colwyn (Darby), Pa.

Philadelphia, Aug. 15, 1909.

Gentlemen: Replying to your request for particulars of my sickness several years ago, I was sick about a year and a half before I heard of Eckman's Alterative. My trouble began with a cold and affected the lower part of my left lung. I had cough at night and fever, but not in the day time. The trouble was so deep-seated that it penetrated my side and affected breast and side from near my shoulder to the lower end of the lung. Altogether I had sixteen different openings that discharged. Not all of these came at once, perhaps three or four was the most at any one time. I was examined by several doctors who said I had consumption and while they didn't tell me it was hopeless, they said so to other members of my family. I was so discouraged about myself that I wouldn't have kept on with the Alterative had not my aunt kept me at it.

While there was improvement, still I didn't get well right away; but after a while I got better rapidly. I don't remember how much medicine I took, but I took it for over a year perhaps as much as eighteen months, and since then I have never needed or taken any medicine and have no sign of the old trouble, except the scars, which I do not expect will ever leave me.

I am in perfect health now, and have been for eleven years, or since taking your remedy for Tuberculosis. (Signed)

(Mrs.) FRANCES ROHLAND CRANE.
4242 Pennsgrove street,
Philadelphia, Pa.

Amenia, N. Y., July 9, 1908.

Gentlemen: On February 9, 1908, I came to Amenia from Rochester, N. Y., suffering with Tuberculosis. My Rochester physician gave me one month to live if I continued in my work. I was having terrible night sweats and midday chills, and was also losing flesh rapidly, having been reduced to 135 lbs., against 155 lbs., my average weight. I coughed and raised continually every night, and became so weak that walking but a few feet exhausted me greatly. Our family physician in Amenia gave me but little encouragement after a complete examination. I began taking Eckman's Alterative immediately. The night sweats disappeared in a few days, as did the mid-day chills, and I began soon to desire food, whereas I had no appetite for months before. Instead of raising all night long, I found that the Alterative caused me to raise in the morning, thus affording me a good healthful night's sleep. The amount raised increased at first, but soon became less, and now I have not the least symptom of Tuberculosis. My health is good and my lungs are strong and sound, and I am again weighing 155 lbs. I attribute my present healthy condition to Eckman's Alterative and feel certain that had it not been for this remedy I would not be alive today.

Sincerely yours,
E. H. COWLES,
Care of Rev. J. J. Cowles,
Park Manse,
Amenia, N. Y.

A New Edition of the Era Key to the U.S.P.

The latest edition of this important and valuable pocket companion has just been completed. It embodies all the additions to and the latest corrections in the U.S. Pharmacopeia, 8th Rev., hence is strictly up to date, authoritative and reliable. Since its first production this condensed manual has proved its value to an ever increasing circle of users among physicians, pharmacists and students. Conveniently arranged for quick reference, it embodies all the information regarding official simples and preparations necessary for prescribing or compounding. The physician finds it an efficient office and bedside companion, the pharmacist gives it prominent place upon the prescription desk. Made to fit handily in the vest pocket, it is offered in two styles of binding, at prices so reasonable that every druggist can well afford to procure it for his own use and, in quantity at a special price, to distribute liberally among his prescribing physicians. For this latter use the Era Key is supplied with the druggist's card printed on the front cover, as an advertisement. It is worth while to read the advertisement in this issue and to write for special quantity prices.

Good Live Copy for Promoting the Drug Business.

The druggist alive to his opportunities is an active advertiser in the promotion of his business. He is especially appreciative of all suggestions, hints and other aids to render his advertisement snappy and full of pulling power. He therefore will find of great service the book of 100 drug store advertisements for newspapers, circulars, show cards, etc., offered (in this issue) by G. C. Roberts, Farmington, N. H. Five cents is surely little enough for a piece of good, live copy, 100 for five dollars.

Some men pay their organization dues as if the money was glued to their fingers and had to be pried off.

FORWARD!

That an aggressive "forward" policy is appreciated by our customers all over the world, has again been demonstrated to us through the fact that our 1909 business was considerably the largest of all our 55 years of existence.

The institutional spirit of 'doing things right" which permeates our organization, and which has made Stearns Quality mean the highest standard of excellence in manufacturing pharmacy, guarantees to our patrons a promptness of service and liberality of treatment that explains their loyalty to us.

The best token of our appreciation is to be found in our fixed purpose to render even better service during 1910.

THE CUDAHY PACKING CO.

NEW YORK
BOSTON

PHARMACEUTICAL DEPT.
SOUTH OMAHA, NEB.

CHICAGO
SAN FRANCISCO

BUSINESS NOTICES

Adrenalin in a New Package.

In addition to the ampoule vials in which it has hitherto been supplied, Adrenalin Chloride Solution is now being marketed in hermetically sealed glass containers of 1 cubic centimeter capacity. "Adrenalin Ampoule" is the name given to designate the new package, and the solution is of the strength of 1 to 10,000 (one part Adrenalin chloride to 10,000 parts physiologic salt solution). In their announcement of the ampoule Parke, Davis & Co. have this to say:

"Adrenalin Chloride Solution has become a necessity in medical and surgical practice. The most powerful of astringents and hemostatics, it lends itself to many practical uses and at little risk of injury in reasonably careful hands. Since the time of its introduction it has been marketed in ounce vials, and of the strength of 1:1000. Experience has shown, however, that a weaker solution is much more frequently required than the "full strength"; and while it is generally an easy matter to dilute with water or normal saline solution, in certain emergencies an already fully diluted preparation is to be preferred. While the danger of deterioration from occasionally opening a vial containing a solution of Adrenalin Chloride is not great, still, in consideration of the fact that a dose is needed now and then for hypodermatic injection, it is believed that the small hermetically sealed package will be welcomed because of its greater convenience and security."

As will be apparent from the foregoing, the Adrenalin Ampoule is intended for hypodermic use. It should be of great value in such emergencies as shock, collapse, hemorrhage, asthma, etc., or where prompt heart-stimulation is desired.

Price Protection for the Retail Trade.

Retail druggists who seek the restoration and maintenance of full prices on proprietary articles, and practically every druggist has that desire, will study with keen interest the announcement of A. S. Hinds, Portland, Me., in this issue, of his plan for the protection of prices on the celebrated Hinds' Honey and Almond Cream. While not perfect, this plan appears as near perfection as any yet offered. It is practically on a one-price-for-all basis, while conserving the rights and privileges of both jobbers and retailers. There is no contract to sign, the safeguard against violation being the integrity of the dealer and the desire to increase profits. The plan in its entirety and detail is presented in the new price list of A. S. Hinds, dated January 1, and effective January 15, 1910, a copy of which has been mailed to every member of the drug trade. If a copy has failed to reach you be sure to write for one. With a system of liberal discounts on purchases and with a Special Cash Rebate for maintaining prices among the trade and to consumers, the plan needs only that co-operation afforded by the druggist's own business interest to make it a great success. It is not without precedent, as such a plan has been used successfully in other instances.

Ammonol Chemical Co.'s Products.

Ammonol, an antipyretic and analgesic, with its numerous preparations; Nutrolactis, a galactagogue for nursing mothers; Gal-e-tone, a general tonic; Piperazine-Midy, uric acid solvent; and the Pasteur Sero-Vaccins are products emphasized in a combination advertisement appearing in this issue. Inquiries addressed to the Ammonol Chemical Company or to any other of the firms mentioned in the advertisement, will bring all desired information regarding the nature and uses of the products named, prices, etc. The demand for them is steadily growing, fostered by intelligent and ethical advertising to the medical profession. A call for any of these articles should not find the druggist's store shelves bare of stock.

Chemicals of Attested Merit.

The agitation for chemicals of standard purity necessarily concerns every druggist and the pharmaceutical profession in general have exerted wide influence toward the enactment of Federal and State laws bearing on the subject. It is an aphorism that "reliable chemicals are necessary for definite therapeutic results," and in this connection we direct the attention of our readers to the products of the Powers Weightman-Rosengarten Company, manufacturing chemists, which for many years have received the preference of leading physicians, pharmacists and manufacturers, because of their purity, uniformity and general excellence. The goods of this well-known company can be obtained from all jobbers at prices no higher than those ruling for the brands of other reputable manufacturers.

Gray's Ointment Has Ninety Years' Record.

The history of Gray's Ointment, manufactured by W. F. Gray & Co., Nashville, Tenn., affords a striking demonstration of success won solely by merit and word-of-mouth advertising. Until the past year newspaper or journal advertising has never been employed. Back in 1820 Dr. W. W. Gray, in Raleigh, N. C., first made this ointment, which is therefore, perhaps, the oldest ointment on the market. He was succeeded by his son, W. F. Gray, also a doctor, in 1850, and upon the latter's death a year ago, the business descended to his children. Ninety years' record, in the same family, passing through three generations. Gray's Ointment is recommended for all external diseases, its exceptional value and curative qualities being well attested by the host of cures which are to be attributed to it. The announcement in this issue and an inquiry to the manufacturers will afford additional and specific information. Druggists interested in handling a ready-seller of this nature will do well to write for details.

California Fig Syrup Co.'s Special Free Goods Offer.

The California Fig Syrup Co. desire widespread publication of the fact that the time limit on their Special Free Goods Offer has been extended from January 1 to May 10, 1910. The details of this offer are presented in their advertisement in this issue. The attractiveness and liberality of the proposition have appealed with special force to the retail trade, and the ready acceptance of it by so many druggists has compelled the time extension to enable all enterprising retailers to take advantage of it. This is one of those opportunities nowadays presented to druggists to increase their profits and increase their sales at the same time. Syrup of Figs and Elixir of Senna is a standard, regular seller everywhere, and the liberal discounts, the free goods, and the special advertising offered by the company constitute an inducement to the shrewd buyer that he is quick to recognize and accept. The druggist who is awake to his opportunities reads the advertisements regularly in search of just such opportunities.

Sale of Bath Cabinets Increased by Advertising.

The Robinson Manufacturing Company, of Toledo, Ohio, manufacturers of bath cabinets of various descriptions, co-operate liberally by local newspaper advertising with their druggist customers. Particulars are to be found in their advertisement in this issue. They report as a result of their newspaper work many good-sized orders from localities where, as yet, none of this special advertising has been done, showing thus its cumulative and expansive effect beyond local limits. They are at present advertising very extensively through the West, a few days ago closing contracts with 100 additional newspapers. Aside from this co-operation, they supply the druggist with a fine line of advertising matter, lithographs, counter display cards, a small model of a cabinet to display on the counter, circulars for the mail and for customers, and, in short, all the printed matter a druggist can reasonably use to advantage.

Valentines of Every Kind for Every Taste.

Valentines and druggists are almost synonymous, for unquestionably the druggist sells a preponderating majority of the valentines annually disposed of. There are styles and fashions and fads and an old stock will not move; everything must be new and fresh and up-to-date. The affection and sentiment which usually inspire valentine sending are fresh and ever new, so must be the evidence thereof. Therefore the druggist who wants to be prepared for February 14, 1910, must place his order for valentines now and see that he gets the right kind of goods. The American News Company, New York, can supply every taste and desire with the most up-to-date productions, and at most alluring prices. Write for the comprehensive and fully illustrated catalogue which describes and prices all manner of valentines, from the penny comics to the high-priced elaborate mechanical effects. Their advertisement is elsewhere in this issue.

Our Free Samples—a revelation.

The most delightful way to make a bouillon, and the only way which entails no opening of cans, digging into messy jars, or fussing with vegetables, spices or seasoning is to use

"STEERO"

Bouillon Cubes

Place one cube in a cup, pour on boiling water and stir—**instantaneously** you have a cup of the richest, most savory and most delicately seasoned bouillon.

Steero Bouillon Cubes are made from beef and all the vegetables, spices and seasoning recommended by expert chefs. They are immensely popular in Germany, where they originated.

Send for Free Samples

No description of Steero Bouillon Cubes can convey an idea of their convenience, quickness or quality. Cost only two and a half cents per cup. All these are proved by the samples we send you free.

Write us a postal and let the samples introduce to you the most delicious bouillon made.

LEHN & FINK New York

BUSINESS NOTICES

Grand Rapids Show Cases Sell Goods.

Goods well displayed are half sold. Hence the particular care given by progressive merchants to the equipment of their salesrooms with the most efficient of show cases, the kind that gives the best display. The requisites in such a case are good material, reliable construction, convenience in use, and the proper means for the exhibition of the goods to the best advantage. The Grand Rapids Show Case Company have won a most enviable reputation for cases of highest excellence, in styles to suit all tastes. They have recently largely increased their factory facilities and are better prepared than ever before to build and quickly deliver a single case or a complete store outfit in any desired style and finish. They solicit an opportunity to bid on any contemplated order, and will be pleased to send their descriptive catalogue to all dealers who will write for it.

Standard American Watches and Jewelry.

Many a druggist cudgels his brain to decide upon profitable side lines. He cannot stick solely to pharmacy and drug handling, for under present conditions he is compelled to be a general merchant. His calling is two-fold in character: he must prosecute both professional work and ordinary business merchandising. Therefore the proposition set forth in our advertising pages by Rogers, Thurman & Co. will appeal to him with special force, namely, to install a department for the sale of standard American watches and solid gold and gold filled jewelry. The terms and provisions of this proposition are such as make it safe and bring it within the means and power of any dealer, and are set forth in detail in their advertisement and in the handsome and valuable catalogue which they will send free to any inquirer. It may pay you to investigate this opportunity.

Star Rubber Co.'s Specialties.

The Star Rubber Company, Akron, Ohio, specialize in druggists' rubber goods, offering a line embodying new ideas which commend it at once to dealers and their customers. The Star Seamless Water Bottles are the only seamless bottles ever made. They are cast whole, and are even and smooth throughout. In syringes, combinations, gloves, nipples, in fact all rubber sundries, the Star brands are distinctive. Upon request they will send catalogue and a free copy of "The Blood of Venus," a thrilling little romance, handsomely bound and illustrated, designed for distribution to the people by the dealer as a trade winner.

MacKellar's Powdered Willow Charcoal.

Wood Charcoal is a most important pharmaceutical commodity, employed as a clarifying and purifying agent, and it is likewise of considerable medicinal utility. There is charcoal and charcoal, however, and a poor article is worse than useless for any purpose; the best only will satisfy. MacKellar's Powdered Willow Charcoal costs no more than inferior qualities, but the user of it can rest assured that he has the best obtainable. It is offered in pound packages, guaranteed, and bearing the maker's stamp of identity and purity. Specify MacKellar's when ordering.

Elite Cloth Cleaning Pad.

The B. L. Williams Manufacturing Company, Inc., are advertising in this issue the Elite Cloth Cleaning Pad, a device which conveniently and quickly removes all manner of stains from all manner of fabrics. It is put up in attractive style, one dozen on a show card, and by reason of this display is a ready seller. The pad itself and the show cards are protected by patent and registration. Obtainable from all jobbers.

Appropriate Fountain Service Equipment.

Daintiness in serving is a prime factor in the success of the soda fountain. Both hot and cold beverages assume a finer taste better when served in appropriate ware, and the customer will come again. No matter how excellent the drink itself, if it be served in a sloppy manner in glass or cup of common ware and unattractive appearance, the ultimate failure of that fountain is sure. The Rockford Silver Plate Company, Rockford, Ill., make a line of appropriate service equipment especially suited to the needs of the better class of soda fountain patronage. By using the coupon in their advertisement their complete descriptive price list may be obtained. Something of their wares is needed by every dispenser of hot soda this winter and of cold soda next summer.

Mortar Signs for Druggists a Good Investment.

The Rotary Sign Company, 14 East 42d street, New York City, offer the druggist a brilliant, attractive sign that is particularly appropriate to his business. It is in the shape of a mortar, its lettering showing silver by day and fire by night, lighted by electricity at a cost of but one cent an hour. It can be seen for blocks, and such is its nature that it compels and holds attention, guiding customers to the store. What the possessor of one of these signs thinks of it is told below.

Braintree, Mass. *Campello, Mass.*

CHAS. R. HILLBERG & CO.
PHARMACISTS.

Rotary Sign Co., N. Y. City:

Gentlemen:—We consider your sign a fine investment. It more than paid for itself the first month in increased business. Yours truly, CHAS. R. HILLBERG & CO.

National Colortype Co.'s Colored Post Cards.

Post cards of American manufacture are now being used in preference to the imported European cards. The National Colortype Company, of Cincinnati, Ohio, have in particular made great strides in the perfection of colored cards, devoting many years to experimentation and the improvement of processes, particularly for the production of high-grade, hand-colored cards. To such an extent have these improvements been effected that they are now able to deliver orders in from two or three weeks, in contrast to the four to six months required to procure foreign cards. They will be pleased to send a sample set of post cards to any inquirer who will mention the ERA.

Eckman's Alterative Unquestionably Excellent.

The Eckman Manufacturing Company, of Philadelphia, present correspondence in their advestisement in this issue corroborative of their claim that Eckman's Alterative exerts directly curative effects in the treatment, not alone of ordinary throat and lung troubles, but in cases that have been pronounced actual tuberculosis. Their advertisement presents also the prize offer of $100,000 for a consumption cure, and the inference is that Eckman's Alterative should stand a good chance to secure this award. The advertisement is interesting reading, and the preparation exploited is unquestionably excellent.

Supracapsulin of Guaranteed Permanence.

Supracapsulin is a superior solution of the active principle of the suprarenal gland, of guaranteed permanence, absolutely aseptic, reliable at all times, in strength 1:1000. It is manufactured by The Cudahy Packing Company (Pharmaceutical Department), South Omaha, Neb., who likewise supply Thyroid, U.S.P., powder and tablets, and Ovarian, powder and tablets. "Cudahy's" should be specified on physicians' prescriptions and druggists' trade orders. Samples and literature supplied on request by the manufacturers.

Watch Repairing for Druggists.

Certainly a new and novel idea is that presented in the advertisement of the United Watch Company, Madison and Market streets, Chicago, Ill., in this issue. They will repair any watch, regardless of its condition, at a cost not below 50 cents and not above 95 cents. This enables the druggist who has a watch and jewelry department to get his repair work done at a great saving of money, time and trouble. An inquiry for information will bring full details, also their complete catalogue, ready February 1.

Arc Light Starts Ceiling Blaze.

STANLEY, Wis., Dec. 27.—Fire was narrowly averted in the Wolf drug store at Thorp, near here, recently, when an overheated arc light started a blaze on the ceiling. The damage was light.

A Great Convenience for Soda Fountain Patrons.

Customers do not like to stand when drinking soda beverages, but are compelled to do so because there is little room in the store for chairs and tables. In such case the adjustable table, pictured and described in our advertising pages by the Combination Display Table & Adjustable Fixture Co., most certainly meets the emergency satisfactorily. They are quickly set up, occupy little space, make available many an odd corner, and please the patrons. The cuts (in the advertisement) show the construction of the tables, while the illustration accompanying this notice affords graphic proof of their utility, convenience and practical value. They are made in various styles and of various materials, and are ornaments to any store.

Cocaine Law to Be Amended So City Will Get Fines.

CHICAGO, Jan. 3.—At the suggestion of the Department of Health, the committee on health recently recommended that the municipal code relating to the sale of cocaine and other drugs be amended to agree with the State law. Under the present system prosecutions must be begun under the State law in order to secure convictions, and the State gets the fines. If prosecutions can be begun under the city ordinance the city will get the fines.

Coffin & Price Succeed Ladd & Coffin.

Ladd & Coffin, the well known manufacturers of Lundborg's perfumes and other toilet specialties, 24 Barclay street, New York, has been succeeded by Coffin & Price, the transfer having been effected to date from January 1. John B. Ladd, the sole owner of the business of Ladd & Coffin for many years, retires on account of ill-health.

The members of the new firm, T. J. Coffin and W. C. Price, have both been identified with the business since boyhood. Mr. Coffin is a relative of the late Sturgis Coffin, one of the founders of the firm, and of Mrs. Ladd, the wife of J. B. Ladd. Both Mr. Coffin and Mr. Price are well known for their knowledge of perfumery and they enjoy an extended acquaintance in their own and allied lines. It is safe to say that they will continue the business along progressive lines.

Mr. Harper's Former Store Again Sold.

WASHINGTON, Jan. 3.—Stone & Pool have sold their store at 609 Pennsylvania avenue to Edmunds & King. The latter were formerly in the service of Z. D. Gilman. The transferred business was formerly that of R. N. Harper and it was with that business and his headache medicine that he started on the road to wealth. Mr. Harper is now one of Washington's wealthy men and a bank president.

Hegeman Corporation Acquires Two More Drug Stores.

Hegeman & Co., of this city, has acquired the drug stores of the F. W. Kinsman & Co., located at Eighth avenue and 125th street, and Broadway and 80th street. The transfer took place the first of the present month. Charles Bailey will remain as manager of the 125th street store under the new ownership and Mr. McCutcheon has been placed in charge of the Broadway store.

Michigan Retail Druggists' Association.

C. A. Bugbee, president, has called a meeting of the Michigan Retail Druggists' Association for February 1 and 2, at Grand Rapids, to consider important matters. The membership is now more than three hundred.

Dioxogen

H_2O_2 12%

THE PURE PEROXIDE OF HYDROGEN

What Kind of People Buy Dioxogen?

Mr. Pharmacist, have you considered the kind of people who buy DIOXOGEN at your store? Are they not among the very best customers you have? Are they not people who *appreciate* and *demand* quality in *everything* they buy?

Doesn't your best judgment tell you that DIOXOGEN, the *Pure* Peroxide of Hydrogen, is the kind every first-class druggist who values this quality trade ought to push?

As a question of policy you cannot afford to run the risk of losing trade of this class by pushing the sale of *any* article of doubtful quality. You cannot *afford* to *recommend* the kind of peroxide the five and ten cent stores sell—the acetanilid kind. You cannot afford to place your store upon that plane.

The Oakland Chemical Co. is the only manufacturer of peroxide who is helping *the druggist get* business. DIOXOGEN magazine advertising drives trade *to the drug store*, and *away* from the five and ten cent stores and department stores where cheap acetanilid peroxide is sold at less than it costs the druggist. If you want to know how to identify your store as a DIOXOGEN store in your community, write for folder *"How We Will Help YOU Sell DIOXOGEN."*

The Oakland Chemical Co., 98 Front St., New York, N.Y.

A King of Optimists

may be like a cart without a horse—something that of itself will not progress—something that stands still.

The Logical Way

to build a business is under your own name—for yourself, your heirs and assigns. And the logical way to work for *yourself* is to go beyond the usual successful non-secrets and into the business about which it is human nature for women to talk. MOURNING DEATH OF LATE MAHLON N. KLINE.

Directors of Company of Which He Was Head Express Their Grief in Sympathetic Resolutions.

At a special meeting of the board of directors of the Smith, Kline & French Co. held December 1, the following preamble and resolutions were unanimously adopted:

[illegible] Board of Directors of the Smith, Kline & French Co. [illegible] through the sudden [illegible] to eternal life of our esteemed President and friend but mourning through our sorrow [illegible] that the Great Master whom he so nobly [illegible] has called him to a commensurate reward, even as he would have wished it to be, and being well impelled in our personal grief that could come nearest to [illegible] we can extend the hand of sympathy, helpless though we be to ease their suffering, we do [illegible] and [illegible]

We do [illegible] to [illegible] the [illegible] of that full life [illegible] We would submit [illegible] this record upon [illegible] for [illegible] influence in the business world in the [illegible] he has made upon the civic and religious life of his country, and, most of all, deeply imbedded in the hearts of all who have known him, there are monuments [illegible]

Resolved, That, on behalf of all in interest of this company, we record the deep personal loss which we feel through the sudden death, on the twenty-seventh day of November, one thousand nine hundred and nine, of our President, Mahlon N. Kline, and of our appreciation of the help his life has been to [illegible]

Resolved, That we do extend to those whose loss is greater than ours, in their grief for husband and father, our deep sympathy, and ask that they believe with us that even the depths of their sorrow contain the assurance that a life was well lived, and the promise that, for him, death will have no sting.

In Memory of Messrs. Kline and Spiehler.

Executive board of the Manufacturing Perfumers' Association of the United States, through President J. Clifton Buck and Secretary Walter T. Hathaway, has adopted and sent to the families of the late Mahlon N. Kline and Adolph Spiehler memorials regretting the deaths of those former members of the association.

In the drug business particularly, a fat head generally begets a starved mind

ACID PACKING REGULATIONS ARE MODIFIED.

Excelsior, When Treated With a 25 Per Cent Solution of Calcium Carbide, Can be Used in Barrels.

The committee on regulations for the transportation of inflammables of the National Wholesale Druggists' Association has issued a circular relating to modifications in the regulations for shipping nitric acid. According to tests made by the Bureau of Explosives of the American Railway Association upon excelsior treated with a 25 per cent solution of calcium chloride such excelsior has been found suitable for packing nitric acid, as the acid will not ignite the packing if containers are broken. The bureau has accordingly approved the use of excelsior properly treated, and it reports that the gross weight of a barrel containing bottles of nitric acid, packed with a treated excelsior, should be about 219 pounds, as compared with a gross weight of 200 pounds when dried excelsior is used.

While the regulations have heretofore prescribed the use of a "case" for packing bottles of specified acids, there will no longer be any objection by the Bureau of Explosives to the use of a barrel packed with treated excelsior for shipping the acids if barrel is made as safe as a case. It is understood, however, that the use of a barrel will not be approved if the packing material therein is objectionable or when of such a nature as to sift to the bottom and increase the danger of breakage of bottles.

Talking Machines Too Much for Janesville Merchants.

Druggists of Janesville, Wis., in company with other merchants, have filed a protest with the city council against the nerve-racking talking machines maintained by most of the West Side 5 and 10 cent theaters. Among the signers of the petition were the Badger Drug Company and the Reliable Drug Company. The city attorney has been ordered to have the nuisance stopped. It seems that "My Wife's Gone to the Country, Hooray, Hooray," screeched out over and over again by a squeaky parody on Mr. Edison's great invention, is the piece which caused most of the trouble and which threatened druggist, banker and doctor with nervous prostration.

A Rattling Good Business Proposition!

Up to $200 a month sales from three feet of showcase space!

Enterprising druggists all over this country are increasing their store sales from $100 to $200 a month.

Everywhere our plan has met with overwhelming success. It has taken the business men of this country by storm.

We want to make you this same proposition now—we want to help you increase your store sales from $100 to $200 a month.

Millions of dollars clear profit are made from the sale of watches and jewelry every year. Last year the people of this country spent over $90,000,000 for jewelry. And please remember there is more than 100 per cent clear profit on this class of goods for the retailer. Why not get in line for your share of the profits?

Here's our proposition—read it over carefully.

You have a big patronage, a large acquaintance and many friends. You sell them their drugs. Somewhere they are going to buy watches and jewelry—why don't you sell it to them?

For years we have been showing merchants all over this country how to make three feet of showcase space add hundreds of dollars to their yearly income.

We want the opportunity to show you. Ask for our big business building proposition.

Please remember that this is a high class proposition. We want to help you get into the watch and jewelry business. We handle only standard make American watches, solid gold and gold filled jewelry.

We will furnish you with a stock of goods, including watches, jewelry, silverware, clocks and everything necessary for a complete up-to-date jewelry department.

We also furnish you with a large, handsome morocco bound catalog, printed on enameled paper, bearing your name in gold letters on the cover. This book with its thousands of beautiful illustrations will bring you many big orders, and remember this means 100 per cent profit to you.

Our big free course in watch repairing will qualify you and your clerks for a large weekly increase in your store profits.

Write today for our great wholesale jewelry catalog. Ask us for our big business building plan. It will interest you. Please act today while this matter is fresh in your mind. And please understand that this request for catalog puts you under no obligation to us.

[6] **ROGERS, THURMAN & CO.** *Wholesale Jewelers* 106 WABASH AVENUE *CHICAGO, ILLINOIS*

GERMAN APOTHECARIES LISTEN TO INSURANCE

Plan Entertainments, Elect A.Ph.A. Delegates and Do Other Business of Interest to the Members.

Dr. William C. Anderson, of Brooklyn, was the principal speaker at the monthly meeting of the German Apothecaries' Society held in January, his subject being "Fire Insurance" with particular reference to the claims and insurance offered by the American Druggists' Fire Insurance Company. He stated that this company had been called into being by the excessive rates of old line companies. Repeated complaints had been made to the old companies of the exhorbitant charges for insuring drug stores, but they stated that nothing could be done to lower the rates. The retail druggists then proceeded, three years ago, to organize a company themselves, and one which is now operated under the laws of every State in the Union and had a fully paid-up capital of $250,000. The highest risk taken on any drug store was limited to $3000 and insurance was placed by the company only on one store in a block. When a fire loss occurred the adjustment was placed in the hands of retail druggists, the insured thus having his claims adjudicated by men familiar with the business.

In opening the meeting President Kleinau presented his greetings to the members for the New Year, and Treasurer Lehman read a communication from Prof. Virgil Coblentz in which he expressed his appreciation to the members for having appointed him chemist of the verein. A letter of thanks was also received from Oscar Goldmann and family and Dr. William Balser and family for the resolutions of sympathy sent to them in their late bereavement.

Emil Roller, chairman of the scientific committee, read his annual report reviewing the lectures of last year and requested members to suggest subjects for lectures during the coming year. S. V. B. Swann gave a detailed report of the conference which met at the New York Board of Trade to discuss the proposed draft of a new pharmacy bill.

Secretary Gilbert, chairman of the entertainment committee, announced that he had selected the following members as his associates for the coming year: Henry F. Albert, Felix Hirsemann, Hugo Kantrowitz, Robert S. Lehman and Geo. T. Riefflin. He also stated that the entertainment to be held on the evening of January 20 at the society's rooms, 192 Third avenue, promised to be a great success. The committee had engaged the Manhattan Ladies' Quartette and Lederhaus' String Quartette for the evening. Arrangements had also been almost completed for the 59th annual ball of the society which is to be held at Terrace Garden on February 24.

Paul F. Gebicke's report of the "mortuary fund," read by Treasurer Lehman, showed a membership of 121, three having joined during the year. At the close of the year the cash balance was $347.34, which was deposited in the People's Bank. There were no expenses during the year, but since January 1 a check of $120 had been sent to the widow of the late Emil P. Wendler.

President Kleinau called for nominations as delegates of the society to attend the next annual meeting of the American Pharmaceutical Association to be held in Richmond in May, and the following were elected: Otto Raubenheimer, Emil Roller, Dr. Geo. C. Diekman, Dr. William C. Alpers and Hugo Kantrowitz.

C. A. Kalish, 60 Wall street, Manhattan, was re-elected as attorney of the society. Prof. J. U. Lloyd has promised to deliver an address at the February meeting.

Eastern Lilly Men Have Holiday Luncheon.

A number of Eastern representatives of Eli Lilly & Co. gathered at a luncheon at the New York Drug and Chemical Club during the holiday week. Among those present were: C. R. Cosby, manager of the New York branch; S. W. Abel, Brooklyn; Col. John W. Lowe, Boston; L. C. Tinker, Providence, R. I.; R. L. Ireland, Reading, Pa.; W. H. Meyers, Scranton, Pa.; W. H. Newton, New Haven, Conn.; M. H. Kleine, Brooklyn; E. F. Pfaff, New York City; P. J. Hartley, Boston, and H. L. Winner, Newark, N. J.

AGENCY FOR *Whitman's* CHOCOLATES AND CONFECTIONS

A Sign that People are Seeking

"With money in their hands"

Our system of selling our package Chocolates and Confections through selected, protected sales agencies makes it a little difficult, sometimes, for the public to buy Whitman's.

Whitman's are not "on sale everywhere."

Every mail brings inquiries "Where is your agency in——?" ranging all the way from Eastport, Maine, to Santa Barbara, California

We limit our sale to protected agencies and cultivate close relations with each agent, endeavoring through each store to supply *fresh* packages to all the fine candy trade that it can possibly reach. We send inquiries to his store, advertise him to the best people by *direct advertising*. But we can't reach the transient trade. He must attend to that.

The costly "general advertising" of Whitman's in the leading publications is all in the interest of the local agent.

The store that has the Whitman agency does wisely to see that the outside display signs are large enough and striking enough to let everyone who passes by *know* that the Fussy Package (and all the others) can be bought inside.

Millions of well-to-do Americans who want the best are hunting the Whitman agent everywhere.

If you have the agency—or if you should get it—*let these people know.*

Write for new catalogue of packages in true colors, samples of advertising matter and our offer to the leading druggist.

STEPHEN F. WHITMAN & SON, Inc., FOURTH AND RACE STREETS *Philadelphia, U.S.A.*

KEEN RIVALRY AT HOLIDAY BOWLING MATCH.

New Feature, Introduced by New York Wholesale Association, Meets With the Favor of the Members.

The New York Wholesale Drug Trade Bowling Association had a club night on Monday, December 27, instead of the regular tournament schedule bowling. These club nights are a new feature introduced for the first time during the present season. Interested members of the association meet for bowling and social intercourse, and they forget for the time being the keen rivalry of the more serious business of the tournament bowling. On the Monday night between Christmas and New Year special interest was added through the donation of a number of prizes, and the meeting was very enjoyable.

George T. Rieflin, of Sharp & Dohme, donated a $10 gold piece; the Worrall Tatum Company, a traveling bag; W. P. Ritchie, of Bruen, Ritchie & Co., a set of military brushes, and Dr. H. C. Lovis, of Seabury & Johnson, an umbrella. The first prize was awarded for the highest score game of the evening; the second prize for the highest average in the first two games; third prize to the man making the most strikes in the first two games; fourth prize to the man getting the most splits in the first two games.

The result was that Mr. Critchley, of Dodge & Olcott, won the first prize with the high score of 188; Mr. Carr, of Parke, Davis & Co. won the second prize with an average of 165. Mr. Smith, of Seabury & Johnson, won the third prize for making the most strikes in the first two games; Mr. Cahill, of Eimer & Amend, won the fourth prize for getting the most splits in the first two games—namely, seven. There was a tie for third prize between Mr. Smith and Mr. Ulrich, of Dodge & Olcott, which was won by the former in the roll-off.

Less valuable, but quite interesting, were the consolation and booby prizes offered by the bowling committee, which consisted of porous plasters containing suitable inscriptions and directions for using. The consolation prize went to Mr. Gillette, of the Corn Products Refining Company, for low score, and the booby prize was presented with appropriate remarks to the president of the association, Mr. Rieflin, who had the distinguished honor of being the donor of the first prize and the winner of the booby. His bowling was of a high order, but he had the misfortune of bowling one "poodle." The bowling committee seized upon this as a pretext for conferring upon him the distinction of winner of the last prize.

There are three more club nights scheduled on the bowling club's schedule on the Monday nights falling on January 24, February 21 and on April 4, when is the closing night of the association's season, when also the prizes for the tournament will be awarded to the contestants.

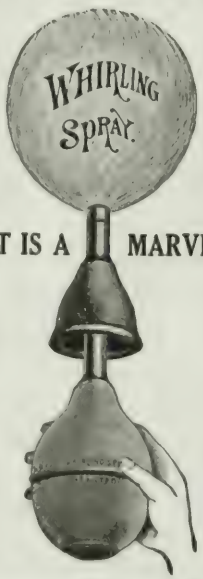
Legality of Trading Stamps at Issue.

WASHINGTON, Jan. 3.—Within the next few days it is expected that Judge Mullowny will hand down a decision as to the legality of the business of selling trading stamps and vouchers. When the cases of the District of Columbia against William B. Kraft, of the Economy Co-operative Society, and Walter J. Gregory, of the Sperry & Hutchinson Co., were called in police court recently the defendants were charged with engaging in a gift enterprise. Attorneys Frank J. Hogan and A. S. Worthington filed briefs, asking that the informations against their clients be quashed. Mr. Worthington also asked that he be allowed additional time in which to file papers, which was granted. It was stated by counsel that if Judge Mullowny's decision is adverse to their clients, the cases will be taken to the United States Supreme Court.

It is held by the District government that the two companies are violating the law relating to gift enterprises. Counsel for the accused companies contended that there is no comparison between the cases at present and the case decided by the Court of Appeals some time ago, which held that there had been a violation of the law by a prominent firm engaged in selling trading stamps. Counsel also contended that all elements of chance had been removed, and that the stamps now issued are redeemable in cash at any time and in any amount, whereas in the case decided by the Court of Appeals the stamps were not redeemable for cash.

A "live" druggist must do more than merely live.

THE MARVEL "WHIRLING SPRAY" SYRINGE



IT IS A MARVEL

WAS AWARDED THE GOLD MEDAL, DIPLOMA, AND CERTIFICATE OF APPROBATION, BY THE SOCIETE D'HYGIENE OF FRANCE, OCTOBER, 9, 1902,

as the latest and best improvement in Vaginal Syringes. Particular attention is called to the fact that by reason of its peculiar construction the Marvel Syringe dilates and flushes the vagina with a volume of whirling spray, which smooths out the folds and permits the injection to come into contact with the entire surface, instantly dissolving and washing out all secretions and discharges.

BOARD EXAMINATIONS

Massachusetts.

BOSTON, Jan. 3.—Of the 14 candidates for registration in pharmacy who took the examinations in the regular class examined in December, only five passed successfully. They were: Leo E. Comeau, Gloucester; Walter L. Douglas, Cambridge; Charles H. Knott, Boston; Peter P. Mitchell, Malden; Benjamin H. Shute, Somerville.

The following were granted assistant certificates: Margaret A. Dale, Hartford, Conn.; George Mazel, Boston; Allen T. Miller, Boston; Nicholas H. Nevler, Boston; Arthur R. Ward, Waltham; Mark A. Jackson, Pittsfield.

The board's annual report was submitted to the incoming Legislature this week. For the first time in its history the board has been self-sustaining, due to the raising of the fee for liquor fees from $1 to $5. The list of drug stores in Massachusetts numbers 1674. "The condition of trade from a financial standpoint shows a slight improvement over last year, and there is a tendency for improved and larger stores," the report says. More candidates than ever before were examined during the year, the increase coming largely on account of the assistant pharmacists.

Alabama.

SELMA, Jan. 3.—The Alabama Board of Pharmacy does not recognize diplomas from any college of pharmacy or medicine, but has reciprocal exchange with those States that accord the same courtesy, provided the applicant holds a certificate by examination. All applicants for pharmacist license must be 21 years of age, with four years' practical experience (two years credit given for college diploma), general average 75 per cent in all branches. Assistants must be 18 years of age and make 60 per cent general average. Examinations are had in chemistry, materia medica, practical and theoretical pharmacy and prescription work. Temporary certificates issued, but not to assistants. Fee, pharmacist, $5; assistant, $3. The next meeting of the board will be held on February 15, at Birmingham.

Manitoba.

ST. PAUL, Minn., Jan. 3.—The examiners of the Pharmaceutical Association of Manitoba have reported as follows on the recent examinations: Minor examination, passed with honors in order of merit, C. E. Hamilton, H. E. Thompson, B. H. Barnett, F. A. Masterman, H. Armitage, R. Duff, G. H. Crawford; pass list alphabetically arranged, W. O. H. Anderson, J. Dawson, A. S. Doherty, W. S. Dunlop, C. E. Dutton, N. Gray, L. A. Hamilton, C. W. Lyttle, G. R. McCorquodale, C. B. Nickle, W. H. Ringer, A. M. Sanders, E. R. Simpson, Miss Florence Thompson, H. J. Winton; pass list special major examination in order of merit, J. A. MacMillan, A. C. Loton, J. Sinclair. C. E. Hamilton wins the association silver medal for general proficiency.

Virginia.

WINCHESTER, Jan. 3.—Only 17 of the 149 persons who were examined during the last year for certificates to practice pharmacy in Virginia were able to pass the requirements of the State Board of Pharmacy. This is shown in the annual report of the board which has been presented to the Governor. Three examinations were held and 132 failed. However, 32 of the 132 made a sufficiently high grade to entitle them to certificates as registered assistant pharmacists, and they were recorded accordingly. During the year 64 men stood the examination for assistant pharmacist. Of these 21 passed and 43 failed.

Publicity Overwhelms Gov. Haskell With Remedies.

GUTHRIE, Okla., Jan. 3.—As a result of the publication of a report that Governor Haskell might have to undergo an operation for gall stones, his desk is now piled high with circulars and samples of gall stone remedies which have been coming in at the rate of three or four a day.

MARCHAND'S
MEDICINAL PREPARATIONS

If you, Mr. Pharmacist, had devoted over *a quarter of a century* to the manufacture of five high grade preparations with only one standard of purity and uniformity, wouldn't you feel they were better than those made by a newcomer?

Then, is it any wonder we are proud of *our* preparations?

We were the first to manufacture Peroxide of Hydrogen (Marchand's) for medicinal purposes—that was thirty-one years ago—we are the PIONEERS.

PHYSICIANS KNOW

That MARCHAND'S PEROXIDE OF HYDROGEN (medicinal, 15 Vol.) is superior, because it is 50% *stronger* than the ordinary U.S.P., 10 Vol., and because it contains *NO ACETANILID*, and is absolutely free from any impurities.

That HYDROZONE (30 Vol.) is *THREE TIMES AS STRONG* as the ordinary preparations, and that it is the *most powerful of all germicidal agents*, yet is *absolutely non-poisonous.*

That GLYCOZONE ($C_3H_8O_4+C_3H_8O_3$), because of its remarkable properties is of signal value when applied to inflamed mucous membranes or other tissues. It is especially serviceable in acute and chronic forms of gastritis, intestinal catarrh, gastric ulcer, etc.

HYDROZONE AND MARCHAND'S PEROXIDE OF HYDROGEN (Medicinal) are put up in the best quality of flint glass bottles, for the reason that flint glass is not so brittle as amber glass. This, in connection with Marchand's improved process of manufacture, reduces the risk of breakage to a minimum.

When a prescription or a request comes to you for **MARCHAND'S PEROXIDE OF HYDROGEN (Medicinal), HYDROZONE, GLYCOZONE, MARCHAND'S EYE BALSAM** or the **DREVET MFG. CO.'S U.S.P. H_2O_2 Official**, see that it is dispensed and no attempt made to urge anything else upon the customer.

Your profit is LARGER than it would be if you urged the sale of an inferior article.

THE AMERICAN NEWS COMPANY

9-15 PARK PLACE *NEW YORK CITY*

THE LOCK-STUB CHECK SYSTEM of Controlling Soda Fountain Receipts

Used only where a cashier is employed

It quickly and permanently stops "leaks" whether from dishonesty or carelessness.
It provides a clean check for the customer—no more sticky and slimy checks.
Throw out your celluloid checks and other antiquated checking systems and put your checking system on a modern basis.

Our booklet describes the complete system. It will "put you wise" to some expensive irregularities under old systems and how to correct them. Write for it

THE LOCK-STUB CHECK COMPANY

131 W. 20th Street NEW YORK — 21 Quincy Street CHICAGO

Here's the Point:

You proclaim yourself a discriminating buyer—establish your business upon the highest level of professional confidence—by dispensing **'Roche' chemicals** and **alkaloids.** Why? Because physicians have learned, through their acquaintance with Digalen, Thiocol, and other widely used 'Roche' products, to **put their trust in** anything bearing **the 'Roche' symbol.** The other day one of New York's leading ophthalmologists said to us—**"Your Homatropine is the best I have ever used."** The fact is, we specialize in the production of **chemicals, alkaloids, and specialties of rare quality.**

Specify 'ROCHE' when ordering the following:

Aconitine	**Atropine**	**Eserine**	**Hyoscine**
Arecoline	**Colchicine**	**Homatropine**	**Pilocarpine**

(in vials of 1, 2, 5, 10, and 15 grains, and upward.)

Benzo-Naphthol	**Hexamethylenetetramine**
Benzoic Acid	**Iodides**
Bismuth Salts	**Kresapol**
Bromides	**Morphine**
Brucine	**Phenolphthalein**
Caffeine	**Salicylic Acid**
Carbolic Acid, U. S. P.	**Salol**
Cocaine	**Saponin**
Codeine	**Sodium Benzoate**
Creosote (Beechwood)	**Sparteine**
Cumarin	**Strychnine**
Guaiacol Carbonate	**Theobromine**
Guaiacol Liquid	**Veratrine**

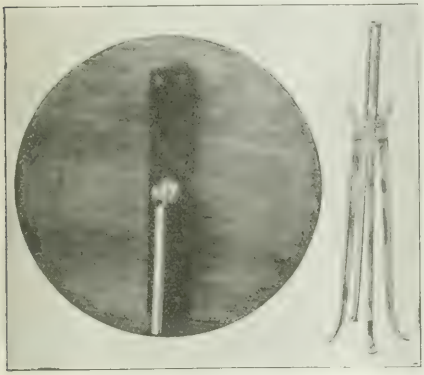
A wise General prepares his plan of action before the battle.
A successful Soda Dispenser should prepare his campaign for the coming season *at once.*

How often have you seen your best patrons go to your competitor for soda because you had no more table room? In an emergency like that, have a few of our tables handy which you can set up instantly IN ANY PART OF YOUR STORE and which can be SET UP OR TAKEN DOWN IN A FEW SECONDS, OCCUPIES BUT LITTLE SPACE, AND CAN BE LOWERED OR RAISED FOR CHILDREN OR ADULTS.



THE CUTS TELL THE STORY

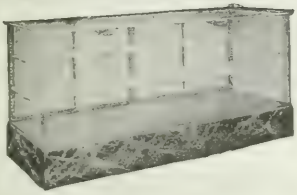
Price, 18 in. top, nickel-plated or oxidized,
$5.50

Beautiful stools of similar combination and construction,
$3.50

REPRESENTATIVES WANTED

Made of the best materials, handsomely nickel plated and polished or oxidized, legs straight or curved as shown in cuts, table surface 18, 20 or 24 inches, made of birch or quarter sawed oak, finished in mahogany or antique oak, and OUTER EDGE GROOVED SO THAT LIQUIDS CANNOT SPILL OVER CUSTOMERS—AN IMPORTANT FEATURE.

Combination Display Table & Adjustable Fixture Co., 56 Fifth Ave., Chicago, Ill.



Prompt Deliveries

Our reputation for good work is unexcelled—for deliveries a little slow. This is due to one cause only—too many orders for our capacity. But this refers to the past. With our new addition we will have a capacity of $2,000,000 annually. We will carry an enormous stock in the white—ready for finishing. Let us figure with you for one case or an outfit. Write for Catalog B-10.

GRAND RAPIDS SHOW CASE CO., Grand Rapids, Mich.

BRANCH FACTORY: LUTKE MFG. CO., PORTLAND, OREGON

New York Office and Showroom, 724 Broadway — St. Louis Office and Showroom, 1329-31 Washington Ave.
Under Our Own Management. THE LARGEST SHOW CASE PLANT IN THE WORLD

THE ERA FORMULARY

CONTAINS OVER 5000 FORMULAS

Formulas for hundreds of articles which the druggist's customers want, and which the druggist can manufacture with profit. The book is the foundation for that profitable manufacturing department which should be a part of every drug store.

Enough formulas to supply every possible demand of the public for Medical, Toilet, Veterinary, Household, Domestic and Technical preparations and articles.

The Drug Store Laboratory is the best paying department of a retail Pharmacy, and increased profits are made on goods of your own manufacture.

Sample sheets will be sent on application, showing the scope and character of the book.

Sent anywhere in the United States, postpaid, on receipt of $5.00

D. O. HAYNES & CO., Publishers, 90 William Street, New York

IT'S SO DIFFERENT!

Hawaiian Pineapple

Picked Ripe **Canned Right**

Send for booklet of recipes

Sliced, Crushed or Grated

Hawaiian Pineapple Growers Assn. 1136 Tribune Bldg., New York City

¶Ask your Jobber for samples and prices, and stock now.

¶Crushed and Grated Hawaiian Pineapple are put up in large and small cans for convenience of the soda fountain trade.

The Soda Man's Best Friend

The secret of the successful fountain is contained in this book. In the fore part a number of pages are devoted to suggestions for equipment and operation of soda fountains, which in themselves are worth several times the cost of the book.

Following is a summary of the formulas contained in this new edition: Fancy Beverages, 573; Sundaes and Frappes, 142; Ice Creams, Ices, Sherbets, Frozen Pudding, etc., 128; Phosphates, Punches, Orange, Lemon and Lime Beverages, 161; Chocolate and Egg Drinks, 61; Hot Drinks, 155; Miscellaneous Syrups, Meads, Salted Almonds, Nuts, etc., 117.

This book is indispensable to every soda fountain owner and dispenser. The new *interleaved* copies are particularly convenient as a practical working formula book, with plenty of space for notes and additions.

D. O. Haynes & Co., Publishers

90 William St., New York

IN THREE BINDINGS—Flexible cloth, $1.00; Cloth boards, $1.50; Cloth interleaved, $2.00. Postage paid.

Give the People What They Want

It's a waste of time and energy trying to persuade them to something else. It's money in a Druggist's bank to "fill orders." Druggists throughout the entire country have taken advantage of our **New Ideas in Rubber Goods**—now being run in national advertising campaign, and are MAKING THEM A LEADER IN SALES. Have you tried it yet?

The Star Seamless Water Bottles

are the only POSITIVELY seamless Bottles ever made. They are cast whole; smooth and even, as a glove a new idea just patented recently by us. **COMBINATIONS, SYRINGES, HOUSEHOLD GLOVES, SURGEONS' GLOVES, NIPPLES**—in fact the most complete lines of Rubber Sundry Goods ever made.

"THE BLOOD OF VENUS"

Is the title of a thrilling little romance we distribute, handsomely bound and fully illustrated, to the PEOPLE thru the dealer, as a trade winner. Write us for free copy and catalog, and ask us what we will do to create heavy sales on these goods for you.

P. O. Box 2162 NEW YORK 117 Hudson St.

THE FLAMING MORTAR
You can now afford a brilliant electric sign

This new invention brings the cost of installation and operation so low that a brilliant attractive sign is at last within your reach

It is your trade sign. So clearly will it stand out that it can be seen up and down your street for blocks both day and night—guiding customers to your store.

95 PER CENT SAVED IN ELECTRICITY
Cost Only One Cent an Hour to Operate

You can afford to burn it ALL NIGHT EVERY NIGHT. Let your competitor get the "one hour Saturday night affair." The letters are silver by day and fire by night—they draw the eye and burn into the memory. Made entirely of steel, nothing to break, warp, crack or get out of order.

DROP US A POSTAL with your name, address and business, and we will tell you how inexpensive it is to install and operate.

ASK YOUR JOBBER FOR THE

ADVANCE FEVER THERMOMETER

(Patented October 6th, 1908)

Perfectly Aseptic, equipped with Lenz Finders and anti-rolling devices, provided with means to limit the extent to which it should be inserted into the body.

The Advance is actually the only improvement in Fever Thermometers which has been demanded by the profession for many years.

STANDARD PRICES for Advance Thermometers

½ Min. Registration, with Certificate, in Rubber Case.....$6.50 per dozen
1 Min. Registration, with Certificate, in Rubber Case.....$6.25 per dozen
2 Min. Registration, with Certificate, in Rubber Case.....$6.00 per dozen

RED OR BLUE BULB FOR RECTAL USE.

1 Min. Registration, with Certificate, in Rubber Case.....$6.25 per dozen

Every Instrument tested by the Certified Government Standard and fully guaranteed.

On the ordinary thermometers the scale is so located that a portion thereof is inserted into the mouth or other organs of the body when making a test of the bodily temperature, and by reason of this fact that portion of the scale which is inserted into the body is worn off, and, in addition to this, the coloring material of the scale gets into the body, and this is one great objection which THE ADVANCE THERMOMETER obviates. Any manufacturer pretending to sell THE ADVANCE is making fraudulent claims and will be brought to justice through the intervention of the U. S. Patent Courts. Manufactured by

SPECIAL FREE GOODS OFFER for WINDOW DISPLAYS

Owing to the great success which has attended our Special Free Goods Offer for Window Displays, and the many requests which we are receiving from the thousands of retail druggists who wish to avail themselves of the opportunity, we have decided to extend the time for making the window displays and obtaining the free goods from January 1, 1910, to May 1, 1910.

For displaying our signs one week, or more and purchasing

6 Doz. SYRUP OF FIGS and ELIXIR OF SENNA @ $4.00, less 5%, ½ Dozen Free.
12 Doz. SYRUP OF FIGS and ELIXIR OF SENNA @ 4.00, less 8%, 1 Dozen Free.
24 Doz. SYRUP OF FIGS and ELIXIR OF SENNA @ 4.00, less 8%, 2 Dozen Free.

Freight prepaid on 24 dozen orders, but not on smaller lots.

To get the benefit of the above special offer please sign the special offer blanks to be had of us and of all wholesale druggists. Now is the time to get the benefit of the free goods in connection with this feature of our advertising campaign, and thanking the druggists generally for their cordial co-operation, we are

Yours very truly, CALIFORNIA FIG SYRUP CO.

FRANK E. STEWART, M.D.
Physician and Pharmacist.

The paper read by Dr. F. E. Stewart before the Medico-Chirurgical College on January 6 and printed elsewhere in this issue of the ERA deserves to be read by every thinking pharmacist, for it reflects the convictions of one who has studied the subject he discusses from every possible direction and that with the knowledge and experience gained from years of actual and consistent practice, both as a physician and a pharmacist.

Following Dr. Stewart's argument to its logical conclusion tends to force home the conviction that "pharmacists should study medicine, obtain a license to practice therapeutics and then take advantage of their close contact with the people to educate them on the subject of medicine." That there is a fine opening for the apothecary-physician seems assured and the thinking and observing man will agree that the writer's recommendation as to the study of medicine is already being put into practice by many pharmacists. Almost every college of pharmacy in the country can produce proof to this effect, and an examination of the lists of matriculates of medical colleges shows the increasing number of names of druggists who are taking coures in medicine. With such a preparation for the active duties of a professional life, the pharmacist-physician would need have no fear of the keen rivalry of cut-rate price establishments or the competition of department stores. His energies could then be directed along professional lines and the practice of "pharmacology" in the broadest sense of the term. The practice of pharmacy by such men would stand for a better realization of altruistic ideals, scientific attainment and for the general good of humanity.

HARDEST BLOW YET FOR N.A.R.D.

In the withdrawal of the Philadelphia Association of Retail Druggists from the N.A.R.D., with its membership of 600, the National association not only loses considerable revenue but suffers in prestige. It is the most serious blow that has struck the N.A.R.D. since it survived its early struggle for existence and its effect may not be confined to the present loss of influence and membership.

The trouble grows out of the attempt of the N.A.R.D. to conduct a U.S.P. and N.F. propaganda on National lines, whereas it has been found to be peculiarly an issue for local treatment and entirely

inconsistent with the original purpose of the N.A.R.D. The fact seems to have been overlooked that the N.A.R.D. came into existence to assist in the regulation of the prices of patent medicines and in its affiliations, direct or implied according to view, it is only natural that many of its members incline toward the patent medicine field. Price protection is the best slogan of all for an organization like the N.A.R.D. There is no use trifling with ethical lines when profits on patent medicines are wanted.

FUTURE OF THE U.S.P. PROPAGANDA.

With Brooklyn pharmacists on the point of giving up the U.S.P. propaganda work and the Philadelphia pharmacists giving up the N.A.R.D. in order to push the same work along local and ethical lines fresh interest will be taken in the future of the propaganda. Physicians cannot be expected to take much interest in advancing the prescription business of druggists who are making, pushing and selling patent medicines. The doctors are not sleeping and if any druggist thinks so let him read what the A.M.A. journal has to say on the subject.

The A.D.S. is a typical co-operative business enterprise, nor has it posed as anything else. It exists to make money for its members through the sale of its products. It is not concerned with the prescription portion of the business of its members. That is their separate, individual affair. Fostering the commercial end in this way the tendency is to get away from the professional side of pharmacy and as the cleavage progresses may not the time come when the pharmacist will be a strictly professional dispenser of prescriptions and the druggist will operate a bazar to supply the public with ready-made medicines and every conceivable accessory for beautifying the flesh and making life more pleasant and comfortable?

"OURSELVES AS OTHERS SEE US."

While captious critics may comment upon the propriety of republishing the articles concerning the drug trade printed in the *Journal of the American Medical Association* we not only contend that no apology or explanation is necessary, but that the publication of these charges is a duty, unpleasant though it be, which cannot be shirked for sentimental or other and less adequate reasons.

It is important that the members of the N.A.R.D. and the A.D.S. should know exactly what is being said in this controversy and we have adopted the only course at present open for furnishing them with the information. At the same time Dr. Anderson's comments on the attacks will be read with a great deal of interest.

OLD LAW UPHELD—NEW BILL IN.

Almost simultaneously two pieces of interesting news are received from Albany. One is a decision of the Court of Appeals upholding the present New York State Pharmacy Law, under which such excellent work has been done by the Board of Pharmacy that wonderment is natural as to the necessity for a new law. The other item is the introduction by Senator Hill and Assemblyman Whitney of the conference bill to replace the old law and a summary of the chief points of which we have heretofore printed.

While noting the action of the highest court in sustaining the old law it is interesting to observe that the new bill if enacted as it now reads would not receive similar treatment in that tribunal. Among the inconsistencies is permission in section 231 for the board to employ counsel, while section 240 charges the attorney-general with the duty of prosecuting the board's cases.

The new bill refers to the practice of "pharmacology," "pharmacy" being used to define the place of business instead of the profession, but in one place there is a slip, as the secretary is required to be a practitioner of pharmacy, while the board members "must have legally practiced pharmacology" for at least ten years in this State.

"FREE LUNCH" 'PHONES DISAPPEARING.

Cincinnati druggists are to be congratulated upon their victory in sending the so-called "free lunch" telephones to oblivion. The fight has been a long and hard one, with the Ohio Valley D.A. making a brave struggle, assisted by Chairman Bodemann, of the N.A.R.D. telephone committee, and Joseph F. McDonald, who has aided druggists in telephone controversies in other cities.

In St. Louis the druggists have suffered defeat in trying to secure slot 'phones from one of the two companies, as reported in the January issue of *The Soda Fountain*, but it is hoped perseverance will be rewarded with ultimate success. In contrast, Philadelphia sends the good news that even the $5 guarantee from druggists has been waived by the telephone officers in that city.

WHY OMIT THE DRUGGISTS?

Here is a bill (H.R. 19280) introduced in Congress by Mr. Alexander, of New York, which requires some explanation on his part:

That all drugs and poisonous solutions containing no more than 1¼ per centum of poisons, and solutions containing not to exceed 1¼ per centum of cocaine, when sent in the original packages and addressed to physicians, dentists and veterinarians, shall be admitted to the mails.

If there is any necessity for the enactment of this amendment to the Postal Law why are the druggists omitted from participation in the supposed benefits? Who is behind this measure?

SUNDAY REST.

History repeats itself in divers ways and places, this time across the border where our Canadian friends are confronted by some of the problems growing out of the enforcement of Sunday rest observance laws. The agitation in favor of a legal day of rest is one that for centuries has stirred governments periodically. The moral principle of the Sabbath command was recognized by the early Christians but not its legal features. In fact, if we read history aright, it was not until the famous edict of Constantine was issued in 321 that the Christian

Sunday became a legal holiday when rest from labor was made obligatory. Since that time political interests and public morals have been the controlling factors in the enactment of such measures, and so they are likely to continue to the end of our days. Why not recognize these facts and as pharmacists get our share of Sunday rest?

The big "Drug Store Trust," backed "by Standard Oil and Tobacco Trust" money, which the papers have been heralding, probably was the Liggett corporation formed to take over the United Drug Company's stores, but Mr. Liggett denies the existence of any "trust." Reading the story of the suit over these stores on page 165 the conclusion is inevitable that the Rexall directors placed a large amount of confidence in Mr. Liggett, even if there was no "trust."

Formulas and fountain hints, experiences and suggestions in the ERA's "Soda Fountain and Candy Counter" department on pages 149 to 152 are worth while in themselves, but form only an appetizing taste of the treasures which are to be found every month in our publication, *The Soda Fountain*. The prize formulas alone are worth more than the subscription price to live druggists who operate soda fountains.

Dr. Diekman's assertion that there is far more danger to the public from physicians who dispense their own drugs, or who are interested in proprietaries, than there is from the sale of impure drugs, is based upon evidence gathered by the State Board of Pharmacy. As an abstract fact, however, the first part of his statement will appeal with more force to most observing and appreciative druggists.

N.A.R.D. never was intended to be a vehicle to induce physicians to use only U.S.P. and N.F. preparations. If National work was advisable the A.Ph.A. would be the proper body to conduct it, but experience shows that propaganda work cannot be prosecuted through the same methods in different localities, conditions never being precisely alike in the various fields of effort.

Pharmacists should heed the appeal for communications for the scientific section of the A.Ph.A. which has been issued by the chairman, M. I. Wilbert, 25th and E streets, Washington, D. C. Ample time will be afforded for reading and discussing all papers that are presented.

Some interesting bits of late drug trade news found their way into the pages of the January *Soda Fountain*. More of the same may be expected in future issues of this bright journal. Druggists will find it more necessary to them with each succeeding issue.

A.D.S. and similar organizations are certainly helping their members to make the money that will be needed at the divorce trial at which the terms "pharmacist" and "druggist" will be separated in popular meaning.

Good work that of the New York State Board of Pharmacy to bring the percentage of short standard drugs down to 7 per cent. That accounts for some of the opposition.

On the next page Mr. Cary, who modestly admits sponsorship for the Coudrey U.S.P. control bill, answers critics who seek to avoid what he considers the vital issue.

Co-operation in Brooklyn has struck a snag and got into the courts, but Dr. Anderson guarantees a cure on page 164.

If all medicines should be standardized as provided in the Coudrey Bill what would happen to the proprietaries?

Mr. Blair's plea for supremacy for professional pharmacy, printed on page 128, is notable for its sincerity and force.

Don't omit to read the article on fountain advertising which appears on page 151 of this issue of the ERA.

Perfumery can be made a most profitable pharmacy feature.

CORRESPONDENCE

California Bees and "Japanese Beer Seeds."

Editor The Pharmaceutical Era:

I have read with great interest the article in THE PHARMACEUTICAL ERA of December 16, 1909, page 623, on the subject of "What Are Bébées or California Bees, and Where May They Be Obtained?" The reading of this article from friend Kebler interested me greatly, because, during the past twenty-five years, I have been searching for material, known in 1859 as "Japanese Beer Seeds," which at that date, were used in my part of Kentucky for the making of a "home drink." The description given by Dr. Kebler demonstrates conclusively to me that the material to which he refers is the long sought ferment of my early recollections.

History.—Through an advertisement offering "Japanese Beer Seeds" for the making of beer at home, and emanating, if I remember correctly, from an Eastern establishment, these "beer seeds" were introduced to our part of Kentucky. They came dried, apparently much like some forms of tapioca, or perhaps they might better be compared to disintegrated, dried pulp of boiled rice. It seemed as though a mass had been made, as of dried dough, and when nearly dry, broken into crumbly fragments, about the size of tapioca. These were of pure white color, and possessed the following qualities:

A glass jar was filled with sweetened water, one-half pound of sugar being taken to the gallon, if I remember correctly. Into this sweetened water at the temperature of the room, these "Japanese Beer Seeds" were placed. They sank to the bottom of the jar, and within a few hours bubbles of gas would collect about them. When the gas bubbles had grown of a size sufficient to overcome the gravity of the pulp-like material, they would rise to the surface, bringing the "seeds" with them. Striking the surface of the liquid the gas bubbles would burst, the pulpy "seeds" sinking to the bottom, to begin once more the process of decomposing the sugar, with the constant evolution of carbonic acid gas, and the production of alcohol. The transparent liquid would be studded with this moving material, some of the fragments rising, others settling, a few floating on the surface attached to the bubbles that seemed not to break, and others lying upon the bottom, preparatory to the further evolution of gas. This active movement would progress rapidly, so much so that within a reasonable period the liquid would be strongly alcoholic. It was then decanted, fresh liquid supplied, and the decanted alcoholic liquid cooled and used as a beverage. If the supply of sugar became exhausted, the "seeds" lay dormant on the bottom of the jar.

These "Japanese Beer Seeds" were increased in amount by cultivating methods, by mixing them, if memory serves me correctly, when in a pulpy condition, with large amounts of boiled rice, allowing the mixture to stand for a considerable length of time, then drying and powdering it. I do not know that directions for this method of increasing the "seeds" accompanied them from the dealer by whom they were distributed, but I do know that my father was accustomed to use this method to increase the quantity, for distribution among his friends.

These "Japanese Beer Seeds" were also, at that time, utilized in other sections of the country, but I do not know how extensively they obtained a foothold, outside my section of Kentucky.

It was customary in those days for the families utilizing the beverage thus obtained to keep two or more jars in process, supplying sugar and water until the taste of a jar of liquid became satisfactory, when, as I have said, it was racked off and more sugar and water added, thus keeping a continuous supply of "Japanese Beer."

I have been looking for many years for something concerning these "Japanese Beer Seeds," and am now wondering, more than ever, in what this ferment consists, that, popularized more than half a century ago, in my part of Kentucky, seems to have been revived under the name recently employed, "Bébées, or California Bees."

In conclusion, I will say that, in my opinion, the origin of this ferment is in the Orient, and that the original name, "Japanese Beer Seeds," will be found to correctly apply. It

will also be discovered, in my opinion, that in some part of the Orient this "Japanese Beer," or this method of fermenting saccharine liquid, goes back to a period far antedating the time of its employment in Kentucky. That it is a ferment in the nature of yeast, is evident. Very truly yours,

Cincinnati, Ohio. JOHN URI LLOYD.

Father of Coudrey Bill Explains Motive.

Editor The Pharmaceutical Era:

I have read with great interest the criticisms on my crude amendment to the Pure Food and Drugs Act, and possibly, on account of its so-called crudeness, the motive of this amendment has not easily been distinguished, except by one gentleman, Dr. A. B. Lyons. I would like to have you place before these gentlemen a few of my inquiries for their most respected replies.

Are they aware of the "joker" in the present Food and Drugs Act which permits drug traffic from sordid interests to go on merrily? I do hereby quote the law, Regulation 7, Standards for Drugs (Section 7):

(b) "A drug bearing a name recognized in the United States Pharmacopœia or National Formulary, and branded to show a different standard of strength, quality or purity, shall not be regarded adulterated if it conforms to its *declared* standard."

This permits any drug in or out of the Pharmacopœia to be sold at any standard. It cannot be possible that these gentlemen are in favor of such a law. Is not the government, so to speak, "accessory to the crime" by permitting such a statute to exist?

I ask this question most respectfully: Should there be any professional hold-up or false ethics between the schools of medicine on one simple standardization, when practicable, of all drugs used to combat disease?

Is not the Federal Government financially able to employ moral and scientific chemists to edit a standard text-book on all agents used for medicaments?

Is it not practicable for these learned gentlemen of the revision committee of the Pharmacopœia to dip into the standard Federal book on drugs, take out what drugs they see fit and construct their formulas?

Should not all agents used for medicaments be standarized?

Who can, but the Federal Government, in an unselfish way, standardize all medicaments?

The issue is as simple as it is vital. It is not primarily a subject for technical or commercial discussion. It is a question of right which relates to the public's well-being, and under the fallacy of the present law, drug traffic will still go on. Technical and commercial questions are involved in the subject of this crude amendment, but they are incidental as compared to the question: *Should there be more than one standard for agents used to combat disease and suffering?*

Does it not limit and embarrass the possibilities of every physician? Is there not a chance for a tragedy, when it could be eliminated?

Let these learned gentlemen stop and think and appreciate that some day they will take a prescription to their own castle that shields their own treasures.

One standard of drugs and chemicals for the benefit of mankind and animals is not burdensome to any honest physician, druggist, drug manufacturer, manufacturer of proprietary or patent medicines. I am, yours most respectfully,

New York, Jan. 13, 1910. H. A. CARY.

Concentrates vs. Perfume Compounding.

Editor The Pharmaceutical Era:

In a recent address to the Philadelphia branch of the A.Ph.A., Mr. W. G. Ungerer very ably presented sundry "compliments" to the "would-be-perfumer," and incidentally condescended to make guarded mention of the so-called "concentrates." While we agree with Mr. Ungerer as to the foolhardiness of the amateur who plans to compound essential oils without any intimate knowledge of them, our viewpoint is a little different, viz., we think the chief danger of the amateur is from essential oil salesmen, who are often so grossly ignorant of the chemistry of the products they are offering that any formula or recommendations which they present cannot be worthy of serious consideration.

We also differ from Mr. Ungerer in his obvious respect for untutored "art" in perfumery. The fact is that the great bulk of consumers now insist upon powerful odors; that in order to attain these powerful odors it is necessary to use very concentrated forms of naturals and usually some synthetics; that an intimate knowledge of the chemistry of both is necessary to fine results; that the moment we enter into the realm of synthetics we are departing from many traditions and stepping into a field of modern chemistry.

And in our opinion it is greatly to the credit of the great manufacturers of essential oils and the splendid progress of perfume manufacture, that the traditional "Art of Perfumery" is fast becoming a more exact science wherein the chemist who specializes in essential oils and synthetics must ultimately supersede the mysterious sorcerers of olden times. Certainly it now requires expert chemical assistance to keep abreast of adulteration which is being so cleverly devised and applied, and on account of which many unscrupulous persons also find it necessary to have an intimate knowledge of the predominant compound and subsidiary substances which are part of every so-called natural.

As to concentrates—is it possible that Mr. Ungerer would try to stem any tide of modern progress? Does he not know that every buyer of essential oils is knowingly or unknowingly purchasing many less finished compounds? Do we not know that most of the otto of rose sold in this country is in reality a compound? Is it not very well known that the concentrates are in enormous use throughout France and Europe, and that most of the great essential oil houses are very busily engaged in manufacturing great quantities of them? As to "original effects," "economics," etc., we respectfully submit that while there will likely be just as many poor concentrates as there are poor essential oils—the concentrates which are compounded by chemists, after most valued French formulæ, with an exact knowledge of the chemical property of each ingredient, are not only equal, but as a rule vastly superior to home compoundings with less scientific attendance. We also hold that the blending and aging of the oils in their entirety is a great advantage and gives better final results; that most of the original effects presented in recent years are the result of work from concentrates; and that the great bulk of perfume manufacture in this country and through Europe is in reality only a manipulation from more or less finished compoundings. But perhaps the best testimony to concentrates is the increasing line of these products which most of the essential oil houses are now openly or secretly handling under coined prefixes which add mystery and profit. CHARLES E. SHOLES.

Putting Character Before Gain.

Editor The Pharmaceutical Era:

Goethe's saying, "more character, less talent," received a big post mortem boost in the $500 Prescription story in your January issue. The sermon, like the "Sermon on the Mount," will live when other preachers have forgotten that they ever knew anything.

It is a most pathetic outcry against this tendency of "office for revenue" only, and will do more good to put character before gain in filthy lucre than a dozen conventions of upliftrs and nickel-plated reformers. W. BODEMANN.

Cross Country Glimpses—Pasadena's New Year's Day Flower Pageant.

By Emma Gary Wallace.

Representation of Part of "Midsummer Night's Dream" and Another Float of Many in Pasadena's Carnival of Roses.

IF the monotony of every-day life palls, and one hankers for a panoramic variety of life and scene, a trip from the Atlantic to the Pacific coast of our great country will surely satisfy in some measure at least, that longing desire.

Snow-clad hills, ice-bound rivers, wind-swept prairies, rugged mountains, deep canyons, wierd deserts where the cactus and sage brush and wandering tumble-weed hold sway and where the sand storms boom angrily about the speeding train as if protesting against the invasion of civilization, more mountains where snows lie surprisingly deep—and then the magical transition to fertile stretches waving with palms, peppers and dotted with beautiful groves of citrus fruits.

Throughout the entire journey one is reminded of the worthy lady who declared delightedly respecting her first-born, "Every day you finds someding new out."

The Land of Optimism.

The Westerner is a firm believer in the trinity of self, country and advertising.

His belief in himself does not render him aggressive. On the contrary, he is cheerfully, hopefully, radiantly optimistic both for himself and for you.

EDWARD T. OFF, of Pasadena, President California Pharmacy Board and prominent in State affairs.

Do you seek business? Opportunity awaits you. Are you in quest of health? It fairly riots about you in the magic of almost continual sunshine, in the breezes purified and tempered by 10,000 miles of travel over rolling seas, in the protection from cold winds and frosts which the circling Mother Mountains afford, rising from smaller uplifts of the earth's crust to snow-capped peaks over two miles above the level of the sea.

The Westerner has succeeded. He has found health perchance, and opulence. Why should he not be enthusiastic, hopeful? Why should he not have faith in this glorius "Land of the Afternoon?"

The winter rains, together with the necessary irrigation, cause orange and lemon crops (worth some thirty millions yearly), grapefruit, guavas, limes, strawberries, cabbages, onions, peas, radishes and numerous other vegetables to mature the whole year through. Then in turn come blackberries, canteloupes, cherries, currants, loganberries, figs, grapes, nectarines, olives, peas, peaches, persimmons, plums, prunes, pomegranates, quinces, raspberries, melons, nuts and honey, which together with the crops of alfalfa hay, grain, yellow gold and native gems—add to the vast native wealth.

It surely is a wonderful section of a wonderful country. How can its people be other than proud and happy that nature has done so much and made so much possible?

The Westerner makes no talk of hard times, gloomy market outlook, or the likelihood of things going to the dogs generally. He talks in big figures. He breathes and lives in an atmosphere of sunshine and growth, and he is not staggered by enormous odds. If he is downed—and he sometimes is, he gets up and goes after success with a grim determination which is sure to win out. What he does not like about the country or its conditions, he is willing to pitch in and help change. What he does like he proceeds to enjoy to the limit.

Advertising a Big Asset.

The Westerner is a thorough believer in the efficacy of advertising. He figures out its value at long range as an investment and at close range as an immediate winner in a smaller way.

The Pasadena Tournament of Roses which takes place annually on New Year's day costs many thousands of dollars, but it brings back in direct returns many times that amount. It has focused the interest and attention of the entire country upon that city yearly. Even abroad it is famous as a wonderful open-air mid-winter gala day.

The climatic conditions which allow such a celebration at a time when many parts of the country are shivering in winter's grasp must be ideal. It is, as it were, an assurance that the claims of summer weather in mid-winter are real.

Flowers in great abundance must be had, for there must be no cause for disappointment. The great floral pageant which will afford a fete day for thousands of home people and visitors must take place on schedule time.

For twenty years the weather on the great day has been all that could be desired, but this year a prolonged and heavy rain was in progress as the new year approached. There was good reason to fear and believe that the day would be an inclement one—for the first time in the history of the Tournament of Roses.

To have the floats and various spectacular allegories ready for the morning parade, the flowers are distributed the evening before and the decorators work all night long, only putting on the finishing touches as the parade sets forth, that the blossoms may be fresh and dewy.

With the rain making rivers of the streets, they worked this year, when it looked like sheer madness. Thousands and thousands of bunches of roses, lilies and violets; tons of holly and pepper berries and other decorations were worked up—and still the rain fell.

"We will have the parade," the Tournament directors said firmly—and they did.

It all came out just like a story book. The rain fell in

torrents until [illegible] and then the wonderful California sunshine [illegible] the streets mysteriously dried up in a marvelously short time and to the sound of stirring music the [illegible] started forth.

Picture From Fairyland.

It was like a moving picture from Fairyland. Wonderful [illegible] horses but by [illegible] horses and [illegible] horses or electricity. Outriders in rich costumes which rivalled the brilliant flowers in color. Elves, fairies with gauzy wings, cupids, mythological figures and the old ox team and covered wagon such as followed the Oregon trail, buck-skin clad girls typical in their fearlessness of the Golden West—all went by with kaleidoscopic swiftness, each having an interest all its own.

There were advertising ideas which were particularly clever. The Realty Board kept a weather eye on business and displayed a great floral globe measuring eight feet in diameter made of flowers. North and South America were worked out in violets on a solid background of white. A gold crown located Pasadena and the location of the land for sale by the Realty Board. The floral announcement, "Pasadena Best on Earth," completed the story.

On the Water Wagon.

The W.C.T.U. drove a gayly decorated water wagon, and the riders lustily declared in song: "We'll Make the Map all White." The bankers, the hotels, the schools, various neighboring towns and individual enterprises all vied with each other to win the prizes in the seventeen or so different classes.

It was all very splendid, but where were the druggists? They were florally silent. Perhaps it is not considered the part of wisdom to acknowledge there is any need of them at all in this healthful place. But there is—and fine up-to-date modern stores they have, too. Personally they are busy, prosperous and exceedingly courteous to strangers.

The bankers combined forces and funds and had a magnificent float of a dignified character. There was likewise an opportunity to have said to the thousands of visitors, many of them in search of health:

"Yours for accurate, scientific service. The Pharmacists of the Crown City of the West."

Within half an hour after the parade passed the writer heard three strangers say in substance: "I wonder which drug store I better make my headquarters for supplies this winter?"

There is food for thought in this query for the druggist who is located where there is a more or less shifting summer or winter population. They need supplies. Who will furnish them?

A Leader in California Progress.

It is interesting to note that Edward T. Off, the president of the California State Board of Pharmacy, is deeply interested in all that pertains to the development of his State as well as his profession alone. He is a man of many interests, being president of the Pasadena Board of Trade, president Pasadena Electric Express, one of the directors of the Pasadena National Bank, one of the Tournament directors, having personally driven in the famous Chariot races; vice-president of the Western Wholesale Drug Company, and has been instrumental in securing much good legislation for the safe-guarding of the legitimate interests of the drug business.

A man of such large affairs is bound to have the best and broadest interests of the business at heart, and to be able to do much to place it upon a high plane.

With the opening of the Panama Canal, the development of South American and Mexican natural resources, together with the advantages of year-around life in the open, the future of the West is indeed bright.

The spirit of the country seems to be, build well, build for the future—and let the world know about it.

Mrs. Wallace Injured in Explosion at Pasadena.

Pasadena newspapers of recent date report that Mrs. Emma Gaze Wallace, who is spending the winter in that city, was injured by the explosion of a steam heater in the rooms of the Board of Trade, whither she had gone for information. The board's secretary, Mr. Bertonneau, suffered a broken arm. Mrs. Wallace was stunned and badly bruised. Prompt assistance was given and the injured were made as comfortable as possible. Mrs. Wallace did not go to the hospital.

Sunday Rest in Canada.

"Works of Dire Necessity and Mercy" Are Alone Permitted to Be Done in the Dominion.

An Ottawa correspondent of the New York *Herald*, in a lengthy article on Sunday rest conditions in Canada, gives information that will interest American druggists: It is not permitted that anything which if done in Canada would be a violation of the Sabbath shall be advertised. This prevents even the advertisements of base ball games, races, excursions, etc., in the bordering States of this country if they are held on Sunday. The law contains numerous exceptions under the head of "works of necessity and mercy," and of these the work of clergymen, choristers, etc., lead all the rest. Physicians may minister to the sick, as many nurses and ambulance drivers, etc., but druggists, it is held, may sell only drugs, medicines and surgical appliances. The soda fountain shall not fizz on Sunday, even though the drug clerk may be busy with his pestle and mortar, and likewise while he may sell ipecac and quinine he cannot sell candy or hair brushes or shaving soap or cosmetics.

Drug stores provide a good deal of trouble for the enforcement of the Sunday laws, says the *Herald*. Nowadays pills and tablets are only a fraction of the stock of the average drug store. Nearly always they keep cigars in stock, and since tobacconists are closed tight on the Lord's Day many a smoker who has forgotten to stock up Saturday night with nicotine fuel for the long Sunday likes to slip over to the apothecary's during the limited hours he is doing business and buy a few cigars.

If the druggist refuses to violate the law his customer is likely to give him a sly wink and possibly refer to the fact that he is an old patron. The drug store man then must choose between the law and offending a steady customer.

Just now the Lord's Day Alliance is preparing to carry into a higher court the decision of a Toronto magistrate that cigars are a drug. A druggist was charged with violation of the law by selling cigars on Sunday and set up the plea that he sold them as a drug good for toothache and stomach ills.

Hotels and restaurants with a liquor license may sell drinks with meals on Sunday, and in many places has been witnessed the introduction of a prototype of the Raines law sandwich which under similar laws in New York made possible the slaking of thirsts on the Sabbath.

A judge in Vancouver hit the property sandwich a terrible blow which would have destroyed any less durable article. "A sandwich is not a meal," he ruled; "therefore drinks cannot be sold with sandwiches on Sunday." In Toronto when the total number of hotel liquor licenses was reduced from 150 to 100 the hotel bars began to experiment with "soft drinks," "local option" beer, etc., offering these mild substitutes for sale on Sunday. The Lord's Day Alliance announces its purpose to prohibit the new practice.

The Lord's Day Alliance is more concerned about fishing which is carried on more as a business than as a sport.

All sorts of strange pleas are set up by shopkeepers charged with violation of the law, the proprietor of the Palms, at Hamilton, defending the sale of candy to two boys on the ground that the sweets were food. The magistrate decided otherwise and fined the defendant $20.

The Lord's Day Alliance workers are strategists. Not long ago certain post-offices in the Western provinces were open on Sunday, mail being distributed. Recipients of the circular were requested to keep secret the fact that the Lord's Day Alliance chiefs soon would descend on the Dominion government and demand stricter observance of the law. It is unfair, declare Mr. Moore and his associates, that postal clerks should be obliged to work on Sunday. The law provides that any person required by his employers to do the usual work of his calling on Sunday shall be given 24 consecutive hours without labor within the next six days of the week.

The practice of holding funerals on Sunday is diligently discouraged by the Lord's Day Alliance, which approves the action of the Belleville (Ont.) Cemetery Company in closing the cemetery on the Sabbath. Mr. Moore writes in the *Lord's Day Advocate:* "Inquiry shows that no troubles have resulted and the public are not in any way inconvenienced by preventing funerals on Sunday."

Can You Blame Them?

By Joel Blanc.

AS frequently happens, I was speaking in defense of the small dealer, and warning my hearers against cutters, department stores, and other concerns generally accused of indulging in unfair competition. Among my hearers were a number of women, one of whom is quite active in church work. When I paused in my defense of the independent retailers, the little lady had her say, and I present you her side of the case as a text for what I am about to write to you:

Said the little lady: "What you say sounds very nice, and there is much truth in it, but you seem to think that there is nothing to be considered in making purchases except price and quality. What I, and what a great many others care for almost as much as we do for price and quality, is service. The average small dealer apparently does not know how to give, or at least, does not give good service.

"I am a frequent purchaser of ice cream for both church and home use. For years I purchased it from different confectioners and caterers who manufactured it. To procure any considerable quantity it was necessary to order a day in advance, and when in a hurry for a small portion for home consumption I was forced to accept whatever flavors the maker chose to have. If we wanted sliced portions we were compelled to slice the bricks ourselves. We had to accept the deliveries whenever the makers chose to make them. there was no uniformity of packing, and, in brief, we never knew what, when, or how our ice cream was going to turn out. Whenever I made complaint, the purveyor would attempt to excuse his own shortcoming by abusing a large ice cream manufacturing company which is rapidly gaining control of the ice cream business of the city. At last I determined to find out if the company was such a wicked 'trust', 'monopoly' and so on, as I had been repeatedly told that it was. I found that I could telephone to the big concern at almost any time, either night or day, and have my delivery made at almost any exact moment that I desired. I found that there were a large variety of flavors always on hand, that the bricks would be made in any size or in as many slices to the quart or gallon as I might wish; that each slice was wrapped in paraffin paper and then packed in quart cardboard boxes; that one or more of these boxes were placed in a properly sized metal container and then packed in cracked ice in a more thorough and uniform manner than I had ever before seen. In brief, the service of the so-called trust saved half my work of serving, saved waste, worry and that at a cost no greater than the cream purchased from your lauded 'small' dealers. Can you blame us for turning away from the small dealers who give such poor service, and seemingly do not desire to improve?"

The foregoing is but an illustration of conditions which are paralleled in the drug trade and which will confront one more and more noticeably as the chain-store system is developed. These conditions are not new, neither are they entirely the creatures of concentration and combination. The fittest always did and always will survive, and the newest commercial evolutions show no more than that the fittest to survive can live longest through combination. But not now nor within this generation will combinations or even close corporations take the place of all individual dealers. For many, perhaps hundreds, of years, there will be thousands, of individually owned drug stores throughout the U.S. Of these thousands, however, every man will be of a higher grade business class than is the average druggist of the present. The purchasing public always has gone and always will go where it can get the most for its money. The time when "most for the money" meant merely quantity or quality has passed. In this age of nervous pressure and general condensation in both mind and matter, *service* has become something for which the public not only pays, but which it demands.

* * * * * * * * * *

Service means something more than action of human mind and muscles. In service, assortment, fixtures, labor saving store appliances, packing materials and delivery facilities are so closely linked with action that they are barely distinguishable from it. It is in perfection of service that the independent business man already finds himself being hardest pushed by the large concerns and, unfortunately. it is something which many druggists pompously waive aside as being something beneath them, something non-professional, non-ethical, as it were.

Of the many forms of competition which the druggists of today consider as unfair there is not one but that largely draws its trade through superiority of service. When a mail-order house issues a large catalogue and therein describes its merchandise in terser and more clearly descriptive language than that in which the druggist or clerk describes merchandise held in hand,—that is giving better service. When the retailer sends out a half pound of a powdered drug in a poorly wrapped and loosely tied package, he is giving poorer service than the "big cutter" who hands out the same quantity of the same drug in a neat, dust-proof box. And if you will just carefully compare the packages of the "big store" with those of the average druggist you will find that much of what is called "unfair competition" is nothing but superior service.

I am fully aware when I acknowledge that efficient service demands material adjuncts as well as action that some of my readers will declare that the small retailer cannot afford the boxes, fixtures, and other material aids demanded. That is not a valid excuse. To prove it to his own satisfaction the average druggist can look around and see competitors with less capital and smaller business who are giving better service than he is. It is perhaps fair to say that good service consists of one-third thought, one-third action and one-third material aids. Without the first two-thirds the last third is useless, but having the first two the last is always procurable. There is a vast difference between the service rendered with a dirty-faced, sticky fingered delivery boy and a clean one—and the only difference in cost is represented in a bit of soap.

I have in mind two drug stores which are located within a block of each other in a suburb of one of our large cities. For years both were run in about the same way. The way was neither very good nor very bad, just about as seven drug stores out of ten are run. At last one of the stores was sold. The man who bought it put all his capital in it, and gave a mortage besides. He had no money for new fixtures and appliances. He had neither sufficient capital nor credit to immediately improve the stock, but the very day he took possession he improved the *service*. That was about six years ago. Today, the man who knew the value of service owns and has enlarged the building. Today he has, and can afford to have, every material need to add to the action of good service. I know of no large store with a better selling, delivery, advertising and storekeeping service than this man has. But he started by giving the best possible service with the best tools he could afford at the time. At the start, his competitor on the next corner had equal material advantages and the extra advantage of acquaintance and long standing. He also had much more capital. He refused to compete with good service, and while he is still in business at the same old stand, he is dragging out a weary, profitless, grouchy existence.

* * * * * * * * * *

One of our contemporaries recently published a cut of a card to use in the N.F. Propaganda. The card showed a druggist with graduate in hand, and supposedly filling a prescription. In this cut the druggist was attired in "jumpers." There is another illustration of the idea some druggists have of service. It is not unusual to see a druggist or clerk serving a patron, while he, the salesman, is partially covered with a dirty apron, in shirt sleeves with unguent smeared arms, or otherwise carelessly dressed or even partially disrobed, and yet, the very druggist who does or allows such things in his own store would snort with critical disgust if he saw, an even cleanly, short-sleeved salesman in one of the "big stores."

Is there any reason why a big store should be kept cleaner than a small one? Is there any reason why packages should be tied better by a "cutter" than by a "schedule" man? Is there any reason why a delivery boy from a big store should walk faster, have a neater uniform, a cleaner face, or better manners than a delivery boy from a small store?

The people go, your wife goes, you go, to buy groceries, drygoods and all that is bought, where the service is best. Can you blame them? Can you blame the grocer for going where he gets the best drug store service, if you go where you get the best drygoods service?

If each one of a chain of a dozen or more drug stores gives better service than you do in your one store, it is up to you to improve your service and to do it quickly, or it will be "eeny, meeny, miney, mo, OUT" for you.

Pharmacists Must Take a Stand.

Former President Blair Explains Position in Resigning From the Philadelphia Retail Association.

This letter was sent to the Philadelphia A.R.D. before the meeting at which withdrawal from the N.A.R.D. was voted:

Mr. N. A. Cozens, Secretary the P.A.R.D.:

DEAR SIR:—I herewith tender my resignation to take place at once.

I do this with sincere regret, as my connection with the work of the association, with the members, and with the National body with which we were associated in the past, has been a pleasure and a benefit to me socially and materially.

The N.A.R.D. was one of the greatest organizations in this country. Its greatness was due largely to the P.A.R.D., which financed it in its time of need, gave it some of its best men, supported it whenever it was in the right, and stood by it even when it did not accept its views and was always ready to do more than its share in the propaganda of the U.S.P. and the N.F.

The P.A.R.D. has heretofore stood for professional dignity, integrity, honesty, fairness and right, even though its purpose was primarily the betterment of the retail druggists in a purely financial way.

Both the P.A.R.D. and the N.A.R.D. have claimed that medicine and pharmacy are sister professions and have endeavored to bring them closer together. Pharmacists have worked to persuade physicians to prescribe ethical preparations and to discontinue dispensing medicines, and physicians have urged pharmacists to discontinue counter prescribing and the sale of nostrums, while both professions have been and are doing all that it is possible to bring around a reformation that will benefit not only the public but themselves as well.

Now, however, the N.A.R.D. has departed from its former principles and is urging its members to assist in promoting the patent medicine or nostrum cause on the one hand and the propaganda work on the other. Such pursuit of two diametrically opposed causes could not escape the notice of our medical friends, and as I stated at our last meeting, the American Medical Association would sooner or later direct its attention toward our double dealing. You will observe in the *Journal of the A.M.A.* for January 8, 1910, that this association has taken notice, and in so doing it expresses itself in no uncertain terms.

As pharmacists, we must take a stand. Either we must espouse the cause of pharmacy as a profession and do nothing that will degrade it, or we must take up the nostrum business with all its attendant evils, chief of which is the deception of the public.

I am convinced that the P.A.R.D. can be the best, the strongest and most powerful association of pharmacists in the State of Pennsylvania, if it could work alone. But associated in any way with the N.A.R.D., which has been absorbed by the greatest nostrum organization in the country, it can only bring itself into disrepute, and gradually dwindle in strength and usefulness, ultimately defeating the very purpose for which it has been organized.

In resolving to affiliate itself with the N.A.R.D. for the year 1910, the P.A.R.D. must naturally take upon itself its share of blame which will naturally be showered upon the National organization by the medical profession and by the ethical part of the pharmaceutical profession.

Believing that the nostrum business is one of the worst crimes that have been perpetrated upon the American public, and knowing that the N.A.R.D. is practically identical with the greatest organization of nostrum vendors and manufacturers of this country, I cannot see how any pharmacist who believes that pharmacy is a profession and who is trying to promote the ethical ideals of the pharmaceutical profession can lend his name to the support of an organization which is striving to defeat these high ideals.

In promoting the U.S.P. and N.F. propaganda, the P.A.R.D. pledged itself to the public and to the medical profession to give them a square deal, but in affiliating itself with the N.A.R.D. this pledge is broken, and for one who has always stood by his work there is only one course possible; that is, to resign his membership in the organization.

Trusting that you will pause before the association my reasons for resignation, I am, yours very truly,

Philadelphia, Jan. 17, 1910 HENRY C. BLAIR.

Washington Branch, A.Ph.A.

Philadelphia Visitors Participate in Meeting, Which Discusses Revision of the U.S. Pharmacopoeia.

WASHINGTON, Jan. 20.—The January meeting of the local branch of the American Pharmaceutical Association was devoted to a discussion of the U.S. Pharmacopœia. George M. Beringer, in calling attention to the report of the A.Ph.A. committee on the U.S.P., pointed out that no attempt had been made to harmonize the individual views of its ten members. One member thought the Pharmacopoeia should be a medium of communication between physicians and pharmacists and should represent the present day needs and practices of representative medical men. Mr. Beringer criticized the contraction of chemical names for synthetic remedies and thought that the Pharmacopœia should contain a comprehensive list of synonyms and that U.S.P. Latin titles should be as near correct as possible. He suggested as desirable features for the new Pharmacopœia: Working methods for determining physical and chemical constants, methods for sterilizing official substances, and the harmonizing of tests so as to make them applicable by the retail druggist.

Professor Henry Kraemer discussed the importance of pharmacognosy in connection with pharmacopœial work and pointed out that fully 70 per cent of the articles in the U.S.P. were intimately dependent on plant drugs. He thought that U.S.P. VIII was not abreast with the advances in pharmacognosy.

H. H. Bartlett in discussing the nomenclature of the U.S.P. said that it was in great need of revision and classed certain titles now in use as of a hybrid character. Professor Joseph P. Remington, said that the terms most severely criticized had received the sanction of the late Charles Rice, generally recognized as a Latin scholar. It was Professor Remington's opinion that the committee on revision should be extremely conservative in the matter of nomenclature changes. He thought that a long list of synonyms would be dangerous and was to be avoided. Admissions to the U.S.P. should be left to physicians and the American Medical Association, through its committee, should admit a tentative list of admissions and deletions at the coming convention.

Dr. H. W. Wiley expressed the opinion that the coming revision of the U.S.P. should be conducted on a distinctly higher plane and embody a broader view of the whole general subject, greater skill of the individuals who are responsible for the revision and a greater appreciation of the public welfare, for the Pharmacopœia is a book, primarily, to protect the unfortunates who are in need of medicine to make them well, rather than for the retail druggist, the physician or anyone else. Dr. Wiley paid a high tribute to the committee of revision for U.S.P. VIII.

President S. L. Hilton appointed the following committee to prepare a report suggesting desired changes in the N.F.: Chairman, Dr. L. F. Kebler; H. E. Kalusowski, Lewis Flemer, Augustus C. Taylor and Wymond H. Bradbury. A vote of thanks was tendered to the guests from Philadelphia.

WOULD BE A "LABORDINIZED PHARMACOPOEIA"

(From the Journal of the American Medical Association.)

"Readers of the *Journal* may remember that the Hon. H. M. Coudrey has previously been referred to in his capacity as president of the Labordine Pharmacal Company, of St. Louis. Labordine, it will be further remembered, was, previous to the Food and Drugs Act, a 'purely, vegetable cardiac stimulant' which should be given preference over other antipyretics so as to 'avoid acetanilid poisoning.' Examination in the association's laboratory showed Labordine to contain nearly 40 per cent acetanilid—a result which the makers of the nostrum had to acknowledge after the Food and Drugs Act made it expensive to lie on the label. Those interested will find our write-up of the matter in the *Journal* of March 30, 1907. What the particular 'joker' is in the bill thus introduced by a man whose various activities as an insurance agent, politician and 'patent medicine' promoter so peculiarly fit him to pass on such an intricate subject as the revision of the Pharmacopœia, we cannot say. That there is a 'joker'—or many of them—we do not doubt, any more than we think that revision of the Pharmacopœia by the 'patent medicine' interests or their tools would further the best interests of the public, of the medical profession, or of scientific pharmacy."

P.A.R.D. Secedes From National Association on Propaganda Issue.

Six Hundred Druggists Out of N.A.R.D. as First Results of Attack of Medical Association's Journal Connecting N.A.R.D. With the A.D.S. and Accusing Them of Fostering Nostrum Evil—Dr. Anderson Defends Both—Brooklyn Discouraged With Propaganda Results in That Borough.

The propaganda question, coming up in various aspects, both on its own account and in connection with the co-operative enterprises and associations, figures prominently in the early history of 1910. Much of moment is the vigorous attack made on the N.A.R.D. in connection with the A.D.S., growing out of the allegations of interests of the two associations and the conflict of purpose involved in the propaganda campaign of one with the manufacturing of remedies by the other. The physicians profess to see what they characterize as double-dealing and their organ, the Journal of the American Medical Association, is printing indictments that explain their position. Two of these are reproduced on pages 131 and 132 for the purpose of letting druggists know just what the charges are. Dr. William C. Anderson, who is dean of the Brooklyn College of Pharmacy and is prominent in the A.D.S., besides being an ex-president of the N.A.R.D., makes reply through the ERA and what he says will be found on the next page.

One notable effect of the attack has been the withdrawal of the Philadelphia Association of Retail Druggists from the N.A.R.D. Former President Blair's resignation from the former association, is given on page 128. Members of the P.A.R.D., it appears, are heartily in favor of the propaganda, as conducted locally, without N.A.R.D. help, while in Brooklyn the Kings County Pharmaceutical Society has become discouraged and will probably continue the campaign only a month longer. With leading organizations involved in this way, U.S.P. and N.F. propaganda work is attracting more attention than ever before and no doubt when the smoke of conflict clears away there will be satisfactory adjustments of conditions in the relations of the pharmacists and the physicians of the country. The reports of the meetings and statements printed are exceedingly interesting.

PHILADELPHIA A.R.D. IS OUT OF THE N.A.R.D.

Action Taken at a Special Meeting, After Resolutions Had Been Lost by Six Votes at Regular Session.

Just as the February ERA goes to press it is learned that at a special meeting of the Philadelphia Association of Retail Druggists, held on January 21, the members voted to secede from the N.A.R.D. by adopting the resolutions offered by Mr. Apple at the previous meeting in January and which are printed in the opening portion of the following report of that meeting:

PHILADELPHIA, Jan. 20.—After prolonged discussion which frequently waxed exceedingly warm, the Philadelphia Association of Retail Druggists, at its January meeting, defeated a resolution to withdraw from the National Association of Retail Druggists. But it was only by a margin of six votes that the victory was won. Hardly had President Frank W. Fluck stated the purpose of the meeting when Franklin M. Apple offered the following resolution:

Whereas, The Philadelphia Association of Retail Druggists was organized to improve the commercial interests of the retail druggists of Philadelphia; and

Whereas, The most important issue of the Philadelphia Association of Retail Druggists is the propaganda for the United States Pharmacopoeia and the National Formulary preparations, which issue has unquestionably proved productive of great pecuniary reward to our members; and

Whereas, We think that greater results can be accomplished in propaganda if the Philadelphia Association of Retail Druggists severs its connection with the National Association of Retail Druggists; therefore, be it

Resolved, That the Philadelphia Association of Retail Druggists does not affiliate with the National Association of Retail Druggists and the dues for 1910 be eight dollars.

Immediately Mr. Apple drew the fire of some of the stalwarts, among them David G. Potts, brother to Thomas H. Potts, secretary of the N.A.R.D. In speaking to his motion, Mr. Apple declared that in his own opinion and that of others, among the latter prominent physicians of the city and State, the propaganda could be more effective if carried on by the Philadelphia organization than by the National body. He said it was absolutely necessary in presenting the propaganda as at present constituted, that it have the backing of an organization whose aims along these lines were identical with those of the physicians. The latter, he said, were causing the trouble and it was on account of their opinion of the present affiliations of the N.A.R.D. that the physicians were opposing the seating of delegates to the United States Pharmacopœial Convention.

Ought Not to Secede From N.A.R.D.

William E. Lee, the next speaker, in admitting that he had changed his mind on the subject, declared that he could not now see any advantage in withdrawing from the ranks of the National association. He said he could not see how the N.A.R.D. was radically different. Continuing, he said in part:

"We would lose our weight and influence, not only in the way we are regarded by the physicians but in various undertakings of benefit to the drug trade in general and to Philadelphia pharmacists in particular. The latter is true particularly as to legislation, for as a local body we could not hope to have the weight of a National body. I can't feel that we ought to leave the N.A.R.D., and such men as Hilton, Bodemann and men of equal standing who are staying in."

Otto Kraus said that the standing of the retail druggist in the opinion of jobbers and manufacturers had been advanced by the existence of the strong National body of retail druggists.

P.A.R.D. Can Best Handle Propaganda Alone.

In the opinion of William L. Cliffe, it was not only feasible but advisable for the P.A.R.D. to handle its own propaganda campaign with no assistance whatever from the N.A.R.D. He declared, however, that it was premature to say that the N.A.R.D. had lent its influences to the A.D.S. He said:

"If this was shown to be true, it would put a different light on the matter, but we must have actual facts. This year at least we should continue. We must look further than the mere money consideration, for there are other reasons for not withdrawing. This is Congressional year and bills will be introduced relating to the drug trade which will need the endorsement or the opposition of a National organization of retail druggists."

David H. Ross stated with emphasis that if affiliation with the N.A.R.D. was going to injure the standing of the druggists of Philadelphia in the opinion of the physicians, then he was in favor of dropping the N.A.R.D.

"Other Interests Running the N.A.R.D."

In his well known energetic manner, Mr. Ross declared that there were other interests running the N.A.R.D., and that it was only by strategy that the P.A.R.D. had been successful at Atlantic City.

"Has the P.A.R.D. received a single thing," he continued, "in the way of an appointment or a representative. [Here Mr. Ross was informed that Philadelphia had a representative on the National telephone committee and that some of its members had refused places on the National propaganda committee.] Well, I say stand on your own feet as men and as pharmacists and the physicians will think more of you for it. The only issue that has done me any good is the propaganda and in that respect we do not have to look for help from the N.A.R.D. We are too much afraid—the sooner we stand alone, the better it will be for us."

Mr. Potts asked what were the direct charges of the N.A.R.D. being controlled by the A.D.S. and in reply, Mr. Fluck recognized Henry C. Blair.

Philadelphia Mainstay of the N.A.R.D.

Mr. Blair spoke right out from the shoulder and concisely summed up the events of the past year and a half. He said in part:

"We have always been the mainstay of the N.A.R.D., financially and otherwise. We have had a year and a half to look

at this matter. At the Atlantic City convention, the most powerful [illegible] said, 'There will be another year.' I agree thoroughly with Mr. Apple's resolution. The same amount of money spent in propaganda by the Philadelphia association alone will do vastly more good.

Mr. Lee declared that there was not a man on the executive committee of the N.A.R.D. who owned a share of A.D.S. stock. Chairman Rehfuss wanted to know if the same was true a year ago, and Mr. Lee replied that he did not know about that.

When the question was called for it was decided to vote by ballot on the issue, and President Fluck appointed Theodore Campbell judge, and Messrs. Cliffe and Apple tellers of the balloting. The result, a victory for the adherents of the N.A.R.D. by six votes, was greeted with a ripple of applause.

On motion, the dues for 1910 were continued at $12. A motion by Mr. Rehfuss that the entire work of the propaganda be carried on during the coming year by the local committee and that 20 per cent be deducted from the N.A.R.D. dues, was carried. R. H. Lackey urged that in the future all of the members be apprised of just what this committee was doing in the way of preparing literature for the physicians so that the druggists would be prepared to meet all demands.

Ex-President Anderson Replies to Attack—Explains A.D.S. Purposes.

Dr. W. C. Anderson, dean of the Brooklyn College of Pharmacy and vice-president of the American Druggists' Syndicate, when shown the article in the *Journal of the American Medical Association*, declared that it was a personal attack by certain officers of the American Medical Association who may see, in such action, some individual advantages. He did not believe their course would be generally approved by the medical profession when the true facts became known.

"The whole question resolves itself into the attitude the medical profession has taken and will continue to maintain in reference to the manufacture and sale of household remedies," said Dr. Anderson. "In all my experience I have yet to find a physician, no matter how rigidly he may be opposed to the general sale of all patent medicines who would not recognize the necessity for legitimate household remedies or who would think of making the claim that all household remedies should be eliminated from the retail drug trade. I have yet to find the physician who thinks the public should consult him when it was necessary to take a dose of sulphate of quinine or castor oil. On the contrary, all recognize the absolute necessity for simple remedies that can be employed by the public without the necessity of seeking a physician's advice. Patent medicines were introduced to the public by physicians. Their extensive use was stimulated by their advice and advertisements. The retail drug trade became a party to their distribution because physicians forced this condition upon them.

"The success of the patent medicine venture on the part of the physicians naturally attracted others who were not actively engaged in the practice of medicine and large business enterprises in such commodities have grown up. It was only natural that these same enterprises should follow the example set them by the physicians and seek the most advantageous means of getting their goods into the hands of the public. As the patent medicines produced either by physicians or other manufacturers were secret remedies, it was impossible for the retail druggist to choose between those that were valuable and practically harmless and those containing ingredients detrimental to the public welfare. The manufacturer created the demand and the retail druggist was the innocent distributer. He has diligently endeavored to eliminate from his own business, in fact, from distribution in any way, all products that were to his knowledge of a nature that would be either temporarily or permanently injurious to the public.

"Retail druggists have always been in the front ranks of the contenders for laws that would make it impossible for the public to secure habit-forming, intoxicating and other dangerous drugs and preparations, thus sacrificing their commercial advantage in the interest of public welfare and the honor of their profession. Both the physician and the pharmacist recognize the necessity for catering to the public demand for true, effective and practically harmless household remedies, and it was with the idea of eliminating the dangerous, secret and in some cases harmful patent medicines by employing true and honest remedies the constituents of which could be known to all, that co-operative organizations took up the work of supplying legitimate household remedies.

"The physician who is honest in his contentions for the elimination of the dangerous nostrum cannot consistently attack or criticize the retail druggist nor organizations of retail druggists that are using their best efforts in the same directions and have adopted the only method that has ever shown any degree of success.

"The attack in the *Journal of the American Medical Association* is an outrage because, at the time of publication, Dr. Simmons, who we believe is its author, knew the true objects sought by the retail drug trade in taking the attitude they have, and had been made familiar with the fact that the labels and circulars which are referred to as being used on the A.D.S. products had been revised and that practically every assertion that appeared on the original labels, which he criticized so severely, had been eliminated. The labels and circulars now being used contain true and honest statements and no attempt has been made to make false claims or to deceive anyone. They are, moreover, in strict accordance with the provisions of the Pure Food and Drugs Act.

"The suggestion was even made to Dr. Simmons that as the A.D.S. represented such a large proportion of the retail drug trade, which has a just desire to comply with the wishes of the medical profession, that if any number of responsible physicians or a regular committee of the American Medical Association would criticize the A.D.S. products, labels, literature, etc., we would gladly accept their suggestions for such changes even to the discontinuing of any product that could be considered objectionable. This would be freely done in order that the physicians and the pharmacists might work together in a consistent and effective campaign for the accomplishment of results which we believe most of the representatives of both medicine and pharmacy desire. We believe that the enemies of the A.D.S. are at the back of this attack rather than the medical profession."

BROOKLYN PROPAGANDA WORK DISCOURAGING.

Members Discuss Practicability of Continuing Work. Dr. Muir Reports on Proposed Pharmacy Law.

At the January meeting of the Kings County Pharmaceutical Society, Dr. William Muir, chairman of the legislative committee, presented a report on the proposed new State pharmacy law, of which a hearing was held in this city recently.

Charles Heimerzheim, who has been conducting the propaganda work of the society for the last half-year or more, reported that he hadn't received a single letter from the pharmacists of the borough commendatory of the work done by his committee. As over $750 had been spent since September 1 and as much more was needed to continue the work, he had become very discouraged and was inclined to think that it wasn't as popular with the members as he at first believed. Several members spoke of the good results attained by the distribution of samples and other work of the detail man. Mr. Raubenheimer said that he should be very sorry to see it dropped and thought it was up to the retailer to do a little detail work himself.

Treasurer Oscar C. Kleine reported that he didn't think the treasury warranted the continuance of the work, and as for himself personally he thought it ought to be dropped. To him it was a loss. An argument brought forward by one member in regard to dispensing by physicians and the need of continued propaganda work was that the physician who charges $1 a visit will not give his patient a prescription which will cost 75 cents, but will substitute something which the large pharmaceutical manufacturing houses have ready and which is cheaper.

One More Month of Propaganda Anyway.

Upon Dr. Muir's motion, $50 was voted to continue the detail work for one more month and at the next meeting the question whether it shall be dropped will be decided. The chairman expressed it as his opinion that the work was never in better hands than Mr. Heimerzheim's and the fact that the finances for this work was formerly derived from subscriptions probably accounted for the present lack of enthusiasm. When the members applied their money directly to the work they wanted to see it well spent.

Text of A.M.A. Journal's Recent Attack on N.A.R.D. and A.D.S.

"The American Druggists' Syndicate an Arrangement Whereby Retail Druggists Become Wholesale Nostrum Manufacturers," is the Medical Editor's Heading.

(From the Journal of the American Medical Association, Chicago, Ill., January 8, 1910.)

For years the manufacturers of "patent medicines" have been reaping a golden harvest at the expense of the public's purse and health. Naturally those druggists who think more of profits than pharmacy and dollars than decency have, to a large extent, participated in the dividends of the nostrum exploiters in the capacity of distributors. More recently, however, the growth of "department store" druggists and other "cut rate" concerns have made serious inroads on the profits to be realized by the sale of "patents." This loss of profits, in turn, has led many of the none-too-particular druggists to take stock in one or the other of the co-operative enterprises that have entered the field to "out-Herod Herod" in the matter of exploiting ready-made remedies to cure all diseases that human flesh is heir to.

Of these organizations, one of the most impudent in its claims and obnoxious in its methods is the American Druggists' Syndicate, more euphoniously known as the A.D.S. This concern, which has been referred to before in the *Journal*,* was founded by one C. H. Goddard, formerly a newspaper man in California and interested in the mining business. According to the advertisements, the A.D.S. is an association of retail druggists "who are daily compounding thousands of prescriptions written by the most eminent physicians of the country."

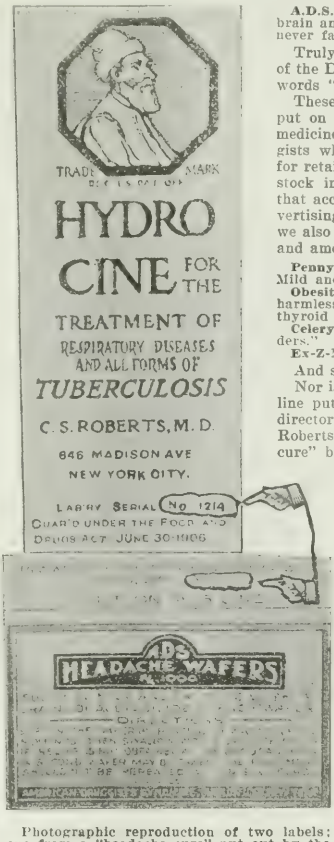
"They not only compound these prescriptions, but they are in daily contact with the patients, and thus have an opportunity of watching their results and those which prove the very best by the practical tests are forwarded by each druggist member to the A.D.S., and from the thousands presented, a competent board of physicians and chemists select the premium prescription and offer it to the public in a ready-made package."

Despite all that has been said about the general harmfulness of ready-to-take panaceas, and despite all of the positive knowledge that we now have regarding the immediate, as well as the remote damage done by taking "patent medicines," we have here the appalling evidence that a very large number of retail druggists, men that should and no doubt do know at least something of the harm that is being done by nostrums, are openly co-operating in the manufacture and exploitation of nostrums! Baldly stated in their own words: "The American Druggists' Syndicate Places the Profit Side of the Patent Medicine Business Where it Belongs"—that is with the retail druggist.

These preparations are objectionable because they tend to mislead and harm the purchaser, degrade the morals of the men who make and sell them, and discredit all who are in any way connected with the drug business or with pharmacy.

As an illustration of the generally objectionable nature of these preparations we would call attention to:

A.D.S. Pelvitone: "A blessing to weak women. A purely vegetable compound." "Is the prescription used by the most eminent and successful physicians." ". . . was selected . . . by an association of three thousand successful druggists." "Try one bottle and you will recommend it to your afflicted lady friends."



Photographic reproduction of two labels: one from a "headache cure" put out by the A.D.S., the other from a "consumption cure" (Hydrocine, now called Oleozone), exploited by C. S. Roberts, one of the original directors of the A.D.S. Notice that the serial number on the two labels is the same, indicating a common source.

Is this ethically, morally, or scientifically on a higher plane than the Lydia Pinkham or the Pierce nostrums?

A.D.S. Headache Wafers: "This prescription was selected from a thousand as the very best, most effective and safest remedy on earth for headache." "Will positively relieve you and not hurt the heart." [Each wafer contains four grains of acetanilid!—Ed.]

Wherein is this better than the thousand-and-one other headache cures that flood the nostrum market?

A.D.S. Brain and Nerve Tonic: "It feeds both brain and nerves." "A scientific nerve food." "It never fails."

Truly a scientific (?) preparation. The courts of the District of Columbia have decided that the words "brain food" are "false and misleading."

These are but examples of the preparations put on the market by this co-operative "patent medicine" concern—a concern comprised of druggists who not only get the regular commission for retailing these nostrums, but who, by owning stock in the A.D.S., participate in the profits that accrue from their manufacture. In the advertising pamphlets distributed by the A.D.S., we also find listed "A remedy for every ailment," and among dozens of others, the following:

Pennyroyal Pills: "For female irregularities. Mild and safe."

Obesity Remedy: "Removes fat slowly and harmlessly." [Harmless? Asserted to contain thyroid extract!—Ed.]

Celery Compound: "Great for nervous disorders."

Ex-Z-Mo: "It will cure eczema."

And so on *ad nauseam*.

Nor is the "patent medicine" business the only line put out by the A.D.S. One of the former directors of this organization was Dr. C. S. Roberts, whose activities in the "consumption cure" business the *Journal* has had occasion to expose. It will be remembered that Dr. Roberts exploits hydrocine (now called oleozone), the marvelous "hyperoxidized hydrocarbon" which he recommended as "a positive cure for tuberculosis." Analysis of Dr. Roberts' product disclosed that it consisted of 95 per cent sugar and small quantities of volatile oils and a trace of pancreatin. This mal-odorous sugar mixture is now manufactured in the A.D.S. nostrum factory as the reproduction of the hydrocine label shows.

One of the advertising schemes of the A.D.S. is the sending out of a Pullman car containing an exhibit of A.D.S. products. This advance agent of the nostrum manufacturers was labeled "A Druggist Organization for the Protection of the Public Health!" After this can we blame Dr. Hartman, of Peruna fame, and Lydia Pinkham, for posing as public benefactors?

Summed up, what does it all mean?

It means that the druggists constituting the A.D.S. are concerned not with scientific pharmacy, but with the marketing of nostrums.

It means that the filling of physicians' prescriptions is being utilized by many retail druggists as a cloak of respectability to hide their real object in business, and finally:

It means that the medical profession in its fight against "patent medicines" of a harmful nature is deprived of a part of the assistance that should be forthcoming from pharmacists.

THE N.A.R.D. AND THE A.D.S.

For some months it has been persistently rumored that the

National Association of Retail Druggists, more familiarly known as the N.A.R.D., has become in effect a creature of the A.D.S. While there have been denials of this, particularly in the pages of *N.A.R.D. Notes*, the official organ of the National Association of Retail Druggists, the secretary of this association recently admitted that with two exceptions all of the officers of the N.A.R.D. are now A.D.S. men.

Even with this admission, however, it might be considered that these A.D.S. members were interested in the N.A.R.D. in their individual capacity were it not for the positive statement recently made by Secretary Goddard, of the A.D.S., who, in the *Voice of the Retail Druggist* (the A.D.S. house organ) for October, 1909, says:

"Notes, the official organ of the N.A.R.D., seems to be ashamed of the action of the delegates of its organization at the last annual meeting in electing an A.D.S. man as president, and they try to make it appear that the newly elected president was chosen by the 'Old Guard,' of which he was a great favorite.

"This is a most surprising position for Notes to take for many reasons:

"First: Because it is not in accordance with the facts.

"Second: Because it should be proud that its organization is at last officered by a man who is (through his prominent connection with the A.D.S.) a recognized representative of the retailers. • • •

"If Notes is still in doubt as to the attitude of its subscribers toward the A.D.S., we would suggest that the editor of that publication submit the matter to its members, for we feel sure that if it were left to a vote of its subscribers, a large majority would not be unfriendly, for the reason that organization druggists generally are almost a unit behind the A.D.S.

"I cannot go into further details, but if I were in the retail business, I would get busy pushing A.D.S. preparations. You cannot lose, and it offers unlimited possibilities."

And this, it should be remembered, comes, not from a pharmacist, but from an erstwhile country newspaper publisher and promoter, who does not hesitate to tell the druggists of the country how to conduct their business—and not a few of them seem to be willing to accept his advice.

Incidentally, it may be added that the president of the N.A.R.D. was—last month—unanimously re-elected president of the A.D.S.

From what has been said, then, it appears that the "Great American Fraud" has secured the unequivocal endorsement of a majority of the members of an association that might have been a powerful influence for good, in safeguarding the public welfare.

Altogether, it is deeply to be regretted that at least a very large number of pharmacists are as yet quite unwilling to dissociate themselves from the "trickery, treachery, bumbug, fraud and lies" with which the nostrum business is so inextricably involved, and it is devoutly to be hoped that the very near future will bring with it a means for differentiating between the nostrum advocate and the pharmacist who is content to do a legitimate business.

In closing, let it be said that against the co-operative plan in itself there can be no objection. No one, except the druggists themselves, realizes more keenly than do physicians, the disgraceful way in which the "patent medicine" and proprietary interests have exploited for their own gain the retail druggist. And it must regretfully be admitted that the medical profession itself has been in no small degree responsible for this state of affairs—at least with regard to proprietaries. That druggists should revolt against the tyranny of these conditions is not only natural but encouraging; organization has no better field. If by co-operation the pharmacists of the country can produce legitimate products, well and good; the public will be the gainer. But that they should combine for the purpose of engaging in such a nefarious trade as that of the "patent medicine" business, not only fails to redound to the credit of pharmacy but at once damns the co-operative company thus engaged.

"PHARMACIST AND THE NOSTRUM BUSINESS."

(From the Journal of the American Medical Association.)

"For more than half a century the American Pharmaceutical Association has done splendid work in the interest of scientific pharmacy, its annual reports embodying a vast amount of invaluable data. Unfortunately, until within the last few years this association has dealt almost exclusively with the scientific side of pharmacy, having to a large extent ignored the economic problems of the profession; it also neglected to recognize aright the needs of the individual pharmacist and did little to encourage local organization. More recently, however, and when too late, it has extended the scope of its activities and branches have been established here and there which are dealing with local problems. By its former short-sighted policy, the American Pharmaceutical Association lost its opportunity—its hold on the retail pharmacists. By ignoring the very evident fact that pharmacy was a business as well as a profession and by refusing to recognize the equally patent fact that the very existence of pharmacy as a science was dependent on its success in coping with the economic problems involved, the association failed to appeal to the rank and file of druggists.

"To fill the gap thus left, another body was organized—the National Association of Retail Druggists—whose raison d'etre was frankly that of helping the pharmacist in his commercial dealings; it was, in brief, to deal with the druggist as a business man rather than as a professional man. This latter organization grew, and has branches all over the country. A little while ago it originated the "get-together" meetings—a splendid idea—to bring physicians and pharmacists into more intimate touch with one another. Incidental to this and connected with it was the movement to get physicians to prescribe official rather than proprietary medicines. In this the pharmacists recognized their own shortcoming in the past and expressed their desire to co-operate with physicians in an attempt to make druggists compounders of drugs instead of retailers of ready-made mixtures and to make physicians writers of real prescriptions rather than the dupes of proprietary companies.

"Unfortunately the National Association of Retail Druggists has within the past few months entered into a mesalliance with the 'patent medicine' evil in its most insidious form. It has become, apparently, the creature of a co-operative 'patent medicine' concern, comprised of a number of its own members, a concern to which we devote some space in the Pharmacology Department of this issue. If the retail druggists are sincere in the propaganda which they instituted with the object of weaning physicians from the unreliable and mystery-provoking proprietaries, back to prescribing official and non-secret preparations, then let them at least be consistent. If they insist on the right to prescribe, then, in the name of consistency, let them prescribe official and non-secret preparations themselves instead of substituting co-operatively-made, for privately-made, 'patent medicines.'

"The coalition is an unfortunate one, especially at a time when the medical profession and the public are keenly alive to the viciousness that is inseparable from the nostrum business It was to be hoped at this juncture, when the so-called ethical nostrums are being discarded by physicians and the use of 'patent medicines' by the laity is decreasing, that the druggists of the country would rise to the opportunity that presented itself to bring the profession of pharmacy back to its one-time position of honor. Nor for years has the time been so propitious for welding together the interdependent professions of pharmacy and medicine. We are still optimistic enough to believe that the eagerness of the retail druggists to go over, body and soul, to the nostrum business is more apparent than real, and that the present control of the National Association of Retail Druggists by an organization whose objects are so plainly inimical to the science of pharmacy is but a passing phase. The self-respecting druggist can assert himself in this matter none too soon; that this profession has so far forgotten its ideals as to lend its support to the vicious 'patent medicine' business is a standing advertisement of shame to the retail pharmacy business of this country."

Retail Druggists Will Fight Coudrey Bill.

PHILADELPHIA, Jan. 20.—At the January meeting of the Philadelphia Association of Retail Druggists, Chairman Cliffe, of the committee on legislation, called attention to the Coudrey Bill now in the National Legislature which proposes to amend the Pure Food and Drugs Act and at the same time provides for the editing of the Pharmacopœia by the Federal Government. On motion, the executive committee was instructed to prepare resolutions protesting the bill.

Pharmacy Will Be on the Fourth Floor.

One of the interesting features in the new skyscraper of the Jefferson Trust Company in Peoria, Ill., will be a fully equipped drug store on the fourth floor which will be installed by Paul R. Fritsche, of 725 Second street.

Shall We Have a Profession of Pharmacy? An Ideal Outlined.

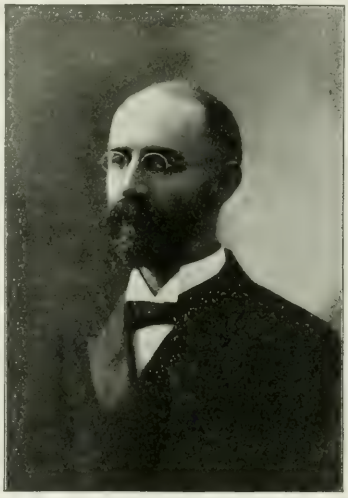
History Traced Back Through Medicine and Therapeutics to the Ancient Priesthood of Egypt—Separation of Surgery and Medicine an Act of the Church in England—Origin of the Dispensing Doctors—Birth of Apothecaries' Society in Time of King James I—Present Status and Progress.

Delivered by F. E. Stewart, Ph.G., M.D., at the Medico-Chirurgical College, Philadelphia, January 6, 1910.

THE colleges of pharmacy are safe in teaching that pharmacy is a profession so long as they do not attempt to define the term. Ask the members of the faculties of these colleges individually what they mean by the term "Profession of Pharmacy" and the answers will surprise you by their differences.

Progress in any science and in the practice of the arts depending upon it is in direct proportion to the amount of co-operation between those engaged in practicing the arts and reporting the results of their observation and experience to the general fund of knowledge for scientific classification. Co-operation, in turn, is dependent upon a clear comprehension of the character and scope of the field of work in which the practitioners are engaged. It is very important, therefore, to define the true meaning of the term "Profession of Pharmacy." In this lecture I propose to give you a clear cut description of what I believe to be the true ideal of professional pharmacy.

Contrary to the opinion of many persons, pharmacy cannot exist as a separate vocation, for it is directly dependent upon therapeutics. Pharmacy is the art of preparing medicines, and there is no use of preparing them unless they are to be used in treating the sick. The application of medicine for that purpose is therapeutics, and persons who apply them are practicing therapeutics. It may be a very poor sort of therapeutics as practiced by ignorant laymen, by uninformed druggists, or by a class of doctors who neglected their materia medica at college, and never posted themselves on the subject after graduation; then pharmacy languishes, but it is the practice of therapeutics all the same. If practiced by the ignorant public the demand for scientific pharmacy languishes because the public is looking for specifics or cures, and, with possibly rare exceptions, drugs are not specifics. If practiced by pharmacists the vocation becomes a menace to the public health, for pharmacists are not educated or licensed to practice medicine. If practiced by doctors who do not know how to write prescriptions intelligently or how to apply medicines properly as therapeutic agents, scientific pharmacy is unappreciated and the pharmacists who offer high class service are only throwing pearls before swine.



F. E. STEWART, Ph.G., M.D., of Philadelphia.

True pharmacy, as distinguished from the business of the nostrum manufacturers, had its origin in the medical profession, which, in turn, had its origin in the priesthood. True pharmacy, therefore, is a sacred calling in which the making of money is secondary to the service of humanity. Proper service demands self-sacrifice on the part of the practitioner, for there are many times and places in which opportunities for sacrifice of the public health for commercial gain are presented and may be taken advantage of to great pecuniary profit. Unfortunately the public is considered legitimate game by many persons engaged in the materia medica supply business, and, therefore, the public should protect its own interests by limiting the practice of pharmacy to persons trained to realize the sacred character of the calling, and the nature of the responsibilities imposed upon them as members of a beneficent profession.

The Origin and Development of the Medical Profession.

There is reason to believe that Egypt was the country in which the art of medicine was first cultivated with any degree of success, the office of the priest and physician being probably combined in the same person. In the writings of Moses, there are various allusions to the practice of medicine among the ancient Hebrews. The priests were the physicians, and were also the law givers; so that it is probable that the three learned professions, theology, law, and medicine, had a common origin in the priesthood. This is an important point to remember. The true physician and the priest are engaged in callings peculiarly sacred and altruistic in character, in which the making of money is entirely secondary to the service of humanity. And the same is true of the lawyer. Unfortunately these professions have become "commercialized" to an alarming extent, but the fact in no way militates against the correctness of the statement in regard to their beneficent character when carried on in a truly professional manner.

In India similar conditions to Egypt pertained to the practice of medicine and theology by the same person, but there is some difference of opinion regarding the connection between religion and medicine in ancient Greece. Aesculapius appears in Homer as an excellent physician, of human origin; in the later legends, he becomes the god of the healing art. The followers of Aesculapius were called Asclepiades. They inherited and kept the secrets of the healing art; or, assuming that Aesculapius was merely a divine symbol, the Asclepiades must be regarded as a medical, priestly class, who preserved as mysteries the doctrines of medicine.

Hippocrates is said to have descended from the Asclepiades of Cos, who traced their descent on their mother's side, from Hercules.

Other writers infer from the Homeric poems that medicine had already a history distinct from religion, and that the worship of Asclepius (or Aesculapius) as the god of healing, had no special connection with the development of the science or profession of medicine. Sick persons repaired, or were conveyed, to the temples of Asclepius in order to be healed, just as in modern times relief is sought by a devotional pilgrimage or from the waters of some sacred spring, and then, as now, the healing influence was sometimes sought by deputy. Moral or dietetic remedies were more often prescribed than drugs.

Traced Back to Hippocrates the Great, Whom, Authorities Agree, is the Father of Medicine.

All authorities agree, however, that the medical art as we now practice it, the character of the physician as we now understand it, both date for us from Hippocrates "the Great," the "Father of Medicine."

The Encyclopedia Britannica states, "The first grand characteristic of Hippocratic medicine is the high conception of the duties and status of the physician, shown in the celebrated 'Oath of Hippocrates' and elsewhere—equally free from the mysticism of a priesthood and the vulgar pretensions of a mercenary craft. The accompanying translation of this celebrated oath was made by Edgar A. Emens, of Syracuse Uni-

verse. Hippocrates is said to have been born on the Island of Cos about 460 B.C.

Medicine and Pharmacy in England.

In the early history of England, medicine, including pharmacy, was practised by the priests. We find that in the year 1215 the priests were forbidden by the church to practice any surgery which required blood shedding, on the principle that the church abhors blood; and, about one hundred years later, all surgery was forbidden them. Thus began the division between medicine and surgery which still continues to this day.

But the physician still continued to prepare and dispense his own medicines, so that medicine and pharmacy were practiced by the same individual. In the meantime chemistry was born of alchemy, and its application to the study of materia medica rendered pharmacy complex, and it was finally relegated to the apothecaries.

The apothecaries in those days were members of the Guild of Grocers, and the vocation did not partake of a professional character. The apothecaries, at least the better class of them, now commenced to perfect themselves in the knowledge of chemistry, and because of the increase of learning thus resulting, and the greater importance of the vocation, the practitioners of this art acquired a higher social standing.

When the monks ceased to practice surgery, the barbers, who had acted as their assistants, gradually stepped into their shoes, and a class of barber surgeons, mostly ignorant and venal in the extreme, arose, and practiced alongside of the surgeons proper. In the 14th century this state of affairs existed; but in the 16th century, medicine being still largely in the hands of the ecclesiastics, Linacre, a celebrated divine and physician to Henry VIII, founded, in England, the present College of Physicians, which, together with Oxford and Cambridge Universities, where medical schools had been established, received authority over all three branches of medicine.

"In April, 1606, James I incorporated the apothecaries as one of the city companies, uniting them with the grocers. On this charter being renewed in 1607, they were formed into a separate corporation, under the title of the 'Apothecaries of the City of London.' These apothecaries appear to have prescribed medicines in addition to dispensing them, and to have claimed an ancient right of acting in this double capacity."

A very insignificant point may be noted here, and that is, whereas physicians were qualified for their degree by study at universities, surgeons and apothecaries obtained their qualifications by apprenticeship, so that the surgeon and apothecary were placed in the same social rank as tradesmen or members of other crafts, while physicians had the higher social standing of the learned professions. The surgeons were not allowed to prescribe medicines to be taken internally, and did not regain the right to do so until early in the 19th century; and, as for the apothecary, he was the humble servant of the physician, preparing the medicines which the physicians ordered. Theoretically, this was the case, but, as already stated, the apothecaries claimed the right to prescribe or recommend medicines, in addition to dispensing them.

During the reign of James I the Society of Apothecaries was founded. Membership to this society required seven years apprenticeship, and under its beneficent influence the apothecaries grew more and more important. Then, in 1666, the great plague broke out in England, during which the apothecaries distinguished themselves for their courage and humanity. There were many physicians who stood nobly at their posts, and many more who fled in terror. In consequence of the courage displayed by the apothecaries, and the cowardice of those physicians who proved recalcitrant, the sick fell back upon the apothecaries, and summoned them from their shops to prescribe for them.

From this time on there seems to have been a tendency upon the part of the apothecary to more and more usurp the physician's prerogative, until there arose a warm contest between the physician and the apothecary—the former accusing the latter of usurping their province, and the latter continuing and justifying the usurpation until the dispute was finally set at rest by a judgment of the House of Lords in 1703, when it was decided that the duty of the Apothecary consisted not only in compounding and dispensing, but also in directing and ordering the remedies employed in the treatment of disease. He was given no right to charge any fee for his service, relying entirely on his medicines for profit.

The Act of 1815 clearly contemplated "the creation of a class of practitioners who, while having the right to practice medicine, should assist and co-operate with the physicians and surgeons." The Act of 1874 "gave power to the Apothecaries Society to unite or co-operate with the medical examining boards in granting licenses to practice."

In 1745 the surgeons emancipated themselves from the barber-surgeons, with whom they had amalgamated in 1540, and founded the College of Surgeons. From that time surgery made rapid progress until it became co-equal with "medicine" as a medical art. According to the Encyclopedia Britannica, from which I have drawn some of my information in regard to the status of pharmacy in England, the term "Apothecary" indicates a general practitioner who supplies drugs to his patients.

Oath of Hippocrates.

I swear by Apollo, the physician, by Aesculapius, by Hygeia, by Panacea, and by all the gods and goddesses, calling them to witness, that according to my ability and judgment I will in every particular keep this, my oath and covenant: To regard him who teaches this art equally with my parents, to share my substance, and if he be in need, to relieve him; to regard his offspring equally with my brethren; and to teach him my art if they shall wish to learn it, without fee or stipulation; to impart a knowledge by precept, by lecture, and by every other mode of instruction to my sons, to the sons of my teacher, and to pupils who are bound by stipulation and oath, according to the law of medicine, but to no other.

I WILL USE that regimen which, according to my ability and judgment, shall be for the welfare of the sick, and I will refrain from that which shall be baneful and injurious. If any shall ask of me a drug to produce death, I will not give it, nor will I suggest any such counsel. In like manner I will not give to a woman a destructive pessary.

WITH PURITY and holiness will I watch closely my life and my art. I will not cut a person who is suffering from a stone, but will give way to those who are practitioners in this work. Into whatever houses I shall enter, I will go to aid the sick, abstaining from every voluntary act of injustice and corruption, and from lasciviousness with women and men—free or slaves.

WHATEVER in the life of men I shall see or hear, in my practice, or without my practice, which should not be made public, this will I hold in silence, believing that such things should not be spoken.

WHILE I keep this, my oath, inviolate and unbroken, may it be granted me to enjoy life and my art, forever honored by all men; but should I by transgression violate it, be mine the reverse.

Status of the Apothecary in America.

The place of the pharmacist in America is still in the formative state, and the process of formation is now in rapid evolution. To understand the significance of the epoch-making events which have transpired in this country during the past decade, and their probable effect upon pharmacy of the future, it now becomes necessary to consider more in detail the true ideal of a profession of pharmacy.

The True Ideal of Professional Pharmacy.

As I stated in my paper entitled "Standardization the Foundation of Professional Pharmacy," read before the Pennsylvania Pharmaceutical Association at its 1900 meeting held at

Bedford Springs, "The term 'profession of pharmacy' implies a fraternity of pharmacists holding the results of the experience of the profession as common property. According to the professional ideal, each pharmacist should manufacture and deal in the same pharmaceutical preparations, under the same names, made according to common standards, and by the same methods; and each member of the profession is supposed to devote a portion of his time to materia medica research for the benefit of his profession. The result of these researches, when classified in the forms of science, constitute the science of pharmacy, or, more properly, the science of pharmacology."

Pharmacology is defined by the National Syllabus Committee as: "The sum of scientific knowledge concerning drugs and medicines; their nature, preparation, administration and effect; including pharmacognosy, pharmacy, pharmacodynamics and therapydynamics."

According to the same authority, pharmacy is a branch of pharmacology, including the science and art of preparing and dispensing medicine.

These definitions are not new ones. H. C. Wood, in his text book on Materia Medica, states that Materia Medica is the name of the collection of substances used as medicines, pharmacy is the art of preparing them, and therapeutics is the art of applying them in the treatment of the sick; also, these three branches are included under the general term, Pharmacology.

Herman, in his "Experimental Pharmacology," used as a manual in the medical schools on both sides of the Atlantic, defines pharmacology as the knowledge of drugs from every possible point of view.

The Standard Dictionary defines pharmacology as: The Science of Medicines, their nature, preparation, administration, and effects; including pharmacy, pharmacodynamics and pharmacognosis. Other dictionaries consulted give similar definitions.

A Comprehensive Definition of Pharmacology.

Pharmacology, according to the National Syllabus Committee's definitions, embraces knowledge of the following subjects:

Drugs. All substances used as medicines or in the preparation of medicines. Drugs that have not been changed by manufacture except by desiccation or comminution are crude drugs.

Materia Medica. The branch of pharmacology that treats of the physical, physiological and therapeutical properties of medicine.

Chemistry. The science of the composition of material things and the art of determining such composition. As a branch of pharmacology it treats of the chemical materials of medicine.

Pharmacy. The science and art of preparing, preserving, compounding and dispensing medicine.

Physiology, treats of the organic functions in a state of health.

Botany, treats of the structure, growth and classification of plants.

Microscopy. The art of examining objects with a microscope.

Pharmacognosy, treats of the identification and selection of drugs.

Toxicology-Posology. Toxicology treats of poisons, their recognition, effects and antidotes. Posology treats of the doses of medicines.

Elementary Physics. Physics is the science of the properties and forces of matter.

Manufacturing Chemistry. The production of chemical substances.

Pharmaceutical Arithmetic. The arithmetic pertaining to the science and art of pharmacy.

Pharmaceutical Latin. The Latin pertaining to the sciences and art of pharmacy.

Theory of Pharmacy. The exposition of the principles upon which pharmacy operations are based.

Practice of Pharmacy. Systematic exercises in pharmaceutical operations.

Commercial Pharmacy. Trade or commerce in pharmaceutical products, including business practice.

Manufacturing Pharmacy. The preparation of pharmaceutical substances.

Historical Pharmacognosy, treats of the recognition, identification, and selection of drugs by well-known methods and appliances, including the microscope.

Pharmacodynamics, treats of the action of medicines on healthy organs.

Therapydynamics, treats of the action of medicines on diseased organs.

Assaying, determining the amounts of valuable constituents of pharmaceutical substances.

Dispensing Pharmacy. The extempore preparation or compounding of medicine.

Pharmaceutical Jurisprudence. The relation of law and pharmacy to each other.

According to the Standard Dictionary, "Science is knowledge reduced to law and embodied in system." Therefore, the knowledge of the above defined subjects, when systematically arranged, constitutes the science of pharmacology.

The same authority says: "Knowledge of a single fact, not known as related to any other, or of many facts not known as having any mutual relations or as comprehended under any general law, does not reach the meaning of science." Therefore, pharmacy, as defined above, is not sufficiently comprehensive to justify dignifying it as a science.

It logically follows that the terms "College of Pharmacology," and "Profession of Pharmacology," are to be preferred to the less comprehensive terms now in use.

Pharmacology is also used in a restricted sense of the term to describe the action of drugs on healthy tissues. But no less authority than Professor Hermann, of the University of Zurich, whose manual in pharmacology is used as a handbook in laboratories of pharmacology on both sides of the Atlantic, calls attention to the restricted meaning of the term, and to its wider signification, the latter meaning referring to pharmacology as the name to be employed to describe the science of materia medica.

How the Professional Ideal Is to Be Realized.

Progress in pharmacologic science and practice is dependent upon four essential factors, namely, organization, co-operation, standardization and legislation.

Organization. It is evident from what has been stated that the true professional idea includes the organization into one association or fraternity of all persons devoted to the science of pharmacology or engaged in the practice of the pharmacologic arts, namely, pharmacognosy, pharmacy, pharmacodynamics and therapydynamics. Such an organization would include pharmacists engaged in the retail, wholesale and manufacturing drug business, also the pharmaceutical chemists connected with the laboratories of the manufacturing houses, and the teachers in medical and pharmaceutical schools working in the field of pharmacology. And, as pharmacotherapy is dependent upon pharmacology, physicians interested in that branch should also be included.

Have we any organization already existing which covers this field? The American Pharmaceutical Association is the nearest approach to an American Pharmacologic Association of anything now existing, and could be made to cover the field by broadening its work to include pharmacodynamics and therapydynamics, and, in time, also to include pharmaco-therapy.

Unfortunately neither physicians, pharmacists, nor pharmaceutical chemists are sufficiently versed in all the branches of pharmacology to listen intelligently to papers on all pharmacologic subjects, but it is evident that this will not long be true if the plan of education mapped out by the National Syllabus Committee is carried out.

From its inception the scope of the work of this committee has been the outlining of a minimum course of study and the preparation of a syllabus for the guidance of pharmacy schools in their preparation of students for admission to the licensing examinations of the boards of pharmacy of the United States. The work originated in New York State, as a result of the passage of the so-called prerequisite law, and has already become National in character.

The pharmacy syllabus, or concise statement of a scheme of lessons, is prepared to indicate the general scope and character of the instruction to be given by the teacher, and the work to be done by the student.

The work of this committee has become part of the work of the Section on Education and Legislation of the American Pharmaceutical Association and the report of the committee appearing on pages 750-58 of the Proceedings for 1908 is worth the most serious consideration by every teacher and student of pharmacy.

I have already given you the scope of the field proposed by the committee in the list of definitions just read. Consideration will clearly show you that the creation of a body of men educated along the lines therein mapped out, and the entrée of this body into pharmacologic practice, would revolutionize the drug business. My own impression is that it would revolutionize it along the lines indicated by the development of the vocation of the English apothecary, for the medical profession has drifted so far away from scientific pharmaco-therapy that there is a fine opening for the physician-apothecary in America.

Co-operation. Progress in pharmacologic science and practice requires co-operation between practitioners of the pharmacologic arts and the medical profession. Of what use is a profession of pharmacology engaged in the study of the materia medica and in the selection and identification of drugs and their preparation, preservation, compounding and dispensing, unless the medical profession uses the medicines thus prepared for treating the sick? The idea of having such a body of men educated and trained to deal in medicines for self-medication

is unpractical and absurd. The public is not sufficiently educated in medicine to be its own doctor, and the pharmacologist without education and training in the diagnosis and treatment of disease is a menace to the public health, and should be suppressed. Either the pharmacologist to be evolved by the operation of the educational system proposed by the National Syllabus Committee will have to add sufficient knowledge of these branches of medicine to warrant licensing him to prescribe or recommend medicines, or the medical profession will have to be educated up to the point of appreciating a pharmacologic profession. Both suggestions appeal to me as worthy of consideration.

Standardization. The professional ideal includes a pharmacopœia, dispensatories, text-books, and colleges of pharmacy or pharmacology. Before the Pure Food and Drugs Act of June 30, 1906, went into effect, conformity with the standards of the United States Pharmacopœia was purely voluntary. This gave an excuse for every manufacturer, little and big, to set up a standard of his own. The craze for new drugs and medicines, resulting from the desire of each manufacturer to introduce a new product for the purpose of monopolizing its sale and creating a demand for it by misleading advertisements, has become so great that the market is overloaded with all kinds of undigested and undigestible material, and scientific pharmaco-therapy is suffering with a bad attack of dyspepsia.

This is one of the causes which has given rise to a condition of mind upon the part of physicians known as therapeutic nihilism, for the cure of which the rejection of most of this undigested material, and the standardization of the remainder, is absolutely essential. The enforcement of the Federal Act referred to, aided by State legislation of the same sort, will do much toward reducing the mass into a condition permitting its investigation and scientific classification. The final end of any product worthy of consideration as a therapeutic agent should be its incorporation into the United States Pharmacopœia or National Formulary.

Legislation. One of the most important suggestions in regard to pharmacal and medical legislation ever made in this country is to be found in the decision of the Supreme Court of the United States, in the case of Worden vs. California Fig Syrup Co., No. 35, Oct. term, 1902, as follows:

> "Many, if not all, the States of this Union have enactments forbidding and making penal the practice of medicine by persons who have not gone through a course of appropriate study and obtained a license from a board of examiners; and there is similar legislation in respect to pharmacists, and it would seem to be inconsistent and to defeat such salutary laws, if medical preparations, often and usually containing powerful and poisonous drugs, are permitted to be widely advertised and sold to all who are willing to purchase. Laws might properly be passed limiting and controlling such traffic by restraining retail dealers from selling such medicinal preparations, except when prescribed by regular medical practitioners."

It is needless to add that such legislation as this would force retail dealers to go through a course of appropriate study and obtain a license from a board of examiners or discontinue their habit of recommending medicines. As the recommending and advertising of goods is considered a foundation principle of commerce, the deprivation of the privilege of advertising or recommending goods for sale to the public, would take away from the drug business a privilege belonging to all forms of commercial business. This fact clearly demonstrates the soundness of my contention that pharmacists should not prescribe or recommend medicine without first obtaining the necessary knowledge and license; and then the practice should be conducted, not as a commercial business, but as a branch of medical practice under the control of the medical laws.

We are therefore forced to this conclusion, namely, that when the medical profession relegated pharmacy to the apothecary, a mistake was made similar to that which occurred when surgery was relegated to the barbers. Surgery never realized its true fruition until it was redeemed from the barbers and restored to its true position as a branch of medical practice. And the lesson teaches us that pharmacy can never become a profession until it is taken within the medical fold where it properly belongs. In the process of evolution which is surely bringing it back to the fold, the tendency seems to be to bring with it a band of apothecaries trained as pharmacologists, whose function will be to select, prepare, standardize, compound and dispense medicines to meet the demands of the medical profession. And, judging from the experience of England, the profession of pharmacology resulting from this evolution will also perform the function of prescribing for minor complaints for which the public now goes to the drug store for treatment.

Function of the Pharmacologic Profession.

The function of the pharmacologic profession shall be,

1. To promote progress in the science of pharmacology and the practice of the useful arts of pharmacognosy, pharmacy, pharmacodynamics, and therapydynamics;
   a, by investigating the substances from all parts of the world which are used, or may be used, as medicines, and introducing them to science and commerce;
   b, by devising methods for their identification, selection, preparation, preservation, compounding, and dispensing;
   c, by adopting and maintaining standards for their protection against adulteration, sophistication, and fraudulent substitution;
   d, by legislation for the protection of standards (pure food and drug laws); for the protection of the profession from encroachments from without upon its field (pharmacy laws); for the protection of the profession from malpractice on the part of its members (code of ethics); to protect materia medica science and commerce (copyright, patent, and trade mark laws).
2. To co-operate with the medical profession in the prevention of disease and the cure of the sick;
   a, by refraining from encroachment upon the field of medical practice;
   b, by refraining from advertising medicines for self-medication;
   c, by taking an active part in educating the public against the abuse of drugs;
   d, by acting as a medium for the dissemination of information in relation to the prevention of communicable diseases, such as tuberculosis, small-pox, etc.
3. To practice the pharmacologic arts by selecting, preparing, preserving, compounding, and dispensing medicines in accordance with professional and scientific requirements.

Personnel of the Pharmacologic Profession.

The pharmacologic profession shall consist of licensed physicians specially interested in materia medica, either as practitioners, teachers or laboratory workers; graduates of pharmacy engaged in the retail or wholesale drug business or in the manufacturing chemical or pharmaceutical industries; pharmaceutical chemists with a degree from a reputable school or university; botanists specially interested in pharmacognosy, and members of botanical societies in good standing; physiologists engaged in pharmacodynamic investigation and materia medica standardization; bacteriologists connected with laboratories for the production of biological materia medica products, or their investigation and standardization; and government experts in any way associated with departments engaged in the identification, or standardization, of drugs, or the study of medicinal plants and their agriculture.

Co-operate Investigation of the Materia Medica and Introduction of New Products.

Progress in pharmacologic science can be attained only through the medium of co-operate materia medica investigation by the workers in the pharmacologic field above enumerated. The results of this work when reduced to law and embodied in system constitutes that branch of medical science hereinbefore described as Pharmacology. As the results of co-operate investigation belong to those doing the work, and as the professional ideal requires each individual worker to donate his work to the profession, the results belong to the profession, and not to the individual workers.

Public welfare demands that members of the pharmacologic profession shall occupy the position of scientists in relation to the materia medica. They are not in this position when their living is endangered if they speak the truth. With the exception of government experts and teachers, the pharmacologic profession should be supported by materia medica commerce. It is therefore essential that materia medica commerce shall be conducted as a professional, not commercial, vocation, so that members of the profession supported by commerce shall occupy the position of scientists.

The difference between professional and commercial materia medica business is most strikingly shown in the different meanings given to the word "introduce," in scientific and commercial circles. The word introduce, in scientific circles, means the donation of a materia medica product to science for the free use of all, especially for the free use of the profession. The word introduce, in commercial circles, means the monopoly of the product by the manufacturer, and the creating of a demand for the product by advertising. The word introduce, in scientific circles, has an altruistic meaning. The scientist is

seeking to know, that he may give away knowledge for the benefit of humanity. The word introduce, in commercial circles, has a selfish or egoistic meaning. The commercial manufacturer is seeking to know, that he may appropriate the knowledge for his own selfish purposes. The different principles here involved are also expressed by the words professionalism and commercialism. The medical profession is organized on a professional basis. The materia medica supply business should be organized on a professional basis, also.

Otherwise there can be no fraternal relations between the medical profession and the materia medica supply business, and professional men holding positions in the employ of manufacturing houses, as well as retail druggists claiming to be professional men, and physicians who patronize either by their prescriptions, stultify themselves, forgetting the obligations they assume upon entering the profession.

Pure Food and Drug Laws.

The Pure Food and Drug Laws not only protect materia medica standards directly but do so indirectly, by forcing manufacturers to tell the truth on their labels. Medicine manufacturers, both retail and wholesale, have long been in the habit of recommending their products as specifics or cures. Any one familiar with drug therapeutics knows that drugs are not specifics, with possibly two or three exceptions, such as the antitoxins, quinine in malaria, and iodine and mercury in syphilis. Therefore the claims made by retail druggists and manufacturers to cure diseases for which there are no specifics, are false. The government dealt a solar plexus blow to such pretense by ruling against the use of the word "cure" on labels.

The so-called "proprietary" business owes its success to the fact that the medical profession is unable to offer specifics or cures for diseases. Taking advantage of that fact, the "proprietary" drug trade stepped into the breach with its system of advertising cures for incurable diseases, and reaped a rich harvest.

The public, however, is getting wise on the subject, and no longer believe every advertisement of the nostrum manufacturers. People now recognize the limitations of drugs as therapeutic agents and are patronizing Christian Science, Osteopathy, the Emanuel movement, Psychotherapy, Hydropathy, etc., hoping to obtain the relief not afforded by doctors and druggists.

The effect of this drift of the public away from physicians and pharmacists has proved disastrous to the drug business as well as to the medical profession. Two remedies for this condition have been suggested. One remedy advocated is that druggists should have the same faith in drugs that Christian Scientists have in the doctrines of Mrs. Eddy, so that they may inspire the people with the same amount of faith in the curative power of drugs that Christian Scientists have in Christian Science. It is believed that if druggists would guarantee cures, the people would buy more drugs and receive the benefit of suggestive therapeutics. In other words, it is advocated that all retail druggists become quack doctors, and resort to pretense as a therapeutic agent. The other plan suggested is the one I have been advocating, namely, that pharmacists study medicine, obtain a license to practice therapeutics, and then take advantage of their close contact with the people to educate them on the subject of medicine, so that they may avoid the numerous pitfalls set for the unwary by quacks and pretenders of all kinds. Aided by the pure food and drug laws, the latter plan would doubtless prove of the greatest value to mankind, and do more than any plan yet suggested to raise pharmacologic practice to its proper position as a learned and beneficent profession. What we need, and what the public is going to have sooner or later, is an honest pharmacologic service; and if the physicians and pharmacists of this country will co-operate in this endeavor, medicine will be restored to public confidence.

Encroachment of the Manufacturing House.

Many retail druggists object to the pure food and drug laws on the ground that their enforcement is playing right into the hands of the manufacturing houses. They claim that the manufacturing of medicines is the exclusive right of the retail druggists; that the establishment of standards for materia medica products, and their enforcement by the courts, is taking away from the retailers their business as manufacturers; that it is placing the same in the hands of the great commercial houses which are conducted by a non-professional body of men who do not hesitate to sacrifice the public for gain.

There is some truth in this contention. If the physicians and pharmacists of this country had given the public a square deal in relation to the materia medica, the conditions now complained of might never have arisen. Unfortunately, the medical schools have neglected to teach drug therapeutics: and the retail druggists have carried on a proprietary medicine business of their own, open to the same objections they are now urging against the manufacturing houses. A reaction has occurred. The worm has turned. The pure food and drug laws are not the result of a co-operative effort on the part of the medical profession and retail druggists to reform conditions, but are due to public resentment of the conditions referred to. This reform should have come from medicine and pharmacy, not from *Collier's Weekly*, *Ladies' Home Journal* and other periodicals.

On the other hand, all must concede that centralization is the tendency of the day in all lines of manufacturing. This is an evolutionary process due to economic conditions, and represents advance in civilization.

The great manufacturing houses have come to stay. Iron, steel, copper, wagons, shoes and nearly every other manufactured article, are now produced on a large scale by great plants. The same centralization is going on in the chemical and pharmacal industries. Who can stop the process of evolution?

Individual manufacturers working on a small scale cannot hope to compete with the great manufacturing houses. This is true now, and as standardization of products in every line becomes more prevalent, the small manufacturer will have less and less chance of success. Standardization work cannot be economically carried on except in relation to large outputs. It costs just as much to standardize a pound of steel as to carbon content as it does to standardize a ton, and the same principle applies to the standardization of materia medica products.

This evolutionary process of centralization is by no means completed. Whether or not it will end in socialism remains to be seen. Socializing medical and pharmacal practice has its advocates. However, this phase of the subject is outside the limits of my lecture.

The Retail Druggist as a Manufacturer.

Under a professional system with its common standards, and freedom from monopoly, every retail druggist has an equal chance with others as a manufacturer of pharmaceutical preparations, but under the proprietary system of monopoly and misleading advertisements, the nostrum manufacturing house has the advantage.

As a matter of self-interest, therefore, the retail druggist should favor the professional ideal. The experience of those interested in pharmacal legislation, points to the contrary. Retail druggists as a class favor class legislation in their favor as manufacturers, but are generally opposed to legislation made to limit the nostrum evil. Students on the subject account for this by saying that every druggist dreams of the time when he, too, shall become a nostrum king and therefore opposes legislation not favorable to the continuation of the nostrum business.

A large part of the demand for medicines is now represented by ready-made prescriptions in forms of sugar and gelatin coated pills, compressed tablets, hard and soft capsules and other forms which cannot be economically manufactured except on a large scale. It is hoped by those druggists who are engaged in the U.S.P. and N.F. propaganda, that physicians will discontinue ready-made prescriptions and return to prescription writing. That may occur, but probably not in the manner hoped for. The tendency is away from polypharmacy and toward the use of pure drugs and in a more scientific manner. This tendency is as unfavorable to the polypharmacy extemporaneous prescription as it is to the ready-made polypharmacy prescription.

Progress in pharmacotherapy is along the lines of standardized medical products. Standardization of the future will include botanic standardization, namely, pharmacognosy, also pharmaceutical assaying, and pharmacodynamic testing of products on animals. This work is expensive and must be done on a large scale for the sake of economy.

What Is the Use of Pharmacologic Education?

This question is often asked, and the answer is frequently pessimistic. Personally, I believe there should be an opti-

mistic answer to the question. I believe that there is a better future for drug therapeutics. Never before in the history of medicine has there been a greater need for a profession of pharmacology. The members of that profession will naturally divide themselves into specialists. Those engaged in government laboratories and in teaching will do most of the research work. Those employed by the large manufacturing houses will also engage in original investigation, but not to the same extent as the first class. Those engaged in the retail drug business will become learned in pharmacologic science and occupy the position of experts in the knowledge of drugs, and their preparation and application as remedial agents. To the extent that each has the necessary facilities, he will become a manufacturer or will hold stock in some large manufacturing house and do all in his power to promote the advancement of the corporation in which he is interested. This, at least, seems to be the tendency of things. And this tendency is in line with the best interests of the public, as it will place the practice of the pharmacologic arts in the control of the pharmacologic profession where it properly belongs.

Pharmacy Laws.

It is manifest from has been stated above that the enforcement of the professional ideal of pharmacologic practice will place professional pharmacists and manufacturers in a position of disadvantage in competition with commercial druggists, and manufacturers of so-called "proprietary" medicines. "Professionalism" requires the surrender of new products to the general fund and includes the teaching of all members of the profession how to make and use the same. "Commercialism" means monopoly of new products by individual manufacturers, firms or corporations, and their introduction to commerce by advertising.

An anomalous condition of law exists in this country by which the manufacturing houses are exempted from the operation of both medical and pharmacal laws. Any person, no matter how ignorant, is permitted to set up as a manufacturer and practice pharmacy and therapy at wholesale without license. As a result, an enormous industry in nostrums has been built up and conducted in unfair competition with physicians and pharmacists. This is one of the abuses for the pharmacologic profession to remedy. The Supreme Court of the United States pointed out a way in its decision in the Syrup of Figs case above referred to. Manufacturing houses should be licensed the same as individual physicians and pharmacists.

Copyright, Patents and Trade Marks.

Contrary to public opinion, the names of medicines cannot be copyrighted. Any person who does not believe this statement can send to the Librarian of Congress and obtain an official circular stating the fact.

Contrary to public opinion, the name of a medicine cannot be privately owned by anybody. What, say you, cannot a manufacturer own the name of a medicine as a trade mark? No. It is an axiom of law that the name of an article of commerce cannot be a trade mark, the reason being that the name of an article cannot at the same time perform the function of an appellative to distinguish it from other articles of commerce, and a trade mark to distinguish the brand of an article from other brands of the same article. The name salt distinguishes salt from sugar. Salt cannot, therefore, serve as a trade mark to distinguish brands of salt from each other. There might be a "salt" brand of sugar, and a "sugar" brand of salt, but there cannot be a sugar brand of sugar or a salt brand of salt.

It is believed by many that inventors possess a natural right to prevent others from copying their inventions, and that an invented or coined word is therefore the natural property of the inventor of the same. This, however, is not the case. There is no such thing as natural property in an invention. The right to prevent others from copying an invention is not a natural right but a creature of statute and of grant, subject to the conditions imposed by the statutes and by the grants. The statutes granting inventors the right to prevent others copying their inventions are known as patent laws, and the grants are called patents. The government does not grant patents on names, as already stated. Moreover, any person has the right to manufacture any invention if it is not patented, that is if he knows how to do so and has obtained his knowledge in a legitimate manner. Any person has an equal right to manufacture and deal in the invention under its proper name, namely: the name which the public generally use to describe when purchasing the article.

Authorities Agree on This View.

Plenty of evidence to support these statements may be found by referring to the following authorities: Encyclopedia Britannica (chapter on "Copyright"), Browne on "Trade Marks," Kerley's "The Law of Trade Marks," "Report of the Commissioners Appointed to Revise the Patent and Trade Mark Laws under Act of Congress Approved June 4, 1898," known as "Senate Document No. 20."

The medical profession is standing between two opinions on the subject of patents on materia medica. One side takes the position assumed by Lord Camden in his celebrated speech on the subject of copyright as follows: "Glory is the reward of science, and those who deserve it scorn all meaner views. I speak not of the scribblers for bread, who tease the press with their wretched productions. Fourteen years are too long a privilege for their perishable trash. It was not for gain that Bacon, Newton, Milton, and Locke instructed and delighted the world. When the bookseller offered Milton five pounds for his Paradise Lost he did not reject it and commit his poem to the flames, nor did he accept the miserable pittance as the reward of his labor; he knew that the real price of his work was immortality and that posterity would pay it."

Those who believe in the application of patents to materia medica products agree with the statement made by Terril in his treatise on Patent Laws. According to this authority:

"The theory upon which these laws rest is that it is to the interest of the community that persons should be induced to devote their time, energies and resources to original investigation for the furtherance of science, the arts, and manufactures. This was recognized from the earliest periods which can pretend to be described as civilized. It is to the advantage of the whole community that authors and inventors should be rewarded, and no measure of reward can be conceived more just or equitable, and bearing a closer relation to the benefit conferred by the particular individual, than to grant him the sole right to his writing or discovery for a limited period of time."

True Scientist Works for Pure Science.

Scientists in every line take a similar position to that of Lord Camden, namely: that "Glory is the reward of science," and refuse to recognize any person as a scientist who attempts to monopolize the results of his observations or discoveries. It is said that the true scientist is working for pure science and is not in any way interested in the application of science to practical purposes; and if the medical profession wishes to be a scientific body, physicians must refrain from commerce in materia medica inventions and discoveries.

Those who believe in the application of patents to materia medica products represent the commercial ideal of the materia medica supply business. The professional ideal of the vocation is represented by still another class who believe with me, that those who are engaged in the practice of the pharmacologic arts should be supported by commerce in the materia medica products, but who hold that materia medica commerce should be conducted as a professional vocation. Practitioners of theology, law and medicine are all engaged in a commercial vocation in one sense of the term. They deal in advice but not in material substances. It is idle for them to assume that they are less commercial than practitioners of professional pharmacy, for we all know only too well that members of the so-called learned and beneficent professions sometimes commercialize their vocations, and thus degrade themselves in the eyes of the community.

The Copyrighting of Medical Books.

Carried to its logical conclusion, the enforcement of the professional ideal would exclude from fellowship the authors of medical books, who take advantage of the copyright law to secure monopolies of the products of their brains. Copyright has been made necessary, however, on account of the necessity of protecting the capital of publishers engaged in the business of printing and marketing books. But the monopoly obtained by copyright does not extend to the subject written about. It only includes the title of the book and its language. In the same manner, exception can be made in favor of the inventors of new processes and apparatus for materia medica medicine, and the government can, without danger to science, grant them the right for limited periods of time, to prevent others copying their inventions, so long as the patents do not cover the

Group Picture of the Illinois State Ph.A. at Quincy Meeting, 1909.

products themselves. If the products themselves are monopolized, every effort is made by the manufacturer to push them to the front as therapeutic agents in place of other products used for the same purpose. Too often this is done by exaggerating their merits, and repressing their unfavorable sides, so that it became next to impossible for physicians to ascertain their true limits as therapeutic agents and to use them intelligently. And if any physician has the temerity to publish the untoward effects of a proprietary product, he excites the antagonism and reprisal of the manufacturer.

Introduction of New Brands of Materia Medica Products to Commerce.

There is a great deal of difference between the introduction of new products to science and new brands of manufacture to commerce. The former belongs to the sphere of science, and the latter to the sphere of commerce. The former can only be accomplished by the use of scientific methods; the latter requires commercial methods. The exploitation of new products by exaggerating their merits and repressing knowledge of failures is one of the most dangerous forms of quackery. The introduction of new brands to the medical and pharmaceutical professions, in the advertising pages of the medical and pharmaceutical press, shows business sagacity and enterprise. But it should always be remembered that: "Commercialism is not a word in good repute in connection with the practice of medicine (including pharmacy or the manufacturing of medicine for therapeutic use). Not that it is wrong for a physician (pharmacist or manufacturer) to make money if it is done honorably; nor is it beneath the dignity of an ethical member of the medical (or pharmaceutical) profession to apply honorable business principles in obtaining just remuneration for services rendered; but it is wrong, and degrading, for him to subordinate all he may do to commercialism. The making of money is the mainspring of commerce, but medicine (including pharmacy) in its scientific as well as altruistic ideals, has a higher and nobler aim. If it were not so, our widely uttered claims of being a liberal profession are false, and a large proportion of what we may call the non-scientific portion of medical literature, including most addresses to graduating classes in medicine (and pharmacy) and to societies, is the veriest talking for effect."

Conclusion.

Shall we have a profession of pharmacy? Yes, but the scope and title of that profession should be enlarged to include the co-operative practice of the pharmacologic arts by physicians, pharmacists, physiologists, botanists, chemists, and all others engaged in investigating and classifying the materia medica, and in selecting, preparing, preserving, compounding, and dispensing drugs and in applying them to the treatment of the sick.

How shall we have a profession of pharmacy? That question cannot be answered in a single paragraph or page. Only by a complete study of the subject along the lines mapped out by this lecture can the question be answered.

? QUESTION BOX ?

THE OBJECT of this department is to furnish our subscribers and their clerks with reliable and tried formulas, and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc. Requests for information are not answered by mail, and ANONYMOUS COMMUNICATIONS WILL RECEIVE NO ATTENTION; neither do we answer questions in this department from non-subscribers.

In this department frequent reference is necessarily made to information published in previous issues of The Era, copies of which, if not out of print, may be obtained for 25 cents each.

Blue Color for Bichloride Solutions.

(M. J. C.)—"Kindly furnish me with information as to a color (blue) for bichloride of mercury solution that will stay that color when making a 1 in 10,000 solution."

Soluble blue, aniline blue and methyl violet are all used for coloring bichloride tablets for making antiseptic solutions. One formula for making tablets, one of which dissolved in 1 pint (Imp.) of water will make a 1 in 10,000 solution of bichloride, is the following:

Mercuric chloride	175 grains.
Sodium chloride	821 grains.
Soluble blue	4 grains.

Mix the salts with the dye, damp with methylated ether to distribute the color, allow to dry and compress into tablets to weigh 5 grains each. If methyl violet be preferred as a coloring agent, you can use about 0.02 grain to each tablet. For a gallon of solution 2 grains of aniline blue will probably be sufficient, although some experimenting is necessary to determine the right quantity to produce a given shade of blue.

Bleaching Infusorial Earth.

(L. P. L.)—Infusorial earth is usually prepared as a filtering medium for use in pharmaceutical operations by first calcining, which removes the organic matter, and then treating with boiling dilute hydrochloric acid and washing with water. This removes the iron, which almost all samples contain. Any sand the infusorial earth may contain may be removed by subsequent levigation.

At a meeting of the British Pharmaceutical Conference in 1898 John Moss read a paper on the possible pharmaceutical uses of infusorial earth in which he stated that if the product was free from organic matter, it seemed to possess all the needful qualities for clarifying liquid galenicals and certain solutions of salts and acids. He stated that it possessed the advantage over talc or asbestos in that it did not clog up the filtering bag, and filtration is consequently rapid and at the

same time perfect. A disadvantage is the difficulty with which it mixes with liquids. It should be worked down in a mortar with a little of the liquid to be filtered, so as to form a smooth thin paste; this can be mixed with more of the liquid to start the filter. If this is carefully done, the filter sets at once, and very little of the filtrate will have to be returned.

Commercial calcined "kieselguhr," which is one of the common forms of infusorial earth, varies in color from a very pale cream to a reddish tint, according to the amount of iron associated, and contains as much as 95 per cent or more of pure silica.

Percentage Solutions.

(J. P.)—"The Bulletin of Pharmacy recently gave in its 'Board Questions and Answers' the following problem: How many grains of cocaine in one ounce of an aqueous solution, 2 per cent.? and the following answer was given: 456.4 × .02 = 9.128. It has been maintained at this hospital that the correct basis is 480 and not 456.4. Could you inform me which of these numbers is correct?"

The last number (456.4) is probably nearly correct and will approximately represent the weight of a fluidounce of an aqueous solution of cocaine, 2 per cent. The weight of a fluidounce of water is approximately 456.4 grains and it is not reasonable to suppose that a fluidounce of a solution made by dissolving 2 parts of cocaine in 98 parts of water would weigh 480 grains. In all percentage solutions or mixtures, weight percentage is understood, unless volume percentage is expressly stated, and the quantity of active constituent in any solution or mixture can be easily calculated if the weight and rate per cent be known. To make a percentage solution of definite volume is to approach the problem from the other direction, and the calculation would be comparatively easy if we always knew in advance the specific gravity of the percentage solution wanted. As we do not always know this, the calculation is expressed as follows: Since the solution is 2 per cent strong, the solvent must be 98 per cent, the finished product containing cocaine 2 parts, water 98 parts, or 100 parts in all. Accordingly, 98% : 2% :: 456.4 grains (weight of 1 fl. ounce of water) : ×, a statement in which × = 9.31 + grains. Thus by measuring out one fluidounce of water, and dissolving in it 9.31 grains of cocaine we obtain a trifle over a fluidounce exactly 2 per cent strong.

Estimating Percentage of Alcohol in Tinctures.

(W. Dr. Co.)—"Will you answer how you can obtain the per cent of alcohol in U.S.P. tinctures made from the drugs and not from the fluidextracts? This is to settle a little argument."

The percentage of alcohol in a tincture may be loosely calculated from the amount of absolute alcohol in the menstruum used and making certain deductions for the amount of extractive. The only correct way, however, is by distilling off the alcohol from the tincture and then, by comparison of the specific gravity of the distillate with the corresponding specific gravity of an alcohol of known strength, as set forth in the Pharmacopœia or other alcohol tables, the percentage of the alcohol is ascertained. The usual method is to take 50 cc. of the liquid to be tested, and carefully noting the temperature of the same, transfer it to a small retort attached to a condenser, rinsing out the measuring flask with two successive quantities of 5 cc. each of distilled water. The measuring flask is then placed at the end of the condenser and the distillation continued until 40 cc. have passed over. Ten cc. of the distilled water are now added to the contents of the retort and the distillation continued until very nearly 50 cc. have been distilled over. The temperature of this distillate is now brought to the degree as that at which the original liquid was measured, and distilled water added to make the distillate measure 50 cc. By this means it is possible to obtain a volume of pure spirit of precisely the same strength as the sample. The specific gravity is taken and the alcoholic strength is obtained by means of the alcohol tables referred to. Some chemists prefer to distill off three-fourths of the sample, and having taken the specific gravity of the distillate to add some water and distill off the remaining fourth, taking its specific gravity separately and finally adding the separate results together.

Some of the considerations which enter into calculations of this kind were set forth in an article by Prof. A. B. Stevens, published in the ERA of February 7, 1907, page 130, which you should read. You will note that the tinctures of the Pharmacopœia are not made from the fluidextracts of the corresponding drugs but from the crude drugs themselves. We do not answer queries by mail.

Pharmacists in the Marine Hospital Service.

(B. J. E.)—All persons in the Public Health and Marine Hospital Corps come under the jurisdiction of the surgeon-general of that service, a branch of the Treasury Department. Applications for entrance must be made to the Civil Service Commission, which conducts and controls the examinations; application can be made on blanks furnished by the commission for the asking.

Applicants must be graduates of a reputable college of pharmacy and must present their diplomas, or evidence thereof; they must be examined physically before other examination by a medical officer of the service, who must fill in and sign the candidate's application blank to the commission. The physical requirements are as strict as for either army or navy service. Age limit, 21 to 30 years. In addition to the physical examination the applicant must take the examination before the Civil Service Commission, which covers spelling, arithmetic, penmanship, letter writing, elements of bookkeeping and accounts, geography and history of the United States. The professional examination relates to chemistry, pharmacy, materia medica and toxicology. A knowledge of minor surgery, bandaging, first aid to the sick and injured and care of sick is accepted as being very favorable to the applicant. The duties of pharmacists in the service are at marine hospitals, quarantine stations and ships, as aides in large cities where stations are maintained and sometimes on emergency duty at detention stations and temporary camps for contagious diseases. At the close of the last fiscal year there were 48 pharmacists on duty in the service, as follows: Pharmacists of the first class, 16; second class, 20; third class, 12.

Violet Water.

(H. H. H.)—Try one of the following from "Pharmaceutical Formulas":

(1)

Violet extrait	2 ounces.
Cassie extrait	6 drams.
Spirit of rose	6 drams.
Spirit to make	16 ounces.

(2)

Violet extrait	2 ounces.
Cassie extrait	1 ounce.
Spirit of rose	½ ounce.
Tincture of orris	½ ounce.
Spirit to make	20 ounces.

(3)

Artificial violet	3 drams.
Schimmel's jasmin	1 ounce.
Concrete orris oil	20 grains.
Oil of bitter almonds	2 minims.
White heliotropin	8 grains
Artificial musk	1 dram
Deodorized alcohol	144 ounces.
Dissolve and add—	
Powdered orris	4 ounces
Macerate for two days; then add—	
Distilled water	16 ounces.

Filter after seven days and color green. According to the authority we have quoted, this perfume, which is of American origin, should have a pale greenish tint, but darker than violet extrait. However, a violet tint may be produced by mixing red and blue until the desired shade is obtained, or by using tincture of litmus or ammoniated cochineal coloring. A spirit-soluble aniline dye of the required shade may also be employed.

No Politicians Wanted on U.S.P. Job.

The dying patient and his doctor don't want to wait for red-tape processes at Washington. Nor does any practical physician or layman want to witness the spectacle of politician job-holders there compiling a pharmacopœia instead of learned and experienced professionals.—*New York Commercial.*

Woman's Reason.

Maisie—Why is his mustache gray while his hair is black?
Daisie—He exercises his mouth more than his head.—*Judge.*

The Essential Oils of the United States Pharmacopoeia.*

By Paul Jeancard and Conrad Satie, Cannes, France.

In most European countries the function of pharmacopœias is to consider only products as utilized in pharmacy. This restriction is quite consistent with the etymology of the word. In the United States, on the other hand, the Pharmacopœia has the authority of a legal standard not only for products which are intended for pharmaceutical use but for table consumption as well.

An official book with so broad a province should maintain great exactitude in its descriptions and strict precision in the analytical methods which are used to demonstrate the quality of products. We are persuaded that the eighth revision of the American Pharmacopœia, notwithstanding the great amount of work which has been accomplished by its authors, is lacking in this precision. It is not our intention to review the description of the numerous products mentioned in the Pharmacopœia. Our sole purpose in the following pages is to review that part of the book which deals with the essential oils and perfumes and to show that it is not always consistent with the established facts of science and industry.

We shall consider the subject in two divisions. In the first we shall collect in a systematic manner the analytical methods scattered here and there in the Pharmacopœia. The second part will be taken up with a discussion of the essential oils and some of their constituents.

I. Analytical Methods.

Essential oils are mixtures of certain chemical bodies: such as, terpenes, alcohols, ketones, etc. They have no fixed physical or chemical properties, the properties varying within certain limits which depend on the place of origin of the plant, the climatological influences, the condition of cultivation, method of preparation, etc. The limits of variation in a given property of a substance, which have been recorded by investigators during a number of years, we shall speak of as "general limits." These represent the extremes of variation.

We have recently *(P. Jeancard et C. Satie: "La chimie des parfums en 1908"—"Revue Générale de chimie pure et appliquée 1909," vol. xii, page 173,* and "American Perfumer," 1909, vol. iv, page 82), proposed that there also be recognized "annual limits." It is obvious that the latter would be more restricted than the former and would necessitate a more exact determination of the purity of a substance.

A pharmacopœia which is in force for ten years or longer should make use of general limits only. It is evident that those limits represent the extremes of variability.

(1) Determination of Physical Properties.

The specific gravity, the optical rotation, the solubility in dilute alcohol, the points of fusion and solidification are the principal physical properties to be determined in the analysis of essential oils.

Specific Gravity.—Two methods are recommended by the Pharmacopœia for this determination: Westphal's Balance and the pycnometer. The temperature at which the specific gravity is to be determined is specified as 25° C.

The choice of 25° C. as normal temperature is perhaps not a very fortunate one. It is a somewhat summery temperature! It would have been preferable to keep the temperature of 15°, which is the mean temperature and also that used in most of the determinations of the physicists since the middle of the 19th century.

It will be noticed that the old tables of alcoholic percentage demanding a temperature of 15.66° have been kept by the Pharmacopœia, whence arises what might be called by the hypercritical an anomaly: the solubility of oil of rosemary is to be determined at 25° C. in alcohol which is 80 per cent at 15.66°!

In the ordinary practice of laboratories, the determinations of specific gravity are so much the more exact when made at room temperature. The pharmacist and the industrial chemist need to know only the three first decimals of the specific gravity. In order to know whether the figure found is within the general limits, it is necessary to make use of a coefficient to calculate the specific gravity at standard temperature. For the essential oils, the coefficient is generally something between 0.0005 and 0.0008; this is, of course, not absolutely exact, but it is so convenient and expeditious that this mode of comparison is used daily for mineral and vegetable oils and animal fats.

Optical Rotation.—For certain essential oils, the oil of lemon, of sweet orange and of bitter orange, the influence of temperature on the optical rotation is not a negligible factor. It is customary to observe the optical rotation at a temperature of 20°. The Pharmacopœia would have done well to have allowed the observation in the case of oil of lemon and of orange to remain at the lower temperature of 20° instead of 25°.

Solubility.—Most chemical works do not sufficiently emphasize the importance of the determination of the solubility in dilute alcohol as a means of investigation, although the fact that a certain organic product is soluble in the usual solvents is a fact of utility. U.S.P. is not exempt from this criticism.

The determination of the solubility of essential oils has two distinct aims. In the preparation of perfumery, for instance, it is necessary to know the solubility of the essence in dilute alcohol in order to obtain a clear preparation. On the other hand, a test of the solubility in alcohol furnishes a very simple means of detecting certain frauds or whether the preparation has been properly distilled. The solubility in dilute alcohol varies with the nature of the chemical constitution. For instance, the alcohols, aldehydes and phenols are very soluble in 60, 65 and 70 per cent alcohol. The aromatic hydrocarbons and the terpenes are only soluble in alcohol of 85 to 95 per cent strength and the sesquiterpenes are only slightly or not at all soluble in 96 per cent alcohol. In considering a series of ethers obtained by utilizing the same acid and different alcohols it will be noticed that the solubility varies inversely with the molecular weight. As an example might be mentioned the index of solubility of the benzoates in 70 per cent alcohol:

Benzoate of methyl, 1.5; benzoate of ethyl, 2.0; benzoate of propyl, 4.2; benzoate of iso-butyl, 8.1; benzoate of iso-amyl, 13.

As essential oils are mixtures of alcohols, ethers, terpenes, etc., the above principle may be utilized by employing a series of three alcohols differing to the extent of 5 per cent. Thus the lavender from the High Alps and the summits of the Low Alps is soluble in 2 to 3 volumes of 70 per cent alcohol, and slightly or not at all soluble in 20 volumes of 65 per cent alcohol. That from the Italian Alps is soluble in less than two volumes of 70 per cent alcohol and in 3 to 4 volumes of 65 per cent alcohol. The index of saponification of the former is something between 100 and 140, and that of the latter between 58 and 90. This example illustrates the correlation that exists between the index of saponification and the solubility of oil of lavender *(P. Jeancard et C. Satie, "Remarques analytiques sur les essences de Lavande"—Bulletin de la Société chimique de France, 1908—4th series, vol. iii, page 155).*

It would be found convenient to state the solubility in three successive alcohols differing by 5 per cent, although the solubility in the most dilute alcohol is in itself an important point. Unfortunately this is not the method indicated by the Pharmacopœia. Some figures of solubility given in the Pharmacopœia will be found in the following table:

	Solubility.	
Oil.	*95 per cent alcohol.*	*70 per cent alcohol.*
Bitter almonds	in any proportion	1 volume
Eucalyptus	in any proportion	3 volumes
Cloves	1 volume	2 volumes
Cassia		2 volumes
Eugenol	in any proportion	2 volumes

If oils of bitter almonds, eucalyptus and cloves are soluble in 1 to 3 volumes of 70 per cent alcohol, it is superfluous to determine their solubility in 95 per cent alcohol. The following table, as determined by us, shows how the solubility of the essential oils should be expressed:

	Solubility.		
Oil.	*70% Alc.*	*65% Alc.*	*60% Alc.*
Bitter almonds	1 to 1.5	1.5 to 2	2 to 2.5
Cassia	2	3 to 5	10 to 20
Cloves	1 to 1.5	1.5 to 2	2 to 5
Pennyroyal	1.8 to 2	2 to 5	5 to 8
Rue	2 to 3	5 to 7	10 to 20
Eugenol	1	1.5	2

The determination of the solubility under such conditions

*Presented by W. G. Ungerer and read at the January meeting of the New York Branch of the A.Ph.A.

renders information of distinct value. There is little use in the determinations required by the Pharmacopœia.

(2) Determination of Chemical Properties.

There are at present in organic chemistry no methods for determining with precision the chemical constituents of such mixtures. Approximate figures are obtained with difficulty. We are in the habit of speaking of the content of acetate of linalyl, thymol and cinnamic aldehyde in oil of lavender, of thyme or of cassia. This way of speaking hides our real ignorance of the question. For instance, in lavender or bergamot which contain a large proportion of the acetate of linalyl, we overlook the presence of certain other ethers which contribute to the aroma of these oils.

With these qualifications we shall pass on to a review of the methods generally employed in the determination of the chemical properties and compare them with those described in the Pharmacopœia.

Acidity.—The Pharmacopœia does not give any figure of acidity except in the case of bitter almonds in which the content of hydrocyanic acid is to be determined volumetrically. It is necessary, however, to determine the acidity of those oils of which the ether content is characteristic, as lavender or bergamot. This determination will demonstrate whether the oil is of recent preparation.

Ethers and the Index of Saponification.—We determine the index of saponification in the following manner: Weigh exactly 2 gm. of the oil in a flask of Bohemian glass having a capacity of 100 cc. and add 10 to 20 cc. of N/2 potassium hydrate solution. The flask should be furnished with a cooling tube 10 to 12 mm. in diameter and 1 m. long. The mixture is then boiled on a water-bath for half an hour. After cooling, water is added and the excess of alkali titrated with N/8 solution of sulphuric acid, using phenol phthalein as an indicator *(P. Jeancard et C. Satie: "Abrégé de la chimie des parfums." Paris, 1904, page 22).*

We call normal solutions those containing the number of grams per liter equal to the molecular weight of the substance. The solutions employed for the determination of the index of saponification contain then (*):

Alcoholic potassium hydrate N/2 28gm. KOH per liter.
Sulphuric acid, N/8 12.25 gm. of H_2SO_4 per liter.

In the above determination the index of saponification is calculated directly from the amount of acid required and it is easy to construct a table giving the index and the quantity of ethers. We insert an illustrative table which we have published:

H_2SO_4 N/8	I. S.	$C_{12}H_{20}O_2$ Percentage.
5.0 cc.	105.0	36.75
5.1	104.3	36.50
5.2	103.6	36.26
5.3	102.9	36.01
5.4	102.2	35.77
5.5	101.5	35.52
5.6	100.8	35.28
5.7	100.1	35.03
5.8	99.4	34.79
5.9	98.7	34.54
6.0	98.0	34.05

We have calculated the sources of error inherent in this determination of the index of saponification and the ether content deduced from it; errors in weighing, in measuring the volume of acid and the potash solution, etc. The ether content can be guaranteed only to one unit.

Let us see what the Pharmacopœia has to say upon the subject of this determination. The acid employed is N/4 solution and therefore contains 24.33 gm. to the liter. It will be noticed that this solution is twice as strong as ours *(Sic)*. A difference of 1-10th cc. in our solution makes a difference of .25 in the ether content while with the pharmacopœial solution the difference is .50. That is to say, that with this solution the ether content may be determined to within two units only. For the determination of the indices the Pharmacopœia indicates two methods which differ according to the oil.

If it is desired to determine only the index of saponification before acetylization, it is directed to weigh 2 cc. of the oil which is then transferred to a flask having a capacity of 100 cc. and then rinse out with alcohol the vessel in which the oil was weighed. The procedure is then concluded as described above.

Instead of weighing 2 cc. of the oil, would it not be better to weigh 2 grams, which would simplify the calculation and permit of the use of such a table as was described above. Another criticism: We weigh 2 grams of the essence directly in the flask which is to be used for saponification and we have more confidence in this direct method than in the use of two vessels.

The second method, which is that indicated for the determination of the indices of peppermint and rosemary, is most extraordinary. It is endeavored to determine the two indices of saponification before and after acetylization with the same portion of oil. So much is undertaken that little is accomplished. Let us consider a little. Exactly 10 cc. of oil are weighed. After saponification the excess of alkali is titrated with sulphuric acid. The product of saponification is washed several times with water to eliminate the ethyl alcohol. This done, one acetylizes by means of acetic anhydrid and after washing and neutralizing determines the index.

It would have been preferable so far as precision and rapidity are concerned to determine the two indices by two separate tests. In the first determination washing with water before titrating with sulphuric acid. Another omission: before acetylizing with acetic anhydrid it is convenient to dry over anhydrous sulphate of soda. If these two methods were combined as a matter of economy—the essences being more or less expensive—it is practicable to do the two tests separately at no greater expense: 2 grams might be used for saponification and 6 or 7 cc. for acetylization. In this way time and precision would be gained.

Estimation of Alcohols.—The total alcohol content is proportionate to the index of saponification after acetylization. This relation only holds good for the primary and secondary alcohols as the tertiary alcohols are partially dehydrated during acetylization. Unfortunately for the chemists, the tertiary alcohols, as linalol and terpinol, are found in most of the essential oils.

Numerous modifications have been proposed in order to render the determination of alcohols by acetylization more exact or rather less inexact. It has been proposed to acetylize in the presence of pyridin. *(Boules Bulletin de la société chimique de France, 1907, pages 117, 861 and 871)* has suggested acetylization by diluting the acetic anhydrid in oil of turpentine; but the latter itself, under these conditions, is partially acetylized. There are too many corrections to be made for the method to give reliable results.

We have suggested a modification of this method by replacing the amount of turpentine with xylene. Under these conditions the acetylization of the linalol seems to be complete and that without dehydration. But the analytical difficulty rests in determining the index of saponification of the acetate formed. One part linalol, one part acetic anhydrid and five parts xylene are heated to boiling. They are then washed four times in water and carbonate of soda, before weighing out 2 grams for the determination of the index of saponification. In the washing there is a loss and the composition is somewhat different from what it was before boiling; further, the index found has relation to nothing but the acetate of linalyl, that is to say, 1-6 of the total mass. The following figures refer to rosewood which contains about 90 per cent of linalol: Acetylization without xylene, 45 to 52 per cent linalol; acetylization with xylene, 70 to 91 per cent linalol.

The U. S. Pharmacopœia seems to have no doubts concerning the reliability of the results obtained by the methods advocated. Except that the indices of saponification are not altered in the examination of essential oils. It should have required the index before acetylization for coriander, sandalwood and especially lavender and the index after acetylization for coriander, lavender and rose.

Aldehydes.—The usual methods now employed for estimating

[*The Pharmacopœia has adopted the atomic weights of the International Commission of 1904. These weights vary considerably from those published in 1909 by the same commission. The molecular weight of potassium hydrate and sulphuric acid were given as

	1905.	1909.
Potassium [illegible]	55.74	56.10
Sulphuric acid	97.35	98.07

For industrial analyses it would be preferable to retain the former values of 56 and 98 than to be obliged each year to change the strength of normal solution.]

aldehydes are based upon the bisulphite method and give very variable results, particularly where the aldehydes are present in small quantities. In this case, results obtained by different chemists are so variable as to be of little value.

The Pharmacopœia indicates two methods for the estimation of aldehydes in the essential oil: the bisulphite and the sulphite methods. The first consists in shaking 10 cc. of the oil with bisulphite and estimating the uncombined portion. This method is advised for pure cinnamic aldehyde. We wonder why the cinnamic aldehyde is estimated by the bisulphite method in commercial aldehyde which contains at least 95 per cent and by the sulphite method in cassia, which contains 80 to 88 per cent.

The sulphite method is called also the method of Sadtler. It depends upon the fact discovered by Tiemann *(Bulletin de la société chimique de Paris, 1899, 3d series, vol. xxi, page 190)*, that when a neutral solution of a sulphite of sodium is added to citral, there is formed citraldihydrosulphonic acid with the liberation of caustic soda. The two substances are found in definite proportion. The weak point of this method is the difficulty of ascertaining the end reaction. The Pharmacopœia recommends phenolphthalein as an indicator, although rosalic acid is recommended in the supplement of May, 1907. We agree with Schimmel that this method is inapplicable for the estimation of citral in oil of lemon.

Ketones.—The Pharmacopœia gives no information concerning the estimation of ketones. It is, however, indispensable to ascertain even approximately the carvone and pulegone in caraway and pennyroyal.

Phenols.—The Pharmacopœia requires the estimation of the phenols of cloves, allspice and thyme. The eugenol in the oil of cloves and allspice is estimated by shaking 10 cc. with caustic soda in a 100 cc. vial having a neck graduated to tenths of a cubic centimeter. The phenols of thyme are estimated in the same manner except that a graduated burette is used. Why this difference of apparatus in the determination of like chemical bodies? It should be noted that the results of the determination of phenols agree to almost five units.

Cineol.—The Pharmacopœia estimates the cineol by means of the phosphoric acid method. Scammel patented his method for obtaining pure cineol with phosphoric acid in 1895. Since that time many chemists have endeavored in vain to apply this method successfully, and it is to be regretted that it is approved by the Pharmacopœia. We shall merely mention the figures obtained by Schimmel *(Bulletin Semestriel de Schimmel et Cie, 1907, Oct., page 47)* in the determination of cineol in a mixture of cineol and turpentine:

Found 42 per cent of cineol in place of 50 per cent.
Found 53 per cent of cineol in place of 60 per cent.
Found 70 per cent of cineol in place of 70 per cent.

By this method the actual content of cineol may be underestimated by 16 per cent. Under such circumstances it is preferable not to talk about the estimation of cineol!

II. Essential Oils.

In the first part of our work we have reviewed the analytical methods presented by the American Pharmacopœia. We have grouped them in logical order so that the defects might be easily recognized. It remains to terminate this critical review by an examination of each of the essential oils.

The Pharmacopœia describes the color, fluidity and odor of each oil. It is difficult to describe graphically the physical characteristics of an oil. The color is variable even for the pure oils. Some oils are described as liquid, others as viscid. These are vague terms. We have suggested more precise terms for the determination of the viscosity of oils *(P. Jeancard et C. Satie: Bulletin de la société chimique de Paris, 1901, vol. xxv, page 516, and Revue Technique, 1904, page 256)*.

The odor of oils is very difficult to describe. We have no desire to criticize the Pharmacopœia on the subject of the physical properties of the oils. Neither have we any doubt that the oil of cloves possesses the aromatic odor of cloves nor the oil of caraway the strong aromatic odor of caraway, etc.!

After what we have said concerning the analytical methods, it is evident that our review of the oils will be a brief one.

Oleum amygdalæ amaræ (Oil of Bitter Almond).—As we have remarked, before, the sulphite method does not permit of an exact calculation of the benzaldehyde.

The solubility in 70 per cent alcohol is 1 to 1.5 and not 1.

Oleum anise (Oil of Anise).—The specific gravity of the oil has been corrected in the supplement of May, 1907, the correct limits 0.975—0.988 being given.

Oleum aurantii corticis (Oil of Orange Peel).—The residue at 100° is a determination of some value. It should amount to 2 to 4 per cent in a good oil.

Oleum cajuputi (Oil of Cajuput).—It is the content of cineol which should determine the value of this oil. But as we have shown, the phosphoric method employed is inexact.

Oleum cari (Oil of Caraway).—The limits of specific gravity have been corrected in the supplement of May, 1907. It is to be regretted that no mention has been made of the content of carvone.

Oleum caryophylli (Oil of Cloves).—The limits of specific gravity given are those at a temperature of 15° and not 25°!

Oleum eucalypti (Oil of Eucalyptus).—The estimation of cineol is inexact.

Oleum Hedeomæ (Oil of Hedeoma).—The minimum content of pulegone should have been given.

Oleum Juniperi (Oil of Juniper).—It is unusual to obtain a pure oil soluble in 10 volumes of 90 per cent alcohol.

Oleum lavandulæ (Oil of Lavender Flowers).—We have *proposed to classify lavenders in two groups (P. Jeancard et C. Satie: Remarques analytiques sur les essences de Lavande. Bulletin de la société chimique de France, 1908, 4th series, vol. iii, page 155): First Group:* Lavender of the High Alps and summits of the Low Alps: oils containing 35 to 47 per cent or more of ethers. They are soluble in 2 to 3 volumes of 70 per cent alcohol and slightly or not at all soluble in 20 volumes of 65 per cent alcohol.

Second Group: Lavender of the Italian Alps and the former County of Nice: oils containing 20 to 30 per cent of ethers. These are soluble in less than 2 volumes of 70 per cent alcohol and in 3 to 5 volumes of 65 per cent alcohol. They are sometimes soluble in 60 per cent alcohol.

The other properties are identical for the two groups and are as follows:

Specific gravity at 15°	0.8800 to 0.8900
Refractive index	—6° to —10°

Index of saponification after acetylization—above 160.

Oleum limonis (Oil of Lemon).—The estimation of citral should be omitted until an exact method of estimating small quantities of aldehyde is discovered.

Oleum menthæ piperitæ; Oleum menthæ viridis (Oil of Peppermint and Spearmint).—We have previously shown that the analytical procedures of the Pharmacopœia for the estimation of menthol are inexact. No mention is made of the determination of menthol in spearmint.

Oleum rosæ (Oil of Rose).—In 1904 *(P. Jeancard et C. Satie: Contribution à l'analyse des essences de Rose, Bulletin de la société chimique de Paris, 1904, 3d series, vol. xxxi, page 43)* we described the following properties of the oil of rose; the point of solidification, the content of stearoptene and citronellol. The two latter permit one to differentiate the oil of France from that of Bulgaria. The characteristics given in the Pharmacopœia correspond quite closely to those of the Bulgarian oil. The index of saponification required is of no value in determining the purity of oil of rose. In the reference cited we gave the following limits:

Oil.	*French Oil.*	*Bulg. Oil.*
Point of solidification	25 to 28°	19 to 21°
Percentage of stearoptene	30 to 35°	18 to 23°
Eleoptenes.		
Citronellol	20 to 23°	30 to 40°
Total alcohols	75 to 90°	84 to 88°

Oleum rosemarini (Oil of Rosemary).—Instead of speaking of the content of acetate of bornyl and of borneal it would have been preferable to give the indices of saponification. It is not necessary to repeat that there is no use in following the methods of the Pharmacopœia for the determination of these indices.

Oleum thymi (Oil of Thyme).—The Pharmacopœia describes the oil of thyme as colorless. Such an oil is the result of rectification, for the oils obtained directly from the distillation of the plants are colored and sometimes highly colored. Phenols of the red oil of thyme vary between 10 and 70 per cent *(P. Jeancard et C. Satie: Sur quelques essences de thym. Bulletin de la société chimique de Paris, 1901, 3d series, vol. xxv, page 893)*. As we have shown in 1901, the propor-

tion of phenols depends principally upon the method of distillation.

Conclusions.

The United States Pharmacopœia possesses all the faults of the pharmacopœias of other nations. These faults are results of the method of constructing the books. They are edited with much care and with inexhaustible patience and are so thoroughly edited, that by the time they appear, they are about ten years behind contemporary science.

These books must furnish information about a great number of substances. They are neither manuals nor technical dictionaries, although the products are arranged alphabetically. Each country has its pharmacopœia and, curiously enough, these books which pretend to defend the public health, differ from one another. This fact in itself must prove their uselessness.

If in our time a pharmacopœia is really necessary, and this has never been proved, it should contain only the established facts of science. A pharmacopœia whose directions have authority for ten years is a strange thing in an epoch in which the most important scientific discoveries rapidly succeed each other and when industrial developments are revolutionizing the customs of the world.

If the United States considers that a pharmacopœia is indispensable to a great country, we look anxiously for the appearance of a ninth revision, which will conform with the actual facts of science and industry. In the ninth revision it would be preferable to drop the alphabetical arrangement which is worse than no arrangement. Would it not be possible to group all the analytical methods in one special chapter and to include tables giving the important facts relative to essential oils? Such an arrangement would be more complete and would economize space.

The purpose of the pharmacopœias must not be to limit the truth or to impose dogmatic limitations which are in force for years. They should be simply good manuals, easy to consult for precise and useful information. No longer legal standards, they should serve as reference books to which we might profitably turn in every difficulty.

Paper Discussed by the New York Branch.

A long discussion followed the reading of abstracts of this paper at the January meeting of the New York Branch of the A.Ph.A., in which Dr. Clemens Kleber, Dr. Dodge, of the Bureau of Agriculture, and others participated. Dr. Kleber recommended the adoption of 25° C. as the temperature at which specific gravities of oils should be obtained and that the atomic weights of the U.S.P. should be placed on a 0=16 basis. Otto Raubenheimer remarked apropos the criticisms of the U.S.P. that "the Frenchmen, in criticising our Pharmacopœia which appears every ten years, had forgotten that their own only appeared every 25 years."

THE WOULD-BE PERFUMER.*

By W. G. Ungerer, of New York City.

Almost every other man seems to want to become a perfumer now-a-days. The "woods are full" of the amateurs who, having read some formulæ and seen the advertisement of a purveyor of raw materials, deem themselves ready to send out to the yearning world some more kinds of perfumery. It looks so easy. Only a drachm of this, an ounce of that, a pint of the other, and here is a perfume that costs a few cents to make and may be sold for a dollar. This is the dream of the amateur—but the awakening comes.

Very soon he is surprised to note that the money is running low in the bank, that the stock is accumulating, for no one will buy his goods, and he himself begins to doubt whether he was ever adapted to the business.

The fact is that there are at least three elements necessary to the manufacture of salable perfumery: high grade raw materials, perfected formulæ, and most of all, expert manipulation. Many a deluded individual has paid a high price for some "exclusive and secret" formulæ or book on the subject, expended a large sum for raw materials, and then found himself seated before a mass of product which the most flattering friend could not call perfumery. The manipulation of the materials is really the most important element in compounding a perfume, and the manufacture of perfumery is a process of extreme delicacy. Perfumery making is not merely a science, which can be taught in a day or learned from books, but an art, which requires something more than exact knowledge. It is beyond dispute that the greatest perfumers the world has known are the French, and there the pursuit of this profession (for it is more than a trade in France) has been handed down from father to son, for generations, so that there is not only an inheritance of formulæ, but a far more important inheritance of artistic ability, taste and heightened sense for odor. It is this combination which makes for supreme success in the field of perfumery manufacturing, and it would be well for every would-be perfumer to consider the enormous risk of undertaking so special a business. If any ordinary business man with limited capital were to come to us and ask our advice about going into the perfumery business, we would advise him, in the famous words of *Punch:* "Don't!"

We certainly do not wish to sell raw materials to any amateur perfumer—for we are certain that, notwithstanding the irreproachable character of these materials, we would hear endless complaints as to the goods, when the fault would lie entirely with the ignorant manipulator.

If a man is desperately determined to go into the perfumery business, notwithstanding all that has been urged, let him employ an expert perfumer—and this is by no means easy to secure. Let him see that he has a very fat bank account, for it will cost him more than twice what he expects before he is well started—and then let him stop and consider once more.

It would be far better for the amateur perfumer to buy concentrated compounds from those who at least know something about the business, than to waste his time and money experimenting, in which all the chances are against success. Of course he will not secure any very original effects from these compounds, or produce any very remarkable perfumes, but at least he will not have thrown his money out of the window.

Of course there is much more than mere manufacture to a successful perfumery business. We have heard somewhere that the selling end is not a negligible element in attaining success, and that special ability is required for placing perfumes, especially if they are not well known or well advertised, but though the amateur "rush in where angels fear to tread," he cannot say that we have not tried to save him from the results of his folly.

Nor should the would-be perfumer forget the enormous competition which he faces in the perfumery trade. There are manufacturers already supplying every kind of demand, from the finest extracts in elaborate boxes, to the cheapest and poorest scented toilet waters that will bear a perfume label. What reason is there for him to expect patronage? Has he anything better to offer? Can he sell any more cheaply? Can he make his goods any better than known products with years of advertising behind them? In fine—what encouragement is there for the would-be perfumer to risk an enormous amount of money in a business which must take years to build up, if it is ever successful, against competition that is worse than killing? Is it not better for the amateur to try almost any other business in the world?

*Read before Scientific Section of American Pharmaceutical Association, Philadelphia, January 13, 1910.

Missouri Pharmacists Renewing Licenses.

ST. LOUIS, Jan. 20.—Charles Gietner, local member of the Missouri Board of Pharmacy, says that the applications for renewal of pharmacy license due January 1 are coming in rapidly and there is every reason to expect that by March 1, the end of the period of grace, that most of the 5000 pharmacists will be in line. The tone of the applications, according to Mr. Gietner, indicate that the law is well received and that the board will have more aid in its work than in the past. H. W. Servant, a member of the board from Sedalia, has resigned, but no action will be taken upon his resignation until after the January meeting at Jefferson City.

Era Course is a Good Investment.

Editor The Pharmaceutical Era:

I received my diploma to the ERA COURSE IN PHARMACY of which I am very proud. The course is as good an investment as a person can make who desires a pharmaceutical education. Wishing you the best of success for 1910, I remain, sincerely yours, HARRY H. HART.

Winnebago, Minn.

THE QUIZ MASTER

A MONTHLY SERIES OF PRACTICAL AND EDUCATIONAL QUESTIONS FOR DRUG CLERKS AND STUDENTS, WITH THREE CASH PRIZES EACH MONTH FOR THE MOST CORRECT ANSWERS.

THREE PRIZES of $5.00, $3.00 and $2.00 respectively, will be paid each month to the three persons submitting the largest number of correct answers to each monthly series of questions. In the event of a tie for any one of the prizes offered, such prize will be equally divided among the successful contestants. This competition is open to all who may desire to compete.

ANSWER BY NUMBERS and write your answers upon letter size paper (8x10 in.), one side only, with your Name and Address at the top of each sheet. Also number your sheets.

ALL ANSWERS for each month's series of questions must be sent at one time, and must be with us not later than the 15th of the following month.

CORRECT ANSWERS to each series of questions and the names of the three contestants who have been awarded the prizes will be published in the Era, after the close of the respective contests.

WE INVITE our readers to send us their questions for publication in this department, particularly questions related to the practical work of drug clerks.

ALL COMMUNICATIONS relating to this department should be kept separate from other correspondence, and addressed to

The Quiz Master
Care The Pharmaceutical Era 90 William St., New York

FEBRUARY SERIES, 1910.

1—What three fatty acids are commonly found in fixed oils?

2—Why are jars made of china or queensware not good containers for ointments?

3—Why do resinous tinctures precipitate upon the addition of water?

4—What are three U.S.P. drugs which are adapted for use as poultices?

5—Why should the measuring of potent medicines with spoons, glasses or cups be discouraged?

6—What four elements are most usually found in organic matter?

7—What advantages are claimed for formaldehyde as a disinfectant over chlorine or sulphur?

8—If benzoin cost 70c. per pound (avoir.), what is the cost of the benzoin used in making one gallon of tincture of benzoin? Show work.

9—What is the physiological action of sarsaparilla?

10—When water and a salt are prescribed in the same prescription and more of the latter is ordered than will dissolve in the quantity of water specified, why should heat not be used to increase the solubility of the salt in water?

11—What precautions should be observed in protecting perfumes from deterioration?

12—Why should silver nitrate be protected from light?

13—What occurs when soap is added to hard water?

14—What acid is frequently employed in the manufacture of imitation vinegar?

15—What does the anatomist mean by the "permanent teeth"?

16—What is the chief objection to the use of iodoform?

17—What official drug does the Pharmacopœia specify shall be preserved in hermetically sealed glass tubes?

18—Sweet root is a common name for what two official drugs?

19—What is meant by a corrosive poison?

20—What U.S.P. infusions are made by the cold process?

21—Aconite is sometimes mistaken for what common root?

22—What is the difference between two samples of alum, one of which is marked "alum, dried and powdered" and the other "exsiccated alum"?

23—What is the strength of (a) camphor liniment; (b) spirit of chloroform; (c) emulsion of cod liver oil; (d) syrup of hydriodic acid?

24—What occurs when copaiba is mixed with about a sixteenth of its weight of magnesium oxide?

25—What are the two classes of manufactured emulsions?

26—What is meant by pulverization by intervention?

27—What are four U.S.P. barks which are obtained from native trees of the United States?

28—What agent would you employ to cover up the odor of phenol in an antiseptic solution?

29—What is the official average dose of infusion of digitalis, syrup of ferrous iodide, sublimed sulphur, and colocynth?

30—What is the botanical name of the plant from which prunes are obtained? What part of the plant is official?

31—What occurs when a steel spatula is dipped into a strong solution of copper sulphate?

32—What means would you employ to retard oils of orange and lemon from acquiring a terebinthinate odor and flavor?

33—What are two drugs commonly called wormseed, neither of which is a seed?

34—What are three methods for mixing powders?

35—How many avoir. ounces of morphine would be contained in 1000 grams of opium which just meets the U.S.P. requirements? Show work.

36—What effect does ammonia water have upon an aqueous solution of ferric citrate?

37—What are the stomata of a leaf?

38—What are emollients?

39—What are syrups as used to designate a class of official preparations?

40—What have been two important difficulties which have interfered with the successful commercial cultivation of opium in the United States?

41—What U.S.P. pills contain soap?

42—What incompatibility exists between syrup of garlic and ammonium carbonate?

43—What are four elements, salts of which, are normal constituents of urine?

44—What is meant by "breaking" of an emulsion?

45—What is the appearance of resin of jalap?

46—What is the weight of a piece of wood which, when dropped into a graduated flask containing 50 cc. of water, causes the water to rise to the 55 cc. mark? Briefly explain answer.

47—When poisons in the solid form are dispensed, other than on prescriptions, what is your method for marking and wrapping the package you hand to the customer?

48—What are two metals which occur in nature chiefly in the form of sulphides?

49—What are the ingredients in essence of pepsin, N. F.?

50—What is meant in botany by plant organs?

Competitors, Please Notice.

The above questions is the complete series for February, and all who desire to compete for the prizes should see that their answers are received by the Quiz Master not later than March 15. Do not send your answers in parts, but mail them all at one time, and be sure to follow the instructions given at the head of this department. Answers in the handwriting of the competitors are desired, although such answers transcribed on a typewriter will be accepted. Careful penmanship is to be commended and this as well as neatness, order and spelling will be considered in grading the papers and awarding the prizes.

Answers Will Be Published.

So many answers in the affirmative have been received from the readers of this department in reply to the Quiz Master's query regarding the publication of the answers in the Monthly ERA that it has been decided to continue this feature of the Quiz Master's Department.

The Quiz Master has been much gratified with the interest manifested in this department not only by contestants, but also by druggists in all sections of the country, and, stimulated by these expressions of approval, an endeavor will be

made to make [illegible] of such nature as to warrant [illegible] in this department, on the part of the readers of the ERA.

The judges of the December contest of the Quiz Master's Department have awarded the prizes as follows:

First prize, $5, to Elsie Day, Lincoln, Neb.

Second prize, $3, to J. P. Brumfield, Galena, Kan.

Third prize, $2, to Charles K. Stotlemeyer, Hancock, Md.

Contestants wishing to know the grades which they have made in December contest may obtain this information on request by sending two cents for postage to the Quiz Master.

THE QUIZ MASTER.

Questions and Answers, December Series, 1909.

1—What is lactucarium?

The concrete milk juice of Lactuca virosa.

2—A prescription was written which called for 24 doses of extract of belladonna leaves, each dose to contain one-fourth of a grain of the extract; after the pharmacist received the prescription the physician requested that the dose of extract be reduced to one-half; how much extract will be needed for compounding, and how much of it will be contained in each dose of the mixture?

Three grains of the extract of belladonna will be used in compounding the prescription, and each dose will contain one-eighth of a grain of extract. If each dose contained one-fourth of a grain of extract, then twenty-four doses would contain six grains ($\frac{1}{4} \times 24 = 6$). If the dose is reduced one-half, three grains of extract will be required ($6 \div 2 = 3$), and each dose will then contain one-eighth of a grain ($3 \div 24 = \frac{1}{8}$).

3—Why should graduates which have contained oils not be drained into a waste paper container before they are washed?

The oil which accumulates in the waste paper container may cause spontaneous combustion.

4—What free acid and what important digestive ferment are found in the stomach?

Hydrochloric acid and pepsin.

5—What are mineral waters?

Mineral waters are waters which are used in the treatment of disease, either by internal administration or by external application, and which owe their virtue to their solid or gaseous constituents or to their elevated temperature.

6—What is the iodoform test for ethyl alcohol?

Dissolve a small crystal of iodine in the suspected liquid; to the cold solution add potassium hydroxide T.S. until the brown color of the solution disappears. If alcohol is present a yellow precipitate of iodoform will be formed.

7—Why should a horn or rubber spatula be used in dispensing ointment of mercuric nitrate?

Such spatulas are not attacked by the ointment which is acid in reaction.

8—How should granular effervescent salts be kept?

They should be kept in well-stoppered bottles, in a dry place, as they tend to attract moisture from the air and thereby rapidly deteriorate.

9—What is a more satisfactory stopper for containers of hydrogen dioxide water than stoppers of cork or rubber?

A pledget of cotton used as a stopper is said to retard the deterioration of the solution of hydrogen dioxide.

10—Why is the following equation not correct: $FeBr + K_2CO_3 = KBr + FeCO_3$?

There are several errors in the equation, first the chemical formula for ferrous bromide is incorrect, as it should be $FeBr_2$ instead of FeBr. Second, two atoms of potassium are represented on the left hand side of the equation, and only one on the right hand side, moreover having corrected the formula for ferrous bromide, another atom of bromine must be represented on the right hand side of the equation. The extra atoms of potassium and bromine can both be represented by changing the amount of potassium bromide from one to two molecules, and the equation correctly written will then read: $FeBr_2 + K_2CO_3 = 2KBr + FeCO_3$.

11—What antitoxins are official?

Diphtheria antitoxin.

12—What are four acids which contain hydrogen, oxygen and sulphur?

Sulphurous acid, H_2SO_3; sulphuric acid, H_2SO_4; pyrosulphuric acid, $H_2S_2O_7$; persulphuric acid, $H_2S_2O_8$.

13—What is the source of benzin?

A distillation product of American petroleum.

14—What is the source of benzole?

A product obtained from coal-tar.

15—How does rock candy differ from ordinary cane sugar?

Rock candy and cane sugar are identical in chemical composition. When a concentrated aqueous solution of cane sugar is gently heated and alcohol added, white semi-transparent crystals of hydrated sugar will separate from the liquid on cooling. These crystals have the shape of oblique four-sided prisms and are called rock candy.

16—In the preparation of what official pills is reduced iron employed?

Pills of ferrous iodide.

17—What change does santonin undergo when exposed to light?

When exposed to light, santonin assumes a yellow color.

18—What are four economic uses of plants?

Food, fuel, building material and medicine.

19—Why should spirit of nitroglycerin be handled with care?

Spirit of nitroglycerin is not considered explosive, but a dangerous explosion may result if any quantity of the spirit be spilled, and the alcohol be partly or wholly lost by evaporation.

20—What is a mixture as applied to a class of official preparations?

Mixtures, as applied to a class of official preparations, are aqueous liquid preparations for internal use, which contain insoluble non-fatty substances, usually held in suspension by substances having viscid properties.

21—If iodine is quoted at $2.85 a pound (avoir.), how much can be bought for $5?

1.7547 + lbs. For $5.00 you can buy as many times the amount bought for $2.85 as $5.00 \div 2.85 = 1.7547 +$.

Then 1 lb. $\times$ 1.7547 + or 1.7547 + lbs., the amount of potassium iodide which can be bought for $5. This problem can also be solved by proportion as follows: 2.85 : 5.00 :: 1 : X = 1.7547 + or 1.7547 + lbs.

22—What is the appearance of oil of cloves? What is its chief medicinal constituent?

A colorless or pale yellow, thin liquid becoming darker and thicker by age and exposure to air. Eugenol.

23—What is an official test to show the difference between creosote and phenol?

Phenol mixed with an equal volume of collodion will produce a permanent coagulum while creosote and collodion mixed in the same manner do not produce a permanent coagulum.

24—Why does the Pharmacopœia permit the presence of as much as one per cent of alcohol in chloroform?

Pure chloroform tends to decompose, and alcohol is added to counteract this decomposition and to preserve the chloroform.

25—What are the English equivalents for the following Latin contractions: (a) ad grat. acid.; (b) consp.; (c) gtt.; (d) q.s.?

(a) To an agreeable sourness; (b) dust or sprinkle; (c) drop or drops; (d) a sufficient quantity.

26—What are rubefacients?

Rubefacients are drugs which when applied cause local irritation and redness of the skin.

27—What is an official leaf drug whose activity is due in part to a volatile alkaloid?

Lobelia; the volatile alkaloid is lobeline.

28—What are the parts of a complete flower?

There are four parts, namely, the sepals constituting the calyx, the petals comprising the corolla, the stamens and pistils.

29—In handling soap bark, why should it not be agitated any more than necessary?

Soap bark should not be agitated any more than necessary, because the dust resulting from such agitation is very irritating to the eyes and mucous membrane, particularly that of the nose, causing sneezing.

30—What are two official drugs which are sometimes used in place of iodoform as dressings for wounds?

Thymol iodide and iodol.

31—What effect do strong acids or alkalies have upon phenacetin?

Strong acids and alkalies decompose phenacetin.

32—In this country, by what system of weight does the druggist usually buy his drugs?

By the avoirdupois system of weight.

33—What is the chief medicinal use of oxygen?

Free oxygen is chiefly used medicinally by inhalation in diseases of the respiratory apparatus, in asphyxia, and affections characterized by incomplete oxidation.

34—What is the average official dose of fluidextract of cascara sagrada, asafetida, emulsion of chloroform, diluted hydriodic acid?

Fluidextract of cascara sagrada, 15 minims; asafetida, 4 grains; emulsion of chloroform, 2 fluidrachms; diluted hyriodic acid, 8 minims.

35—What is the difference between mercurial ointment, diluted mercurial ointment and blue ointment?

Mercurial ointment contains mercury, oleate of mercury, prepared suet and benzoinated lard. Diluted mercurial ointment is made by mixing 67 parts of mercurial ointment with 33 parts of petrolatum. Blue ointment is a synonym for diluted mercurial ointment. Mercurial ointment contains 50 per cent of metallic mercury, while diluted mercurial ointment contains 33.5 per cent of metallic mercury.

36—What is meant by colloidal substances?

Colloidal substances are those which do not have a crystalline form, and will not pass through a vegetable or animal membrane by the process of dialysis.

37—How would you proceed to cut a piece of glass tubing?

Glass tubing can usually be easily broken by first scratching it across with a sharp three-cornered file, then grasping the tube with both hands, one on each side of the scratch, and making a slight outward and downward pressure.

38—What is the part official, botanical name and active constituents of podophyllum?

The dried rhizome of Podophyllum peltatum. The active constituents are podophyllin, picropodophyllin and podophllotoxin.

39—What is the physical difference between iodine, bromine and chlorine?

Iodine is a solid having a metallic lustre and a bluish black color; bromine is a heavy, dark brownish-red mobile liquid; chlorine is a greenish-yellow gas.

40—If one quart of a sodium chloride solution contains 40 grains of sodium chloride, how much of this salt is in one fluidounce of the solution?

One and one-fourth grains. $40 \div 32$ (fl. oz. in 1 qt.) = $1\frac{1}{4}$ or $1\frac{1}{4}$ grains in 1 fl. oz.

41—What are three vegetable drugs which contain emulsin?

Wild cherry, bitter almond and sweet almond.

42—What are five spices usually for sale in drug stores?

Cinnamon, cloves, allspice, ginger and myristica.

43—What changes does decolorized tincture of iodine, N.F., tend to undergo soon after it is prepared?

It usually acquires a disagreeable alliaceous odor and deposits crystals of sodium tetrathionate.

44—What is the official Latin name for (a) colophony; (b) precipitated phosphate of lime; (c) muriate of soda; (d) yellow prussiate of potash?

(a) Resina; (b) calcii phosphas precipitatus; (c) sodii chloridum; (d) potassii ferrocyanidum.

45—What part of cardamom contains the active medicinal constituents?

The seeds contain the active medicinal constituents.

46—What is approximately the volume of a wineglass?

Two fluidounces.

47—How would you soak a label from a bottle while the bottle is being filled?

Fasten a piece of wet blotting paper or sponge over the label by means of a rubber band, and by the time the bottle is filled the label can usually be easily detached.

48—What do you consider a good method for removing the odor of iodoform from a graduate?

Washing the graduate first with a strong solution of potassium or sodium hydroxide and then rinsing with a little alcohol is considered a good method by some reliable authorities, while others equally competent assert that the odor can be removed by first adding a few drops of oil of turpentine to the utensils and then washing with soap and water.

49—Why does effervescent sodium phosphate sometimes not effervesce?

Usually because the containers have not been properly sealed, thereby permitting the salt to absorb moisture and producing premature effervescence.

50—How would you clean a mortar which has become stained?

When the nature of the stain is known it is frequently not difficult to secure a proper solvent or cleansing agent, but when such information is not available the stains can usually be removed by treating the mortar with some strong oxidizing agent such as a mixture of sulphuric acid and potassium dichromate, or sulphuric acid alone, or chromium trioxide.

The Era Course in Pharmacy.

Begin the new year by enrolling as a student in the ERA COURSE IN PHARMACY and use to good advantage time and money which were formerly wasted. The ERA COURSE is a home study course in Pharmacy which is divided into ten parts with recitations and examinations by mail. Thorough instruction is given in General Chemistry, Theoretical and Practical Pharmacy, Botany and Materia Medica. The cost of the Course is ten dollars, and each student is given gratis a year's subscription to the Monthly ERA. A prospectus will be sent by the publishers of THE PHARMACEUTICAL ERA to any one who applies.

New classes are organized each month and now is an excellent time for students to enroll, because the ERA COURSE can be most profitably and advantageously studied during the winter evenings.

N. Y. COLLEGE OF PHARMACY ALUMNI DANCE.

Old Grads Enjoy Themselves at Annual Ball—Honorary President Ewen McIntyre Leads Grand March.

The fifteenth annual ball of the Alumni Association of the College of Pharmacy of the City of New York held recently at the Harlem Casino, 124th street and Seventh avenue, was attended by many of the graduates and students and their ladies. The hall was tastefully decorated for the occasion, the boxes in the balcony being especially gay with the various colored banners of the classes and fraternities.

The grand march which took place at 10:30 o'clock and in which about fifty couples participated, was led by Ewen McIntyre, honorary president of both the college and the alumni association, and William Ebbitt. Second in line was Hieronimus A. Herold, president of the association. After the march, dancing was begun and it was not until the wee, small hours of the morning that the gayety came to an end. The committees having the affair in charge were as follows:

Executive—Chairman, Ewen McIntyre, William Ebbitt, H. A. Herold, C. P. Wimmer and F. A. Leslie. Floor—Chairman, Ed. Pfaff, C. W. Ballard, F. Borggreve, W. Gale, N. R. Hirsch, F. P. Tuthill, A. G. Gilmore, L. W. Brown, Th. M. Davies, S. May, Wm. Pruss, W. J. Ferrier and N. S. Tow. Reception—Chairman, N. S. Kirk; assistant chairman, W. A. Hoburg, Jr.; A. C. Searles, G. Hohmann, L. W. Geisler, E. F. Thode, F. N. Pond, A. Henning, O. Raubenheimer, C. S. Erb, G. A. Ferguson, W. B. Stacom, G. F. Burger, F. L. Linnig, G. Abbehusen, F. L. Nagel, B. E. Dawson and A. Hegeman. Press committee—Chairman, Caswell A. Mayo, C. A. Lotz, F. W. Brown, F. W. Welbert, William A. Ward, E. W. Blake and Wm. E. Warner. Ball—Chairman, Ewen McIntyre; vice-chairman, William Ebbitt; treasurer, C. P. Wimmer; secretary, F. A. Leslie; C. W. Ballard, A. J. Bauer, F. Borggreve, R. Duckworth, C. S. Erb, P. M. Everts, W. J. Ferrier, L. W. Geisler, A. Henning, G. Hohmann, N. S. Kirk, H. C. Lovis, E. Pfaff, F. N. Pond, A. Vorisek and W. H. Ward. Graduate—Wm. B. Stacom, C. A. McBride and J. A. Steffins. Floor manager—Edward F. Pfaff; assistants, P. M. Everts and R. Duckworth; chief usher, A. Kuhlman; ushers, H. D. Miller, G. A. Cheney and A. Hamelin, all juniors, and E. Auchenpaugh, M. H. Weil and A. Lawson, seniors.

World's Fair to Be Held in New York in 1913.

The New York Advancement Co., which was incorporated last month at Albany to organize and hold a world's fair in New York in 1913 in commemoration of the 300th anniversary of the settlement of Manhattan Island by the Dutch, has elected James F. Graham, temporary president and George N. Moran, secretary. The committee on site reported that it had received six offers of sites ranging from 300 to 962 acres, four of which are in the city limits and two in the suburbs.

International Congress of Hygiene Postponed.

On account of the unpreparedness of the United States the proposed International Congress of Hygiene, which was to have been held in Washington, D. C., during the present year has been postponed, and the Senate has adopted a resolution validating for 1911 or 1912 the invitations heretofore extended to other nations for 1910. A resolution, authorizing the extension of invitations to the various states of the Union, has been adopted.

ADVERTISING HINTS

TWO NEARBY WINDOW TRIMMING DAYS.

St. Patrick and the Eggs.

This year Easter comes at an earlier date than for ten years (March 27) and thus brings within one month two notable window trimming occasions—St. Patrick's Day and Easter.

A Combination Window.

For those who wish a combination display commemorative of both anniversaries, the following description will be found both suggestive and helpful:

Across the back and sides of the window place a dado, or wall, of plain white, or cream-tint, wall-paper, as high as necessary store lighting will permit. Of course, one must also consider the size of the window to be enclosed, and as a general guide it may be said that this wall, or lining, should not be higher than the breadth of the window floor from the glass to the rear edge. From smooth, emerald green paper cut a number of figures to represent shamrocks or clovers, from eight to twelve inches across or of a size that will best conform to the size of window. An enlargement of a playing card "club" answers well for a pattern. Paste these shamrocks along the upper edge of the white dado so as to form a border. Now cut out numerous "eggs" from paper of several colors and of varying sizes and attach them promiscuously to the balance of the dado. Cover the floor of the window with green cloth, excelsior or sawdust. Take pliable strips or pieces of hoop and so tie as to form a deep cup. Cover the cup with white paper to imitate large egg-shell. Make the edge of opening at the top irregular, to resemble the "broken" edge of a shell. Mount this on wheels to form a "chariot". With white and green ribbons hitch four or more "candy-box" rabbits to this chariot. Arrange artificially lilies and other flowers to hang over the top of the egg. Take a doll of appropriate size and dress it in green robe and cowl. Stand this "St. Patrick" at the head of the rabbit team. Place a rough staff in the hand of the doll. Have a card lettered—

> Easter comes so early this year that
> St. Patrick leads it in.

Display candies, perfumes and other articles, or gift goods, with packages of green, white and gold predominating.

The Real Sod

Arrange a dado as previously described, but omit the paper "eggs." Take a large shallow box or pan, fill it with loam and in it plant clover seed. Do this in time so that the seed will sprout and produce a good growth of clover before St. Patrick's Day. Place the box containing the clover in the centre of the window. Upon a stick thrust into the earth attach a sign announcing that the box contains—

> A rale bit 'iv th' owld sod.

In the window display appropriate merchandise.

The Harp of Erin.

Make a harp frame of light wood or heavy cardboard and cover it carefully with green silk. Use a narrow yellow ribbon or confectioners' gilt cord for harp strings. Cover the sides [illegible] as in the combination display described above, omitting the eggs. Stand the harp on a white pedestal in the centre of the window. In front of the pedestal arrange a stand of small American and Irish flags. Around the edges of the window floor place pots of growing palms or other plants. Display a card [illegible] of appropriately colored goods.

Incidentals.

Some suggestions which may be utilized in arranging window trims for St. Patrick's Day are the following: A Belgian paving block or other piece of stone labeled "A chip from the Blarney stone", a battered silk hat with green band, clay pipe stuck underneath the band, and a policeman's club, labeled, "[illegible] Pat. His Irish crown and American sceptre"; a large Irish potato labeled, "The brain builder, muscle maker and nerve nourisher of the ruling race"; a flask of whiskey labeled: "Where the only snakes of Ireland are to be found"; or, a pair of old boots may bear the label "Where St. Patrick drove the snakes of Ireland."

For Easter Only.

One of the most simple, and yet artistic displays seen in New York last year was made as follows: Procure seven pliable strips of wood about one-third greater in length than the distance between the floor and ceiling of the window. Upon the floor of the window, near the centre of the rear edge, nail a block of wood as long as the combined widths of the strips. If the strips are two inches wide the block or thick board should be twelve inches long. Take one of the strips and place one end against the inside edge of the block. Spring the other end forward and downward so that it will touch the window glass at the extreme top and exactly in the centre of the width of the glass. Spring the other strips similarly into position, on each side of the central strip, but spreading at the top like a fan. The object is to arrange the strips to form a fan-shaped, semi-dome canopy frame, similar in proportions to the sounding board placed behind a pulpit. When the strips are in place fasten them by nailing at the top and bottom to the window ceiling, and the block respectfully. Cover the inside of the shell-like frame thus made, with white muslin, or cambric. Upon the overhead surface of the canopy fasten gilt stars. Below the gilt stars fasten light blue, then dark blue and finally black stars. Mingle the gold with the light blue for some little distance. Blend the light into the dark blue and the dark blue into the black. In the downward direction increase the thickness of the stars and also their size, so that when within three feet of the floor, the white surface will be almost entirely covered with black stars. Procure a very large flower-pot or waste basket and cover it with gilt paper. Within the basket place an immense bunch of vivid crimson, tissue paper chrysanthemums, and then stand the floral display in the exact centre of the window beneath the canopy.

The Dye That Won't Come Off.

A novel display for advertising dyes was made as follows: In the centre of the window a large doll attired in a long white slip was seated and around it were scattered broken egg shells which had been dyed in various colors. The doll's face and hands were grotesquely smeared with dyes of many colors and the slip which it wore was streaked with dyes. Around the doll and broken shells was a display of dyes and a large card announced "Our dyes are the sort that won't come off."

Artificial Lilies.

For general Easter decoration, artificial lilies may be made as follows: Cut strips of thin copper wire in lengths of twelve inches. Tie them in bunches of ten, wrapping each bunch for nine inches of its length in green tissue paper. This forms the stem of the lily. Cut the lily leaves each three inches long from white crepe paper. Bend out the ends of five of the wires so as to radiate in the direction the leaves should take. Gild or wrap the ends of the other five wires so as to form the calyx. Now paste a lily leaf on each side of each of the radiating wires, so that the wires will be hidden between the layers of paper. When dry, each leaf may be bent or curled by manipulating the wires.

A Satirical Display.

Procure an ordinary gingham sun-bonnet, place it upon a stand, and label it "Grandmother's Easter bonnet." Procure a willow, or grass waste-paper basket, invert it, fasten a number of duster feathers to the bottom and surround the edge of the bottom with a wreath of garlic or onions. Festoon the sides with vivid flowers interspersed with a few lemons and turnips. Procure four or five three-foot wires and upon the end of each place a six inch disk of gilded cardboard, a champagne cork, a lump of coal, or other grotesque hat-pin head. Force these "pins" through the basket. Place the inverted basket beside the sun-bonnet and label it: "Granddaughter's Easter hat."

Druggist Fined $3500 for Illegal Liquor Sales.

ST. EDWARDS, Neb., Jan. 20.—A. D. White was recently found guilty on 14 counts of selling liquor without a license and to minors, each count costing him $250.

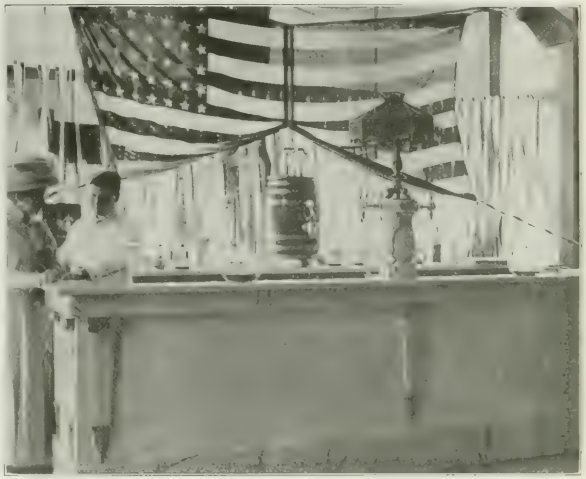
The SODA FOUNTAIN and CANDY COUNTER

Unique Location for Fountain in a Milwaukee Pharmacy—Some Strong Sellers.

One Milwaukee fountain that has been in steady operation all winter, despite the fact that it is not located in the busy downtown section, is the handsome new iceless fountain in the Puritan Pharmacy, Biddle and Van Buren streets. Samuel A. Schwandt and Robert W. Hindley, the two enterprising young proprietors of the pharmacy, are strong advocates of winter service at any fountain that can boast of a fairly good location. Hot chocolate, hot soda water and warm drinks of all kinds have reigned supreme at the Puritan Pharmacy all winter and the proprietors are far from being disappointed with results.

"Our fountain has been a tremendous success all winter and you can be sure that we are strong advocates of the 'all-the-year-around' fountain," said Samuel A. Schwandt. "The winter service that we have been offering seems to have been even more popular than we had even anticipated and there is no doubt but that with the experience that we have met with this winter that we will be able to double our trade next winter."

It was on July 3, 1908, that the Puritan Pharmacy was opened by its present owners, but before this time a well known drug store had been conducted in the same location, known as the Meadows Pharmacy. But with the appearance on the scene of the new and enterprising owners, things began to take on another aspect. Trade began to increase gradually at the rate of 20 per cent each month and steady advances are still being made. Samuel A. Schwandt, who is shown in the picture, had had ample experience in the pharmacy field before he opened the Puritan, having been located with Max Goetz's Merrill Park Pharmacy at Grand avenue and 27th street, for more than 15 years. Robert W. Hindley, the other proprietor, was for several years a chemist with the Horlick Malted Milk Company, of Racine, Wis., and later had wide experience in various pharmacies of the State.



Samuel A. Schwandt at Puritan Pharmacy's New Fountain, Milwaukee.

The Puritan Pharmacy has many advantages of location favorable to both the fountain and drug trade. It is situated right at the foot of Milwaukee's aristocratic east side residence section, a fact which insures a steady family trade, at least under the excellent business methods adopted by the present owners. To get to the downtown section of Milwaukee, many of its upper east side residents pass the Puritan Pharmacy. Then, of course, the transient trade is also important.

The picture discloses a most unusual location of the fountain, directly in the front window of the pharmacy. This is the only fountain in Milwaukee so located and the tremendous success that it has secured is a sure indication that there are many strong points in favor of such a location.

"The peculiar location of our fountain has attracted no end of comment," said Mr. Schwandt, "but the results that this location has brought us are more than pleasing. In the first place, the fountain, so located, is an attraction from both the exterior and the interior of the store and the fact that it is displayed to such an advantage naturally helps to increase trade. Then the saving of wall space for display cases and shelves is of no small importance. The space in the window would be liable to go to waste, but now it is utilized in the best possible manner, while the space that it would occupy at any other point in the store is now being used to the best possible use. As nearly as we can figure it out, we are securing just double the amount of space by this arrangement. We are now able to have ample room in the rear of our store for tables and chairs. Then there is the added advantage that this arrangement gives us plenty of opportunity to get around both sides of the fountain. I believe that many pharmacists might well follow this plan of ours, especially if their stores are not as large as they might be."

In the short time that it has been in operation the Puritan Pharmacy fountain has made itself especially well known, not only for excellent service, but for the wide variety of unusual dishes and drinks that are served. One of the big drinks served at the fountain last year was the celery phosphate, something rather unusual, and a drink that became popular from the very start. Another big seller was the "Merry-Go-Round" sundae, served in a champagne glass with a cone-shaped, hollow center, topped out with a slice of pineapple and a cherry and syrup to suit. This proved to be so popular that it is being called for even during the cold winter months.

Mr. Schwandt, who has general charge of the fountain, is "chuck full" of good ideas in regard to fountain service and to the serving of new and attractive dishes.

"Next year we will serve more ices, because I can see that there is a growing call for them," said Mr. Schwandt. "We will serve an ice in the usual manner, with shaved ice, fruits, phosphates and with a lemon or a wine flavor. A really good ice, daintily served, is always acceptable, especially in hot weather."

Both Mr. Schwandt and Mr. Hindley are enthusiastic over their fountain trade and both stand for the very best of service at the fountain, demanding absolute cleanliness in every respect from their dispensers and seeing to it that only the highest grade of everything is served over the fountain at all times.

"I think that it is a good suggestion for every dispenser to

adopt to feature the serving of buttermilk at all times of the year," said Mr. Schwandt. "Even here in Milwaukee, one of the greatest brewing centers of the country, I find that our buttermilk trade is enormous. I am confident that buttermilk has come to be a staple necessity at almost any fountain. This reminds me of another feature and that is the serving of Ilires nectar from the keg. We keep a keg on our fountain the year around and it is surprising how people like it."

FORMULAS.

Winter Bracer.

Pour ½ an ounce of sweet cream into a mug and add 1½ teaspoonfuls of powdered chocolate, 1 ounce of clam juice and a little butter. Fill with hot water and season to taste.

Special Cherry Milk.

Cherry syrup, 1 ounce; banana syrup, ½ ounce; whipped cream, ½ ounce; chipped ice, a sufficient quantity. Place in a 10-ounce glass, fill with milk and serve with spoon and straw.

Nedra Sundae.

In a fancy sundae glass place 2½ ounces of chocolate ice cream, 2 ounces of whipped cream and 1½ ounces of orange frappe. Then put on a few chopped walnuts, a Mexican kiss candy and half a slice of lady finger cake. On top put a teaspoonful of whipped cream and a red cherry.

Southern Railroad Special.

Into a fancy grape juice glass put ½ ounce of orange frappe, 1 ounce strawberry cream, 1 ounce vanilla cream, 1 ounce whipped cream, ½ slice of fresh pineapple and ½ of a macaroon cake. Serve with a fancy colored napkin.

Red Men's Special.

Serve in a fancy dish: One-half ladleful of tutti-frutti frappe and ½ ladleful of vanilla cream. Around the sides of the frappe and cream put a few chopped cherries and top off with a teaspoonful of whipped cream. Put one whole walnut on top.

Creamed Egg.

Into a shaker place 1 ounce of orange syrup, 1 ounce of pineapple syrup, 2 ounces sweet cream, a dash of soft ice cream, and 1 egg. Add shaved ice and shake well. Strain and add carbonated water, fine stream, to fill 12-ounce glass. Top off with nutmeg and serve with wafers and napkin on the side. Price, 10 cents.

Victory Sundae.

Place a cone of vanilla ice cream (10 to the quart) in a sundae dish and cover with maple caramel sauce. Top off with a maraschino cherry and add a few English walnuts. Price, 10 cents.

Ginger Ice.

Reduce ginger syrup as served at the fountain one-half with simple syrup; put a ladleful of this syrup on a cone of lemon sherbet (disher No. 12) and stick in the top either a piece of crystallized ginger or a festino.

Nut Souffle.

Place into a sundae glass or cup 1 ladleful of vanilla ice cream and over it pour vanilla syrup. Sprinkle with chopped nuts and top off with whipped cream.

Mixed Nut Dressing.

Chop fine ½ pound of English walnut meats, ½ pound pecans and 2 ounces of roasted almonds. Reduce to the proper consistency with maple syrup.

Natalie's Nectar.

Raspberry juice, 4 fl. ounces; pineapple juice, 2 fl. ounces; extract of vanilla, 1 fl. ounce; extract of almond, ½ fl. dram; sugar enough to sweeten to taste. Add foam solution, q. s.

Ambrosia Syrup.

Various mixtures of different flavors are dispensed under this name. As good a formula as any is raspberry syrup, 1 ounce; orange syrup, ½ ounce; pineapple syrup, ½ ounce; place in a 12-ounce glass with 2 ounces of strawberry ice cream and fill glass with carbonated water.

Hot Champagne de Menthe.

Into 8 ounce mug pour 1 ounce of champagne syrup and ½ ounce spearmint syrup. Add 3 dashes of acid phosphate solution, fill mug with hot water, mix, and float a slice of lemon on top.

Merry Widow.

Slice ½ of a banana crosswise and place the slices on a small butter plate. Over the slices place a ladleful of good stiff ice cream and over the cream sprinkle finely ground nuts and top off with a maraschino cherry. Over all place a ladleful of whipped cream that has been sweetened.

Hot Egg Caramel.

Chocolate syrup, ½ ounce; vanilla or almond syrup, ½ ounce; coffee syrup, ¼ ounce; 1 egg; sweet cream, 1 ounce; hot water to fill mug.

Princeton McAlpin.

Orange syrup, ½ ounce; raspberry syrup, ½ ounce; grape juice, ½ ounce; claret syrup, ½ ounce; 1 ladleful Hawaiian pineapple; shaved ice; ½ slice of orange; 2 cherries; fill glass with carbonated water, coarse stream, and serve with spoon and straws.

Ananassa Meringue or Sundae.

On an ice cream saucer put 2 dipperfuls of vanilla ice cream (20 to the quart); place on this 1 meringue shell and over it pour 1 ladleful of Hawaiian grated pineapple and a small quantity of whipped cream. Sprinkle with powdered sweet chocolate and add a red cherry. By omitting the meringue this delicacy can be served as a sundae.

Maple Cream Syrup.

Fresh cream, 1 pint; fresh milk, 1 pint; maple sugar, 4 pounds; gum foam, ½ ounce. Boil the sugar with the milk and add the cream and gum foam.

Pharmacists and the Fountain.

—A CANDY display of more than ordinary merit in the windows of the Krueger drug store at Shawano, Wis., has been attracting much attention.

—HOT lunches will be served in the Baker-Jones pharmacy in West Main street, Battle Creek, Mich. The store has been renovated and greatly improved.

—STANDARD PHARMACY, Elizabeth City, N. C., is installing a new and elegant fountain which will be ready for use with the first breath of milder weather.

—MARTIN & MOORE are spending about $3000 in enlarging and improving their pharmacy at Kankakee, Ill. A new and larger soda fountain is a part of the new equipment.

—MOORE DRUG STORE in Knoxville has been refurnished and the mahogany fixtures give a getter setting than was possible before to the handsome onyx fountain in the salesroom.

—TAMBLYN'S new drug store at 232 Yonge street, Toronto, Ont., which is finely fitted, has a soda fountain and candy counter, in addition to numerous tables for the accommodation of patrons who prefer to sit while partaking of fountain beverages and ices.

—W. C. BEBGER pharmacy at Bridgeton, N. J., has been sold to William E. Glaspell and others composing the Cuskaden-Glaspell Company. Mr. Glaspell, who is a graduate of the Philadelphia C.P. and has managed pharmacies in Philadelphia and Atlantic City, will pay special attention towards popularizing the fine fountain which is an attractive feature of the store.

Fountain Dispensers Accused of Theft.

WASHINGTON, Jan. 20.—Lonsworth Shuldt, alias Harry Taylor, and George Graham, dispensers at the fountain in O'Donnell's drug store, were arrested recently on charges of theft. Detectives had been placed in the store in the hope of discovering those who were guilty of taking missing toilet articles and fountain silverware. It is alleged that Shuldt and Graham were caught in the act and they were convicted in the police court, being fined $10 each. Shuldt claims to be from Newark, N. J., and Graham from New York and declare they have been chums for five years.

Candy in Drug Stores.

Pharmacist Davis Finds it Profitable to "Treat" His Youthful Patrons to "Sweets."

Casting bread upon the waters is the way Samuel B. Davis regards the giving of candy to every youthful patron of any of the six retail drug stores which he conducts in Philadelphia. And Mr. Davis is credited with thinking out some extremely clever trade-getting ideas which many of his fellow-druggists have promptly adopted. To a representative of the ERA, Mr. Davis discussed the situation about as follows: "You see all my places are neighborhood stores and there are plenty of young folks who do the errands for the family. Well you know, too, that there are very few youngsters who do not have a sweet tooth and their taste for sweets is generally greater than their means to gratify it. Now suppose they are sent on errands. If it is at all possible they will get the desired article at the store where they know they are going to receive a few pieces of candy. Sometimes two or three will come in and combined the sale may not amount to more than 5 cents. The next time, perhaps, the amount of the sale is 50 cents and the youngster will not think of going to any place but the one that gives away candy, even although he may have to pass several other stores to get to mine.

SAMUEL B. DAVIS.

"Many proprietors declare that it is a nuisance. It may be in their case, for perhaps the neighborhoods are not adapted, for several reasons, to giving away in this manner. But most of the patrons of my stores buy just when they need it—they want it as soon as possible and the quickest way to get it is to send one of the children into the store for it.

"You know that with the right kind of service, the parents and older members of the family will unconsciously follow the lead of the children. It gives you an opportunity to secure the trade of families when many other more expensive methods would fail. And the cost is so trifling. It may run as high as 25 cents a day, but can you adopt any cheaper advertising plan that would be as far-reaching? Besides I find that it helps to build up by sale of candy in bulk, the 5-cent sales that are so profitable to the retail druggist.

"Then, again, look at the pleasure it affords the youngster whose circumstances provide for absolutely no pennies spent on the sweets so dear to him. You forget that it is a business proposition when you see their faces light up as you hand out the expected sweets. You can't resist an added portion when you know that such circumstances exist and you make a friend for life of the boy or the girl to whom candy and the getting it for nothing is an event long remembered."

And it does look good to see the genial druggist with a "Here you are" dip into the box of moderate priced "chop-sticks" and similar confections just under the counter and drop a few pieces into the outstretched hand of the youthful purchaser of "five cents worth of Epsom salts" or even five postals. Perhaps ten minutes later, Mr. Davis has a 'phone call for some one in the neighborhood. He has only to go to the door and any boy in sight is only too glad to run the required errand and is just as willing to be remunerated with a handful of candy. It is business, but it is tempering business with sentiment in a manner that has made Mr. Davis one of the best known and most popular druggists in the neighborhoods in which his stores are located.

Krueger Fountain Now Runs All Winter.

Believing that it should start out the New Year right, the Krueger drug store at Shawano, Wis., opened its fountain with a full line of both hot and cold drinks. The store's fountain has, as a rule, been closed during the winter months, but the management has arrived at the conclusion that a winter trade may be made all important.

Fountain Advertising.

Valuable Off-Season Hints and Suggestions for Promoting the Publicity Department.

IN a country of such great extent as ours, there is such a wide range of temperatures that the fountain owners in the Northwest may be properly advertising hot soda when the owners on the Gulf Coast are appealing to a perspiring public with frigid beverages. However, taking the country in general, we may safely say that the late fall and late winter weeks are generally off-seasons in the fountain business. Now, as it is an established rule with the successful business men in all lines to do their most vigorous advertising in off-seasons, the fountain owner will do well to make especial advertising effort during those weeks when seasonal changes are showing the most rapid fluctuations of the thermometer.

In the following will be found an outline of a short advertising campaign for an off-season. This outline is, of course, merely suggestive, and intended to give examples of several classes of advertising.

A Portrait Contest.

Procure photographs of twenty-five well-known men, whose prominence ranges from local to national fame, the mayor of your town, local Congressman, Rockefeller, Edison and other men in the public eye. Take these photos to a photographer and have his retoucher disguise each face with painted whiskers, spectacles, or other additions that will not change the lines of prominent features. Remove or cover all names or identification marks that may be upon the photographs. Attach the photographs to a large board or other suitable backing, number each in consecutive order, and then place the board in the window or display it in the store, as may seem best.

Procure a sufficient number of cards, each having twenty-five numbered lines upon which to write the guesses, and with lines at the top for the guesser's name and address. Above the photographs place a show card lettered thus:

Give them a shave, massage, or knock their glasses off. These are portraits of prominent men who are partly disguised for the occasion. Guess who they are. Ask for a guessing card and write your guesses thereon. It will cost you nothing. Only one set of guesses allowed to a single person. Those guessing the entire 25 correctly receive five soda checks FREE. Three checks to those who guess 15. Two to those who guess 10. One to those who guess 5.

Have the guessing ballots placed in a locked box, and upon a certain date open the box and distribute the prizes.

A Specimen Off-Season Newspaper Ad.

BLOW HOT OR BLOW COLD,
We Are Right Here With the Goods.

This is the changeable season, when folks who come in for a Hot Soda often top it off with a Cold One. But of all things, this is the season for Eats—

SUNDAES.

We have a new wrinkle in a Caramel Nut Sundae. It's a fifteen-center; but it's

A DAINTY ROUND MEAL IN ITSELF.

FOR THIS WEEK ONLY!

A five-cent cigar or five cents worth of candy or gum with every

CARAMEL NUT SUNDAE.

The above advertisement was set in four inches, double-column space, and it proved to be a first-class business bringer.

The Octopus Window Trim.

With string and waste-paper make a ball about 18 inches in diameter. Make another ball six inches in diameter. Fasten the balls together to form the head and body of a devil-fish. Cover with pale yellow or ivory-white paper. Mark the eyes

and other features in red and black and as grotesque as possible upon the small ball, or head. Suspend by fine wire from the ceiling and in the center of the window. From the large ball which represents the body run spirals of crepe paper in simulation of the tentacles or arms of the devil-fish. Let these tentacles radiate from all sides, and fasten their ends to the top, sides and bottom of the window. At the fastened end of each tentacle attach a card bearing the name of some drink or dish. Make a light candy exhibit upon unoccupied part of window floor. Have a large show-card lettered with the following:

> We are down in the crowds but we are getting to be AN OCTOPUS ourselves. We can't help it.
>
> Our fountain goods are so good that we are rapidly becoming monopolists of the soda and sundae business.
>
> Come in and patronize the little trust that nobody wants to bust.

The Meal Ticket Scheme.

An off-season is a particularly appropriate time for starting the "meal ticket," a scheme which has been particularly successful with the few fountain owners who have adopted it. Have a heavy, good quality card printed somewhat as follows:

> Miller's Meal (and Drink) Ticket
> ONE DOLLAR AND FIFTEEN CENTS
> FOR A DOLLAR
> Keep this ticket always with you and present it when making a purchase at the fountain.

The dispenser will punch one 5c. mark for each nickel purchase. Around the edge of the card have "5c." printed 23 times. Sell the cards for a dollar each, but give $1.15 worth of drinks for each card. Your dispenser should be furnished with a punch, and cancel a figure five for each purchase of that amount.

Advertise the scheme. Call attention of people to the fact that they virtually receive 15 per cent interest on the investment of a dollar; that they get from three to five times the interest paid by savings banks and they can draw both interest and principal as rapidly as they choose—in soda.

The issuer of tickets of this sort rarely really gives 15 per cent, for a good many tickets are either lost or mislaid before being entirely used. The scheme is such a business stimulator that one can well afford to give full face value of the ticket in drinks. It is merely human for the possessor of the ticket to drink more often than he would if each transaction was on a cash basis. In fact he will "treat" more frequently and liberally, buy higher priced beverages and will confine his soda patronage to the store for which he has a ticket. This plan is better than that of selling separate soda checks in quantities at a discount, because it more closely confines the use to the original purchaser, prevents speculative peddling of checks by boys and girls, and looks bigger to the purchaser. For protection the tickets should be consecutively numbered, or bear the signature of the fountain owner. They may also be marked "Not transferable," and bear the name of the purchaser.

An excellent way to popularize the tickets is to frequently offer, *to ticket holders only*, some special 10-cent drink for 5 cents.

A Glimpse of Spring.

Spring is the season that rarely arrives on time, except on the calendar. It is noteworthy that the blustering storms of February and March make a much more disagreeable impression than storms of equal severity in mid-winter. It therefore follows that there is no season when leaves and flowers are so appropriate for advertising purposes as during the few weeks before out-door nature brings them. So this is the time of year when it is good advertising to trim the fountain, or window, or both, with artificial vines and flowers. If you have a columned wall fountain, bank it high with blooms of tissue-paper or other artificial flowers. If you have no canopy, make one with wooden uprights and cross pieces, cover with violet tissue and deck with roses, or cover with pink and white tissue and deck with violets.

Any of the many flower window trims which have been described in *The Soda Fountain* and ERA are adaptable for fountain advertising at this season of the year. Add colored electric lights if you can. Use your floral decorative material lavishly, thus suggesting the abundance of spring's b'essings.

Women's Organizations.

Activity of Washington Chapter, W.O.N.A.R.D.

WASHINGTON, Jan. 20.—Mrs. Nellie Florence Lee, National president, W.O.N.A.R.D., was present at the January meeting of Washington Chapter, held this evening at the residence of Mrs. W. H. Bradbury. There was an excellent attendance, with the president, Mrs. Roger Duffy, in the chair. Mrs. Lee spoke interestingly of the work of the National organization through its constituent chapters. She dwelt upon the accomplishments through the campaigns for the suppression of immoral advertising, sales of suggestive postal cards and other questionable merchandise, and the cigarette evil.

The recording secretary, Mrs. Augustus C. Taylor, read the usual reports. Several new members were welcomed. By request of several of the members, Mrs. Charles J. Fuhrmann read "The $500 Prescription," Joel Blanc's story in the January ERA. This story was officially endorsed as being one of great moral strength, and one which would tend to inspire its readers to higher efforts. During the social hour refreshments were served by the hostess.

Pushing Propaganda Work in Chicago Chapter.

CHICAGO, Jan. 20.—Mrs. Charles A. Redig, chairman of the publicity committee of Chicago Chapter No. 2, W.O.N.A.R.D., is sending out copies of the report recently made by the propaganda committee, composed of Mrs. W. H. Brown, Mrs. Joseph F. Forbrich and Mrs. George P. Mills, chairman. The report includes pertinent questions regarding women's co-operation in carrying on the propaganda campaign and will undoubtedly prove of value in aiding this work.

A general invitation has been extended to druggists and doctors, with their better halves, to attend the card party to be given by the chapter in Assembly Hall, N.W.U. Building, at 1.30 on the afternoon of February 8.

Tolstoi and Other Features in Boston.

BOSTON, Jan. 20.—The January meeting of Boston Chapter, W.O.N.A.R.D., was held this afternoon at the Hotel Vendome, with Mrs. Roxa K. Stover, of Cambridge, presiding. Mrs John W. Lowe was in charge of the programme, which consisted of an address on "Tolstoi" by Professor Richards, piano selections by Mrs. Freda Gerhard, and readings by Miss Eames. At the business session Mrs. Lowe and Mrs. Frank F. Ernst, of Jamaica Plain, were elected delegates from the chapter to the mid-winter meeting of the Massachusetts Federation of Woman's Clubs, on February 1, at the Park Street Church. A pleasant feature of the meeting was the distribution of the chapter year books.

Members of Cincinnati Chapter Twice Entertained.

CINCINNATI, Jan. 20.—Mrs. L. C. F. Cramer, of Cincinnati Chapter of the W.O.N.A.R.D., entertained the members a few days ago at her home in Tusculum with a musicale, assisted by Mrs. R. C. Yowell, of Hyde Park. Mrs. John Fallon, president of the chapter, also entertained the members at her home in Crown street, Walnut Hills. Both events were extremely enjoyable.

Westchester County Ph.A. Elects Officers.

The annual meeting of the Westchester County Pharmaceutical Association held recently at Park Hill Inn, Yonkers, N. Y., was attended by thirty or more members and the guests of the occasion, Mayor J. T. Lennon, Yonkers; Dr. William Muir, Clarence M. Lyon and Albert Van Houten. Dinner was served at a large circular table. Addresses were made by Mayor Lennon, Dr. Muir, Mr. Lyon and Ulrich Wiesendanger.

The officers elected for the ensuing year are: President, J. H. Thomas, Yonkers; first vice-president, F. Farrington, Tarrytown; second vice-president, F. L. Guernsey, Ossining; treasurer, J. B. Sackett, Tarrytown; secretary, J. Roemer, Chappaqua. Committees appointed: Executive, L. P. Schlesinger, W. H. Leonard, W. J. Koch; arbitration, Messrs Townsend and Dichter and R. C. Blackburn. Mr. Featherston, Yonkers, was elected a regular member and Dr. William Muir was made an honorary member. Mr. Sackett's re-election makes this the 22d year that he has held the office of treasurer. The next meeting will be held at New Rochelle.

MOSTLY PERSONAL

Rise of Frederick W. Stecher, Successful Pharmacist.

How millionaires are grown from small beginnings in the rich and fertile soil of American prosperity and trade progress is shown in a most interesting series of articles which is now being printed in the *Saturday Evening Post*. Using for his subject the title, "The Small Man's Market," James H. Collins, the author, tells his readers the stories of fortunes made from nothing at the start except a new idea, with energy to push it, perseverance to cultivate it and patience to gather the rewards of popular appreciation in the shape of millions.

Mr. Collins deals with the experiences of men and women who have devised new food specialties, contrivances for household or personal use, articles of wear and things that seem to them to be calculated to meet a wide human need. The originators, believing them to be as good as any of the famous articles sold nationally—maybe better—are always confronted with the problem of securing a market, as to which Mr. Collins says:

"Not one in a thousand of these promising specialties ever gets beyond a neighborhood sale, because the originators do not know how to build up a large business from slender means. It is generally assumed that abundant capital is needed to market such commodities—that everything nowadays is in the hands of trade combinations and that the opportunities are all gone."

Mr. Collins points out that this latter supposition is not true and among the examples he cites is the experience of one of the drug trade millionaires of today, Frederick W. Stecher, of Cleveland, Ohio, who, while his name is not given in the *Post*, will be recognized in the "true story of success" as narrated in this breezy chronicle of achievement:

"Twelve or fifteen years ago a young German druggist had a small store on the outskirts of a city in the Middle West. Up to that time, it is said, he had never cleared a net profit exceeding $2000 in any year. His shop was so far from the business center that he sold barbers' supplies as a side line, being the local agent for chairs and sundries, as well as for the toilet preparations used by barbers.

FRED W. STECHER,
of Cleveland, Ohio.

"His chief interest lay in chemistry, rather than in pharmacy, and he was constantly experimenting with new preparations. One of these, a toilet cream, seemed to have novelty. Compounded because there was an inquiry for some such article, it differed from ordinary cold creams. The latter have fats or oils as a base and are rubbed into the skin to be absorbed. His stuff, on the contrary, was made to be rubbed into the pores and then rubbed out again, cleansing in the process. Put on sale in the store it made friends so rapidly that he saw possibilities for building up wide distribution. But he saw them in the wrong direction. Had he possessed at that time all of the capital that he would have wished he might easily have dropped a fortune, because the road of development that he took at the outset ran into a blind alley."

Mr. Collins tells how the preparation, which has since become widely known as Pompeian Cream, at first appealed to Mr. Stecher as something ideal for barbers and professional masseurs and records how he proceeded to cultivate that field until he had it thoroughly worked.

"It was some time," continues the writer, "before the druggist realized that his logical field for development lay with the general public. Then he began placing the goods with other druggists. Demand grew rapidly, and he held it, and all his earnings were put back into development, until, one day, he boarded a train for New York to visit an advertising agent who had written encouragingly about his preparation, pointing out the fortune that could be made by creating a national demand. Arriving in New York at 7 the next morning the druggist went to the agent's office, but was told he seldom got down before 11. For years the druggist had been at work at 7 each morning. Instead of waiting, therefore, he went to the office of another advertising agent of whom somebody had spoken on the train. This second advertising man at first saw no possibilities in the preparation. The market already was filled with cosmetics, balms, unguents and creams. There was absolutely no chance. The druggist patiently explained wherein his stuff was different, got out a jar of the cream and rubbed some of it on the advertising man's hand to show how it worked, and they went to lunch together, still discussing. When they returned to the office the agent was persuaded that here was something of original merit.

"'How much do you plan to spend in advertising?'

"'Five thousand dollars,' replied the druggist.

"'Have you got it?'

"'No.'

"'Have you got that much credit?'

"'No, but I pay my bills and people respect me in my town.'

"'Well, you look good to me,' declared the advertising man finally. 'You've shown us. We'll take the account.'"

The campaign then begun in a small way was pushed and its scope and sphere enlarged until, as the writer in the *Post* says, "today that ex-druggist is building a fine mansion in the best residence quarter of his city, and his preparation has a world-wide sale."

So much for the *Post's* chronicle. But there is much more to Mr. Stecher than the mere discovery of a novelty in cosmetics and a success due to cautious development and systematic advertising. There is another story of his life that will appeal in its practical aspect to both druggists who have toiled and won and to those who have worked and failed in endeavoring to woo and win fortune through research in their fields of endeavor.

Mr. Stecher was born in Oshkosh, Wis., in 1866. With only a common school education he early in life served an apprenticeship in the drug stores of his native town. Studious, observing and attentive, as was to be expected in the son of a clergyman, he made progress in his drug store work and naturally chose pharmacy for a profession. Entering the School of Pharmacy of the University of Wisconsin in the fall of 1885, he graduated two years later, receiving the degree of Ph.G., the subject of his thesis being "Sanguinaria Canadensis." Soon afterwards he moved to Cleveland.

His brother, Henry W. Stecher, had a pharmacy in Cleveland, located at 1066 Pearl street, on the outskirts of the city. Naturally the young druggist went there to pursue his calling and soon was taken into partnership. Having other interests, the elder brother decided to leave the retail drug trade, and young Mr. Stecher became sole owner of the pharmacy.

With long hours and added responsibility Mr. Stecher did not abandon practical research. His opportunity came when a barber who bought supplies from him complained one day of the greasy creams he was forced to use, of their rancidity and expensiveness. Mr. Stecher worked to overcome those objections and soon produced the product which he called Pompeian Massage Cream. It filled the bill and its growth in popularity is a matter of general information, with which the readers of the ERA are familiar.

Despite the glamor thrown around the Stecher fortune by the magazinist, there was no hit or miss effort in the development of this preparation. The originator went systematically to work. He attended steadily to his duties in his pharmacy, but at the same time pushed his cream, first among the barbers and then with other druggists and the public. It has taken almost ten years to change the erstwhile hard-working druggist into the present-day millionaire. Nor have his efforts been all directed along one line, for with a natural business instinct seldom to be found in men of his professional attributes, he is, in addition to his office in his own manufacturing companies, president of the Security Mortgage & Investment Co., vice-president of the American Multigraph Company, vice-president Farmers' Chemical & Fertilizer Co., vice-president Wilson

Dress Book Company, and director in the Cleveland Phonograph Record Company.

Personally Mr. Stecher is a mild-mannered, of slight physique, with bright and kindly eyes. Unobtrusive and modest, he shrinks from publicity for himself but spends hundreds of thousands of dollars in advertising his preparations. On a recent visit to his old home in Oshkosh it was said of him:

"Many old friends were glad to see the former drug clerk, inasmuch as years and wealth have not changed him, nor has he become afflicted with the trouble which causes so many self-made men to unduly rate themselves: 'Fred Stecher,' as one of his friends said, 'will always be Fred Stecher.'"

—SAMUEL DAVIS, Boonton, N. J., recently visited the New York drug trade.

—JACOB BETZLER, Morristown, N. J., was a recent visitor in the New York drug trade.

—CHARLES E. KEELER, of Atlantic City, N. J., recently visited his many friends in this city.

—C. F. G. MEYER, Jr., of the Meyer Bros. Drug Co., St. Louis, was a recent visitor in New York and other Eastern cities.

—DR. G. S. SEABORN is now in charge of the department of experimental medicine of Parke, Davis & Co.'s New York Branch.

—H. A. STILES, druggist at Sturgeon Bay, Wis., was injured recently by falling down a slippery entrance to his basement.

—HUGO DU BOIS, of the Roessler & Hasslacher Chemical Co., has returned home from a trip to Europe which occupied two months.

—C. R. MOTT, the Syracuse (N. Y.) representative of the Lilly pharmaceutical line, visited Indianapolis the latter part of December.

—JOHN B. SIMS, for many years a druggist of Nashua, has been appointed food and drug inspector by the New Hampshire State Board of Health.

—W. D. ROWLES, head of the special preparation department of Parke, Davis & Co.'s New York branch, has returned from a business trip to Detroit.

—OSCAR W. SMITH, manager of Parke, Davis & Co.'s New York branch, has returned from a recent visit of a week at the company's headquarters in Detroit.

—J. L. WARWOOD, of Davenport, Iowa, whose territory is in Iowa and Illinois, was a recent visitor in St. Louis, at the headquarters of the Meyer Bros. Drug Co.

—W. L. PIERCE, who represents the Red Lilly pharmaceutical line in Baltimore, Md., has returned home from a short visit to the Lilly laboratories in Indianapolis.

—GEORGE W. TERNES, who is well known to the trade of the northern section of Chicago, has just returned from a few days' visit to the Lilly laboratories in Indianapolis.

—J. A. HUESTON, Middletown, N. Y., formerly with Henry Klein & Co., is now with Eli Lilly & Co. Mr. Hueston will cover the Hudson River territory in his new position.

—DR. RUSSEL W. MOORE, chemist in charge of the laboratory, United States Appraisers' Department, Port of New York, has returned from a two months' European trip.

—E. G. RAEUBER, manager of the Wisconsin Pharmacal Company, of Milwaukee, made a recent trip to Manitowoc, Wis., to be present at the birthday celebration of his mother.

—CHARLES GIBSON, of Walker & Gibson, Albany, and the Gibson Drug Company, Rochester, N. Y., was a recent visitor in this city. Mr. Gibson called on his friends among the jobbers.

—MRS. THEODORE WETTERSTROEM, of North Side, Cincinnati, wife of Chemist Wetterstroem, of the Ohio State Food and Dairy Commission, spent the Christmas holidays in Pontiac, Mich.

—EDWARD MALLINCKRODT, president of the Mallinckrodt Chemical Works, St. Louis, has been elected a director of the Laclede Gas Company, one of the chief public utility companies of St. Louis.

—DR. E. R. LARNED, chief of the department of experimental medicine of Parke, Davis & Co., at Detroit, Mich., has returned to that city after a short visit to the company's New York branch.

—HOWARD A. PEARCE, formerly of the Pearce Pharmacal Company, Los Angeles, Cal., has left the practice of pharmacy and opened an office in his home city, where he will engage in the practice of law.

—JOHN MALEY, of Madison, Wis., for many years a traveling salesman for Robert Stevenson & Co., Chicago, has been made traveling salesman for the Milwaukee Drug Company to succeed the late Charles Calkins of Tomah, Wis., who died a few weeks ago. Mr. Malec will cover northwestern Wisconsin the territory covered by Mr. Calkins.

—ARTHUR W. CLAFLIN, president of the Geo. L. Claflin Company, Providence, R. I., was one of the guests at the banquet given by the Rhode Island Congregational Club in honor of Forefathers' Day.

—PROF. WILLIAM HALLOCK, Phar.D., Ph.D., delivered a lecture on the "Ultra Microscope" at the January meeting of the New York College of Pharmacy. The lecture was illustrated by stereopticon views.

—GEORGE B. MCLEOD, representative of the American Druggists' Syndicate for Pennsylvania and upper New York State, with headquarters at Syracuse, spent some days at the home office in Long Island City during January.

—E. E. MAGEE, manager of the Powell Prescription Pharmacy, Redding, Cal., was recently successful in passing an examination admitting him to practice law. He has no intention of leaving the drug business at present.

—FELIX HIBSEMAN, former president of the New York German Apothecaries' Society, is enjoying the balmy climate of Florida amid the everglades and cocoanut trees in the vicinity of Miami. He writes: "I wish I had an ERA to read."

—D. P. DAUGHERTY, of the National Aniline & Chemical Co., is back in New York after five months' absence attending to the interests of the corporation on the Pacific Coast. He expects to remain at the local offices for several months.

—C. F. RAMSAY, '09, University of Michigan, lately employed as chemist by E. R. Squibb & Sons, Brooklyn, has returned to his home at Detroit, Mich., where he has accepted a position with a large pharmaceutical manufacturing house.

—PROF. OSCAR OLDBERG, of Chicago, former president of the A.Ph.A., is spending the winter at La Jolla, Cal., where he arrived October 26 and where he will remain until April. He is unable to do any work except such as may be unavoidable.

—W. H. LAMONT, manager of the St. Louis branch of Eli Lilly & Co., is back at his desk after a few days' visit at the home office. While in Indianapolis Mr. Lamont assisted as an instructor in the holiday week session of the Lilly Salesmen's School.

—WILLIAM MCGIBBON, the well known Lilly representative of Grand Rapids and western Michigan, was called to Indianapolis during the holidays to assist in the instruction at a session of the Lilly Salesmen's School. Others who assisted were: O. E. Dahly, of Minneapolis, and G. C. Barnes, of the Twin City sales force.

—PROF. H. H. RUSBY, president of the A.Ph.A. and dean of the New York College of Pharmacy, left recently for a ten months' visit in the City of Mexico, where he will devote his time to researches in the National Institute. Upon his return the results of his work will be presented to the New York Botanical Society in the form of a special address.

GEORGE B. CUMMINGS, who recently sold his pharmacy at Highland Park and retired, had been in the retail drug business for 45 years, of which 37 were spent in Highland Park. Mr. Cummings became a subscriber to the ERA when it was started and declares that he has found the ERA "very beneficial" to him in his business.

—RALPH B. GABLE, a well known member of the A.Ph.A., for many years advertising manager for Merck & Co., and later manager of the business of the Hoffmann-LaRoche Chemical Works, New York, has opened a business at 150 Nassau st., New York City, under the name of The Fenwick Records. Mr. Gable says that the task he has now set before him is that of "finding good men for important positions or vice versa."

—J. E. BROWN, who has been general superintendent and chief merchandise man of the Hannah & Lay Mercantile Co., Traverse City, Mich., for the past three years, has resigned, to accept a position of larger responsibilities and usefulness, as manager of the jobbing business of the Revillon Brothers, of Edmonton, Alberta, which is one of the old and wealthy firms of the world, having headquarters in Paris, France—with branch offices in London, Berlin, Moscow, Montreal, Chicago and elsewhere. The firm's business at Edmonton is jobbing of general merchandise, and in looking over the field for a man of general training and all-around knowledge and ability for manager, Mr. Brown's good work for the Traverse City company attracted the attention of the Revillon Brothers, with the result stated.

P.A.R.D. Elects Officers and is Relieved of Telephone Guarantee.

WILLIAM E. LEE,
first vice-president Philadelphia A.R.D.

WILLIAM T. BURKE,
elected president Philadelphia A.R.D.

DAVID J. REESE,
second vice-president Phila. A.R.D.

PHILADELPHIA, Jan. 20.—The January meeting of the Philadelphia Association of Retail Druggists was characterized by a lively contest over a proposition to secede from the N.A.R.D. [a report of which will be found on page 129 of this ERA] and numerous other important matters were discussed. The annual reports for 1909 reviewed the accomplishments of the year, which it was generally agreed had been the most successful in the history of the organization. Particularly was this true of the increase in the membership placed at 82, with but four resignations and two deaths. Retiring President Fluck recommended increased vigilance and activity along legislative lines, additional concessions on telephones and more exclusive benefits for members.

There was a contest threatened on the proposed amendment to the constitution, relative to delegate representation in the N.A.R.D. Under present conditions, it was shown that in the past, the P.A.R.D. had been paying $5 annually into the N.A.R.D. treasury for the dues of some of its members who perhaps had paid but $3 up to that time and who then fell months behind in their payments. This, it was declared, was poor business and under the amendment finally accepted, delegates will be elected only on the number of members who have at the May meeting paid the dues for the current year, while all delegates elected must be full paid for that year. It was explained that if between the delegate election and the time of the convention more members paid the dues for the current year, it would be possible for the association to pay into the National treasury the money for this additional representation and send previously elected alternates in the order of the number of votes they had received.

D. J. Reese, for the telephone committee, announced that druggists would no longer have to guarantee receipts of at least $4.50 on their pay 'phones a week and that while they would not receive commission on any amount less than that, the guarantee had been done away with. Chairman W. A. Carpenter, for the membership committee, proposed the names

CARL W. SHULL,
financial secretary Philadelphia A.R.D.

MORRIS HERSON,
third vice-president Phila. A.R.D.

NATHAN A. COZENS,
recording secretary Philadelphia A.R.D.

of Louis Cohen, H. L. Goldberg and William Lund for membership and they were unanimously elected.

Contrary to expectations, Frank W. Fink, president during 1909, refused to consider a re-election, and with regret the members gave him permission to withdraw his name. William T. Burke, who during the past year has served the association most efficiently as chairman of the executive committee, was nominated in his stead, and upon motion, nominations closed. There were no contests on any of the others and the official family of the P.A.R.D. during 1910 will be as follows:

President, William T. Burke; first vice president, William L. Lee; second vice president, David J. Reese; third vice president, Moses Hecht; recording secretary, Nathan A. Cozens; financial secretary, Carl W. Shultz; treasurer, George W. Fehr; chairman of the executive committee, Julius S. N. Lang; members of the executive committee (one from each district), Frederick R. Kelly, W. H. Ricker, H. L. Hetrick, Walter Rothwell, W. H. Umstead, C. C. H. Kirlin, W. E. Supplee, Charles Leedom, David H. Ross, H. A. Kalbach, Christopher Koch, L. R. Hoffecker, John B. Reynolds and C. F. Schmickle.

Affairs of Brooklyn's Big Buying Club are Taken to the Courts.

Former Manager Sued for Alleged Indebtedness of $15,000, but Dr. Anderson and Other Associates Defend Him Company Will Pay 100 Cents on the Dollar.

C. F. Schoenherr, a director and stockholder in the Brooklyn Consolidated Drug Company, has commenced suit against J. C. Wischerth, former manager and treasurer of this buying club, to compel the latter to account for and pay over what he owes to the company, if anything. At a hearing before Justice William J. Kelly, of the Supreme Court, Brooklyn, January 20, Mr. Schoenherr was represented by his brother, an attorney, who charged Mr. Wischerth with gross mismanagement, neglect to keep proper accounts and the misappropriation of $12,000. It was also asserted by the plaintiff that in the capacity of manager, Mr. Wischerth had received 4 per cent on all bills to cover expenses but had exceeded this amount. Furthermore, the latter, although a director, did not hold stock in the company but was interested in another company having holdings in the Brooklyn Consolidated Drug Company, this being, however, not contrary to law. On behalf of the 200 stockholders an early trial was plead for.

Mr. Wischerth's attorney, John E. Bullwinkel, pointed out that Mr. Schoenherr was the only one of 15 directors who saw fit to bring action and said that if suit was to be brought it should be instituted by the company and not by one stockholder. The court took the case under advisement.

Will Settle Debts Without Discount.

Attorney Schoenherr, in discussing the present status of the Brooklyn Consolidated Drug Company and his suit, made the following statement: "Rumors are being spread that the differences between Mr. Wischerth and the company have been adjusted and the claims against the company are being settled on the basis of 90 cents on the dollar. This is untrue. The company intends to pay all of its debts in full and no outsider or adjustor has been authorized to adjust the books of the company or even to pay any claim at less than dollar for dollar. Mr. Wischerth was forced out of office as treasurer and manager because he refused to give an accounting. He promised to pay $15,000, but has so far neglected to do so. The directors have been unable up to the present time to learn the true condition of the company for the reason that Mr. Wischerth has refused to surrender the books or give a correct statement of its assets and liabilities. The stockholders have twice authorized an audit of the books but the books have not been audited."

H. J. Scheidt has been elected treasurer of the company and W. F. Morgan manager. Attorney Schoenherr said that the officers would be glad to hear from anybody who has a claim against the Brooklyn Consolidated Drug Company. There are no proceedings pending against the company, and there will be no receivership or suspension of business. As soon as the dispute with Mr. Wischerth is settled the company will be in a better position than ever before to carry out the objects for which it was incorporated, to the satisfaction and profit of all concerned, declared the attorney.

Dr. Anderson Defends Mr. Wischerth.

Dr. William C. Anderson, president of the Brooklyn Consolidated Drug Company, who was interviewed regarding the charges preferred against Mr. Wischerth, characterized them as direct misstatements and the suit as a work of spite on the part of C. F. Schoenherr. He said action had been taken in direct opposition to the other directors and that the latter had adopted a resolution condemning it. Mr. Schoenherr had become very much disgruntled because the minds of the 14 other directors didn't run in the same line as his own. Mr. Schoenherr had always shown a decidedly ugly disposition towards Mr. Wischerth. The latter was one of the original organizers and stockholders of the company. The 4 per cent allowed on all bills was intended to cover running expenses, clerk hire, rent, etc., but was insufficient, and on the election of the new manager the percentage was increased to 5.

"Mr. Wischerth," said Dr. Anderson, "put his own stock and $10,000 of his own money into the company when it was first organized. A contract was made with him that if at any time he should withdraw as manager or the board of directors should elect a new manager, an accounting should be made and the assets and liabilities of the company ascertained, and if it was found that the company owed a balance to Mr. Wischerth on account of money placed at the company's disposal, the same should be paid to him. If this accounting should show that Mr. Wischerth had incurred losses in any way through his management and that there was an amount due the company from him, he would pay the same. The company was handicapped in taking proper care of the business which has constantly increased by the cramped quarters in which they were compelled to work, and for two years at least, a building committee has been looking for a larger place. This, when found, was some distance from Mr. Wischerth's drug store, while the two buildings formerly occupied by the company were directly connected therewith. This fact made it practically impossible for Mr. Wischerth to give even the attention to the business of the company that he had formerly been giving. In moving and rearranging the business a new manager was elected. This made it necessary to bring into effect the original contract with Mr. Wischerth and an accounting has been in course of progress ever since December 7, when the company moved to new quarters.

Mr. Wischerth Willing to Pay.

"The accounting is almost complete and will be finished by January 28. Until that time it cannot be stated definitely just what amount is due either party. Although it is quite certain that Mr. Wischerth sustained certain losses in the conduct of the business and that the accounting will probably show a balance due the company from him, he has given every assurance of his willingness to live up to his agreement in every particular, and to pay to the company every penny that it may be shown is due it from him. In fact, he has gone so far as to assist us by advancing certain sums in order not to cripple the organization, the agreement being made that if the sums are in excess of what is found to be due the company from him, such excess will be returned to him. Mr. Wischerth's actions have been absolutely fair and honorable.

"Regardless of Mr. Schoenherr's personal attack in this matter, the affairs of the Brooklyn Consolidated Drug Company will be properly and satisfactorily settled without any injury to the finances or the future prosperity of the company, and Mr. Wischerth will be entirely exonerated from all charges made against him by Mr. Schoenherr or those who may be prompting him in his unjust and unreasonable actions."

New York City Wholesale House Incorporates.

Lehn & Fink, wholesale druggists at 120 William street, New York City, have incorporated under the laws of the State of New York, with a capitalization of $600,000. The incorporators are: Albert Plaut, Joseph Plaut and W. J. Gesell. The business, which was established by Louis Lehn and Frederick W. Fink in 1874, has heretofore been conducted as a partnership. Albert Plaut has been a member of the house since 1886, at which time Mr. Lehn retired from business and his brother, Joseph Plaut, became a partner 12 years later upon the retirement of Mr. Fink. Mr. Gesell has been associated with Lehn & Fink for 30 years.

Sale of Rexall Stores to President Liggett Severely Criticised.

Calling Price Paid, $350,000, "Ridiculously Inadequate," Stockholder Fights for Restoration of Securities or their Value to Treasury of United Drug Co.

A battle royal for the control of the 21 drug stores operated by five companies in affiliation until recently with the United Drug Company, of Boston, is expected to be fought to a finish at a special meeting of the stockholders of the parent corporation which is to be held in Jersey City on February 2, for which requests for proxies are being sent to all of the stockholders by Richard V. Lindabury, a prominent lawyer of Newark, N. J., and John B. Cobb, of New York City, who, next to President Louis K. Liggett, is the largest holder of stock in the Rexall co-operative concern, his holdings amounting to 500 shares, which he acquired some years ago when capital was needed by the company. Mr. Cobb also is sending to the stockholders a statement of his reasons for desiring their proxies, as well as a copy of a demand which he sent to the following directors of the United Drug Company: E. L. Scholtz, Denver; Wm. C. Bolton, Brooklyn; J. C. Brady, Fall River; Chas. E. Ball, Holyoke; E. R. Petty, Newark, N. J.; Walter A. May, Pittsburg; Byron M. Hyde, Rochester; Thos. H. Brannen, Atlanta; L. K. Liggett, Boston; James C. McCormick, Boston.

The facts stated in both documents are about the same. As a large stockholder Mr. Cobb questions the propriety of the transfer to President Liggett of the United Drug Company's holdings of capital stock in the 21 stores operated by the following companies: Hall & Lyon Co., Williamson & Watts, Cahoon-Lyon Drug Co., Gray & Worcester, Dwight-Nye Drug Company. He reviews the circumstances of the transfer to the Louis K. Liggett Company and gives reasons which he believes justify the demand that the property be returned to the United Drug Company.

Mr. Cobb declares that after repeated efforts he was informed by Mr. Liggett that the latter had paid approximately $347,500 for the stock, which he considers to be "ridiculously inadequate." Then he quotes from Mr. Liggett's prospectus of his new company to show that the assets of the five companies are $1,056,124; that the retail sales of the stores were guaranteed to be over $2,000,000 for 1909; "that a conservative estimate is that the 21 stores will show gross sales of $2,200,000 and net profits of $200,000 for 1910."

Mr. Cobb continues: "As the United Drug Company owned more than half of the stock in the five companies in question, its share of the profits for 1909 would be more than $80,000 and for 1910 more than $100,000." Assuming that Mr. Liggett's prospectus is correct he considers $350,000 too small a price for a property in which the net profits in two years amount to more than $180,000.

Mr. Cobb says: "In a letter received from Mr. Liggett's counsel, there is a statement that if the directors think this transaction was not a wise one for the company, Mr. Liggett is willing to have it rescinded. This would be entirely satisfactory to me, if it could be done, but I am advised that these securities have already been transferred to a new company, which has issued its stock and notes upon the basis of this acquired ownership, and that under the circumstances it probably would not be possible to have the original shares returned.

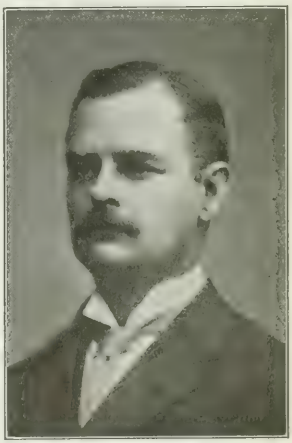
"There is no good reason, however, why the stock and other benefits and advantages which Mr. Liggett has received from the corporation to which he conveyed the purchased shares should not be turned over to the United Drug Company. If it be said that Mr. Liggett has put a great deal of time and effort into the promotion of the new company my reply is that Mr. Liggett, during all this time, was president and active head of the United Drug Company, drawing a large salary from it, and that our company was entitled to the very energy and activity which he has been attempting to utilize for his own individual benefit. There is no reason why what has been done in connection with the construction of the new company,

(Continued on page 168)

NEWLY ELECTED OFFICERS OF THE DRUG TRADE SECTION OF THE NEW YORK BOARD OF TRADE.

GEORGE WILLIAM KEMP,
chairman Drug Trade Section.

CLARENCE G. STONE,
vice-chairman Drug Trade Section.



WILLIAM A. HAMANN,
treasurer Drug Trade Section.

At the annual meeting of the Drug Trade Section of the New York Board of Trade and Transportation held early last month at the Drug and Chemical Club, George William Kemp, of Lanman & Kemp, was re-elected chairman. Other officers were chosen as follows: Vice-chairman, Clarence G. Stone, of the Lambert Pharmacal Company; treasurer, William A. Hamann, of the Roessler & Hasslacher Co.; secretary, Wm. F. McConnell; directors, C. R. Cosby, Charles S. Littell, Dr. H. C. Lovis, Fred. E. Watermeyer and Russell R. Sloane, Jr. Committee reports were read and a number of new members elected. Resolutions were adopted in memory of Mahlon N. Kline and Charles N. Crittenton.

C. H. LOWE NEW PRESIDENT OF MANHATTAN.

All Debts Ordered Paid and Neat Balance Left in the Treasury—New Pharmacy Bill Meets With Favor.

The January meeting of the Manhattan Pharmaceutical Association held in the New York College of Pharmacy was presided over by the vice-president, Dr. Charles H. Lowe.

Dr. Lowe was elected president to succeed Dr. George C. Diekman, who recently resigned from that office. Mr. Latham, in nominating the new executive, remarked upon the triumphs scored by the association in the past and the seeming indifference and inactivity from which it had lately suffered. If the organization is to continue, something must be done in the way of rejuvenating it from its present humiliating condition. He thought that the next president should have fiery energy, strength and enthusiasm, and should inspire the members. Mr. Lowe accepted the chair until the end of the present term and hoped that the members would lend him their aid and heartiest support.

The resolution that Treasurer George H. Hitchcock be empowered to use from the reserve fund an amount sufficient to pay all outstanding bills which were in existence at this meeting was adopted. The total amount of these bills was $650, leaving almost $200 in the reserve fund.

Mr. Hitchcock reported a total current disbursement of $70, which covered such items as lectures, secretary's salary, etc., and a balance on hand of $16.90. Fifty dollars was recently paid in dues. A. Bakst, as chairman of the finance committee, reported expenditures amounting to $15.82 for printing and postage.

A report on the recent hearing held in this city by the legislative committee of the New York State Ph.A. on the proposed pharmacy bill, was also presented by Mr. Hitchcock. His final remarks were that the Manhattan Ph.A. had always stood for the best in pharmacy and he thought that the stand the association took at Albany last spring was responsible for the present proposed pharmacy bill. The members didn't exactly oppose the Brown Bill, but they did in a way favor the Conklin Bill. The proposed bill, it was said, is as near an ideal bill as is at present possible.

The resignation of ex-President F. O. Collins was received and the secretary ordered to request him by letter to reconsider his action. Deep regret was expressed that the association should lose a member who had been so prominent in its past activities.

CHARLES H. LOWE, New York, elected president of Manhattan Pharmaceutical Association.

It was suggested at this meeting that a change be made from the usual postal notice of meetings which are sent to members and for the most part ignored. The consensus of opinion was that a circular or personal letter or even personal calls were now necessary to secure attendance. Mr. Hitchcock said that the large number of absences was perhaps due to the depression of the past two years. Other organizations were suffering from the same lethargy. The only encouragement left to the "old guard" was that dues were coming in fairly regularly, even if those who paid didn't attend the meetings. It was up to the president and officers to do their best to decrease the number of absentees, he said.

Ohio Valley D.A. May Be Branch of State Ph.A.

CINCINNATI, Jan. 20.—The work of organizing county branches of the State Pharmaceutical Association in Ohio goes merrily on, and Theodore Wetterstroem, a prominent O.S.P.A. member, whose territory of forming a county organization will be taken up next in Hamilton County, in which Cincinnati is situated. Mr. Wetterstroem gave it as his opinion that probably it would not be well to have a county organization separate and apart from the Ohio Valley Druggists Association, of Cincinnati, and suggests that the O.V.D.A. members constitute the county branch of the O.S.P.A., and that the O.V.D.A. meetings be held at certain times in advance of the O.S.P.A. Mr. Wetterstroem will ask the O.V.D.A. members to think this over.

MR. RAUBENHEIMER HEADS N. Y. BRANCH.

Criticism by Former A.Ph.A. President Oldberg of Pharmacists in Government Service is Resented.

Perhaps the matter of greatest interest brought up at the January meeting of the New York Branch of the A.Ph.A. was the reading of a letter by President Diner in which the writer, whose name was not given, tendered his resignation, giving as his reason for such action the recommendations made by Prof. Oscar Oldberg in his presidential address, and also by the committee which reported on this address, regarding the pharmacists in the Public Health and Marine Hospital Service. Former President Oldberg practically recommended that the association should cease its efforts to bring about changes in the rank and pay of pharmacists in the service of the government and the committee recommended that the efforts of the A.Ph.A. committee on the status of pharmacists in the service of the United States should be directed primarily to the elevation of the ability and worth of such pharmacists. The member who wished to sever his connection with the association was persuaded by the chairman to delay his request until after it should be presented to the branch for action. The several members in the government service were spoken of in the highest terms and a resolution, proposed by Thomas P. Cook, was adopted to the effect that the report of the committee on the president's address cast a reflection on the professional ability of the pharmacists in the government service and that the New York Branch of the A.Ph.A. went on record as disapproving of such report.

Several interesting papers were read and the resulting discussions were keenly followed. Dr. George A. Ferguson expounded on the pharmaceutical and legal status of camphor liniment and gave some very interesting statistics on the volatility of camphor and the holding power of cottonseed oil. Otto Raubenheimer suggested the use of sesame oil in camphor liniment instead of cottonseed oil, one reason being that the former was more penetrating.

C. A. Mayo read an extract of an article by Paul Jeancard and Conrad Satie on "The Essential Oils of the U.S.P.," which will be found on page 141 of this issue of the ERA.

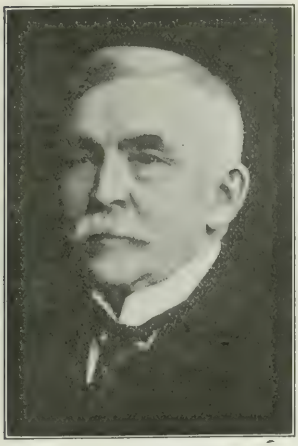
Hugh Craig read a brief note on the assay of opium which was written by Prof. E. L. Patch. The method of assay used by Professor Patch followed somewhat that of the U.S.P., the variations practiced being of a minor nature and rendering the assay more commercially practicable.

Thomas P. Cook presented a report on the recent hearing of the legislative committee of the New York State Ph.A. on the proposed State pharmacy bill. Speaking of the Coudrey Bill now before Congress, Mr. Cook said it was not probable any action would be taken on it in the Federal Legislature.

Dr. George C. Diekman, chairman of the committee on science and practice of pharmacy, presented abstract translations of the following recent contributions to pharmaceutical literature: "Aspirin and Acetyl-salicylic Acid," by E. Hoest (*Pharmazeutische Zeitung*, 1909, 209); "Assay of Cresol Soaps," by Keller (*Apotheker Zeitung*, 1909, 90); "Iodized Oils," by R. Conradi (*Chemische Zeitung*, 1909, 17); "Estimation of Iodoform in Iodoform Gauze," by V. Caolini (*Moniteur Scientifique*, 1909); "A Characteristic Reaction for Resorcin," by Boucher and Girard (*Journal de Pharmacie et Chimie*, 1909, 20); and "The Presence of Enzymes in Eggs," by Schindelmeyer (*Apotheker Zeitung*, 1909, 89). He also spoke on the characteristics of the new Hungarian Pharmacopœia.

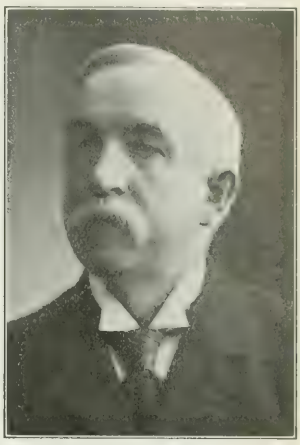
The officers elected for the ensuing year are: President, Otto Raubenheimer; vice-president, Albert M. Rochrig; secretary, Hugh Craig; treasurer, Dr. Joseph Weinstein. Chairmen of committees: Membership, C. A. Mayo; legislation and education, Thomas P. Cook; professional relations, Dr. G. A. Ferguson, and science and practice of pharmacy, Dr. G. C. Diekman.

Three Brothers Drake, Half a Century in the Drug Business Together.



HARVEY W. DRAKE,
vice-president.

HENRY T. DRAKE,
secretary and treasurer.



The late JOHN R. DRAKE,
president.

New Year's Day, 1910, marked the fiftieth anniversary of the founding of the Drake Brothers Company, wholesale and retail drug house of Milwaukee. As a reminder, the twenty-five employees of the company gave a congratulatory party to the members of the house, John R. Drake, president; Harvey W. Drake, vice-president, and Henry T. Drake, secretary and treasurer. When the first little store was opened fifty years ago at 265 South Water street, there were no employees, the three brothers doing all the work. A branch was opened in 1872 at East Water and Michigan streets, but the business there grew at such a remarkable rate that this store is now the main house. Harvey W. Drake is now the oldest member of Independence Lodge, F. & A. M. Henry T. Drake is a member of the G.A.R. and of the Loyal Legion. Several of the employees are becoming veterans. The oldest is Frederick E. Webb, who has been connected with the company since 1872. Next is Theodore Wangemonn, who has been with the company for 24 years, and third is Edward Spragg, who has a 22-year record.

DEATH QUICKLY FOLLOWS 50TH ANNIVERSARY.

John R. Drake Was the Oldest and for Years the Only Member of the American Ph.A. in Wisconsin.

MILWAUKEE, Jan. 20.—John Ransom Drake, president of the Drake Bros. Co., wholesale and retail druggists, passed away on January 17 after an illness of several months. It is said that he never had taken a vacation. He was born near Springfield, Erie County, N. Y., in 1834, and came to Milwaukee at the age of 17 years. He entered the drug store of Lake & Williams and afterwards was associated with the W. L. Hopkins Company, and Dr. L. L. Lake, who owned a drug store on the Milwaukee south side. On January 1, 1860, he and his brothers bought Dr. Lake's business and organized the Drake Bros. Co.

Mr. Drake joined the American Pharmaceutical Association in 1860. For some years he was the only member in Wisconsin, and for a number of years he was the authorized agent of the association in this State. He was the eldest of three surviving charter members of Independence Lodge, F. & A. M. A widow and three daughters survive.

German Apothecaries Give Entertainment.

The members of the German Apothecaries Society, with their wives and sweethearts, were out in full force at the entertainment on the evening of January 20, held in the society's rooms, 192 Third avenue, New York. The programme included several numbers by the Manhattan Ladies Quartette and Lederhaus' String Orchestra, and violin selections by Mrs. Haustein, who was accompanied by Mrs. Elinor Koch at the piano. Mrs. Haustein is a niece of Paul Arndt, a well-known member of the society, who entertained those present with several recitations. The "vereins-poet," Otto P. Gilbert, also expressed his sentiments in verse under the titles "Die Pille" and "Unsere Damen." The next meeting, which also marks the 59th anniversary of the formation of organization, will be held on February 24.

PTOMAINES TAKE HEAD OF CHEMICAL COMPANY

Dr. Leach, Married Only a Year, Dies Suddenly After Partaking of a Lunch of Canned Food.

CINCINNATI, Jan. 20.—Dr. William A. Leach, head of the Leach Chemical Company and a prominent business man, died a few days ago at his home at 3751 Elsmere avenue, Norwood. He and all the members of his family became violently ill on the night that he died, after having partaken of a lunch consisting principally of canned goods. The attending physician says he believed Dr. Leach died from heart disease superinduced by ptomaine poisoning, and it is probable that the coroner will investigate the case.

Dr. Leach was a great fisherman and hunter. He was born 47 years ago at Wellsville, Ohio, and was married only about a year ago. His widow and infant daughter survive him. He was an Elk, an Odd Fellow and a Knight Templar.

Sad Death of Mrs. Robert Fulton.

Friends in the East have received announcements of the shocking death of Mrs. Marianne Fulton, wife of Robert Fulton, of Beaumont, Cal. On going home at noon from his pharmacy, Mr. Fulton found the house filled with smoke and his wife's lifeless body on the floor in the kitchen. Evidently she had fainted and fallen on the stove, her clothes catching fire. A sad feature was that the awful accident occurred on the first anniversary of the death of the couple's son, Rogers. Mrs. Fulton, who was aged 56, was registered in Michigan from the time of the passage of the Act until 1905. General sympathy for the bereaved husband has been expressed.

Obituary Notes.

—MRS. BOWLES COLGATE died recently in this city in her 60th year. She was the widow of Bowles Colgate, who retired as senior partner of Colgate & Co. in 1900 and died two years later. A son, Lathrop Colgate, and a daughter survive.

—GEORGE A. ELWOOD, for 40 years a specialist in botanical

drugs, died recently at his daughter's home in East Orange, aged 69. For many years he was a member of Walter Adams & Co., this city. He was a prominent Mason.

—JOSEPH GARLICK, Fairview, Utah, is dead.

—J. W. FOREAKER, Corning, Ohio, pioneer, is dead.

—THOMAS BRAUN, retired, Chicago, is dead, aged 63.

—JOHN H. SMITH, retired, Little Falls, N. Y., is dead.

—WILLIAM L. SPENCER, Racine, Wis., is dead, aged 60.

—WILLIAM BAKER, pioneer pharmacist of Chicago, is dead, aged 74. He retired several years ago.

—PATRICK F. KINSELLA, Milwaukee salesman, formerly in the wholesale drug trade, is dead, aged 54.

—J. A. NICOLLE, Montreal, was practically drowned recently as a result of an epileptic attack in his bath.

—DR. GUSTAVE WARLITZ, East Baltimore, Md., is dead of pneumonia, aged 63. He was a leading citizen.

—FRANK EMERSON, of Emerson & Patrick, Lawrence, Mass., in business there since 1870, is dead, aged 58.

—JAMES MILLER, Ph.C., New York, graduate N.Y.C.P., '76, is dead, aged 64. A widow and five children survive.

—IRVINE E. JONES, Westfield, N. Y., is dead, aged 55, leaving a widow. Gangrene followed removal of a corn.

—DR. THOMAS TAYLOR, scientist, since 1871 in the Department of Agriculture, is dead in Washington, aged 90.

—DR. GEORGE G. BURNETT, director in the California C.P., druggist in San Francisco for 44 years, is dead, aged 67. A widow and two children survive.

—R. L. MCGRUDER, Shepherdstown, W. Va., died December 26 in Washington of Bright's disease. He was 65 and is survived by a widow and four children.

—JULIUS H. SPELGER, aged 42, for 20 years a leading druggist of Louisville, Ky., is dead of typhoid fever. He is survived by his mother, widow and three sons.

—ALMOND S. DEBENDORF, former Chicago druggist and father of C. A. Debendorf, of that city, is dead, aged 92. He retired 10 years ago, after having been in the drug business in Chicago for 23 years. Burial at Galesburg.

—EDWARD HELLER, at one time manager of the C. Von Hermann pharmacy, Michigan and 22d street, and later with John Blocki & Co., Chicago, died suddenly on January 5.

—JOHN FRANKLIN, for many years a member of John M. Maris & Co., Philadelphia, and of recent years senior member of John Franklin & Son, Chicago, died suddenly December 15.

—MRS. SARAH E. T. STEVENS, widow of Lucius F. Stevens, herself a retired druggist, formerly in business as her husband's successor in Manhattan, is dead, in Brooklyn, N. Y., aged 56. She was born in Kankakee, Ill.

—JOHN D. WING, founder of Wing & Evans, chemical supplies, New York, died January 1, aged 76. He had been in business in this city since 1859. A widow, two sons and a daughter survive. He belonged to several clubs.

—DR. WILLIAM BALSER, aged 72, is dead. He was an honorary member of the German Apothecaries' Society and a member of the New York College of Pharmacy, besides belonging to many associations. He served in the Civil War as a surgeon. A widow and daughter survive.

Druggist La Scalia Exonerated.

Following an inquest held before Coroner Feinberg in this city, Frank La Scalia, druggist at 2038 Second avenue, was exonerated from all blame concerning the death of Filemena Stansiale, of Mount Vernon, who died from carbolic acid poisoning. It was shown that Mr. Stansiale had called for a wrong prescription and that the druggist made efforts to warn him of the mistake.

Pharmacist's Little Son Shot While Playing.

Arthur Shibley, one of the two six-year old boys who were fatally shot while sleigh-riding on Washington Heights, New York City, recently, was the son of F. G. Shibley, a Syrian, proprietor of two drug stores, located at 3900 Broadway and 28 Rector street, respectively. The supposed murderer, a half-crazed magician, is in the hands of the police.

Perkins Medal Presented to Dr. Acheson.

Dr. Edward Goodrich Acheson, of Niagara Falls, received the Perkin medal at the January meeting of the New York Chemists' Club. The presentation was made by Prof. C. F. Chandler, of Columbia University, and Dr. Acheson replied briefly.

N.Y. Pharmacy Law is Upheld.

Highest Court in State Sustains Validity of Statute Under Which Board Works.

ALBANY, Jan. 25.—The Court of Appeals affirmed the judgment in the case of the State Board of Pharmacy against A. D. Matthews' Sons, Brooklyn. This dry goods firm was charged with selling tincture of arnica, tincture of iodine and spirit of camphor in its store without a licensed pharmacist being present, as the law requires, to personally supervise such sales.

The board brought complaint against Matthews' Sons in the municipal court, but the case was dismissed. Upon appeal to the Appellate Division of the Supreme Court, this decision was reversed and a new trial ordered. The defendants again appealed, stipulating for judgment absolute and the Court of Appeals has now affirmed the decision of the Appellate Division.

SALE OF REXALL STORES TO MR. LIGGETT.

(Continued from page 165.)

and the development of its enterprise, should not have been done by Mr. Liggett for the United Drug Company, which is entitled to his services."

From the letter sent to the stockholders it appears that the board of directors at a meeting held January 5 ratified the action taken at a meeting last September, when the board approved the sale of the stock to Mr. Liggett. The board justified the sale on the ground that the company needed working capital, but Mr. Cobb asks why Hall & Lyon stock was purchased as late as July and Williamson & Watts stock was bought in October if the company was short of working capital. He also quotes a letter from Mr. Liggett in which the latter says he voluntarily paid $30,000 more than he agreed to pay for Gray & Worcester stock, a fact which leads Mr. Cobb to make comment as to the diligence with which the board was looking after the affairs of the stockholders, "when the buyer of the securities is so well satisfied with his trade that he voluntarily pays an additional $30,000."

Mr. Cobb does not see where the Rexall druggists will benefit by the transfer of the stores to a separate corporation, nor how the United Drug Company stockholders will be better served if the president devotes time and attention to another enterprise owned by himself. He demands that the company be reinvested with what belongs to it, or its equivalent—no more, no less. Unless the stockholders take action to restore ownership of the securities it is intimated that Mr. Cobb will appeal to the courts.

C.R.D.A. Condemns Mail Order Houses and Peddlers.

At the recent meeting of the Chicago Retail Druggists' Association resolutions were adopted condemning the practices of, and cautioning pharmacists against purchasing from mail order houses and peddlers dealing in synthetic products, and that the members recognize Aspirin patent and trade mark rights until the same are declared void by a court of last resort. The treasurer's report showed a balance on hand of $371.86 after disbursements totaling $10,743.92 had been made.

The following officers were elected: President, L. P. Larsen; first vice-president, B. A. C. Hoelzer; second vice-president, W. H. Brown; third vice-president, A. E. Zuber; secretary, I. M. Light; treasurer, C. M. Storer. Trustees elected are: North Side, Herman Fry, Frank Kremer and O. F. Niethammer; South Side, J. P. Crowley, John A. Mahaffy and James H. Wells; West Side, W. H. Armbrecht, Ed. Williams and John J. Boehm.

February Meeting of New York Branch.

At the February 7 meeting of New York Branch, A.Ph.A., the programme will include a discussion of the relative values of percolation and maceration in the preparation of galenicals. It is expected Prof. John Uri Lloyd will be present.

New Chairman of N.W.D.A. Legislative Committee.

Charles A. West, president of the Eastern Drug Company, Boston, Mass., has been appointed chairman of the legislative committee of the N.W.D.A., succeeding the late Mahlon N. Kline. Mr. West has accepted the appointment.

Let Your Customers Know You Sell Diamond Dyes

We are spending thousands over $150,000 to help you sell Diamond Dyes, but unless you let your customers know that you handle them you can't possibly get all the profits you should.

Write today for some of our magnificent, new store advertising—the catchiest, most attractive ever prepared.

Put it up in your store. Let the people near you know where to get Diamond Dyes. It means lots of profits—steady profits, too.

The store advertising is free to Diamond Dye retailers.

HERE IS THE TRUTH ABOUT DIAMOND DYES

It is a chemical impossibility to color Silk and Wool (animal material) and Cotton and Linen (vegetable material) equally as well with the same dye.

Any DYE Chemist will tell you this fact. Of course it sounds easier to trust to luck and use one dye for both. But remember, an economy is not real economy unless it is successful. Do not be misled by imitations of Diamond Dyes.

Recommend Diamond Dyes to Your Customers They Will Thank You for It

NOTE—A, advanced; D, declined; C, correction; N, new.

See page 190 for Price List Changes and page 192 and following pages for Prices Current.

NEW YORK, Jan. 25.—The demand for drugs and chemicals during the past month has been steady and limited to seasonable articles, nearly all changes in value being at a higher range of prices. The severe weather prevalent throughout the Eastern section of the country for the past ten days has interfered to some extent with shipments and prompt delivery of goods, but good business in all lines are reported. Of the regular staples of every drug stock opium is quiet, Norwegian cod liver oil more active, Spanish saffron advancing, and flaxseed, both whole and ground, much higher. Linseed oil continues to advance owing to extreme prices for the seed. Kavakava is scarce and oil of cubebs is higher.

OPIUM—The market here is quiet, but primary markets maintain their firm position with confirmed reports of bad and unfavorable weather for the growing crop. The arrivals in Smyrna for the week ending December 31 amount to 1836 cases, against 1971 cases on the corresponding date of last year. On December 31 the stock on hand in Smyrna was 800 cases, as against 2345 cases at the same period of the preceding year, and in Constantinople 386 cases, against 182 cases. Jobbers' prices in this market remain unchanged at $6.10@$6.25 for natural, $7.10@$7.25 for granulated, and $7.10@$7.25 for U.S.P. powdered.

QUININE—Second-hand lots are more liberally held on the market is firmer, but without quotable change. The shipments of bark for the first half of this month only amount to 360,000 pounds, a very small quantity; if the shipments continue light, it is probable that an advance in the price of quinine will take place. At the auction sales in Amsterdam on January 24 the entire supply offered was sold at 11.08 florins against 10.98 florins at the previous sale. Manufacturers' prices are well sustained on the basis of 14c. for bulk in 100-oz. cans.

COD LIVER OIL—Norwegian is in good demand and steady at $25@$28 per barrel, as to brand, quantity and seller, and the outlook is considered favorable to higher prices.

GUARANA—The supply is rather closely concentrated and spot quotations have been recently advanced. Jobbers quote $3.25@$3.50 per pound for whole and $3.50@$3.75 for powdered.

BAY RUM—Porto Rican is tending upward and quotations have been marked up to $1.60@$1.65 per barrel. For less quantities $1.70@$2.00 per gallon is asked.

CUBEB BERRIES—Owing to continued scarcity and higher quotations in primary markets the tendency is toward higher prices in the near future. Good berries are firmly held at 45@50c. per pound for moderate quantities only.

OIL OF CUBEBS—Owing to the high price of cubeb berries the oil has been advanced to $3.50@$3.75 per pound. The oleo-resin has also been marked up.

IPECACUANHA—The market for Rio and Carthagena is much firmer, owing to cables reporting higher prices in primary markets. Rio is very scarce in this market and held at $1.75@$1.85 per pound. Carthagena is still quoted at $1.30@$1.40 per pound; powdered, 10c. per pound additional.

ASAFETIDA—There is an active demand for good quality, but owing to small stock no transactions of importance have taken place. Quotations for U.S.P. have been marked up with only a limited quantity offered.

FLAXSEED—A sharp advance has taken place in the market for this article and a further rise in price is not improbable. For whole clean seed $8.50 per barrel is asked; less, 6@8c. per pound; powdered, 5@7c. per pound.

LINSEED OIL—Extremely high prices are quoted, jobbers asking 85@95c. per gallon for boiled and 83@93c. per gallon for raw, the inside price being for barrel lots. Buyers are inclined to hold off and await developments, but at the same time holders are reluctant sellers and no shading of prices is reported. The movement of seed in the Northwest continues light.

SAFFRON, SPANISH—The market continues to advance with a good active demand for prime Valencia, and $11.50@$12.00 per pound is asked.

SANTONIN—Primary markets are reported very firm, and while jobbers have made no changes in current quotations, an advance is looked for in the very near future. The available stock in this market is small.

OLIVE OIL—Is cabled higher at primary sources of supply and the tone of the local market is firmer, but quotations are unchanged.

BUCHU LEAVES—Both long and short varieties are higher, 65@75c. per pound being asked for the former and 85@90c. per pound for the latter. Powdered, 10c. per pound higher for either variety.

MASTIC—Higher prices rule for this gum, which is now quoted at 55@60c. per pound, and 70@75c. per pound for powdered.

TAMARINDS—Have taken an upward turn and jobbers are now asking $2.75@$3.00 per keg.

Alleged "Drug Trust" Suit is Discontinued.

PORTLAND, Ind., Jan. 20.—Late developments in the suit of Harry L. Wilt, a former Portland druggist, against the Mooney-Mueller Drug Company, the A. Kiefer Drug Company, of Indianapolis; the Fort Wayne Drug Company, George L. Stevens, Alpheus A., Charles P. and John A. M. Adair, charging the ruination of his local business by the formation of an alleged trust to regulate prices, and to restrain trade, are that the recent dismissal of the suit without trial at Decatur recently was the result of a compromise by which the defendants paid Wilt $150 and the costs of the case.

Perfumery Business Moved to Philadelphia.

ROCHESTER, Jan. 21.—An important change has taken place in the perfumery trade by the affiliation of Alfred Wright, Perfumer, Inc., of this city, with William R. Warner & Co., of Philadelphia, pharmaceutical chemists. The business was established in 1866 by the late Alfred Wright, who conducted it until his death in 1891, since which time it has been continued by his sons, Alfred G. Wright and John S. Wright. The business will be moved to Philadelphia. Alfred G. Wright will retain his connection as president and perfumer. John S. Wright will remain in Rochester.

To Test the Ban on Unlabeled Foodstuffs.

WASHINGTON, Jan. 20.—Under a ruling by the Department of Agriculture, common carriers are prohibited from accepting shipments of foodstuffs of any sort which do not bear on the package the certificate of contents placed there by a government food inspector. Violation of the ruling throws the consignment open to confiscation on the part of the government, leaving the railroad company to pay the shipper for the goods. The Pittsburg Melting Company has brought suit to test its validity, and the result is awaited with much interest by the carriers.

This Attracts Customers
This will hold them

JERSEY-CREME has a rich wine color and a delicious flavor that places it distinctively in a class to itself.

Everybody likes it and will return to your fountain for a glass of "The PERFECT Drink."

"It is the best drink before the American people today."

"Never had a drink so easy to introduce."

"Greatly pleased with the way it has repeated."

"It is the best article that we have ever handled of its kind, and we consider it the best drink on the market."

"It has given us and our trade eminent satisfaction. We hope to more than double our sales next season."

"Your descriptive phrase "The PERFECT Drink" is truly applicable, for I have never tasted a drink quite so perfect."

The quoted sentences above are extracts from letters received from pleased customers, and these letters were all unsolicited. We could quote similar extracts from hundreds of other letters, but for the lack of space.

Send us an order for a small shipment. It will cost very little to try it.

There is an enormous demand for JERSEY-CREME where it has once been introduced, and you will find this demand at your fountain if you will "Try it just once."

You can't afford to be without JERSEY-CREME at your fountain.

Copy of any TRADE MARK or PATENT, with 64 page Booklet on LEGAL TRADE-MARKS, PROTECTIVE PATENTS, and FOOD AND DRUGS ACT, sent for 25 cents. G. H. DAVIS, Attorney, 908 G St., N.W., Washington, D. C.

A Di-Knocks-Ogen Doxology

OR SWAN SONG, ENTITLED

Knick-Knack Peroxide

Composed for the Knock-Knock Company

From an uphill argument endeavoring to bolster the sale of a product that has to be wired in to keep it from decomposition for even first usage, The Knock-Knock Company have rapidly descended to a nasty malicious attack on all peroxides properly made and preserved.

THE LIAR

Deceives only the uninformed. Chemists, Physicians and Druggists laugh at the silliness of the Acetanilid **ROT** published, but unfortunately the consumer may be deceived by pernicious matter. Therefore we agree to pay $50.00 for an article from any chemist, doctor or any other person who is authority on such matters, who will over his signature say that Acetanilid 3-16 grains to the ounce of H^2O^2 is dangerous or even harmful or that it is not a **BENEFIT** to that product as making it a staple and **DEPENDABLE** preparation.

As the largest manufacturers of medicinal peroxide in the United States we assume we are the thorn in the flesh of The Knock-Knock Company.

We **ARE** the **KNICK** in the sharp edge that has been cutting profits from the dealer for years.

We have the **KNACK** of showing that the best product ever put in glass can be sold at **LESS** price in **LARGER QUANTITIES** at **GREATER PROFIT** to **EVERYBODY**.

AS TO PROFITS, LOOK AT THIS

HYDROX Peroxide.....3 dozen cost $2.00, if sold at 15c., $5.40; profit, $3.40
Di-Knocks-Ogen.....1 dozen cost 2.00, if sold at 25c., 3.00; profit, 1.00

It has been demonstrated that any Peroxide at 15c. will sell three times as quickly as Di-Knocks-Ogen at 25c., or a profit of $3.40 against one measly dollar. Does it pay the dealer to assist elaborate mud slinging at such a cost to him?

Write us about **MEDICINAL** Peroxide. **WE** make no other kind.

HYDROX CHEMICAL COMPANY

NEW YORK **CHICAGO**

Patent Office Has Jurisdiction Over Label Registration.

Jurisdiction over the registration of labels is left with the Patent Office in a decision which the Attorney-General has transmitted to the House committee on patents. At a recent hearing the question as to whether under the new law labels came within the purview of the work of the Patent Office or under the Library of Congress was raised. Commissioner of Patents Moore and Librarian Putnam taking opposite views. The whole matter was then referred to the Department of Justice.

Red Cross Stamps Not Good for Postage.

Notwithstanding the instructions issued in connection with the sale of Red Cross stamps, many letters are being posted bearing these stamps in place of the regular postage. When a letter posted in this manner is addressed to some destination in this country it is treated as unpaid matter. Matter bearing Red Cross stamps is not admitted to the mails in Great Britain, even though the regular postage is also attached, and it is admitted in Germany only in case the stamps are on the back of the letter or parcel.

Olive Oil of Sure Quality

Heinz Olive Oil begins with quality; it is pressed for quality; it ends with quality.

It is made from grades of olives especially chosen for their oil-yielding properties — quality, not quantity. These are grown within a radius of eighteen or twenty miles of Seville, Spain, a section favored by nature for fine olive production.

They are hand-picked—no bruised or inferior fruit is used. At Seville our plant is located where the olives are pressed immediately after leaving the groves. Only the virgin oil—that of the first pressing—is bottled. The surroundings in which

HEINZ Pure Olive Oil

is pressed are of immaculate cleanliness. The careful workers are uniformed in white. Every possible safeguard is taken to produce an oil of the highest quality and of absolute purity. Extreme precautions are also exercised in caring for the oil after pressing, to insure freedom from foreign influences which so easily affect the delicate product.

Heinz Olive Oil exhibits a clearness, a brilliancy, a fine golden color with a slight greenish cast that stamp it as an oil of exceptional quality and purity. For all medicinal uses it has every point of excellence a physician or druggist could desire.

H. J. HEINZ COMPANY

Special Offer

This 18 in. Punch Bowl with a Ten Case Order of

Walker's

GRAPE JUICE

"It's Clear Because It's Pure"

THIS handsomely decorated punch bowl is eighteen inches in diameter and ten inches high. Triple enameled, hand painted in colors, burnt in. It is said to be the handsomest article of its kind ever offered to the trade. Decorations include beautiful grape clusters shown in a most artistic manner. It is an ornament to any fountain—useful, attractive and a business producer. This bowl alone is good enough to cost us $5.00 apiece in ten thousand lots.

Walker's Grape Juice is the new national beverage. It is a new kind of grape juice and is being brought to the attention of everyone by a $200,000 advertising campaign now under way.

Walker's Grape Juice is clear and brilliant—free from tannin and purple sediment. We tell people in our advertisements why it's better—they see that it is better by looking at it—they will know it is better when they taste it—better than all others. You sell Walker's Grape Juice by the bottle for home and medicinal use—you sell it by the glass at your soda fountain. Before the opening of the fountain season we will supply you with recipes for novel and attractive fancy and mixed soda fountain drinks to be made with it which will add to your popularity and trade. Your jobber can supply you now.

In the "Ten-Pin" Bottle

Write for our Special 5 and 10 Case offers with Free Window Display Matter.

The GRAPE PRODUCTS COMPANY, North East, Pa.

SUCCESSFUL YEAR FOR INSURANCE COMPANY.

Six Per Cent Dividend Declared by American Druggists and Reduced Premiums for Policy Holders.

CINCINNATI, Jan. 21.—At the third annual meeting of the stockholders and directors of the American Druggists' Fire Insurance Company the first dividend of 6 per cent was declared, 4099 stockholders voting for the proposition and 1003 against it.

The meeting was most enthusiastic and successful. During the year the company had written insurance amounting to $4,070,202 at an underwriters' premium value of $63,895. Of this premium value the sum of $15,974 has been allowed the policy holders as a reduction in their premiums of the year, making the net premiums a total of $47,921.49. In addition the company earned from its investments $9261.30. During the year, it was shown, the company had saved the retail druggists $16,000 in premiums, or $35,487 since the company had been in business.

Fire losses during the year amounted to $12,893.07, and the total expense for operation, including the expense of entering eight additional States for business, was $19,862.91. The total available assets at the close of the year were $277,501.20, these including only the cash, accounts and bond securities of the company. The total accrued liabilities, other than reinsurance reserve, amounted to $3000.27, the reserve fund being $24,125.18, leaving a net surplus as to policy holders, which includes the capital of the company of $250,375.75.

The code of regulations of the company was amended so that not more than seven members of the board of directors may be State representatives of the company, the provision being intended to safeguard the interests of policy holders and stockholders of the company in the future.

The stockholders re-elected the entire old board of directors, which in turn re-elected the officers. Some changes were made in the personnel of the advisory committee, the result of all elections being as follows: President, Charles H. Avery; vice-president, L. G. Heinritz; secretary and general counsel, Frank H. Freericks; treasurer, George B. Kauffman; executive committee, Charles H. Avery, L. G. Heinritz, James H. Beal, Walter Rothwell, A. O. Zwick, George B. Kauffman, Frank H. Freericks; board of directors, Charles H. Avery, L. G. Heinritz, James H. Beal, Samuel C. Davis, Wm. C. Anderson, Simon N. Jones, G. O. Young, A. O. Zwick, Lewis C. Hopp, J. A. Kester, Walter Rothwell, George B. Kauffman, M. S. Kahn, E. B. Heimstreet and Frank H. Freericks; advisory committee, C. M. Southall, W. F. Baum, Fred W. Connolly, John D. Muir, Charles M. Butcher, Louis Emanuel, D. W. Ramsaur, Edw. W. Stucky, F. C. Godbold, Otto F. Claus, L. D. Carlson, Emil S. Blumenkranz, C. R. Redding, J. H. Axt, Nelson S. Whitman, J. W. Monfort, B. H. Hill, Charles J. Fuhrman, Thomas A. Spivey, N. D. Sevin, W. S. Elkins, Jr., A. O. Rosser and Charles H. Huhn.

The company decided to enter California, New Hampshire and Maine for new business.

New Corporation Will Deal in Children's Remedies.

The Howard-Stacey Company, Brooklyn, incorporated under the laws of New York with a capitalization of $100,000, will deal in children's specialties. The new company has established an office in Brooklyn and will in the near future open another in Manhattan. As a side line, it will put on the market simple remedies for ailments of children, such as for colds, colic, etc. The incorporators are: Schuyler Horn, J. H. Spencer, F. W. Lovejoy, W. Howard Bender and C. Stacey Bender.

Adds Another Store to Its Chain.

PARSONS, W. Va., Jan. 20.—The J. W. Kogelschatz Drug Company was recently sold to the F. S. Johnston Drug Company, of Elkins and Davis, which now has a chain of three stores. F. S. Johnston, of Elkins, is general manager. R. W. Shaverly is manager of the Davis store, and A. K. Burley is manager at Parsons.

List of Manufacturers of Viruses, Serums, Etc.

Under date of January 17, the Treasury Department at Washington issued a list of manufacturers now holding licenses issued under the Act of Congress to regulate the sale of viruses, serums, toxins and analogous products.

UPHOLDS FEDERAL PURE FOOD AND DRUG LAW.

Appeal Taken From Judge Stafford's Decision Sustaining the Constitutionality of the Statute.

WASHINGTON, Jan. 20.—Attorney Greeley, for the Waterbury Chemical Co., has arranged to appeal from the recent decision of Judge Stafford, in the District Supreme Court, upholding the constitutionality of the Federal Pure Food and Drugs Act in the seizure of 36 cases of cod liver oil which the government confiscated without preliminary notice to the manufacturers.

The effect of this decision, unless it be reversed on appeal, will be to permit the pure food and drug authorities to seize goods without notice or hearing and submit to the courts the question of misbranding or adulteration. This part of the law, the company claims, is unconstitutional, inasmuch as it confiscates their products without due process of law. The manufacturers intend to carry the point clear up to the United States Supreme Court, if necessary to secure a favorable decision.

A NEW PLASTER COMPANY.

Will Market Its Product Through the Jobbers, Unlike Most of the Concerns Now in That Line.

A new concern, to be called the Wilford Hall Company, with a capital stock of $200,000, is being formed to engage in the manufacture and sale of medicinal and surgical plasters, plain and medicated gauzes, suspensories and other goods such as are usually handled by plaster manufacturers. The new concern will distribute its products exclusively through the wholesale druggists.

Mr. Hall, the organizer, has been in the plaster business for almost 20 years, his latest venture being the installation of the plant of the Aseptic Products Company, a branch of the A.D.S. Previously he was with Grosvenor & Richards, Seabury & Johnson, and Bauer & Black. Mr. Hall has been successful heretofore and his new venture promises to become an important factor in the plaster business.

New York Heads of Parke, Davis & Co. Given Dinner.

At the annual dinner given on January 12 by O. W. Smith, manager of the New York branch of Parke, Davis & Co., to the executives of the branch at the Drug Trade Club, there was a decided change made in the program which has heretofore been a feature of such affairs. In previous years it has been the custom after dinner to listen to words of wit and wisdom from the heads of departments. On the last occasion post-prandial speeches were dispensed with. Dinner over, the entire party proceeded to Hammerstein's Vaudeville Theater, where boxes had been secured. Among those present were:

O. W. Smith, S. H. Carragan, W. J. Carr, J. Burnside, Wm. McKay, H. Kellogg, E. Plummer, W. D. Rowles, E. McColl, W. B. Kaufman, A. Jenkins, D. Lyle, A. de Castro, Dr. G. M. Gutierras, V. Pinto, W. Partrick, H. Kluckel, G. Tompkins, H. Rontgerman, W. Snyders, C. Brant, H. Rollinson, J. Doran, J. M. Blanco, Dr. Jokichi Takamine, J. J. Meyer.

The affair was voted one of the most enjoyable and successful of the many that have been given by the company's local branch.

"Freaks of Fancy" for Meyer Employees.

The annual frolic of the Meyer Bros. Employees' Mutual Aid Association will take place February 4 at Lemp's Park Hall, St. Louis, and it is said that the chief number of the programme will be "A monstrous assemblage of humorous characters in the howling farce comedy entitled 'Freaks of Fancy,' translated from the French for this occasion. The Show will Never be Repeated." J. Joseph Redmond, manager of the salesmen sample department, is general manager of the production. Of course there will be dancing.

Paper Box and Label Plant Damaged.

CHICAGO, Jan. 22.—Three firemen were injured and two of them escaped being burned to death only through a heroic rescue by two comrades in a disastrous fire today in the five-story building occupied by the H. S. McCracken Box & Label Co., at 513 West Van Buren street. The fire was caused by spontaneous combustion in paper boxes in the basement.

Get ready for PNEUMONIA

At this season pneumonia, deadliest of human diseases, is most prevalent. Ordinary treatment is of little value. Specific treatment is demanded; but common pneumonia serums have proved worthless.

Pneumolytic Serum—prepared only in our laboratories—is highly successful. It has been on the market three years. It almost invariably aborts the attack when given early.

We are making a special effort with it at present and physicians are showing keen interest.

Be prepared to supply it. When it is wanted there is not a moment to lose.

Price $3 per 10 Cc. package, less 40% to the drug trade.

Dioxogen

H_2O_2 12%

THE PURE PEROXIDE OF HYDROGEN

$H_2O_2H_2O_2H_2O_2H_2O_2H_2O_2$

PLAIN TALK—BUT, THE TRUTH

Mr. Pharmacist, do you want to be brought in competition with the grocer and the 5 and 10 cent store? Can you maintain the high standard of your calling by selling the class of goods such stores carry, and by adopting their methods? Shouldn't a druggist—a registered pharmacist maintain a higher standard and conduct his business on a different principle?

Ordinary **peroxide of hydrogen is sold by many 5 and 10 cent stores and even in many grocery stores, for 5 cents per 4 oz. bottle! They buy it as low as *36 cents per dozen.* Even that is too much for it. We sell better peroxide than that ourselves for 25 cents a gallon in bulk! But, *we* sell our peroxide of ordinary grades for commercial purposes only. We know they are not suitable or efficient for personal or medicinal uses.**

Dioxogen, the *Pure* Peroxide of Hydrogen, is free from all the objectionable characteristics of ordinary peroxide. It is free from acetanilid, contains less than ½ the acid and less than ⅓ the residue allowed by the U. S. P. and is 25% stronger than that standard requires. It is made and sold *exclusively* for personal and medicinal use. It is a *drug store* article, and it offers no attraction to the 5 and 10 cent or grocery store. It is sold on *quality, not* on *price.* Mr. Pharmacist, it will pay you to associate your store with the ***Dioxogen*** campaign of "quality" advertising. By pushing ***Dioxogen*** by making ***Dioxogen*** your leading brand of peroxide by making ***Dioxogen*** the kind *you recommend* you will be maintaining the high standard of your store and your business.

We will help you tell your customers. Write for particulars regarding our latest co-operative selling plans

Whitall Tatum Co., New York, advertise their Globe Brand Pump and Improved Rectal Syringe on p. 157.

Jno. Wyeth & Bro., Philadelphia, Pa., devote their space on p. 184 to an attractive adv. of Vanilla Extract.

Necco.

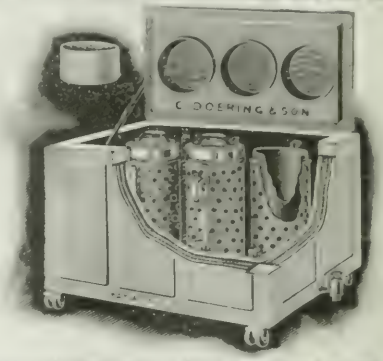
Sounds like an Italian word, but it isn't. Simply an abbreviation of the firm name New England Confectionery Co., of Boston, Mass., and a name applied to a line of confectionery which has deservedly won favor with dealers and consumers. Necco Sweets is a generic name under which are offered a large line of Necco products, some 500 items or more. The advertisement in this issue names a few of them.

Anesthaine.

Anesthaine-Abbott is a preparation advertised in this issue by the Abbott Alkaloidal Company, Chicago, Ill. Its [illegible] Stovaine, [illegible] of long [illegible] permanently in the attention [illegible] which has [illegible] and [illegible] its use [illegible]. Anesthaine, however, is [illegible] as a product which may be safely and effectively employed in all the varied conditions for which local anesthesia [illegible] Anesthaine contains no cocaine. Literature will be sent to physicians on request.

An Effective Ice Cream Cabinet.

An ice cream cabinet which it is claimed will keep ice and



[illegible] cream longest with one being is advertised in this issue by C. Doering & Son, Chicago, Ill. This cabinet, styled the Doering Arctic, is built entirely of steel and enameled, hence the farther claims for it that it will not leak, warp or waterlog, as will a wooden one, and, withal, it is cheaper than the latter. An inquiry will bring a catalog giving prices and [illegible] of styles and sizes.

PURE ALKALOIDS

There is no class of medicinal chemicals in which extreme purity and uniformity are of greater importance than in the Alkaloids. Consistent with the high standard of excellence which we strive to maintain in all of our products, our Alkaloids may be relied upon to conform to the most rigid requirements for purity. Special attention is directed to the following:

Cocaine Hydrochloride, Codeine Alkaloid and **Sulphate, Atropine Alkaloid** and **Sulphate, Apomorphine Muriate Crystals, Aconitine, Caffeine, Caffeine Citrated, Digitalin, Diacetyl-Morphine, Diacetyl-Morphine Hydrochloride, Hyoscine Hydrobromide, Homatropine Hydrobromide, Ethyl-Morphine Hydrochloride, Morphine Sulphate** and other **Salts of Morphine, Pilocarpine Hydrochloride, Scopolamine Hydrobromide, Strychnine Alkaloid** and **Salts, Etc.** *Specify "M.C.W."*

STOVAINE
IS A GREAT SUCCESS

Not as a spinal anesthetic, excepting in the hands of the most skilled, like the brilliant Jonnesco (for the idea of the injection of the spinal canal with all its dangers will never become popular with the patient, nor will the average man care to undertake it) but as the basis of Anesthaine, Abbott—non-secret, without cocaine, widely adopted and successfully applied in all the varied conditions for which local anesthesia may properly be used.

Anesthaine is being widely advertised to the Medical Profession, therefore you should stock, modestly, to care for the demand that is sure to come. Ask your jobber. Literature on request.

BUSINESS NOTICES

Branch Office in St. Petersburg.

F. Hoffmann-LaRoche & Co. has found it necessary to establish a branch office in St. Petersburg, Russia, making six branches so far created by this young and enterprising house. Its New York branch, at 65 Fulton street, under its present management, has exceeded the most sanguine expectations. The illustration presents a bird's-eye view of the

laboratories at Basle, Switzerland, and Grenzach, Germany, and it is understood that the demand for 'Roche' chemicals, alkaloids and specialties is such as to tax its manufacturing facilities to the utmost.

SODA FOUNTAINS and STORE FIXTURES
MANUFACTURED BY
J. W. Storandt Mfg. Co., Rochester, N. Y.
YOU CANNOT AFFORD TO PLACE YOUR ORDER WITHOUT CONSULTING US

The Seal of Approval.

In the booklet "Facts," which the American Soda Fountain Company has recently mailed to the trade, is a story relating to three neighbors, each with identical advantages of location. Each had a soda fountain. Neighbor One was content and never changed to more modern improvements. Neighbor Two invested in a fine Wall apparatus. Trade naturally left Neighbor One, following the bright and beautiful. He had feared a temporary loss, but fully expected the return of his regular customers—but as good, or better soda was served from the newer and finer apparatus so people stayed there. Naturally Neighbor Two settled back comfortably, satisfied with his increased trade. He forgot there might still be improvements and did not think seriously of the Iceless Innovation advertisements. Neighbor Three was quick to take advantage of the economical idea and installed a beautiful fountain. Trade left Neighbor Two for exactly the same reason it had left Neighbor One, and the increased business for Neighbor Three was many times that of Neighbor One. The story is illustrated by drawings, showing Neighbor One with the old-fashioned apparatus serving one customer. Neighbor Two has three clerks at his beautiful Wall apparatus serving three customers, while Neighbor Three with his Iceless Innovation is easily serving three customers with but one clerk. Other illustrations in the book, together with the "Facts," are all to the point. If you did not receive a copy send for one, mentioning the ERA in your request.

Formulas.

Just 1311 formulas are given in the new edition of the Dispenser Soda Water Guide. Every fountain operator needs it.

Extract of Vanilla

WYETH'S EXTRACT OF VANILLA

is prepared from the choicest variety of carefully selected and properly cured VANILLA BEANS, and contains no coloring matter nor any of the artificial or synthetic principles so frequently employed.

The DELICATE AROMA, a distinguishing feature of our preparation, is imparted by the natural flavor of the *Bean*

SPECIAL PRICES IN BULK

We have filed with the Secretary of Agriculture, as provided by the Food and Drugs Act, June 30, 1906, our GENERAL GUARANTY, which has been registered by the department as "GUARANTY No. 9." We take this opportunity of again assuring the trade that the high standard for which all of our preparations have long since been recognized shall be strictly maintained, and are pleased to afford this guaranty as to their purity and standard.

JOHN WYETH & BROTHER, Inc.
Pharmaceutical Chemists Philadelphia, Pa.

LEMONS?

We know you have had them. Maybe we handed you one years ago when concentrates were in their infancy and we were at the mercy of existing conditions. But today we have the best organization of technical experts in this country. Incidentally we are meeting great opposition. Why? Because the best perfumes in the world are now made from Concentrates—because the "art of perfumery" is becoming an exact science wherein the up-to-date pharmacist with our bases is far more competent than any sorcerers of olden time—

TRY ONE, TWO, OR THREE

odors and our suggestions concerning same. Your money back if you are not PLEASED with results. Catalog on request.

$100,000 CONSUMPTION CURE TESTS MET BY ECKMAN'S ALTERATIVE

Will give the prize of $100,000 to charity should conditions of award permit its bestowal upon Eckman's!

The announcement that a prominent Yale alumnus would award $100,000 to the first person discovering a cure for tuberculosis (consumption) interests the manufacturers of Eckman's Alterative only in respect to the fact that Eckman's **HAS ALREADY** met the conditions required:

1st—It has been in use over five years. 2d—It has many testimonials to prove that cures **have been effected**—testimonials from those cured, and from clergymen, priests and members of various religious orders, and others of standing, which prove that the cures were authoritative—were **real**—not fancied recoveries of people afflicted with minor affections of the lungs, or bronchial tubes or stomach.

But actual recoveries from well-defined, long-seated or acute cases of tuberculosis—(consumption of the lungs.)

ECKMAN'S ALTERATIVE A BOON TO HUMANKIND

Of course, no remedy is an absolute specific—even vaccine and antitoxin have not proved infallible. But Eckman's Alterative has **cured** cases of the severest type which were otherwise entirely incurable.

Eckman's Alterative, according to hundreds **who know by experience**—which is far better than claims or theories—is one of the greatest medical discoveries in the history of man.

The makers of Eckman's Alterative do not want the award. They will furnish the medicine for tests free to any charitable tubercular sanitarium or clinic in Philadelphia designated by the committee in charge of the award, with one member of this concern upon the committee. Upon this proof establishing the truth of all claims, if the award is made, it will be turned over to any charity or charities designated by three leading publishers.

Eckman's Alterative may be obtained from jobbers.

Write us for special local newspaper offer over dealer's name.

Many of the principal druggists throughout the United States are now running the advertising and report excellent results. Sales, in many instances, show a gain of several hundred per cent.

ECKMAN MANUFACTURING COMPANY

MARKET AND SIXTH STREETS -:- PHILADELPHIA, PA.

BUSINESS NOTICES

Goggles Practical and Cheap.

The Chicago Eye Shield Co., 141 So. Clinton St., Chicago, will mail to the trade the cards of a pair of Chicago Goggles No. 23 mounted on their advertisement in this issue. This card is a duplicate of the cards of this device, which is at once attractive, practical and cheap. Of late years goggles have come to be a necessity in a host of occupations to protect the eyes from wind, dust and accidental injury, the locomotive engineer, the motorist, the driver of horses, and even the modest pedestrian exposed to storm finding them serviceable and convenient. This special introductory offer will enable the dealer to convince himself that in Chicago goggles he has an article ready of sale and profitable. All jobbers can supply the trade demand.

Change in Cod Liver Oil Selling Agency.

Alfred Stubbs, drug broker, 30 Cliff St., New York, is out with an announcement to the trade that on Dec. 1 last he resigned the selling agency for Jervell & Co., Aalesund, Norway, and advises his friends and customers that hereafter he will act as sole agent in the United States for Isdahl & Co., Bergen, Norway, for their "Midnight Sun" brand of cod liver oil. This brand for fifty years past has been a recognized leader for its high quality.

Anyone Can Learn to Swim.

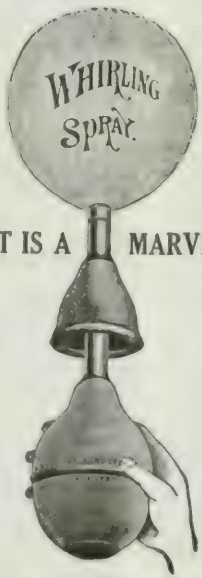
Learn to swim is an admonition that cannot be too often and vigorously repeated. Aside from the great pleasure afforded by a knowledge of swimming, there is added a sense of safety and confidence of incalculable value. While everyone admits the desirability of knowing how, there are many who ask how shall I learn? Learning to swim does not come easy to all. It is to the slow learners that the simple device advertised in this issue appeals with [illegible] Ayvad's Water Wings come very great [illegible] They remove from the learner that timidity which is often the only deterrent, and prove a real help to every tyro. There is a steady demand for this appliance as it is widely advertised to the public through the popular magazines. Dealers are supplied with color show cards and circulars. Write to the Ayvad Mfg. Co., Hoboken, N. J., for further information.

Jersey-Creme Sanitary Straw Dispenser.

This clever device, placed upon the market by the Jersey-Creme Company, of Fort Worth, Texas, is an answer to the call of public sentiment for a more sanitary method in which straws may be dispensed at soda fountains. The panels are of glass, all metal parts nickel-plated, and every part is easily accessible to clean. This is an absolutely sanitary device that excludes flies, insects and germ-laden dust. Each individual

can wait upon himself, and as it is double acting, straws can be secured from either side by a gentle touch of the lever shown in the cut, and only one straw is delivered at a time. The Jersey-Creme Company give these dispensers free with shipments of Jersey-Creme, and every dealer who would protect the health of his patrons should correspond with the Jersey-Creme Company at Fort Worth, Texas, with the view of equipping his fountain and tables with them.

THE MARVEL "WHIRLING SPRAY" SYRINGE



IT IS A MARVEL

WAS AWARDED THE GOLD MEDAL, DIPLOMA, AND CERTIFICATE OF APPROBATION, BY THE SOCIETE D'HYGIENE OF FRANCE, OCTOBER, 9, 1902,

as the latest and best improvement in Vaginal Syringes. Particular attention is called to the fact that by reason of its peculiar construction the Marvel Syringe dilates and flushes the vagina with a volume of whirling spray, which smooths out the folds and permits the injection to come into contact with the entire surface, instantly dissolving and washing out all secretions and discharges.

AGENCY FOR Whitman's CHOCOLATES AND CONFECTIONS

A Sign that People are Seeking

"With money in their hands"

Our system of selling our package Chocolates and Confections through selected, protected sales agencies makes it a little difficult, sometimes, for the public to buy Whitman's.

Whitman's are not "on sale everywhere."

Every mail brings inquiries "Where is your agency in——?" ranging all the way from Eastport, Maine, to Santa Barbara, California

We limit our sale to protected agencies and cultivate close relations with each agent, endeavoring through each store to supply *fresh* packages to all the fine candy trade that it can possibly reach. We send inquiries to his store, advertise him to the best people by *direct advertising*. But we can't reach the transient trade. He must attend to that.

The costly "general advertising" of Whitman's in the leading publications is all in the interest of the local agent.

The store that has the Whitman agency does wisely to see that the outside display signs are large enough and striking enough to let everyone who passes by *know* that the Fussy Package (and all the others) can be bought inside.

Millions of well-to-do Americans who want the best are hunting the Whitman agent everywhere.

If you have the agency—or if you should get it—*let these people know.*

Write for new catalogue of packages in true colors, samples of advertising matter and our offer to the leading druggist.

BUSINESS NOTICES

The Peroxide Controversy.

The Hydrox Chemical Co., New York, are using some very "live" copy for their two pages of advertisements in this issue. They discuss in vigorous language the use of acetanilid as a preservative of peroxide of hydrogen, maintaining that it is entirely unobjectionable in the quantity employed, on the contrary its presence is decidedly beneficial. In support of this contention they offer fifty dollars to any chemist, doctor or other person who is authority who will have the temerity to maintain an opposing position. The quality of Hydrox Peroxide is asserted to be the highest, but its cost to the trade is such that it renders a greater profit to the dealer than any other. The other Hydrox toilet specialties are equally profitable. The two advertisements in question are snappy and well worth reading.

Praise From Lord Northcliffe.

The Mothersill Remedy Co., Ltd., Detroit, Mich., finds of considerable value the following testimonial letter from Lord Northcliffe:

SUTTON PLACE, BY GUILDFORD, SURREY,
December 9, 1909.

The Mothersill Remedy Company Limited.

Gentlemen: Your letter of the 14th of September reached me on my return to England from a journey to Newfoundland and back, during which I have seen and heard abundant evidence of the fact that Mothersill's Seasick Remedy appears to be, in nineteen cases out of twenty, an absolute cure for Mal-de-mer, and also for what the Americans call "car-sickness." I have taken it on many occasions, with excellent effect and no after-effect. You are quite at liberty to make use of this letter, as I think it a duty to express my opinion on the subject. Yours truly,

NORTHCLIFFE.

A testimonial of this character is not to be procured for a preparation which has questionable merit. For seasickness Mothersill's seems to have made good.

Fire at Lewes—Plant Sold.

The plant of the Hocker Manufacturing Company, manufacturers of druggists' tin cans and tin boxes, at Lewes, Del., was recently destroyed by fire. The business has now been purchased by Fred L. Myers, who is building a new and improved plant and will soon be in a shape to take care of a largely increased business.

Should Be Sprayed With Calcium Chloride.

On page 78 of the January ERA, in the item about nitric acid packing, an error in the heading might cause confusion to thoughtless persons. As correctly stated in the item itself the proposition was to spray the excelsior packing with a 25 per cent solution of calcium chloride.

Price Lists, Pamphlets, Catalogues, Received.

WHITALL TATUM CO., New York-Philadelphia. Price list 1910. 206 pp. freely illustrated. Druggists' and perfumers' glassware, druggists' sundries. A very attractive list, numerous illustrations in colors. List prices and discount sheets.

MARCHAND'S
MEDICINAL PREPARATIONS

If you, Mr. Pharmacist, had devoted over *a quarter of a century* to the manufacture of five high grade preparations with only one standard of purity and uniformity, wouldn't you feel they were better than those made by a newcomer?

Then, is it any wonder we are proud of *our* preparations?

We were the first to manufacture Peroxide of Hydrogen (Marchand's) for medicinal purposes—that was thirty-one years ago—we are the PIONEERS.

PHYSICIANS KNOW

That MARCHAND'S PEROXIDE OF HYDROGEN (medicinal, 15 Vol.) is superior, because it is 50% *stronger* than the ordinary U.S.P., 10 Vol., and because it contains *NO ACETANILID*, and is absolutely free from any impurities.

That HYDROZONE (30 Vol.) is *THREE TIMES AS STRONG* as the ordinary preparations, and that it is the *most powerful of all germicidal agents*, yet is *absolutely non-poisonous.*

That GLYCOZONE ($C_3H_8O_4+C_8H_8O_3$), because of its remarkable properties is of signal value when applied to inflamed mucous membranes or other tissues. It is especially serviceable in acute and chronic forms of gastritis, intestinal catarrh, gastric ulcer, etc.

HYDROZONE AND MARCHAND'S PEROXIDE OF HYDROGEN (Medicinal) are put up in the best quality of flint glass bottles, for the reason that flint glass is not so brittle as amber glass. This, in connection with Marchand's improved process of manufacture, reduces the risk of breakage to a minimum.

When a prescription or a request comes to you for **MARCHAND'S PEROXIDE OF HYDROGEN (Medicinal), HYDROZONE, GLYCOZONE, MARCHAND'S EYE BALSAM** or the **DREVET MFG. CO.'S U.S.P. H_2O_2 Official**, see that it is dispensed and no attempt made to urge anything else upon the customer.

Your profit is LARGER than it would be if you urged the sale of an inferior article.

"Quick Loader"

INSECT POWDER GUN

LEADS THEM ALL

It Leads in Quick Sales
It Leads in Durability
It Leads in Construction
It Leads in Applying the Powder
It Leads in Price

There is as much profit and much more satisfaction in selling the "Quick Loader" than any other gun made.

If you buy in lots of 25 gross or more we will place your name on the top plate in place of ours, and in addition will furnish you with a reasonable quantity of attractive powder gun circulars, with your imprint.

Advise us the probable quantity of guns you will wish this coming season and we will make you an attractive price and help you to sell them.

American Can Company

New York Chicago San Francisco

GIVE THE PEOPLE WHAT THEY WANT

It's a waste of time and energy trying to persuade them to something else. It's money in a Druggist's bank to "fill orders." Druggists thruout the entire country have taken advantage of our **New Ideas in Rubber Goods**—now being run in national advertising campaign, and are MAKING THEM A LEADER IN SALES. Have you tried it yet?

The Star Seamless Water Bottles

are the only POSITIVELY seamless Bottles ever made. They are cast whole, smooth and even as a glove—a new idea just patented recently by us. COMBINATIONS, SYRINGES, HOUSEHOLD GLOVES, SURGEONS' GLOVES, NIPPLES in fact, the most complete lines of Rubber Sundry Goods ever made.

"The Blood of Venus"

Is the title of a thrilling little romance we distribute, handsomely bound and fully illustrated, to the PEOPLE thru the dealer, as a trade winner. Write us for free copy and catalog, and ask us what we will do to create heavy sales on these goods for you.

"ASK FOR PARTICULARS ABOUT OUR SEAMLESS GOODS."

THE STAR RUBBER COMPANY
265 Switzer Avenue
AKRON, OHIO

Here's the Point:

You proclaim yourself a discriminating buyer—establish your business upon the highest level of professional confidence—by dispensing **'Roche' chemicals** and **alkaloids.** Why? Because physicians have learned, through their acquaintance with Digalen, Thiocol, and other widely used 'Roche' products, to **put their trust in anything** bearing **the 'Roche' symbol.** The other day one of New York's leading ophthalmologists said to us—**"Your Homatropine is the best I have ever used."** The fact is, we specialize in the production of **chemicals, alkaloids, and specialties of rare quality.**

Specify 'ROCHE' when ordering the following:

Aconitine	Atropine	Escrine	Hyoscine
Arecoline	Colchicine	Homatropine	Pilocarpine

(in vials of 1, 2, 5, 10, and 15 grains, and upward.)

Benzo-Naphthol	Hexamethylenetetramine
Benzoic Acid	Iodides
Bismuth Salts	Kresapol
Bromides	Morphine
Brucine	Phenolphthalein
Caffeine	Salicylic Acid
Carbolic Acid, U. S. P.	Salol
Cocaine	Saponin
Codeine	Sodium Benzoate
Creosote (Beechwood)	Sparteine
Cumarin	Strychnine
Guaiacol (Carbonate)	Theobromine
Guaiacol (Liquid	Veratrine

MacKellar's

It requires no great effort to add the word "MacKellar's" when ordering powdered Willow Charcoal, but it means a great deal of difference in the quality you will get. Insist on having the WILLOW CHARCOAL (Salix) that is "Prepared at MacKellar's Mills, Peekskill, N. Y. Bulk or cartons.

R. MacKELLAR'S SONS COMPANY

Established 1844 PEEKSKILL, N. Y.

CHARCOAL

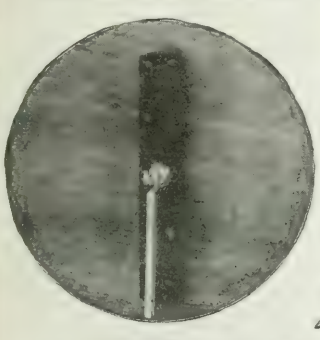
If You Have a Soda Fountain
You Need the Portable Soda Table

Ordinary Soda Tables when not in use are in the way. They add to your rent money. The Portable Soda Table is collapsible—set up or taken down in a few seconds. When not in use can be set aside, taking up the space of an umbrella. It *helps* pay your rent money.

Ordinary Soda Tables spill the liquids on the customers. **Portable Soda Tables** prevent that—the outer edge is grooved, catching the drip.

Every soda fountain has its rush hours. customers come in no table room—result, they go to your competitor. Avoid this. Be prepared. Have a few Portable Soda Tables at your disposal, which can be set up in a few seconds and placed anywhere in your store, ready for service.

Showing Portable Soda Table in Use.



Showing Table Taken Apart.

Top can be lowered or raised, for children or adults, as the occasion demands.

SAVES SPACE—KEEPS CUSTOMERS—MAKES MONEY

Aren't these sufficient reasons why PROGRESSIVE DRUGGISTS should use Portable Soda Tables?

Your jobber should have them in stock if he hasn't, write us. We gladly send our Tables on 30 days approval. If not entirely satisfactory, your money refunded without question.

STYLES: Nickel-plated, and Polished or Oxidized. Legs straight or curved. Table surface, 18, 20 or 24 inches. Birch or quarter sawed Oak. Finished in Mahogany or Antique Oak.

PRICES: 18 inch top, Nickel-plated or Oxidized, $5.50. Beautiful stools of similar combination and construction, $3.50.

When you break a prized piece of china or glass, just get

Major's Cement

It will mend the article quickly and well. Instructions for use on wrapper with each bottle.

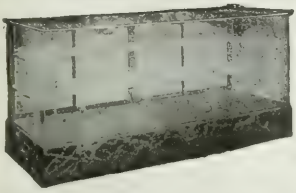
DON'T BE FOOLED yourself nor allow **YOUR CUSTOMERS to be, by using some inferior article.**

MAJOR'S CEMENT IS THE BEST and its worth is proven in its use by the general public for over 30 years.

Sells at 15c. per bottle.

Your wholesaler can supply you. Major's Rubber Cement and Major's Leather Cement, for use on rubber, cloth and leather, are of the highest grade. Price, per bottle, 15c.

MAJOR MANUFACTURING COMPANY
461 PEARL STREET NEW YORK CITY



Prompt Deliveries

Our reputation for good work is unexcelled—for deliveries a little slow. This is due to one cause only—too many orders for our capacity. But this refers to the past. With our new addition we will have a capacity of $2,000,000 annually. We will carry an enormous stock in the white—ready for finishing. Let us figure with you for one case or an outfit. Write for Catalog B-10.

ASK YOUR JOBBER FOR THE

ADVANCE FEVER THERMOMETER

(Patented October 6th, 1908)

Perfectly Aseptic, equipped with Lenz Finders and anti-rolling devices, provided with means to limit the extent to which it should be inserted into the body.

Insertion Aseptic — Projection for Antirolling

Lenz Finder — Lenz Finder

The Advance is actually the only improvement in Fever Thermometers which has been demanded by the profession for many years.

STANDARD PRICES for Advance Thermometers

¼ Min. Registration, with Certificate, in Rubber Case.....$6.50 per dozen
1 Min. Registration, with Certificate, in Rubber Case.....$[illegible] per dozen
2 Min. Registration, with Certificate, in Rubber Case.....$6.00 per dozen

RED OR BLUE BULB FOR RECTAL USE.

1 Min. Registration, with Certificate, in Rubber Case.....$6.25 per dozen

Every Instrument tested by the Certified Government Standard and fully guaranteed.

On the ordinary thermometers the scale is so located that a portion thereof is inserted into the mouth or other organs of the body when making a test of the bodily temperature, and by reason of this fact that portion of the scale which is inserted into the body is worn off, and, in addition to this, the coloring material of the scale gets into the body, and this is one great objection which THE ADVANCE THERMOMETER obviates. Any manufacturer pretending to sell THE ADVANCE is making fraudulent claims and will be brought to justice through the intervention of the U. S. Patent Courts. Manufactured by

They All Want

PINEX

The Biggest Selling Cough Remedy That Ever Happened

It does the work—it has the merit. It makes friends—always. It gives your customer a lot for his 50 cents And it repeats like sixty. One of the biggest money makers that a druggist ever touched.

It's Heavily Advertised

The demand keeps growing. If you are not handling it, someone else is getting your profit. We guarantee Pinex and ***guarantee the sale.*** Also guaranteed under the Pure Food and Drugs Act June 30, 1906. Serial No. 7561.

Don't Lose These Sales!

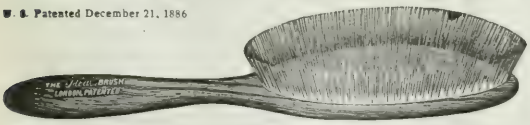
Don't let your people get the habit of going elsewhere. Order some from your jobber. If it doesn't sell, fire it back. The only way you can lose is by waiting until you lose sales.

The Pinex Co., Fort Wayne Indiana

AIR CUSHION.

The Ideal Hair Brush.

U. S. Patented December 21, 1886



SIBERIAN BRISTLES.

Nothing Like it on the Market.

Do not confound this brush with the rubber back wire brushes. It is entirely different. The "Ideal" has an Air-Cushioned Back and Genuine Siberian Bristles. It is the best selling brush on the market. Order through your jobber, wholesale drug or dry goods.

SPECIAL FREE GOODS OFFER for WINDOW DISPLAYS

Owing to the great success which has attended our Special Free Goods Offer for Window Displays, and the many requests which we are receiving from the thousands of retail druggists who wish to avail themselves of the opportunity, we have decided to extend the time for making the window displays and obtaining the free goods from January 1, 1910, to May 1, 1910.

For displaying our signs one week, or more and purchasing

6 Doz. SYRUP OF FIGS and ELIXIR OF SENNA @ $4.00, less 5%, ½ Dozen Free.
12 Doz. SYRUP OF FIGS and ELIXIR OF SENNA @ 4.00, less 8⅓, 1 Dozen Free.
24 Doz. SYRUP OF FIGS and ELIXIR OF SENNA @ 4.00, less 8⅓, 2 Dozen Free.

Freight prepaid on 24 dozen orders, but not on smaller lots.

To get the benefit of the above special offer please sign the special offer blanks to be had of us and of all wholesale druggists. Now is the time to get the benefit of the free goods in connection with this feature of our advertising campaign, and thanking the druggists generally for their cordial co-operation, we are

Yours very truly, CALIFORNIA FIG SYRUP CO.

THE STRONGEST FIRE INSURANCE COMPANY

A Conservative Businessman One who, before accepting a promise to pay or to indemnify, has the good judgment to ask:

What have you to back it up? What disinterested **authority** will vouch for the truth of your statement?

We have a Surplus as to Policy Holders of a

Quarter Million Dollars

The Insurance Commissioners of Connecticut, Georgia, Illinois, Indiana, Kansas, Kentucky, Massachusetts, Michigan, Minnesota, Missouri, New Jersey, New York, Ohio, Pennsylvania, Rhode Island, South Carolina, Tennessee, Texas, Vermont, Washington, West Virginia, and Wisconsin are supervising and controlling us. THEY WILL VOUCH FOR THE TRUTH OF OUR STATEMENT.

We are saving retail druggists in fire protected towns of the above mentioned States thousands upon thousands of dollars annually. We give them better protection and greater satisfaction than any other Insurance Company in existence.

WHY NOT YOU?

FIGHTING FOR GOOD, CHEAP FOOD.

With the fight against the unnecessary use of preservatives practically won, the next great food problem is the curbing of the cold storage trusts and the consequent adjustment of the cost of ordinary, perishable food to the proper relation of supply and demand, without compelling victims of the present system to pay high prices all the year around for animal and vegetable products that need only be eaten when in season and which are both in abnormal demand at other times and of doubtful food value through the loss of nutritious elements due to unnatural and prolonged preservation.

Cold storage for temporary purposes, like the use of preservatives under proper circumstances, is not a menace to the health of the people, but either or both when overdone can only be regarded as dangerous to health and life. Following the attack on the bad features of cold storage in *The Soda Fountain* a New Jersey District Attorney has made an investigation in which he discovered that turkeys were kept as long as *seven years* in cold storage in Jersey City and he has gone about the business of indicting the offenders. In New York City a municipal ordinance is pending to compel labeling the cold storage food and in other cities and several States the evil is receiving publicity and legislative attention. Dr. Wiley has attacked the cold storage eggs and his aid can be counted upon in rescuing the people from the cold storage barons.

A CHANCE FOR GAYNOR AND LEDERLE.

In the fight against embalmed food at high prices, which concerns every druggist in the country, as well as everybody who is not independently wealthy, New York City is, next to if not ahead of Chicago, the chief storm center. Mayor Gaynor, who has just come into office, possesses the experience gained through long service as a Supreme Court Justice, together with independence of trusts and politicians, that ought to enable him to take a masterly grasp of the situation. Mayor Gaynor's character is best shown to our readers outside of this city and State by his action in reappointing as Health Commissioner of New York the man who revolutionized the department and forced—as only one of many achievements—the supplying of pure milk to this city, regardless of where it came from, or who supplied it, with no concern as to State lines, or anything else. There was only one issue, pure milk.

This man, Dr. Lederle, is back again at the head of the Health Department of New York City. An interesting sketch of his career is given on page 265

of this issue of the ERA and one need not read between the lines to come to the belief that with a new section of the Sanitary Code made to apply to the case he could and would put the cold storage barons out of business in New York City—just as he did others in his previous term who would not comply with the Code—thereby giving New York fresh food at reasonable prices and setting an illuminating example for the rest of the country.

Mayor Gaynor has the courage. Health Commissioner Lederle is magnificently equipped for the work. The opportunity is one of the largest in point of concern to every citizen that has ever been presented to any municipal official.

CHAIN STORES—A MAMMOTH CONCEPTION.

In this issue we are giving a great amount of valuable space to the subject of "chain" drug stores, but the unrest of thousands of druggists and the activities of many other interests have made this for the moment a paramount problem in drugdom. In the New York and Maryland legislatures bills are pending which if enacted into law would prevent the operation of "chain" drug stores by corporations. In the courts we have the controversy between the Riker company and President Liggett of the United Drug Company, as to which there has been no decision regarding the amount of sales which the Riker corporation must make to keep in the Rexall "chain." President Liggett, meanwhile, has been adding to his chain of owned stores—they now number more than 21.

But probably greater and more important than anything heretofore attempted is the trans-continental "chain" of drug stores under the auspices of the American Druggists' Syndicate which has been launched by Secretary Goddard. With a basis of 12,000 members the possibilities are enormous. A "chain" composed of 12,000 retailers would eclipse anything of a similar nature that has ever been seen in industrialdom. Mr. Goddard undoubtedly realizes many of his difficulties, but it is probable that in the enthusiasm of presenting the proposition he may not realize his limitations.

The difficulty of operating a drug store owned by a corporation, yet retaining the individual ownership of the proprietor, is a most serious problem. The original owner would hardly care to sell if he was doing a satisfactory and prosperous business, unless he obtained a price which was more than normal, or he had some other object in selling, which would make it an undesirable investment from a capitalistic point of view.

If the proposed corporation could acquire a large number of prosperous stores at reasonable prices, with no "dead ducks," as they might be called, the outlook would be encouraging to the people interested. In this case, with the records as to sales, etc., which the A.D.S. would have available, there would be little danger of misrepresentation, but even then, if the mere member of the A.D.S. would have the same privileges and protection as would a store actually owned by the A.D.S. why would the druggist with a lucrative business sell his pharmacy to the A.D.S.?

POSSIBILITIES OF THE CHAIN AGITATION.

So far, the "chain" stores that have been successful have been operated in the selective way, that is capitalists have investigated localities and prospects and have picked out the best possible propositions; but even under these favorable auspices success is not assured by any means, as the record, in our news columns of the bankruptcy of the Jungmann "chain" gives timely evidence. This was an ambitious and apparently judiciously managed business venture, but the results did not bear out expectations. The assets are far in excess of the liabilities, but without working capital there is only the one culmination.

If the "chain" fever keeps up no doubt the wholesalers will have to take a hand in the movement. If half the drug stores in the country should go into "chains" that would make them independent for the most part of the jobbers, the latter would have to do something in self-defense. What would be more natural than starting rival "chains"? Most of them are amply equipped and well-financed to undertake such an enterprise. What would be more probable than that they would do so?

It has been said that too much of anything is worse than not enough and it is worth while for retail druggists to pause and consider whether there may not be danger in the present "chain" epidemic. Co-operation is a mighty good thing under equitable restrictions, but there is danger in carrying it too far. The present situation, on the whole, is one which invokes calm thought and consideration on the part of everybody interested in the prosperity of the druggists of the country—both retail and wholesale. When all is said and done it is entirely improbable that either element will be eliminated from the situation. Both are necessary to the drug business—more than in any other line of commercial life.

In the April ERA we expect a number of letters from prominent druggists, both wholesale and retail, in which the "chain" subject will be discussed from various points of view. The symposium promises to be instructive and enlightening.

"THE FUTURE OF PHARMACY."

Nothing that has been said or written in many years has called out more comment than the highly interesting paper on "The Future of Pharmacy" which Dr. Stewart contributed to the February ERA. The author's ideal is the unification of the professions of medicine and pharmacy, which certainly is the real consummation that all might devoutly desire, but there are limitations in mankind, as there are in everything. To attain the ideal of Dr. Stewart we would have to discover the ideal man, a most entrancing proposition of research, but in our present knowledge and with our facilities for investigation, somewhat far away in the future. That seems to be the tenor of a symposium of the views of thoughtful pharmacists and physicians which will be found on page 247.

There is a noteworthy trend of opinion in the contributions in the direction of the divorce of the drug store from the pharmacy: the separation of professionalism from commercialism. The conclusion of

some of the writers is that eventually the druggist will, as abroad, be a "handler" of drugs and the pharmacist will be a dispenser of prescriptions and more allied to the scientific side of pharmacy than at present.

THE NEW YORK PHARMACY BOARD.

On page 245 of this issue of the Era we print copious extracts, almost the complete text, of the decision of the Court of Appeals sustaining the present New York State Pharmacy Law in a suit which was prosecuted by a Brooklyn concern that had been penalized by the Board of Pharmacy. While the court did not take up all of the objections that have been made against the present law by Assemblyman Conklin, representing the Brooklyn druggists who are opposed to the board, the unanimous opinion handed down would seem to dispose of any further attacks in that direction. The Brooklyn department store had the best legal talent available and every effort was made to hit the board in a vulnerable spot. While the method of election of the board was not judicially considered the fact that the same has been unchallenged in the courts for nine years or more would tend to militate against any adverse ruling by the Court of Appeals, especially as it is purely a matter of opinion.

The new Pharmacy Bill has reached a point where it is likely to pass the Senate, but in the Assembly it was still in committee at the time of going to press. Elsewhere will be found reports of conferences, hearings, etc. It is to be regretted that there seems to be less interest in this bill than in those of the last few years. This is probably due to the endorsement of the old law by the Court of Appeals. Nobody would be seriously hurt among law-abiding pharmacists if the legislature should fail to pass the pending bill.

THE EVIL OF PRICE-CUTTING.

One of the evils of the drug trade, that of cutting prices, has seized upon the tobacco trade to an extent that has called forth a vigorous demand for its abolition by that energetic journal *Tobacco*, extracts from which are printed on page 230 of this issue of the Era and which will be read with interest both by advocates and opponents of the practice so far as it affects conditions in the retail drug trade.

We have often pointed out the fact that with rare exceptions, where the cutters enjoy wholesale purchasing advantages, the cutting of prices is injurious all around and even the public, which is the supposed gainer in all cases, really benefits to a very limited degree. *Tobacco* urgently desires a remedy. Drug trade victims also would like to see a remedy put into operation. Perhaps some of our readers can offer practical suggestions which would apply to either or both trades; if so the Era's columns are open to them.

MAKING OUR ADVERTISEMENTS NEWSY.

With a view to making the Era's advertising pages this month more than ordinarily attractive an offer was made, open to all persons without restriction, of free advertising space in the May issue to the three advertisers who can demonstrate through the receipt of answers that their announcements have attracted the largest amount of attention.

It is the Era's policy to make the advertising section as interesting and as valuable to the subscribers as the news pages and for that reason every effort is made to have our advertisers fill their spaces with live, fresh copy. The results are beneficial to them, as well as to our readers. Taking into consideration the extraordinary offer made in line with this endeavor we urge our subscribers to carefully scrutinize the advertisements in this issue of the Era and aid so far as they can in a decision of their merits and attractiveness.

As told in our news columns of the last issue of the Era, ex-President Oldberg came in for some criticism at the January meeting of the New York Branch of the A.Ph.A. for the manner in which he referred to the pharmacists in the Government service in his address at Los Angeles. When it is remembered that the A.Ph.A. has pledged with recurrent frequency its support and expressed its confidence in the ability of these men it is not likely that the ex-president's remarks will fill the country with disturbance or endanger the chances of Government pharmacists from getting that recognition which is really their due. Of course, harmony is desirable, but there will be no war.

The "Oath of Hippocrates," reproduced in Dr. Stewart's paper in the February Era, carried the reader back to a time when its reputed author was called "The Great" even by his own contemporaries. Though there were physicians before his day, the reforms he introduced were so important, and the impress of his genius upon the whole art of healing was so great that the title of "Father of Medicine" is well deserved. As a pioneer he laid the foundations of discoveries that have since proved of inestimable value to mankind.

The authors of the paper on "The Essential Oils of the U.S. Pharmacopœia," which appeared in the February issue of the Era, declared that our official guide is about ten years behind contemporary science. The force of the criticism was lessened on the members of the New York Branch of the A.Ph.A., however, when Mr. Raubenheimer remarked, "the Frenchmen, in criticising our Pharmacopœia which appears every ten years, have forgotten that their own Codex appears only every twenty-five years."

Bill at Washington for a National Health Department, with a secretary in the President's cabinet, is moving along slowly. The enterprising *Soda Fountain* for February gave a very good summary of the measure as presented to Congress for legislative approval. Druggists will find considerable fresh, live news in *The Soda Fountain* outside of purely fountain topics.

Clever is no word to describe the discovery at Washington of the necessity of an appropriation to enforce the publicity clause of the Corporation Tax Act. Congress can dodge responsibility and business secrets will be safe.

In Virginia fountains selling coca-cola will be taxed $15 each, if Speaker Byrd has his way. Readers of *The Soda Fountain* will be kept informed regarding the progress of this proposed legislation.

Lively times may be expected when N.A.R.D. asks at Washington for seats in the U.S.P. Convention. Era subscribers will learn all of the interesting particulars.

Druggists interested in the sale of soda water and lunches should never miss an issue of *The Soda Fountain*.

Ohio is working hard for laurels. New associations are being formed weekly and enthusiasm is high.

Store "chains" are liable to snap, like other chains, when the tension becomes too great.

BOOK REVIEWS

DIGEST OF COMMENTS ON THE PHARMACOPŒIA OF THE UNITED STATES [illegible] Prepared under the Direction of Walter Wyman, Surgeon-General of the Public Health and Marine-Hospital Service of the United States. By Murray Galt Motter and Wm. L. Weaver of the Division of Pharmacy and Chemistry. Published by Authority of the Secretary of the Treasury. 523 pages. Washington, D. C.: Government Printing Office.

This bulletin, the second of its kind to be issued under the authority of the Public Health and Marine Hospital Service, covers the literature relating to the Pharmacopœia which appeared during the [illegible] year 1905, embodied in the bulletin for the previous year, the compilers have followed the principle that the value of a compilation of comments on the officially recognized standards must be largely in the direction of recognizing shortcomings to be corrected and errors to be eliminated. To this end, in addition to journalistic literature, abstracts from reports of State boards of health, committees on adulteration of pharmaceutical associations and annual reports of manufacturers have been incorporated on the ground that such reports call attention to the kind of adulteration and substitution now in vogue; they also go to show the need for constant watchfulness on the part of the pharmacist, and the physicians' imperative need of assurance that their sources of supply for medicaments are controlled in an efficient and honest manner.

In looking over the abstracts which appear in this bulletin under the heading "nomenclature," one may become fully cognizant of the great number of comments which have been made criticising this feature of our official guide. If these criticisms stand for anything they may be taken to mean that many Latin titles of official articles now recognized will not appear in their present form in the forthcoming edition of the Pharmacopœia. This is but one feature of the bulletin before us, and we can commend its study to any one interested in the improvement of the Pharmacopœia.

TEXT-BOOK OF MEDICAL AND PHARMACEUTICAL CHEMISTRY. By [illegible] H. Beasley, B.S., M.D. [illegible] professor of [illegible] and [illegible] and [illegible] Hospital [illegible] and professor of [illegible] and [illegible] in the Brooklyn College of Pharmacy, etc. Seventh revised edition, [illegible] pages. Cloth, $3 net. Philadelphia: P. Blakiston's Son & Co.

This book, upon the appearance of its several revisions, has been reviewed in these columns and most of our readers are already familiar with its character and scope. We can still endorse our previous words of commendation; the present edition, so far as we have been able to detect, has been purged of misleading statements and the book, as a whole, is an up-to-date presentation of the science of chemistry, at least in the essentials which are needed by medical and pharmaceutical students. The general character of the work has not been changed, although many pages appear to have been rewritten. In Part IV the section devoted to proteins has been made to conform with the nomenclature and classification recommended by the committees of the American Physiological Society and the Society of Biological Chemists.

EXPORTERS' ENCYCLOPEDIA, Containing Full and Authentic Information Relative to Shipments for Every Country in the World, and Containing Over 750 pages. Cloth. New York: [illegible] Co.

This book contains much information which should prove of value to pharmaceutical manufacturing and wholesale houses that do an import and export business. In it are given in a clear and concise manner the essential facts relating to the [illegible] Some of the subjects which receive treatment worthy of mention are [illegible] explosives, fire risks, etc. As a guide the Encyclopedia should post the manufacturer so that he may make shipments to any foreign [illegible] delays, fines, etc., for it outlines for him practical routes to every [illegible] he must take. The Encyclopedia is published as an annual supplement to the Exporters' Review, a well known monthly magazine devoted to the export and import interests of American trade.

"ANTIPYRIN, ACETANILID AND PHENACETIN. ARE THEY HARMFUL REMEDIES? ARE THEY HABIT-FORMING DRUGS?" is the title of a booklet by Dr. Uriel S. Boone, of St. Louis, Mo., which the author states is "respectfully dedicated to the medical profession of the United States." The pamphlet contains the results of Dr. Boone's investigation of the harmfulness of the remedies mentioned and from the statistics obtained from more than 1000 hospitals and sanitariums in the United States he concludes that the coal tar remedies have been maliciously slandered. His brief for these preparations is summed up in the following suggestion to the medical profession: "Let us be just to ourselves and not allow foolish fears to deprive us of these preparations which are probably of greater use to the medical profession than any other drugs in the materia medica."

Chicago Veterans to Afflicted Friends.

WASHINGTON, Feb. 20. The loving service of the Chicago Veteran Druggists' Association reaches far. Samuel L. Hilton, of Washington, who has been seriously ill, was the recipient of beautiful flowers from his friends of the Chicago Vets. He also received a touching letter of sympathy, signed by those of the veterans who were present at a recent meeting of their "Round Table." A similar letter was received by Joel Blanc, who recently underwent a minor operation for his eyes.

Maine Association Will Meet at Castine.

Executive committee of the Maine State Ph.A. has decided that the meeting and annual outing of the association shall be held at Castine July 6-8.

A Matter of Timeliness.

By Emma Gary Wallace.

JULIET ANTON had rung the changes of every cold weather article of which she could think, until she was quite at her wits' end for something new and different. She especially desired this week's windows to be winners and as she walked briskly down the Avenue in the crisp air, her mind was very busy with the problem. Her attention was suddenly attracted by the dazzling brightness of something upon which the sun shone in the window of a hardware store. It was a forlorn Chafing Dish which stood dejectedly among an array of saws and pliers—incongrous to be sure, but it gave Juliet her clue.

Christmas had brought her a beauty in burnished copper all complete with wind shield, flagon, tray, and stag handled spoon and fork. Stupid not to have thought of such a treasure before!

Then, too, there was the little low mission table in the hall at home and the embroidered lunch cloth that was only used on state occasions. Juliet fairly flew along. It was all clear in her mind now, the main window should exhibit a line of Chafing Dish necessities.

The next morning found the junior partner of Anton & Company busily at work with her material all assembled for both the front and the side window. Sam had cleaned the plate glass until it was like looking straight out doors to look through it, and the base of each window was neatly covered with moss green crepe paper upon which tiny pink rosebuds were generously sprinkled.

In the middle of the front window, Miss Juliet stood the squat little mission table and spread upon it the snowy folds of the cherished embroidered lunch cloth. This made a satisfactory background for the lustrous copper utensils and their accompanying accessories. In a low vase, she massed some delicate pink flowers which she placed upon one corner of the table.

The effect of the central decorative feature was exceedingly pleasing and was certain, Miss Juliet felt, to attract favorable attention.

Mr. Anton stood by occasionally grunting out remarks entirely derogatory to the whole idea, which the look of admiration on his face belied. Miss Juliet laughed easily, and paid little heed. She had come to know her gruff old father in the months which had passed, and the better she knew him the more she admired his rugged character.

On one side of the window the young trimmer built a neat pyramid of bottles of olive oil which was contained in low, fat bottles of unusual shape. The richness of the oil was apparent from its color and thickness.

Nearby stood a black-lettered card which announced:

> "This is the very best quality of *Virgin Olive Oil.* It was extracted from nearly ripe olives which were hand-picked to avoid injury by bruising. The oil was then immediately pressed and bottled for market.
>
> "We guarantee it free from all adulterants, of superior quality and bland and agreeable to the taste.
>
> "We invite comparison."

On the opposite side a similar pyramid of Tarragon Vinegar likewise explained by a card of the same shape and size that:

> "This *Tarragon Vinegar* is prepared purposely for the finest class of trade. It was made by macerating Tarragon Herb in pure cider vinegar for three months. Especially fine for use in salad dressings, and dishes where a particularly delicate flavor is desired. For recipes showing its use, see free book of Chafing Dish Dainties given away this week.
>
> "Try a bottle."

Bottles of curry powder and air-tight cans of all kinds of spices formed semi-circles about the bases of the pyramids, those most commonly used in Chafing Dish cookery being placed well to the front.

In front of this again, Miss Juliet placed two handsome plates with a square of black paper in the center of each. On one plate she placed a mound of ordinary commercial bicarbonate of soda, and upon the other a mound of chemically pure soda, glistening white and finely powdered in comparison. Each mound was plainly labeled. The evident contrast in color and quality told its own story.

In front of the vinegar was placed plates prepared in the same manner with mounds of cream of tartar, which showed a manifest difference in color and texture.

Cloves of garlic, bottles of flavoring extracts, a few cans of condensed milk, and a tall gallon bottle containing a liquid purporting to be denatured alcohol for burning purposes, several preparations for cleaning and polishing the utensils and sundry other drug store articles which might be used in preparing a Chafing Dish supper, were given appropriate place.

In front of the table stood a card which stated briefly:

> "To obtain the best results procure the best materials. Wholesome dishes are not made with poor ingredients."

Over the whole was placed an arched span from which many colored electric lights twinkled in the evening and which were all but hidden in the day time by the clustering wild roses which wreathed the arch. Miss Juliet had manufactured the flowers some time previously, at the cost of a few cents and a couple of hours' time when detained in the house with a temporary indisposition.

The side window was dressed with the same moss green carpet and flowery span. Upon an elevation built up of covered boxes stood several hot soda mugs, from which a thin mist not unlike steam constantly emerged. This effect was produced by placing a slow burning pastille in the bottom of each.

About this elevation she banked a quantity of pound packages of coffee, marked "Anton's Own Blend," and a card made clear the fact that this was the grade and kind of coffee used at the Soda Fountain. Its excellence and flavor were all known and arrangements had been made by which customers might be supplied with the same blend for home use.

Miss Juliet argued that a straight coffee might be obtained anywhere, but the peculiar flavor of a happily blended mixture would be difficult to duplicate. She also realized that the prices asked for oil, spices, vinegar, extracts and coffee were higher than those obtained for the ordinary grocery store article.

She doubted that even the attractiveness of her display would be sufficient to convince those whom she wished to reach most, that her goods were worth the amount of the extra charge.

From the manufacturer of the Chafing Dishes she readily procured a quantity of the books of recipes given with the outfit. These she obtained for nothing for the promise to distribute them to people likely to be interested in the goods also advertised in the book, she also added the stamp of the firm of Anton & Company as well, securing a certain advertising advantage from the knowledge that the books would be kept.

In the suburban paper which appeared tri-weekly she made the announcement that throughout the entire week a free booklet of valuable Chafing Dish recipes would be presented to each lady calling at the store and asking for it. Attention was called to the full line of high class Chafing Dish necessities which were on display.

The week proved to be a fine one as far as the weather was concerned and the women came from distant parts of the district to get a book of recipes for nothing.

Miss Juliet was kept busy explaining the difference between the olive oil she offered for sale and that which was of an inferior quality. The Tarragon Vinegar was the subject of much interest as many of her customers declared they had seen it called for, but had never quite understood what it was and some had tried to get it of their grocer and failed.

But what astonished her and her skeptical father most of all was the coffee sales. Those who were not familiar with the flavor of that served at the fountain made haste to try it, and the quality of that product was so fine that it was a strong argument in favor of the sale.

The packages were put up in small air-tight containers so there was no escape of the rich aroma. This seemed to be a point which had weight. Women dislike to carry home a parcel which announces the nature of its contents throughout the whole car.

The sale of the denatured alcohol alone was surprising. Mr. Anton expressed it as his conviction that every woman in the city must keep one of those new-fangled frying pans in her parlor. But he was entirely satisfied that there had been started in his store a brisk trade on a number of articles

which had always been exceptionally slow movers with him.

He even acknowledged this to his junior partner, to the delight of that enterprising young woman, who was as pleased with her father's approbation as she was with the substantial cash results of the sale itself.

PREPARATIONS FOR THE U.S.P. CONVENTION.

Notices Issued of Proposed Changes in Constitution to Be Voted Upon at Washington in May.

Following the meeting of the board of trustees of the United States Pharmacopœial Convention, held at Columbus, Ohio, January 28-29, Dr. Murray Galt Motter, secretary, has sent out notices of the adoption of a resolution to submit to the convention in May propositions to amend the constitution to admit to membership the Secretary of Agriculture, the Secretary of Commerce and Labor, the Association of Official Agricultural Chemists, the Association of State and National Food and Dairy Departments, the National Wholesale Druggists' Association and the National Dental Association. Another proposed amendment reduces the number of delegates from three to one. A third changes the title of the "Committee on Revision" to "General Committee on Revision." Membership in the latter is to be increased from 25 to 50 and the committee will appoint from its own membership an executive committee of 15 which will have immediate charge of the work of revision.

A motion to include the National Association of Retail Druggists in the list for representation was lost, but it is understood an effort will be made at Washington to accord representation to that organization.

The trustees will recommend that a revised edition of the Pharmacopœia be prepared five years after the publication of the U.S.P. IX, if in the judgment of the Committee on Revision and the board of trustees such a revision is desirable.

At Columbus a vote of thanks was passed to Professor Diaz, of the University of Havana, for his services in translating the text of the U.S.P. into Spanish. A resolution was passed recommending that the privileges of the floor be extended to the representative of this university.

Those present at the Columbus meeting were: Dr. Beal, Professor Remington, Dr. Simmons, Mr. Meissner, Dr. Whelpley and Dr. Motter. The next meeting will be held at Washington, May 9, 10 a. m. A partial list of delegates has been prepared, but the complete list is not likely to be ready until about the time of the convention.

The local committee of arrangements has invited Senor Calvo, dean of the diplomatic corps at Washington, to address the U.S.P. convention.

Prof. Chandler to Deliver Farewell Address.

"Reminiscences of fourty-four years' service in the Faculty of the College of Pharmacy" is the subject selected by Prof. Charles F. Chandler for his farewell address to be given before the New York College of Pharmacy at the annual meeting to be held on March 15. Immediately preceding the address the election of officers and trustees will take place, the nominating committee appointed at a previous meeting having presented the following names for the offices to be filled: President, Nicholas Murray Butler; first vice-president, Charles F. Chandler; second vice-president, Herbert D. Robbins; third vice-president, William Jay Schieffelin; treasurer, Clarence O. Bigelow; secretary, Thomas F. Main; assistant secretary, Edward W. Runyon; trustees to serve three years, Otto P. Amend, Adolph Henning, Caswell A. Mayo, Reuben R. Smith and Dr. Henry C. Lovis.

In Remembrance of Friends.

Of all the sweet things which the Yuletide brings,
The dearest come to me on Mem'ry's wings;
A shadowy troop of the friends who are gone,
Hand-clasping the living ones still marching on.
Tears for the dead who have finished the race,
And cheers for the living who've taken their place.
Peace upon earth, and goodwill to all men;
The Christ-child hath said it; what more need I pen?

Rensselaer, O. J. WINCHELL FORBES.

In the drug business many a game of "freeze out" proves to be only a game of [illegible] with the "freeze" on the freezer.

The Great Trade Problem of Stopping Price-Cutting.

The great problem that confronts the trade today is how to put an end to price-cutting on established staple brands of cigarettes and cigars. *Tobacco* names cigarettes before cigars, in this connection, for the reason that price-cutting on the finer grades of cigarettes is far more generally prevalent and widespread than is the cutting of prices on cigars.

At the same time the present situation in Boston—where the staple brands of 10-cent cigars are being offered to the consumers at less than the wholesale prices quoted by the manufacturers—shows to what lengths the craze for cut prices in the trade may lead.

Tobacco honestly believes that great as might be the harm to the trade if the anti-cigarette laws now upon the statute books of a few States were extended to a dozen, or even a score of other States, it would be vastly less than is the damage which the trade is now wantonly and foolishly inflicting upon itself, through the senseless cutting of prices.

Cut prices affect adversely every interest in the trade—the manufacturer, the jobber and the retailer, but *it cannot be denied that cut prices hit the retail dealer harder than any one else.*

Under the present custom of selling cigarettes at cut prices, the manufacturer and the jobber suffer, it is true, but the retailer has the legitimate profits that ought to be his cut almost—and in some cases entirely—to the vanishing point.

The retail cigar dealer has not even the excuse that the grocer or the dry goods dealer has for selling certain staples at cost in order to stimulate his general business and bring about larger sales of other lines of goods upon which there is a good margin of profit.

The thing to do is to seek a remedy for present conditions, and when the remedy is once found to apply it perseveringly and persistently until a cure is effected.

Different interests should get together in an effort to bring about better and healthier conditions for the benefit of the entire trade. Competing manufacturers should realize that they have much in common at stake in this matter, and for the time being should lay aside all feelings of antagonism toward one another, and face this problem with a resolute purpose to solve it for the general welfare of the trade.

The jobbers, too, should join in the movement, and hold up the hands of the manufacturers in an effort to remedy the existing evils, while the retailers, who have found themselves proportionately the greatest sufferers of all, should welcome anything that would bring relief from the present intolerable conditions.

The retail dealer is entitled to a fair margin of profit upon the goods that he sells and it is up to the manufacturer and the jobber to find a way to protect him.

It is certain that because of the ruinous system of price-cutting that has so long prevailed, even the smaller retailers have thrown away a few dollars every week for many, many years, while in the case of the bigger dealers, the profits sacrificed have run into hundreds of dollars annually.

It has been an absolutely senseless and unnecessary waste, and it is high time that it should cease.

Something should be done to put a stop to present conditions before they become worse.

"Blizzard Class" Dinner to Be Held March 11.

The "Blizzard Class," composed of the graduates of the class of 1888 of the New York College of Pharmacy, will hold its 22d anniversary dinner at Allaire's, 192 Third avenue, near 18th street, New York City, on Friday, March 11, at 7 p. m. sharp. The attendance this year promises to be larger than ever and the members scattered over New York, New Jersey and Pennsylvania will meet again at this annual reunion and exchange reminiscences. Allaire is noted for his famous dinners, the price of which is fixed at $2—which all members are asked to remit to the committee, per Otto Raubenheimer, Ph.G., 1341 Fulton street, Brooklyn, N. Y.

Michigan Ph.A. at Detroit June 21-23.

Secretary E. E. Calkins, of Ann Arbor, announces that the 1910 meeting of the Michigan State Ph.A. will be held at Detroit June 21-23. The Travelers' Auxiliary has given assurances of continued support and an active canvass is being made for new members.

Rut and Road.

By Joel Blanc.

Senator Borland had been looking over some old Eras. Suddenly he turned to me and said:

"I notice that you have quoted some unidentified verse-maker in the following words: 'The Lord don't send no derricks to h'ist folks out of ruts.'

"This quotation occurs in one of your stories of the emphatically critical sort, a story in which you use your entire vocabulary to condemn the man who stays in a rut. Now, Joel, you are right, or at least as near right as you usually are; but the trouble with you, my boy, is that some of your preachments are rather radical.

"On the real dirt roads, or even the macadam roads, it often happens that the wheel ruts are not only the smoothest part of th' road; but th' smooth ruts are so long that th' farmer who kapes his wheels in them will get to market an' sell out his truck befoor th' farmer what is avoiding th' ruts will get out iv his township.

"Judging from what I have seen iv druggists an' politicians —an' th' good Lord knows druggists ain't politicians, more shame to thim—min in ginral is divided into two classes, thim what sticks to th' ruts all th' toime an' thim what goes sashayin' from one side iv th' road to th' ither, from ditch to ditch.

"Whin ye hear a rattlin' hub an' see a bent axle, ye can be shure th' mule chuffer iv thot caravan is aither always in th' rut or always pullin' out iv th' ditches. Ye may look at a race track what seems as shmooth as ye'r own bald shpot, all th' way round, but if ye will watch th' shkilled pilot what is holdin' th' sulkey ribbins ye will learn that aven the finest track has its ruts an' ditches. Aven at a two-ten clip th' good driver will pick his way, takin' th' middle iv th' road, th' rut, to th' first turn an' thin huggin' th' inside ditch until he passes th' quarter post.

"Jist so in business, or politics—an' whin aither iv thim reaches success it's th' same as th' ither. Wan iv ye will shtick to th' ruts no diff'rince how miny shtones thay may bump him over, or how much hub-deep mud thay may lead him into, while anither iv ye will go galivantin' over th' whole road ontil ye wud think he was tryin' to infringe th' Wright airyplane patents wid a hay-wagon—ye wud so.

"Ivra man what travels over th' road iv loife has a load to pull. With some iv thim it's a load iv booze, with ithers it's a load iv ill-health; with ithers it may be debt, th' clerk problim, too big a family or not big enough, cut prices, or alleymony. Which iver it is, it's hard pullin' at th' best. But ye will notice thot the man what sticks to th' rut as long as it is shmooth, an' steers his wheels to th' grass edges whin th' rut is full iv shtones, ginrally gets to market without a breakdown or broken eggs.

"Th' trouble wid ye drug fellers is they ain't enough iv ye what thinks iv endurance. Most iv ye is thinkin' only iv aither sprintin' all th' way to th' tape or gettin' there in a sleepin' car widout tippin' th' porter. Th' wan iv ye what shticks to th' rut, includin' shtones an' mud, won't buy wan new showcase what he railly needs, 'cause he ain't got cash to refit th' whole shtore. Th' ither, th' wan what goes boundin' over th' whole highway on tires inflated wid hot air, will mortgage his sowl an' go widout a clean shirt to meet th' paymints on six hundred dollars' worth iv plate glass show-cases whin all he railly needed was a four-foot cigar case.

"I raymimber a little Dootchman what bought an old drug shtore in West Madison shtreet, in th' eighties. Ye wud have thought from th' looks iv it that th' place had been inherited from Galen. Whin th' little Dootchman took th' shtore he bought a bolt iv cheese-cloth fer dust rags, an' that was th' only new fixtures he put in at oncst. Ivra wan said it was th' worst iver, an' th' paypul livin' nearby bought their drugs in th' next ward. Bye'n bye ye could hear people say th' little Dootchman had th' goods, an' was makin' th' price, an' givin' th' service. Wan by wan new show-cases appeared, an' th' walls was papered, an' th' floor was tiled, but th' things was added so slow an' stiddy that no one didn't hardly notice thim. Business kept a-growin' an' th' shtore improvin'. In tin years th' little Dootchman had th' finest shtore an' drug business in th' ward—an' say! jist let ye'r moind dwell on this: Nobody raymimbered thot th' little Dootchman had ever had anything but th' finest shtore in th' ward! Th' little Dootchman kept in th' rut whin th' rut was shmooth an' dry, an' he drove on th' grass near th' ditches whin th' best part iv th' road was there—an' he got to th' asphalt miles ahead iv ither felleys what was in th' rut all th' toime, or niver.

"Yis, it ain't because ye are druggists thot ye go to wan extrame or th' ither, it's a ginral rule iv human nature—but I niver knew any class to show as much rayspict f'r th' rule as ye druggists do.

"Foive years ago ye were all shoutin' f'r price protection, an' th' prescription business cud go to th' ash can. Wan coort decision, what wud have been nuts to ye, if ye had annie political jaynius, an' ye shkip th' rut an' slide into the gutter what Pilgrim's Progress calls th' 'Slough iv Despond.' After shtayin' in the muck an' chewin' th' cud iv vacillation f'r a while, ye come out an' go clane to th' ither side iv th' road, an' commence a shoutin' ye'r lungs loose f'r propaganda, an' ye cuss ye'r former god iv patents an' profit jist as loudly as ye praised it a little while ago.

"After a bit ye drift toward th' ither side iv th' road again an' ye commence to think that th' only thing what makes th' nawstrums so bad is makin' thim in large quantities in vats, in factories. Ye get a shneakin' notion thot if ye make thim ye'rsilves by th' quart that they are as ethical as catnip tea. These med'cines ye call 'Household remedies,' because they are made in a place what is too shmall f'r a freight elevator. Bein' carried up from th' cellar 'stid iv bein' lowered from th' tenth flure is what makes thim ethical—mebbe. Thin ye gets to a hilltop what gives ye a view iv a mirage iv Millionairville, an ye at oncet decide thot if ye combine a hundred quart packers into wan twinty-foive gallon tub an' let wan man mix for th' hundred iv ye, th' ethics will still be there. Ye kape on increasin' th' size iv th' tub ontil ye are makin' so much ye can't bring it down on an elevator—ye have to use a pipe-line. But ye are still ethical? O yis, ye are still ethical—at laste ye are until a bunch iv doctors shoos ye to th' ither side iv th' road. An' thin, ye don't know where ye are at—an' ye are there yet.

"Ain't it time ye got back into a rut an' hit th' pike ontil ye come to a guide post, or can leave y'r siven-wheeled wagon an' take a trolley? Through it all there has been min' what would jine ye in neither rut nor ditch. Fer most iv thim I ain't got nothin' but contimpt, they are jist shirks. But ithers said: 'Let's wait an' see what thim fellers decides upon doin'—at prisint they seem to be doin' thimsilves. Let's wait until they *shtick* at somethin'. Let's wait ontil we see where they are goin' to shtand pat an' shtay pat.' An' now, lookin' back, can ye help admirin' them fellers?

"Ye remoind me iv a melo-drama wid foive acts an' siventeen murders. It was called 'Escaping from th' Toils.' Ye have been so busy escapin' from the jobbers, an' th' manufacturers thot ye ain't had no toime to be sociable wid ye'rsilves. Now, whin ye foind thot th' docs is after ye, ye ought to be miserably happy 'cause ye have found anither master to escape from. Ye ought to go on th' road wid an Uncle Tom's Cabin show—ye are all Elizas.

"Not long since wan iv ye was shoutin' f'r 'A thousand lifters.' Ye ividently got siveral thousand, f'r ye seem to have been lifted into a condition iv negation thot would tickle a Theosophist. Mebbe if ye wud take notice thot th' rale big shtores, speshly thim what is linkin' thimsilves up into chains, ain't worryin' about th' doctors, or propaganda, or th' definition iv 'whin is a nawstrum,' it wud do ye good. Mebbe if ye wud figure up an' foind out whither it is th' prescription counter or th' nawstrum counter thot is ye'r own 'pie counter,' ye cud lift ye'rsilves into an aisy-chair what ain't got no bent pins in th' parts iv it what comes next to yer pants. There's only wan thing thot is better thin standin' pat—thot is, sittin' tight."

Why Women Use Powder on Their Faces.

American women are only following a common psychological phenomenon when they use face powder, according to statements made by Prof. U. G. Weatherly, of Indiana University, in an article on "Race and Marriage" in the current number of the *American Journal of Sociology*, issued from the University of Chicago press. Professor Weatherly declares the women are actuated by the same motives as savages who paint the skin black. "Men's ideals of beauty usually are found in the best type of what they themselves are, and what they find most useful," he says. "For this reason traits which especially characterize a group are often artificially exaggerated for purposes of ornament. Dark races blacken the skin, tall races increase the stature by special footwear, flat-nosed people further flatten the nose, the white women use face powder.

MICHIGAN DRUGGISTS DISCUSS LEGISLATION.

State R.D.A. Aroused by Dispensing Physician and Itinerant Vender Danger—Officers Elected.

GRAND RAPIDS, Feb. 20.—The first annual meeting of the Michigan Retail Druggists' Association, held recently, was attended by over 100 members. Mayor George L. Ellis welcomed the visitors to the city and Max S. John Bergey, of Lansing, responded on behalf of the association. President C. A. Bachee briefly outlined the purposes of the organization.

W. C. Kirchgessner, chairman of the executive committee, recommended that such bills as the association desired enacted by the next Legislature be drawn up by an attorney; that a representative be maintained at Lansing during the session to look after the drug trade interests, and that the campaign for a larger membership be pushed with vigor. He thought the organization of county and local associations should be encouraged and that these associations should keep in touch with the members of the Legislature. This report, by its subsequent adoption, authorizes the payment of $100 yearly salary to the secretary, he to employ such clerical assistance as might be needed, and the postponement of organization of a ladies' auxiliary until the next meeting.

The legislative committee recommended that the next Legislature be asked to enact a law similar to that enforced in Ohio for the regulation of itinerant vending of drugs, except that the license fee for itinerants shall be $300 and that the penalties for violations be divided equally between the good roads fund of the State and the State Board of Pharmacy. It also recommended that the proposed bill for the regulation of the sale of liquor by druggists be left open for further consideration and discussion, and informed the members that further light was desired by the committee as to the scope of a law to cover the dispensing of medicines by physicians. The liquor bill was by common consent put over to the September meeting.

Condemns Price-Cutting by Pharmacists.

G. P. Engelhard, in a stirring speech, made some particularly condemnatory remarks anent price-cutting by pharmacists and dispensing by physicians. He said that the present moment was not the time for the former practice: "capital and labor are everywhere combining to make themselves stronger and the druggists alone hang up the signs of war and price-cutting." "The dispensing physicians," he said, "seem to think they are endowed with divine rights, that their talents are ample to cover two professions, that they are superior to any laws that may be enacted fixing the standards of drug skill and experience on the purity of the medicines dispensed.

"Under the present lax system the physician may diagnose a case, prescribe for it, prepare the prescription and administer the medicine and nowhere is there a record of what he has done, a check against mistake or a safeguard against criminal intent. If the patient dies the physician who diagnoses, prescribes, dispenses and administers, also writes the death certificate, and thus can bury any mistake he may have made or destroy the evidences of crime. This system clothes the physician with too much power. His responsibilities are entirely too great and public safety demands reform.

"In the countries of Europe dispensing by physicians is absolutely forbidden. In England ethics forbid the physician to prepare his own medicines. It is in this country alone that the dispensing physician is tolerated. They have so encroached on the druggist that the prescription business is not a third of what it should be, and this encroachment is every year becoming greater. If dispensing by physicians is to be permitted to continue the law should require that they shall give the patient a copy of the prescription thus properly that there may be some evidence at least of what they intended to administer; also that when the patient dies the coroner be called in to give the death certificate."

Discrimination in Favor of the Doctors.

Mr. Engelhard called attention to the fact that whereas years of study were required of the pharmacist before he could practice his profession and the Federal and State laws fix standards of purity [illegible] drugs, our pharmacists handle the dispensing physician is superior to requirements of training and to the pure drug laws. He can hand out anything he wishes and no questions are asked. The convention heartily agreed with Mr. Engelhard's remarks and adopted his views as the basis for proper legislation.

The officers chosen for the ensuing year are:

[illegible] president; Fred [illegible] president; H. [illegible] Grand Rapids, treasurer. [illegible] Grand Rapids, secretary; H. B. Hazelwood, Traverse City, committee [illegible] W. [illegible] Spencer, Grand Rapids; D. D. Allen, Detroit; E. A. Abbott, Muskegon; Conrad [illegible] Lansing; S. Bennett, Lansing; S. L. Collins, Hart; legislative, Herman VanAllen, Ionia; John G. Steffens, Grand Rapids; W. [illegible] Detroit; L. W. Lewis, [illegible] Jackson; D. D. Gore, Petoskey; H. M. Gillis, Howard City; H. H. Mack, Alpena; [illegible] A. Parker, Grand Ledge; A. A. Schantz, Ann Arbor; Secretary, [illegible] A. LeKrone, Zeeland; [illegible] Grand Ledge; H. [illegible] Grand Rapids; A. [illegible] White Cloud; W. E. [illegible] Hesse, Lake; E. Pere, Saginaw; Marie.

Kalamazoo was chosen as the next place of meeting. President Bughee suggested that at the State meetings the association should be independent of the wholesalers and manufacturers in the matter of entertainment.

The convention closed with a banquet at the Hotel Pantlind, at which the ladies were present and William McGibbon officiated as toastmaster. Among those who responded to toasts were Mayor George E. Ellis, Thomas H. Potts, secretary of the N.A.R.D.; G. P. Engelhard, W. C. Kirchgessner, John Dooley, Charles Walker, Senator Carl Mapes, Representative Leonard Verdier, Lee M. Hutchins and E. E. Miller.

DRUG CLERKS' SOCIETY ORGANIZES AUXILIARY.

Membership in Branch Organization Open to Salesmen. Annual Fees are Reduced by Directors.

A meeting of the National Pharmaceutical Society, the newly incorporated association of drug clerks, was held at the meeting rooms, 155 West 73rd street, on the evening of January 24. An auxiliary for salesmen was organized and the following members elected: R. N. Miller, Joseph A. Glennon, K. R. Loud, S. L. Weiss, E. L. Fendler, E. A. Kern, A. Schober, Ernest Hassinger, L. R. Folliott, A. A. Karlin, M. Patterson and Edward Schott. Short addresses were delivered by Mr. Glennon, Mr. Loud, Mr. Fendler and Mr. Schott, all of whom expressed great interest in the welfare of the society.

The following officers of the auxiliary were elected: president, Edward Schott; vice-president, R. N. Miller, and secretary and treasurer, E. L. Fendler.

The annual fees have been reduced from $5 to $3, payable in monthly installments of 25 cents.

On Friday evening, January 28, the society held a smoker at Ebling's Casino, 156th street and St. Ann's avenue, Bronx, for the purpose of increasing the membership preparatory to holding a bazar. Three thousand invitations were distributed throughout the city and vicinity. Charles H. Goddard, Peter Diamond, president N.Y.R.D.A.; Joseph Weinstein, secretary New York State Board of Pharmacy; Dr. William C. Anderson, dean of Brooklyn College of Pharmacy; C. W. Bliss, attorney to the society; Edward Schott and President Wm. E. Crews were on the programme of speakers.

Would Have Proprietors and Clerks in Association.

The co-operation of the proprietor pharmacist and the registered clerk for the purpose of fighting the chains of drug stores, was the subject discussed by thirty or more pharmacists, clerks and students who assembled recently at the New York College of Pharmacy. C. Bernardo, of 2755 Broadway, the principal speaker of the evening, described those who were interested in the promulgation of the chains as a new element which had recently entered the field of pharmacy and which had no respect nor love for the profession. With them it was a matter of dollars and cents. Mr. Bernardo was appointed chairman of a committee to solicit members to form a protective organization to combat the chain system. Robert P. Bell, an attorney, was made temporary chairman of the embryo association.

At a later meeting called by Mr. Bernardo and which was held at the Ideal Drug Company's store, 100th street and Broadway, methods of procedure were decided upon, the immediate work of those interested being to hunt for members. Forty pharmacists of the East Side and their clerks have signified their intention of joining. The question of higher wages for clerks has been temporarily dropped and will not be taken up until the Druggists' Co-operative and Protective Association of the State of New York, the new organization, has been well established. The next meeting will be held at the New York College of Pharmacy on March 2 at 8.15 p. m.

President Huhn Replies Sharply to Attacks on N.A.R.D. and A.D.S.

Accuses Philadelphia Association of Breach of Faith in Withdrawing From the National Body—$7000 in Treasury Through Cutting Loose From Jobbers and Manufacturers—Self-Dispensing Doctors Oppose the A.D.S. Hopes N.A.R.D. Will be Admitted to U.S.P. Convention.

MINNEAPOLIS, Minn., Feb. 20.—Charles H. Huhn, of this city, president of both the N.A.R.D. and A.D.S., considers the recent attacks of the *Journal of the American Medical Association* and various individuals hostile to the two organizations named, as the sheerest nonsense. Mr. Huhn, whose sincere and energetic loyalty to the interests of retail druggists will hardly be questioned by anybody who knows him well or by any competent, unbiased judge of men, does not purpose to remain silent under the fierce attacks that have been made upon the organizations of which he is the official head. He is "loaded." In conversation with the ERA representative, Mr. Huhn replied categorically to the main criticisms of the assailants, and intimated that he would have plenty more to say when the proper time comes.

CHARLES H. HUHN, Minneapolis, president Nat. Assc. Retail Druggists and American Druggists' Syndicate.

Referring to various nostrums which Dr. Simmons has mentioned as being harmful, and which are fathered by the A.D.S., President Huhn said:

"Take the case of one of these—Hydro Cine. This was never indorsed by the A.D.S. or N.A.R.D., but we are obliged to put our serial number upon it. Dr. Simmons knew this when he wrote the article attacking us."

The president certainly scored very heavily on at least one of the accusers of the N.A.R.D. Henry C. Blair, it will be remembered, resigned as a member of the Philadelphia A.R.D. His resignation is dated January 12, 1910.

"It is peculiar," said Mr. Huhn, "that Mr. Blair should be too 'ethical' to be in touch with so contaminating a thing as the N.A.R.D. or A.D.S., but not too 'ethical' to send out a letter like this only six days after his resignation." And Mr. Huhn produced the following from his files:

THE HENRY C. BLAIR COMPANY,
MANUFACTURING CHEMISTS,
PHILADELPHIA, PA., U. S. A., Jan. 18, 1910.

American Drug Syndicate, Minneapolis, Minn.:

GENTLEMEN—The detail work and advertising we are doing on Iodone products will undoubtedly create a demand which you will be asked to supply. Kindly file our prices, as follows:

Iodone Powder	Retail, $1.00,		$8.00 per Doz.
Iodone Oil	"	"	"
Iodone Ointment ...	"	"	"
Iodone Nebulizer ...	"	$1.50,	$12.00 per Doz.

Jobber's discount 15 per cent, 2 per cent cash, ten days.
We shall be pleased to receive your orders.

Yours very truly, THE HENRY C. BLAIR COMPANY.
Dic.—H.C.B.—Pres.

N.A.R.D. Cuts Loose From the Jobber.

"The N.A.R.D.," said President Huhn, "stands for the betterment of the condition of retail druggists and for price protection. Up to two years ago we worked with the jobber, who co-operated, of course, not because he was especially fond of us, but for himself. The jobber and manufacturer have dominated the N.A.R.D. The latter cut loose from them and ended last year with a treasury balance of $7000.

"I personally have reason to believe that the jobbers and manufacturers are behind this hostile *American Medical Association Journal* article. The first gun fired by Dr. Simmons against the N.A.R.D. was at the meeting of the Philadelphia Wholesale Druggists' Exchange held the night before Mahlon N. Kline died, and Mr. Kline was the master of ceremonies. The only reason for Dr. Simmons' attitude was the fact that I happened to be president of both the N.A.R.D. and A.D.S. I had not asked for either office. I had assurance of the loyal support of the P.A.R.D. members. After Dr. Simmons' visit to Philadelphia these members forgot all about their promise of loyalty to me.

"I believe that these attacks are due to the buying club of the P.A.R.D., which club is known as the Philadelphia Wholesale Drug Company. The P.A.R.D. is willing to enjoy all the benefits of a buying club, but is not willing to grant them to anybody else. While the Philadelphia association has withdrawn from the N.A.R.D., its individual members are still paying that organization their dues. There is no question that the P.A.R.D. would have remained loyal to the N.A.R.D. if one of its members had been appointed to the executive committee of the National association. Two good men were proposed for the executive committee—Frank F. Ernst, of Boston, and Harvey Leith, of Providence—both of whom lost out with the Philadelphia men, and George W. McDuff, of New Orleans, was returned to the committee, and he is not an A.D.S. man. Then the Philadelphians went home and called it an A.D.S. victory!

"The N.A.R.D. has no connection with the A.D.S., nor does it desire to absorb it. But both organizations are working with the same end in view from different objective points, viz., the bettering of the condition of the retail druggists.

"It is said that the N.A.R.D. is doing no good to retailers by its U.S.P. and N.F. propaganda work. I will fearlessly submit the prescription file of every retail druggist in the country as proof of the fact that few or no prescriptions were U.S.P. or N.F. preparations up to two years ago, when the N.A.R.D. took hold of the U.S.P. and N.F. in connection with various branches of the A.Ph.A. The prescription files of the retailers today tell a different story. We have met in our get-together meetings but a very small percentage of physicians, while the N.A.R.D. with its U.S.P. and N.F. propaganda department has reached nearly every physician in the country. Yet there are those so base as to say that the N.A.R.D. has done nothing in the way of promoting the U.S.P. and N.F.!

"Twenty per cent of the dues received by the N.A.R.D. was appropriated for this purpose. If there are a few isolated spots not benefited by this work, the headquarters of the N.A.R.D. can show for every one of these a hundred places where benefit has been received. We are constantly receiving requests from physicians that this propaganda literature be sent to them regularly.

"Personally, I am not ashamed nor have I any apology to make to pharmacists or physicians for the part I have taken in helping along the retail druggists of this country, whether it be through the N.A.R.D. or the A.D.S. The main function of my office as president of the N.A.R.D. is to devote my efforts to benefit retail druggists, and to that end I shall address myself in spite of what any organization or individual has to say.

"For years manufacturers have exploited proprietary remedies, many of which are only copies of U.S.P. and N.F. preparations, slightly worked over here and there, and, I admit, resulting in improvement in some cases, and then marketed, practically the same preparations, under more catchy and euphonious names, the retailer being made to pay very high prices for that class of preparations. The retailers could not stand this. They were growing poorer and poorer, while the manufacturers were becoming richer and richer. The retailer had no opportunity for exercising the professional qualifications

acquired by a college education, because physicians prescribed only proprietary and secret preparations. And even though he might know the formula for these ready-made prescriptions, he would dispense them at the expense of being called a substitutor.

"On the commercial side of his business the department stores and mail order houses cut into him so that he found himself 'between the devil and the deep sea.' Instead of running an ethical pharmacy he was obliged, for his own salvation, to seek such side lines as soda fountains, confectionery, stationery, notions of all kinds, toys and even restaurants. You cannot blame the retailer for doing these things. He is driven to them by reason of the physicians' neglect of the U.S.P.

"When I accepted the presidency of the N.A.R.D. I went on record as to my position and there is no reason for anyone to read anything into that speech of acceptance different from what was really said, namely, that I would be loyal at all times to the N.A.R.D. and to the best of my ability perform the duties of the office in a manner that would afford no legitimate cause for complaint. I asked at that time that criticism be withheld till I should have an opportunity to prove the sincerity and integrity of my purpose. To that principle I still adhere. If I had the co-operation of all the retail druggists I could much more easily execute the duties I have sworn to perform and show greater results.

"I cannot help regarding those who are opposing the N.A.R.D. for any cause whatsoever as having been enemies of this National association even while they were part and parcel of it. Nothing can be more apparent than the fallacy of the insinuation that a druggist could not be ethical and favor the U.S.P. and N.F. propaganda and at the same time be selling over his counter household remedies which the public calls for constantly, and while such remedies are absolutely pure and standardized by a co-operative organization of retail druggists whose sole aim and object is to furnish the public, and more especially the poor class who cannot afford to run to the doctor with every trifling ailment, with a preparation that is absolutely pure and non-habit-forming.

"The average physician does not object to his druggist furnishing these common household remedies. In fact, many of us have been told by the physician to take care of such slight indispositions by giving some harmless preparation rather than call him out at night or during his office hours.

"As for the A.D.S., I have no apology to offer. This organization was formed by pharmacists and has proved in its short life of four years that there was a field for it. We have seen pharmacists rise from interest-paying retail druggists to dividend-receiving and cash customers to the jobbers and manufacturers, and even home owners; and, as one expressed it, the profits of the A.D.S. have enabled him to take a trip around the world. If this does not prove that the A.D.S. is working for the betterment of retail druggists then I am mistaken.

"The opposition to the A.D.S. comes not from the straight physician, but rather from the self-dispensing doctor, the jobber and the manufacturer. These are three powerful elements which have thrown every obstruction in the way of the progress which the A.D.S. has made in spite of their efforts to handicap our advancement. It surely is not necessary for me to point out in detail the reasons for the opposition.

"In my opinion, the object of Dr. Simmons in writing that article was to deny the N.A.R.D. representation at the U.S.P. revision convention. The trustees of the revision committee—five in number, including the secretary of the committee—in session at Columbus in January, exercised their power to keep the N.A.R.D. delegates out of the revision convention, although at the same time they recommended admission for the N.W.D.A., which does not look well because the retailer really has more to do with the U.S.P. and N.F. than has the wholesaler, so that if the N.W.D.A. is entitled to admission there ought to be no question about the eligibility of the N.A.R.D. However, I live in the hope that when the N.A.R.D.'s request for representation comes up on the floor of the convention at Washington next May there will be a sufficient number of friends of the toiling pharmacists present to furnish the three-fourths vote necessary to seat the delegates which the N.A.R.D. has selected to represent it. Both the U.S.P. and N.F. revision committees cannot have or find any more devoted friends of the U.S.P. and N.F. or a more energetic agency for exploiting those works which we all regard so necessary, than the N.A.R.D."

Lively Session of Philadelphia A.R.D. When it Withdraws from N.A.R.D.

PHILADELPHIA, Feb. 20.—As announced in the February ERA, the Philadelphia Association of Retail Druggists at a special meeting decided to withdraw from the National Association of Retail Druggists. The meeting was one of the largest in the history of the organization and while the balloting to continue with the National body, taken at a previous meeting, was very close, the vote finally in favor of secession was overwhelmingly in favor of the latter course. The annual dues were not affected by this action and remain at $12 for 1910.

While those in favor of withdrawing advanced many arguments, old and new, in favor of that step, the real pressure seemed to come from the members of the medical profession who by reason of the articles in the *Journal of the American Medical Association* of January 8, were quite conversant with the points at issue. The members in favor of withdrawing argued that with the A.D.S. a factor in N.A.R.D. work, the retail druggists of Philadelphia could not consistently ask their physicians to continue to co-operate in the popularizing of the official preparations of the United States Pharmacopœia and the National Formulary. Those opposed to this radical step declared there was no evidence that the policies of the parent body were or would be injured simply because President Huhn occupied the same office in the respective organizations. They argued that there was no evidence of collusion.

Secretary Potts Sends Plea for Delay.

Some little time was lost in parliamentary bickerings but the motion to reconsider was finally carried. Frank W. Fluck, the retiring president of the P.A.R.D., read the articles in the *Journal of the A.M.A.*

William E. Lee commanded rapt attention when he read a letter from Thomas H. Potts, secretary of the N.A.R.D., as well as an active member of the P.A.R.D., in which he declared that the influence of the manufacturer and the jobber were evident in this attempt to disrupt the N.A.R.D. The letter stated that with the exception of Messrs. Huhn and Renner, not a member of the executive board of the N.A.R.D. held a share of stock in the A.D.S., and Mr. Potts pleaded that no action be taken hastily. He urged that action be suspended until after the mid-winter meeting of the National executive committee.

The secretary read a letter from the Philadelphia County Medical Society, in which the P.A.R.D. was asked to define its position in view of the charges against the National organization. W. A. Carpenter read a communication from a physician, known to be an ardent supporter of ethical prescriptions, in which he asked for the names of druggists in Mr. Carpenter's section of the city who were still supporting the N.A.R.D.

With the issue squarely before them, the battle began. Charles Leedom introduced a resolution, calling upon the National body to explain and condemning any attempt on the part of any outside corporation to interfere in the affairs of the retail druggists' organization. This resolution was defeated and a similar fate was met with by a resolution, presented by Dr. Lowe, calling upon President Huhn to resign.

Affiliation Loses by Vote of 66 to 18.

Then the resolution offered January 7 by Franklin M. Apple, as printed on page 129 of the February ERA, amended to eliminate the question of dues, was presented.

Those who spoke in favor of withdrawal were Charles Rehfuss, F. M. Apple, H. C. Blair, W. A. Carpenter, F. W. Fluck, D. H. Ross, Christopher Koch and R. T. Blackwood. The leaders in favor of continuing with the N.A.R.D., and who spoke to that effect, were Charles Leedom, William L. Cliffe, David G. Potts, William E. Lee, D. J. Reese, Theodore Campbell and E. H. Fienhold.

The question was finally called for and when the vote was counted, it was announced that 18 were in favor of continuing the relation with the N.A.R.D. and 66 were against that affiliation. There was quite a demonstration when William E. Lee, first vice-president of the P.A.R.D., upon the announcement of the vote, arose and, declaring that while he was entitled to his opinions and that the arguments advanced had not changed them, he wanted it understood that he was not for division.

"Whether you are up or down, gentlemen," he said, "I

want it understood that I am for the Philadelphia Association of Retail Druggists, first, last and all the time."

These generous sentiments were echoed by others and the utmost harmony and good nature was evident. In instructing the secretary to reply to the communication of the Philadelphia County Medical Society, informing it of the action of the P.A.R.D., it was suggested that attention be called to the interest that was being manifested in various "punk medical concerns" in the city by certain physicians and asking the society to see that if any of its members were members of such concerns, they be properly disciplined.

Western Pennsylvania Stands by N.A.R.D.

PITTSBURG, Feb. 20.—On account of the attacks in the *Journal of the American Medical Association* on the N.A.R.D., a special meeting of the board of directors of the Western Pennsylvania R.D.A. was recently called by the secretary, B. E. Pritchard, who was once president of the N.A.R.D. Mr. Pritchard had received numerous inquiries concerning the articles from physicians who thought an explanation was necessary. After considerable discussion the board adopted the following resolutions:

Resolved, That this body condemn said attack as unjust, untruthful and in direct opposition to the altruistic principles of the American Medical Association; and be it further

Resolved, That we believe that the policy of non-affiliation with any commercial body adopted at the inception of the National Association of Retail Druggists has never been deviated from and is still firmly adhered to, and be it further

Resolved, That proper steps be taken at once to ascertain what influences are back of this attack and the animus that is the underlying cause thereof.

Resolved, That we condemn the rule or ruin policy of the Philadelphia Association of Retail Druggists as evidenced by that body withdrawing from affiliation with the National Association of Retail Druggists; and be it further

Resolved, That the Western Pennsylvania Retail Druggists' Association hereby reaffirms its fidelity to the N.A.R.D. and faith in its honesty of purpose and unswerving devotion to the welfare of the retail druggist.

A.D.S. Will Vote on Plan to Form Monster Chain of Retail Drug Stores.

Manager Goddard Calls a Special Meeting for March 7 at Which Scheme to Organize Enormous Co-operative Combination Will be Acted Upon—Would Effect More Than 12,000 Stores—Approved in the Metropolitan District.

As an outcome of the unrest which has seized many retail druggists in localities where the so-called 'chains" of drug stores popularly attributed to Standard Oil, Tobacco Trust and other corporation interests have either been established or planned, with the many rumors about a war of extinction against the independent retail druggists, there is now in course of planning a "chain" of far greater scope and larger dimensions than anything so far attributed to the combinations of oil and tobacco capitalists who have been attracted to the retail drug trade.

The new "chain," if it materializes according to the ideas of its projectors, will be a more formidable proposition than anything ever before undertaken in any retail trade, for the plan is to control, either by purchase and absorption, or through protective working arrangements, all of the more than 12,000 retail stores of the American Druggists' Syndicate.

The plan has progressed far enough so that a meeting of the stockholders will be held in this city on March 7 to decide upon the feasibility of the scheme and to vote on a proposition to increase the capital stock to the amount of several million dollars in order to provide necessary sinews of war for the coming conflict, should the decision be in the affirmative.

Plan Approved by Committee of Metropolitan District.

As the outcome of a meeting of members of the A.D.S. doing business in the metropolitan district, held on February 10, a conference committee met with C. H. Goddard, the secretary and general manager of the syndicate, at the A.D.S. laboratory in Long Island City on February 13 and after a long discussion approved the plan to call a general meeting of the stockholders for March 7 to vote (1) upon the proposition to form a chain of A.D.S. drug stores, (2) to increase the capital stock of the syndicate from $200,000 to such sum as may be needed to finance the project, which sum would be in the millions.

This committee, which was advisory in its functions, consisted of Peter Diamond, ex-president of the New York State Ph.A.; Dr. W. C. Anderson, dean of the Brooklyn College of Pharmacy; Dr. Joseph Weinstein, member New York State Board of Pharmacy; Michael Rafter, E. C. Goetting, E. Wolf, John K. Oates, Emil Roller, Charles Hackenberger, Charles Bernstein, Bernard Colle, S. L. Neier, H. E. Hall, David Westheimer, F. K. James and J. Colp, representing the Manhattan, Bronx and Brooklyn Boroughs of New York City.

The sentiment at the conference was that closer co-operation was essential at this time to protect the members from the encroachments of the "chain" stores of the large corporations. The committee was practically unanimous in favoring the submission of the proposition to the entire membership. A day or two later Mr. Goddard, as secretary of the A.D.S., issued the call for the meeting on March 7.

Would Avoid the Fate of British Retail Druggists.

At the meeting of A.D.S. members held on February 10 in Allaire's Hall, Third avenue and 18th street, Manhattan, the attendance overflowed the hall, about 400 being present from the various boroughs of New York City and from nearby towns in New Jersey.

Dr. William Muir, of the New York State Board of Pharmacy, who presided, declared the time had come for the independent retail druggists to decide whether they would fight for mutual self-preservation or permit the "chain" corporations to undersell and force out of business the retailers who occupy territory which may prove attractive to the "chain" magnates. He considered the situation serious and predicted a fight to the finish in which the small retailers would succumb, unless they stood together and began an aggressive battle before it became too late. He cited the fate of the small retailers in Great Britain, where they had been practically wiped out by the Boots and other combinations. It was for the retailers here to say whether they would meet the same fate, or prevent it by action while there was still hope of success.

Dr. Muir was listened to attentively and made an impression upon his hearers which found vent in applause. The plan for the salvation of the American retailers was explained by Manager Goddard, who required no introduction and who was heartily received.

Plan to Control Country's Retail Drug Trade.

In outlining his plan, which was the subject of consideration for which the meeting was called, Mr. Goddard explained that during the last year he had been often approached by members of the A.D.S. who thought something ought to be done to stay the encroachments of the big corporation "chains" on the preserves of the retail drug trade and finally he had decided to formulate a plan and see what the members thought of it. He did not know whether ten or a dozen, or a hundred, would respond, but he was pleased to note the large attendance. He continued in part:

"By the plan which I have in mind, the A.D.S. may acquire practical control of the retail drug business of the country, either by buying the retail stores of such members or others as may desire to sell and by co-operating with such as do not want to sell, so that the members will be able to get the full credit and support of the syndicate without losing the identity of the individual druggist, yet enjoying the protection which it is proposed to extend to all A.D.S. stores.

"If one of the chain stores is planted across the street from one of our stores, the plan is to offer united opposition to the new competitor and give the chain system the fight of its life. We would spend as much as $10,000 in the fight to save the life of one store and charge it off to the advertising account. One fight like that would end unfair interference with our stores."

Some Druggists in Need of Pelvitone.

One of the members broke in at this point to discuss the propriety of manufacturing and selling pelvitone and said that Pinkham's vegetable compound was even more objectionable, so he refused to sell either.

"This meeting is not to discuss pelvitone," said Mr. Goddard. "We can take that up another time, but I would like to say

that some druggists need a good deal of pressure to give them the backbone necessary to stick up for their own rights and interests. I have recently been in retail stores where the conditions have been almost offensive. Imagine a man coming from behind the prescription case in his shirt-sleeves, mopping a pool of ice water he was carrying in one hand, and wiping his mouth with the other! Would you see that in a chain trust store? Never.

"One of the secrets of success of the chain stores is that their places are clean and attractive. Their managers and employees are cleanly and respectably clothed; they are attentive and polite. Those that can't comply with these conditions are bounced. Quite a number of druggists could better fight the new competition if they would act on these simple up-to-date object lessons. In stores that we would own we would have to provide good, clean service to the public. It would be no hardship to those used to other conditions. The Tobacco Trust did it with the old employees in the United Cigar Stores and it only took a few dismissals to improve things and the old managers and employees confessed that they were glad of the change.

Ought to Have $3,000,000 at the Start.

"If we go into this fight we will have to increase the capital stock. For stores which we purchase we could pay part in stock and part in cash, or all stock, or cash, as might be found advisable. In taking over stores appraisers would have to be appointed, consisting of practical drug men, real estate men, etc. We now have a capitalization of $200,000 and to make a good start that ought to be raised to $3,000,000. We now have assets of fully $1,000,000.

"The only way the retailer can save himself, so far as I can see, is to go into something of this kind. I am assured that we can buy enough stores throughout the country to absolutely control the business. I know that for the last six weeks meetings have been held between the active heads of the Riker and Hegeman interests to form a combination. Those gentlemen are seeking profits and they will make more money by stopping fighting among themselves. When they do that, they will turn their attention to you retail druggists.

"If the A.D.S. organization could show the Rikers and Hegemans how we could increase their profits we might even swallow those stores. It would look improbable now, but stranger things have happened and it would not surprise me if our Jonah would swallow the chain whale in the end. But it will be the other way and you will be the real Jonahs if you do not organize, for the minute they get together they will start to try to swallow the independent dealers."

"But," interrupted one of the druggists, "a salesman came into my store today and said that the Riker and Hegeman interests had gobbled the A.D.S. He said they owned control of our stock. Is that true?"

"No, it is not," said Mr. Goddard. "In Riker's Mr. Cosden and Mr. Cahoon each own 10 shares of our stock; of Hegeman's Mr. Ramsey owns 10 shares and his cousin 5 shares. That makes 35 shares they own out of 20,000. Moreover they have never taken any interest in A.D.S. affairs and have apparently had no use for us."

In answer to questions, Mr. Goddard said the details of the plan had not been worked out, the present meeting being merely to find out how A.D.S. members regarded the subject. He asked to have a committee appointed to confer with him later and this committee was chosen from among the members present, in part, others being selected later by Mr. Goddard. Dr. Muir was named but asked to be excused. This advisory committee was finally made up as reported elsewhere.

When it came to taking a vote on the desirability of calling a meeting of stockholders to pass upon the plan there was only one negative vote.

DRUGGISTS TO RETAIN THEIR INDIVIDUALITY.

Manager Goddard Makes Further Explanation of Reasons for Movement—Protection the Prime Idea.

In an interview subsequent to the meeting of February 10, Mr. Goddard outlined his plan as follows:

"The intention is, so far as possible, to maintain the individuality of the druggist in each case, insisting only upon loyalty to the syndicate in that the druggist will purchase every dollar's worth of stock possible from it and abide by such plans for the general welfare as may be suggested from time to time.

"In return we will give such protection as may be needed. In the cases where the druggists maintain their own status we will not share even in their profits. The business will continue in the old hands, with only a pro rata payment by the individual of the expense of the general programme. In cases where the syndicate buys the store direct the individual will be superseded by the syndicate, as a matter of course.

"I did not originate the idea of the chain system. I was pleased with the programme of the syndicate as a manufacturing concern, but the retail druggists of the country began to get alarmed over the opposition of the chain stores and urged some action that led to my placing the matter before the meeting of February 10."

Jungmann Chain of Stores in New York City Goes Into a Receivership.

In view of the agitation over "chain" drug stores much interest is being manifested in the troubles of the Jungmann "chain" which in New York City comes closely after the Riker and Hegeman "chains" in number of stores. Lack of working capital of sufficient amount and too heavy operating expenses resulted last month in bankruptcy proceedings being begun in the courts.

A petition was filed against J. Jungmann (corporation), druggists, at 1020 Third avenue, 1 East Forty-second street, 15 East Twenty-third street, 428 Columbus avenue and 50 Church street, Hudson Terminal Building, by these creditors: H. & G. Ross & Co. $927, L. Fonseca & Co. $389, Dodge & Olcott, $103, and Max Belitzer, $73. It was alleged that the corporation is insolvent and made preferential transfers of property. Judge Holt appointed Frederick Hinrichs receiver, with a bond of $5,000, on application of Henry Hentze representing the petitioning creditors.

The business was started 30 years ago by Julius Jungmann and was incorporated in November, 1906, with capital stock $100,000 and Mr. Jungmann as president. The business was started in the early seventies in 1870, and Mr. Jungmann afterwards opened several other stores in various parts of the city. The operations branched out by buying up a few stores in the Church Street district in June, 1908, and another store in September, 1908, at 15 East Twenty-third street in the Metropolitan Life Building, which took a good deal of money. In December the business took a turn for the worse and it was said in the trade that the corporation was slow in its payments and behind in rents, and in filling up the places and hasn't made full settlement of bills to banks.

It was also said that the new stores was not as good as anticipated and the corporation did not have sufficient working capital to meet the additional expenses. The running expenses of the five stores, it is said, amounted to $90,000 a year. Until recently creditors expected that the corporation would be able to pull out of the difficulty and an issue of bonds to the amount of $100,000 was proposed, but it is said they were not disposed of.

A statement of the corporation's financial condition on Dec. 1 last, showed nominal assets of about $400,000, with liabilities $130,000. The principal items in the assets were merchandise, $211,000; trade marks, etc., $100,000, and machinery and fixtures, $76,000. When the store at 15 East Twenty-third street was being fitted up the corporation gave two chattel mortgages on some of the fixtures for $10,000. A large wholesale drug firm is said to be a creditor for $12,000.

At a recent meeting of 100 or more creditors, at which Frederick Hinrichs officiated as chairman and Charles A. Kalish as secretary, the total liabilities were announced as $150,000, of which amount $85,000 is credited to merchandise. Mr. Jungmann said that he hoped to make an offer of settlement, but couldn't say just at what time this would occur. His attorneys claimed he was solvent and that a petition in bankruptcy should not have been filed. A creditors' committee was appointed to decide whether the stores should be continued and to generally look after the interests of the creditors. The members of this committee are: H. S. Pattison, of Schieffelin & Co.; Wilber Titus, McKesson & Robbins; Robert L. Smith, Carnegie Trust Company; Joseph Plaut, Lehn & Fink; H. T. Jarrett, Mallinckrodt Chemical Works, and Secretary C. A. Kalish, 60 Wall street, this city. The committee will report at a subsequent meeting.

Baltimore Excited Over Reports of Attempts to Monopolize Drug Trade.

Talk of 300 Retail Stores Joining Liggett Company—Liggett Retains Control of Rexall Pharmacies and Invades Canada—Sustained by Stockholders.

Baltimore, Feb. 20.—Intense interest has been aroused among the retail druggists here by the publication of a report that men identified with the United Cigar Stores Company, a branch of the American Tobacco Company, or so-called trust, are trying to get control of the retail, semi-wholesale and actual wholesale drug business throughout the country, and with that end in view contemplate the acquisition of stores already in existence or the opening of new ones in locations where they can actively and aggressively compete with druggists with a good trade who refuse to sell their stores.

The guiding spirit in the formation of this alleged new trust is said to be John B. Cobb, a large stockholder of the United Cigar Stores Company, and the movement appears so formidable to the United Drug Company, Louis K. Liggett, president, operating four stores in Baltimore under the name of Williamson & Watts, that this interest has formed a holding company to prevent the purchase of stock control by the United Cigar Stores promoters. This holding company is called the Louis K. Liggett Company and now controls 21 drug stores.

It is intended to have other drug interests, both wholesale and retail, join this holding company and thus by a counter combination resist attempts at absorption by the United Cigar Stores Company men. The object of the latter is said to be nothing less than the creation of an absolute monopoly, which would have the entire population of the United States at its mercy.

W. J. Smith, general manager of the Williamson & Watts stores, is quoted on the situation as follows:

"We just had to protect our own interests, and the holding company was the result. We do not want Mr. Cobb and those associated with him to demoralize the retail trade, and we are fighting him every inch of the way. We are the independents and do not want to be absorbed by any trust. To better protect our interests, we agreed to form the holding company, and it was done several weeks ago. We understood that it was the purpose of those favoring the merger of all the big drug interests throughout the country to encroach upon our own territory. We propose to prevent the scheme from going through if this is possible."

It is hoped that all the retail druggists in Baltimore, about 350, will join the holding company. Incidentally, it may be mentioned that the competition of trade between the Williamson & Watts store at 17 West Lexington street and other pharmacies in that neighborhood has been very keen for some time past.

STOCKHOLDERS DECIDE IN FAVOR OF LIGGETT.

Holding Company to Retain Stores Transferred to It by the United Drug Company's Directors.

As announced in the February number of *The Soda Fountain*, the stockholders' meeting of the United Drug Company, held in Jersey City on February 2, sustained the action of the directors in selling the company's control of 21 drug stores to its president, Louis K. Liggett, who organized the Louis K. Liggett Company to operate them. John B. Cobb, of New York, next largest stockholder to Mr. Liggett, was present at the meeting and protested against the confirmation of the sale, but Mr. Liggett had a majority of the proxies. There was a good attendance and the matter was discussed during a session which lasted almost three hours. The chairman was Fred S. Rogers, of Middletown, former president of the New York State Ph.A.

Mr. Cobb had previously intimated that he would appeal to the courts if the sale was ratified, but at the time of going to press with this issue of the Era he had taken no action so far as could be learned.

New Rexall Branch Established in Canada.

Toronto, Feb. 20.—Louis K. Liggett, president of the United Drug Company, Boston, U. S. A., was guest here recently at a banquet given in his honor on the occasion of the organization of a branch of that co-operative society for the Dominion of Canada. The city comptroller and several prominent druggists were present, including several from the States, Fred S. Rogers, former president of the New York State Ph.A., being among them. The company has already established a laboratory and has made a good start.

Liggett Subsidiary Acquires Store in Syracuse.

Syracuse, N. Y., Feb. 20.—After considerable negotiation and litigation the Dwight-Nye Drug Company, a subsidiary of the Louis K. Liggett Company, of Boston, has acquired the Rufus E. Smith & Co. drug store at South Salina and Jefferson streets. Mr. Smith retires after more than 30 years in the drug trade harness. In the course of the litigation, preliminary to the sale, Mr. Smith secured a judgment for $19,600 for breach of contract of purchase against the new owners, who had refused to carry out the original agreement of sale.

Riker Suit Against United Drug Co. Postponed.

The injunction suit of Wm. B. Riker & Son Co. against the United Drug Company, to compel the latter to treat the former as its exclusive New York City and Boston agent, is still pending in the New Jersey Chancery Court. Several dates have been set for a hearing at Newark, but postponements have been entered.

Hegeman & Co. Incorporate for $6,000,000.

Albany, N. Y., Feb. 20.—Hegeman & Co., of New York, was incorporated recently with a capital of $6,000,000, to deal in chemicals, drugs and medicines. The directors are Stephen P. Anderton, Morton G. Bogue and Powell Crichton, of New York.

CORPORATIONS COULD NOT OPERATE "CHAINS."

Bill at Albany, if Passed, Would Make It Possible Only for Individuals to Conduct Drug Stores.

Albany, N. Y., Feb. 20.—Assemblyman Joseph, of New York, has introduced into the Assembly a bill which is designed to prohibit corporations from practicing pharmacy, medicine or dentistry. Its passage, says Mr. Joseph, would make it impossible for strings of drug stores to be conducted under corporation management. Hearing to be had March 9.

Interest attached to the proposed measure because of the recent announcements in New York City that Standard Oil and Tobacco Trust interests are behind movements to open stores in all parts of the country, and that the smaller druggists are organizing for a campaign of self-protection. The bill makes it compulsory for all persons engaged in the drug trade or in medicine or dentistry to take out licenses in their own name. Licenses under the new measure could not be issued to corporations.

"The bill, if passed," said Assemblyman Joseph, "would mean that individuals and not corporations could operate drug stores. It would make it impossible for a corporation to conduct a string of stores like that owned and operated by the American Tobacco Company. There are two things aimed at in the bill. One is to protect the public. The other is to protect the small druggist, who, in New York City particularly, is facing the possibility of being driven out of business."

Maryland Pharmacy Bill Excludes "Chains."

Baltimore, Feb. 20.—If a bill drawn by State Senator Linthicum becomes a law the practice of pharmacy will be subject to far more stringent regulations than has been the case. The bill provides, as does the present law, that pharmacists and assistant pharmacists must pass an examination before the State Board of Pharmacy, pharmacists to pay a first license fee of $10 and assistants of $5. Every pharmacist in the State must report to the board June 1 each year. No pharmacy must be left in charge of an unregistered person and no store can be conducted under a certificate other than that of the owner. Physicians and dentists may compound and dispense their own prescriptions. Violations of the law are punishable by a fine of $100.

QUESTION BOX

THE OBJECT of this department is to furnish our subscribers and readers with [illegible] and tried formulas and to discuss [illegible] pharmacy, prescriptions, [illegible], dispensing difficulties, etc. Requests for information are not answered by mail. ANONYMOUS COMMUNICATIONS WILL RECEIVE NO ATTENTION, neither do we answer questions in this department from non-subscribers.

If this department frequent reference is necessarily made to information published in previous issues of The Era, copies of which, if not out of print, may be obtained for 25 cents each.

Nitric Acid and Oils in a Mixture.

(Dr. B. W. S.)—Submits the following recipe:

Aloes	1 ounce.
Sulphuric acid	½ ounce.
Nitric acid	½ ounce.
Flaxseed oil	1 pint.
Turpentine	½ pint.

Mix.

He writes: "How would you mix it without causing an explosion? I have often mixed it. The other day a faker asked me how to mix it and I said nothing. In this place nearly every other man has a liniment or salve so powerful that one is in danger of having the buttons of his pants and coat blown off if he undertakes to compound their formulas."

We can see but little practical use for a mixture like this one, although with the omission of the aloes, it is of a type that is sometimes prescribed by country horse doctors for spavin and other enlargements of the bones and joints of horses. Oil of turpentine is oxidized by nitric acid and also decomposed by sulphuric acid, the final products being influenced by the strength of the acids. The acids also react with each of the other ingredients, depending upon the order of admixture. A more incompatible and dangerous prescription can hardly be suggested, although if the customer insisted the pharmacist might attempt to put it together. Extra precautions should be taken, however, to prevent accidents. The nitric acid should be added slowly and cautiously to the turpentine contained in a dish some distance from the operator and preferably in the open air. In a similar manner the sulphuric acid can be mixed with the flaxseed oil and then slowly added to the previous mixture. The aloes may be stirred in as the closing operation, although we fail to recognize the method of reasoning which prompted the prescriber to employ this drug for external application.

Solubility of Boric Acid in Glycerin.

(H. H. E.)—"Kindly advise me if it is possible by a 'grinding process,' as it is called, to make a 50 per cent solution of boric acid in glycerin when the solubility of the former in the latter at 25° C. is given as 4.6? The reason for the question is that some Western drug company claims to be doing this."

No, it is not possible by any "grinding process" that we know of to make a 50 per cent solution of boric acid in glycerin. According to the figures given by the Pharmacopœia, a saturated solution of the acid in glycerin only contains 17.857 + per cent. Of course, it is possible to increase the range of solubility by dissolving the acid in glycerin heated as in the official process for the preparation of glycerite of boroglycerin, but in the product so made the boric acid unites with the glycerin, forming boroglycerin. The official glycerite is said to contain 50 per cent of boroglycerin, but not 50 per cent of boric acid.

Utilization of Soured Grape Juice.

(A. Y. W.)—"I have about 40 gallons of grape juice that has soured. The juice is about seven years old and in some of the bottles a reddish brown sediment has been deposited. Could I make a wine or vinegar out of this juice, and if so, how? Please publish a formula."

This inquiry has been referred to several manufacturers of grape juice and the consensus of opinion seems to be that neither good wine or good vinegar can be made out of old grape juice in poor condition. One manufacturer answers by saying "that the juice having turned sour has already undergone both the first (alcoholic) and second (acetic) fermentation. It would not, therefore, make wine; whether it would ever make even a poor quality of vinegar is very doubtful, as it probably contains the germs of the third (putrefactive) fermentation. This is quite likely to be the case as the juice is so old and thus would be unfit for any purpose."

Another manufacturer states that the usual process of the manufacture of grape juice is to sterilize it by heat, and the action of the heat tends to destroy the acetic acid which is necessary in the manufacture of vinegar. It also injures the ferment germs which are necessary in the production of wine. He also states that if the juice has simply soured it might be sold at a low price to some distiller to manufacture into brandy, but no satisfactory recommendation as to its disposition can be made without first making an examination of representative samples of the juice.

Compound Elixir of Saw Palmetto.

(Constant Reader)—Try the following:

Lithium benzoate	512 grains.
Fluidextract of hydrangea	768 minims.
Fluidextract of triticum	640 minims.
Fluidextract of buchu	640 minims.
Fluidextract of saw palmetto	960 minims.
Potassium bicarbonate	640 grains.
Alcohol	1 fl. ounce.
Syrup	1 fl. ounce.
Aromatic elixir	11 fl. ounces.
Purified talc	2 drams.

Mix the fluidextracts with the alcohol, then add the aromatic elixir, the syrup and the purified talc. Shake well and occasionally during 12 hours; then filter, returning the first portions of the filtrate until it passes clear. In the liquid thus obtained dissolve the lithium benzoate and potassium bicarbonate, adding aromatic elixir, if necessary, to make the whole measure 1 pint.

Antiseptic Dusting Powder.

(S. D. Co.)—A typical formula for an antiseptic dusting powder is that given in the National Formulary, page 133. It possesses decided antiseptic properties and may be used as a dusting powder or in 5 per cent solution. Another formula is that usually given under the title

SQUIBB'S COMPOUND ALUM POWDER:

Camphor	1 part.
Carbolic acid, crystal	2 parts.
Dried alum, fine powder	47 parts.

Dissolve the camphor in the liquefied carbolic acid and then thoroughly incorporate the mixture with the alum. This powder is used for indolent ulcers and sores, especially for veterinary use.

Here are two others:

(1)

Boric acid	70 parts.
Iodoform	25 parts.
Salicylic acid	4 parts.
Oil of eucalyptus	1 part.

(2)

Ammonio-ferric alum	1 ounce.
Boric acid	1 dram.
Zinc sulphate	½ dram.

Salicylic Acid, Bismuth Subnitrate, Etc., in an Ointment.

(E. R. K.)—"Kindly inform me through the Question Box why the following ointment should turn dark after being kept on hand a short time, the cause, and what other base could be used to prevent the coloration?"

Ammoniated mercury.
Salicylic acid.
Bismuth subnitrate.
White wax.
Spermaceti.
Oil of sweet almonds.

The coloration observed depends principally upon the re-

South Dakota Pharmaceutical Association on Trip to Spearfish Canyon.

action which takes place between the salicylic acid and bismuth subnitrate, the color of the product formed varying under different conditions. Ammoniated mercury may also be partly decomposed, but these reactions are more or less retarded by previously mixing the first three substances separately in as many parts of the ointment base, and then combining the three parts thus made. The reaction is likely to take place after a time whatever base may be employed.

Remedy for Eczema.

(H. R. & J. T. U.)—We are not familiar with the proprietary preparation named by one of these correspondents and the best we can do in any case is to give the following formulas, employed by recognized authorities in the treatment of eczema:

ECZEMA CREAM.

Salicylic acid	40	grains.
Resorcin	40	grains.
Calamine	2	drams.
Zinc oxide	4	drams.
Oil of cade	2	drams.
Powdered starch	½	ounce.
Soft paraffin	1	ounce.
Wool-fat	1½	ounces.

ECZEMA LOTION.

Zinc oxide	½	ounce.
Calamine	½	ounce.
Glycerin	½	ounce.
Detergent solution of coal tar	½	ounce.
Water, enough to make	6	ounces.

OINTMENT.

Bismuth subnitrate	4	drams.
Zinc oxide	1	dram.
Glycerin	3	drams.
Liquefied carbolic acid	40	minims.
White vaseline	1½	ounces.

For use in obstinate cases the Physicians' Manual of the Pharmacopœia and National Formulary gives this formula:

Alkaline solution of tar	85 parts.
Precipitated sulphur	147 parts.
Tar ointment	168 parts.
Sulphur ointment	168 parts.
Soft soap	135 parts

Mix.

A Cement Salesman's Method.

Harry Siegel, 21 Hillsdale avenue, Jamaica, New York, sends the Era a sample stick of what purports to be "cement" and with it the following letter, which explains one salesman's method of selling his wares to druggists:

"The salesman represents himself to be an agent for a $7,000,000 corporation and the sample is supposed to be its latest invention. This cement is supposed to stick anything (the druggist included). He shows you two spools cemented together (with carpenter's glue, I believe) and two spools which he cements together and holds waiting for an opportunity to exchange them for the spools which he first showed you. While you are busy talking to a customer he puts the two spools he cemented in your presence into his grip; when you are through with your customer he asks you to try to pull apart the spools he first showed you and which you think are the spools he cemented together in your presence. His scheme is one of the old-time fakes which I saw demonstrated some years ago in Broadway, New York.

"I believe a goodly number of druggists were worked by this schemer in Brooklyn and Jamaica. The price the salesman sells the cement to the druggist is 90 cents per dozen, but you have the privilege of buying three dozen for $1 with your first order. Please publish your opinion of this scheme in the Era."

Our opinion may be stated in a very few words. In making his purchases the druggist should use every endeavor to ascertain the quality and authenticity of the goods he would buy, and any offers made to him through other than well-known and recognized channels of trade, no matter how tempting, should be thoroughly scrutinized before he commits himself or becomes a party to any contract or assumes any new obligations. Commercial life is too strenuous in these days to waste time on gentry whose credentials are limited to the plausible stories they may be able to tell or the wonders they claim they can perform.

ERA COURSE IN PHARMACY.

Graduates, January, 1910.

Matriculation Number		*Examination Grade, P. Ct.*
5988.	James T. Lain, Pleasant Hill, Mo.	96
6113.	Sister Gervaise Sullivan, Mobile, Ala.	98
6133.	W. L. Terrill, Dyer, Tenn.	98
6143.	Warren C. Pearson, Ansonia, Ohio.	96
6282.	Forrest Price Barnes, Hemlock, Ohio.	98

The above graduates will receive diplomas within a short time. A large and very handsomely engraved diploma, printed on artificial parchment, with the graduate's name engrossed, especially suited for framing, will be furnished to all those who request it for the sum of $2. Those desiring the latter should forward the necessary fee to The Pharmaceutical Era.

IMPORTANT TOPICS DISCUSSED AT MEETING OF KINGS COUNTY PHARMACEUTICAL SOCIETY.

Propaganda Example of Philadelphia A.R.D. Cited as Reason for Continuing Work—State Legislative Measures Reported—Interesting Paper on Percolation—Better 'Phone Commissions.

Propaganda was the principal subject of discussion at the February meeting of the Kings County Pharmaceutical Society held at the Brooklyn College of Pharmacy. Chairman Heimerzheim, of the trade matters committee, reported the total expenditure on this item during the last five or six months as having been $700 and Dr. Muir reiterated his statement made at a previous meeting that the society was donating its entire dues to this work without calling on the retail trade. It was good work, but the question existed as to the expediency of thus devoting all the society's income to this one thing.

Secretary Hegeman reported fair results in the collection of dues and that the members who had paid were profiting by the propaganda work. A change of tactics was proposed by Thomas J. Keenan: to give up this creditable work at this point would be a confession of failure. It was suggested by other members that the notices of meetings be in the form of return postal cards bearing the statement: "Please reply on attached card whether propaganda is giving benefits," or something else to the same effect.

Dr. Muir thought it would be a good idea to insert reports of the meeting from some pharmaceutical journal in the notices which would then be sent in letter form. This, it seemed to him, would be a more direct appeal than any the committee might make.

Work of Philadelphia A.R.D. Cited.

C. A. Kunkel reported very good results from propaganda, saying that 90 per cent of his prescriptions called for N.F. or U.S.P. preparations. Mr. Keenan called attention to the heavy dues paid by the members of the Philadelphia Association of Retail Druggists, and said that this organization had introduced N.F. goods everywhere in Philadelphia. Chairman Rehfuss recommended that someone be employed by the society to send out literature to physicians twice a month telling the latter how they could obtain samples, thus cutting down expenses.

Dr. Anderson thought that the success in establishing a demand for N.F. preparations in Philadelphia was due to the constant meetings of the pharmacists with the physicians in that city and said that the Kings County Ph.S. ought to have a physician read a paper at its next meeting. This innovation would attract the attention of the physicians because the meeting would then probably receive come notice from the medical journals. He said the future of pharmacy depended on getting the young physicians to prescribe extemporaneously.

Getting Basis for a Comparison.

Dr. Van Horn, the detail man, reported that the physicians didn't come into the drug stores as much as was formerly the custom and it was thus oftentimes difficult for the pharmacist to talk up his U.S.P. and N.F. preparations. Especially so was this true of proprietary-prescribing physicians. Dr. Van Horn thought that the question should be put to all the members of the society: "How many N.F. preparations and how many proprietaries, have you put up in (month to be determined) 1909 and the same month 1910?"

A joint committee was being organized by different pharmaceutical organizations, according to Mr. Heimerzheim, to wait upon the telephone company in Brooklyn and endeavor to secure a higher commission than the 10 per cent on total receipts, now the rule.

Mr. Heimerzheim was granted authority to represent the society on this committee. He said that telephone commissions [illegible] all the way from 15 to 35 per cent on their total receipts, the investigation might prove of value.

Percolation Inventions Receive Attention.

Mr. Keenan read a paper on maceration and percolation and explained in detail the pressure-percolation invention of Hiland [illegible] and Prof. Jean De Lacy Mohr, [illegible] Mr. Keenan, [illegible] Bernadelli and John A. Dunn, are to be found in the report of the meeting of the New York Branch of the A.Ph.A. on another page of this issue. Mr. Keenan was not of the opinion that the pressure process originated with Mr. Flowers, Professor Mohr having prepared fluidextracts in this manner some time previously.

Dr. Joseph Kahn thought the process would not work with all drugs, especially those containing glucosides. Mr. Dunn, in reply to the questions of several of the members, said that only 8 out of the 17 macerations to be found in the U.S.P. were used in the Squibb laboratories. All of Squibb fluidextracts are made by repercolation and no other method would be thought of.

State Legislative Bills Discussed.

Dr. Muir reported that the proposed State pharmacy bill had been subjected to several minor changes and had been introduced and given a hearing at Albany. The proposed Act to amend the charter of New York City so as to require daily reports of all cocaine sales, he considered an injustice since the police can now examine the records kept of such transactions. He also reported Assemblyman Joseph's bill which, if passed, will require that a pharmacist must conduct his business under his own name. He read the recent decision of the Court of Appeals upholding the Board of Pharmacy as a constitutional body. Upon his motion and with the amendment of Mr. Keenan that the wholesalers be consulted in order to secure their co-operation, the society went on record as being opposed to the Smith bill as being an uncalled-for and extreme measure.

For the use of the trade matters committee $50 was voted, the same amount also being appropriated to the entertainment committee of the New York Ph.A. for its annual meeting at Saratoga. The proper committee was instructed to have a physician address the society at the next or a special meeting. Three applications for membership were referred to the committee of investigation. The report of Treasurer Kline showed $382 cash on hand and $4516 in the college treasury.

C. A. STORER PRESIDENT OF CHICAGO BRANCH.

Physicians and Women's Clubs Invited to Co-operate in Work—Pharmacopoeial Subjects Are Discussed.

CHICAGO, Feb. 10.—At the January meeting of the Chicago Branch of the A.Ph.A., Leo Eliel, of Indiana, a former member, presided. The election of officers resulted as follows:

President, C. A. Storer; first vice president, E. N. Gathercoal; second vice president, L. A. Becker; third vice president, Mrs. M. M. Gray; secretary treasurer, W. R. Bell; chairmen of committees, membership, C. M. Light; education and legislation, C. H. Avery; practice, S. K. Sass; medical relations, C. S. N. Hallberg; public relations, T. V. Wooten; branch member of the Council of the A.Ph.A., C. A. Storer.

Professor Hallberg spoke briefly for the committee on medical relations and reported that instead of holding joint meetings with physicians it had been decided to ask co-operation in the work of revision through announcements by the committee on pharmacology in the *Bulletin of the Chicago Medical Society*.

Mr. Wooten reported for the committee on public relations, that he had brought to the attention of the Federation of Women's Clubs the fact that the so-called "prescription patents" required for their various combinations a large proportion of spirituous liquors, such as brandy, gin, whisky, etc., and that the Federation had agreed to take up this matter.

In a discussion on the revision of the Pharmacopœia, Dr. H. M. Gordin, of Northwestern University, advocated elimination of the common identical tests for chemicals and recommended descriptive definitions for galenic preparations, i. e., tinctures, fluidextracts, and fixing standards for alcohol contents, extractive, etc.

Prof. A. H. Clark, of the University of Illinois School of Pharmacy, discussed the official pharmaceutical assay processes. Reference was made to the standards adopted by the Pharmacopœia and it was shown that there had been a marked improvement in the condition of the drugs in the Chicago market since the Food and Drugs Act went into effect.

Both papers attracted much attention and an interesting discussion followed in which Prof. W. A. Puckner led. Chairman Eliel then introduced Messrs. Huhn, Jones, Mann, Elkin, Williams and Renner, who were here attending the meeting of the N.A.R.D. executive committee, and each of whom spoke briefly, expressing interest in the A.Ph.A.

Important Subjects Ably Presented at Meetings of A.Ph.A. Branches.

Percolation and Maceration, With Demonstrations of New Process, Revision of N.F. Pure Drug Bills, Expectorants and Elections on the Programmes.

The February meeting of the New York Branch of the American Pharmaceutical Association held at the College of Pharmacy was devoted to the discussion of the relative merits of percolation and maceration in the preparation of galenicals, among those taking part in the symposium being Professors John Uri Lloyd and Joseph P. Remington, guests on this occasion.

Professor Lloyd said that the distinction between the two processes was one only of words. He told of the method of maceration taught him by the old German pharmacist in Cincinnati to whom he had been apprenticed. His preceptor insisted upon the moistened drugs standing for 14 days and it was the young apprentice's duty to stir daily the contents of the many vessels in which the process was being carried out. He elaborated on the danger of percolators bursting from internal pressure or capillarity when poorly packed and said of maceration that it began with the moistening of the drug and the success of percolation depended on the success of maceration. Capillarity is one of the factors to be contended with in percolation. If the resin present in a drug is included in a gum insoluble in alcohol, then the gum must be moistened with something that will soften it. When one to two thousand pound lots of powdered drug are to be percolated the U.S.P. process cannot always be followed to the letter, the fineness of powder called for in the Pharmacopœia causing clogging or some other mishap will occur not propitious to the preparation of a good U.S.P. product.

Percolation More in Favor Than Maceration.

Professor Remington, who was introduced by President Otto Raubenheimer as "a pharmacist who had remained a pharmacist," said he didn't believe the best results were obtained from one of the two processes but from the best of the two processes. Maceration simply means soaking. Percolation consists in the piston-like driving out of soluble matter from the packed drug. Maceration was not in favor so much at the present time inasmuch as it was the American idea to save time. percolation taking half the time necessary for the former process. The proper choice of menstruum was the essential in percolation. A step towards success in percolation lies in moistening with a few drops of the menstruum the plug of absorbent cotton used at the orifice of the apparatus, since the syrupy fluid from the interior will often stop at this point. Professor Remington compared the percolation of large and small amounts of drugs with the charges of large and small guns, the grains of powder in the charge of the guns on a battleship being as large as a man's fist and those of the ordinary rifle very fine.

Mr. Raubenheimer read portions of a paper prepared by himself on the "History of Percolation." He drew special attention to agitation in maceration and compared the different percolation methods in the U. S. and foreign pharmacopœias.

Secretary Hugh Craig read a short paper on "Percolation and Maceration in the U.S.P.," written by George Beringer, who defined percolation as being really percolation and maceration or macero-percolation.

John A. Dunn, introduced as having, as a boy, worked with Dr. Squibb, said that the latter was particularly partial to percolation. The first thing to do, he said, was to seek a proper menstruum, one that will yield the best properties of the drug. Proceeding with this in view, the U.S.P. was nicely arranged for their method.

New Process Given a Demonstration.

The discovery of a new process of preparing fluidextracts by a syringe pressure process was the claim advanced by Hiland Flowers, who demonstrated his theory by preparing a fluidextract from Jamaica ginger, using a conical syringe. He thinks that with his apparatus crystalline sugar can be produced from cane juice and that steam or compressed air can be used in addition to pressure. Dr. George C. Diekman enlarged upon the different meanings which the admonition, "pack firmly" had to different students and said he was in favor of maceration despite all its drawbacks.

A percolator patented by Professor Lloyd and in use in his laboratories at Cincinnati, was described by Caswell A. Mayo. This apparatus consists of two coils horizontally arranged, one above the other. Through the upper coil steam circulates and through the lower cold water. Upon the percolate passing down, the alcohol is evaporated by the hot steam pipe and rises in a tube where collected. The extractive being heated only momentarily does not collect on the steam ring. The entire apparatus is hermetically sealed so that the loss of alcohol is practically nil and the amount of extractive matter nearer 100 per cent than previously possible. This percolator, moreover, occupies little room and while one apparatus is being emptied the other can be used.

Percolation Difficult for Inexperienced Clerks.

John C. Gallagher, of Jersey City, said he had found it the hardest thing in the world to get clerks who would pack the percolator right. Percolation is the neater, cleaner and takes the lesser room of the two methods under discussion, but he sometimes thought he would fall back on maceration unless he did the work himself. For inexperienced men, maceration is the best. Others who expressed views on the subject were Albert M. Roehrig, Felix Hirseman, Thomas D. McElhenie and Dr. Joseph Weinstein. In the general discussion following the remarks of the above speakers Professor Lloyd recommended that as a general rule the temperature during percolation or maceration shouldn't be less than 60° C. Professor Remington said that when percolation was difficult, the syrupy liquor should be run off and maceration again proceeded with. Interrupted percolation, he thought, should be included in the U.S.P.

W. A. Pearson, secretary of the Scientific Section of the Philadelphia Branch of the A.Ph.A., suggested that a similar section be organized by members of the local branch.

COMPREHENSIVE REPORT ON N.F. DISCUSSED.

Use of Saccharin and of Artificial Coloring Deprecated. Other Recommendations of Interest.

WASHINGTON, Feb. 20.—The February meeting of the City of Washington Branch of the American Pharmaceutical Association was devoted to a discussion of the report of a special committee on National Formulary consisting of Lyman F. Kebler, Wymond H. Bradbury, Henry E. Kalusowski, Lewis Flemer and Augustus C. Taylor. This committee was appointed to consider the several communications that were presented at the December meeting of the branch. Their report was a comprehensive one and discussed in detail the several propositions that had been made. For the proper consideration of the several conclusions reached by the committee the members of the local branch, including the visitors present, constituted themselves a committee of the whole and discussed the several propositions seriatim. On motion, the following principles were endorsed:

Recommendations Adopted.

Object—The National Formulary should be a book of remedies which not only conserve and protect the welfare of the people, but also represent the best that the American Pharmaceutical Association stands for.

Nomenclature—No name should be used which misleads in any particular.

Standards—It is believed that it would be preferable to have a definite standard prescribed, when practicable, for each product recognized.

Division of Book—It is unwise to divide the book into two parts.

Introductory Notes—The National Formulary should include useful introductory notes, comments, etc.

Metric System—The metric system alone should be employed in giving the quantity or proportion to be used in preparing the various products.

Medicinal Tipples—All products which bear any form of stigma characterizing tipples should be eliminated.

Saccharin—The use of saccharin as a sweetening agent for National Formulary products should be discouraged.

Pills—The general directions for making and coating pills should be continued if it is found practicable to present the matter in an intelligible form.

Artificial Coloring—The artificial coloring of official prep-

arations should be discouraged, it is desirable, however, to introduce one or more formulas for preparing coloring solutions to be used when called for by prescriptions.

Preservatives—Preservatives, other than such articles as alcohol and glycerin, should not be used in pharmaceutical preparations.

Basic Elixirs—The introduction of several select basic elixirs is recommended.

Proprietary Medicines—Formulas intended to produce an imitation of some proprietary product should not be included in the National Formulary.

Supplements—Supplements, corrections and additions should be issued as the progress of pharmacy and medicine may demand.

Recommendations Not Adopted.

The following recommendations were not concurred in by the majority of the members present, either because of a difference of opinion or because the subject matter itself has, as yet, not been sufficiently well discussed to permit of the expression of a definite opinion by many of the members present.

Synonyms—The committee believes that there should be introduced into the National Formulary as many synonyms as possible for the several preparations.

National Formulary a Book of Formulas—The committee is of the opinion that all simples should be embodied and described in the Pharmacopœia and that all mixtures and composites such as "Vegetable Cathartic Pills", "Compound Tincture of Cardamom", etc., should find a place in the National Formulary.

Druggists' Receipt Book—The committee expressed the belief that the only good purpose that such a book could serve is that of a repository for worthless, antiquated and defunct products. It is unable to see what possible value such a book would be to the progressive pharmacist.

Extemporaneous Preparations—The committee itself was undecided as to the advisability of preparing the various N.F. products extemporaneously, but expressed the opinion, evidently the majority, that it is the safer procedure to dilute fluidextracts with an appropriate solvent in the manufacture of a tincture than to prepare such tincture under conditions which are not as favorable as they might be.

Additions and Omissions—The committee believes that great liberality should be exercised along these lines because the National Formulary is to be used by people located in various sections of the country.

Additional Discussion is Invited.

On motion, it was agreed that the paragraphs endorsed by the members present be submitted to the committee on National Formulary, that the report as a whole be published and that attention be called to the recommendations not endorsed, so as to elicit additional discussions from pharmacists in various parts of the country.

Saccharin—Saccharin was discussed at some length, and it was suggested that because of the widespread use of this article and the apparent difference of opinion regarding the possibility of harm resulting from its use, additional informa-

seconded by Mr. Hynson, the following resolution was adopted:

Mr. Lowry Chosen President of Baltimore Branch.

Baltimore, Feb. 20.—At the annual meeting of the Baltimore Branch of the American Pharmaceutical Association, held in January with President H. P. Hynson in the chair, the following officers were elected for the ensuing year:

President, W. J. Lowry, Jr.; vice-president, A. C. Meyer, of A. C. Meyer & Co.; secretary and treasurer, Dr. E. F. Kelly; chairman committee on membership, E. W. Hodson, of

and member of Council, A. Ph. A., Dr. H. P. Hynson; chairman committee on scientific work, Dr. Jos. P. Remington; chairman committee on the science and practice of pharmacy, J. J. Barnett; chairman committee on education and legislation, J. Fusco Pool, of Pool, Doyle & Co.

Dr. Hynson's meeting for the committee on education and legislation discussed the advisability of the Pure Food and Drug Bill drawn by the commission appointed by the Governor of Maryland for that purpose. He mentioned that this bill paralleled the National law in most respects. The bill was endorsed.

Consideration of the National Formulary revision begun at the December meeting was taken up, the two points being, first, character and exact definition of non-official ingredients, and, second, additions to the National Formulary.

The discussion was opened by Dr. Hynson, who thought that the scope and purpose of the N.F. ought to be determined before such points could be properly settled.

Dr. Charles Caspari, Jr., thought that any detailed discussion of either point could well be deferred in view of the fact that two committees of the A.Ph.A., the committee of the N.F. and the committee on standards of non-official drugs and chemical products, now have these matters in hand.

Attention was called by Dr. Hancock to the criticism by the lay press of a lack of standardization of medicaments. The discussion was participated in by several members and the opinion was expressed that non-official ingredients should be defined and, wherever possible, standardized, and that no action be taken at present as to additions to the N.F.

Ohio Branch A.Ph.A. Re-elects Old Officers.

CLEVELAND, Feb. 10.—The Northern Ohio Branch of the A.Ph.A. met at the Cleveland School of Pharmacy on January 28, the old officers being re-elected as follows:

President, Lewis C. Hopp; vice-president, Wm. T. Hankey; secretary-treasurer, H. V. Arny, chairmen of committees: membership, W. M. Fox; professional relations, C. W. Bennett; science of pharmacy, M. G. Tielke; educational and legislation, O. B. Hannan; member of Council, A.Ph.A., Lewis C. Hopp.

A paper on "Expectorants of the U.S.P. and N.F.," by O. E. Muhlhan, was illustrated as usual by several sets of samples of the preparations discussed, made by the pharmacists present. Mr. Muhlhan spoke of compound tincture of benzoin and the difficulty in obtaining a benzoin up to pharmacopœial requirements as to alcohol solubility. He discussed compound syrup of squill and the difficulty of preparing a permanently clear preparation. He criticised the recipe for elixir of terpin hydrate N.F., recommending total elimination of water (even in syrup) in its manufacture, reporting that by use of glycerin and alcohol a permanent preparation containing 2 grains terpin hydrate to the fluidram could be easily prepared. An interesting discussion followed.

San Francisco Pharmacists Prepare for State Ph.A.

The annual convention of the California State Pharmaceutical Association was the subject of consideration of the leading druggists of San Francisco at a conference recently held at the Palace Hotel. The convention will be held in that city on May 17 to 20 and fully 1500 delegates are expected to attend. Prof. Frank T. Green, city chemist, was elected chairman; Edward L. Baldwin, vice-chairman; C. B. Whilden, member of the Board of Pharmacy, secretary, and Charles J. Abraham, treasurer.

Prof. Lloyd at German Apothecaries' Meeting.

Prof. John Uri Lloyd lectured on percolation before the New York German Apothecaries' Society at the February meeting. In his introductory remarks, he paid tribute to the memory of Dr. Charles Rice and Dr. Fred Hoffmann. He talked interestingly of his experience with W. J. M. Gordon, of Cincinnati, the first American chemist to purify glycerin, and by whom he was employed for several years; and outlined his studies of the various phases of percolation since that time.

Erie County Druggists Take Up Propaganda.

BUFFALO, N. Y., Feb. 20.—At its annual meeting last month the Erie County Retail Druggists' Association elected the following officers: President, J. H. H[illegible]; vice-president, L. A. Kingston; second vice-president, M. L. Kretzner; secretary, H. M. Wise; treasurer, O. Rydstrom. A propaganda committee of ten members was appointed and much active work in this and other directions is planned for 1910.

Prof. Remington Before Northern Ohio Branch A.Ph.A.

At the meeting of the Medical Pharmaceutical Section of the Northern Ohio Branch, A.Ph.A., scheduled for February 25, in the Academy of Medicine, Cleveland, Prof. Joseph P. Remington was on the programme for an address on the "Revision of the U.S.P."

Old Associations Elect Officers, Many New Organizations are Formed.

J. ARTHUR BEAN, Somerville, elected vice-president Boston Association of Retail Druggists.

JAMES F. FINNERAN, of Boston, elected president New England Br., A. Ph.A.; also pres. Mass. State Ph.A.

FRANK F. ERNST, Jamaica Plain, elected president of Boston Association of Retail Druggists.

F. F. ERNST CHOSEN PRESIDENT BOSTON R.D.A.

Association Votes to Continue Its Allegiance to the N.A.R.D.—Larger Membership, Finances Good.

BOSTON, Feb. 20.—The annual meeting of the Boston Association of Retail Druggists was held at the Massachusetts College of Pharmacy last month, with Professor LaPierre, the president, occupying the chair. Reports of both the secretary and treasurer were encouraging, the former reporting an increased membership during the year, and the latter a substantial balance on hand. The association voted to continue its allegiance to the N.A.R.D.

Professor LaPierre, after four years' service as president, declined re-election for another term, and the announcement was received with regret, followed later by the adoption of a formal expression of Professor LaPierre's valuable services to the association. The election of officers for the ensuing year resulted as follows:

Frank F. Ernst, of Jamaica Plain, president; J. Arthur Bean and George E. Grover, both of Somerville, first and second vice-presidents, respectively; Lyman W. Griffin, of Boston, treasurer; Charles H. Davis, of Dorchester, secretary; executive committee, presidents of the several locals.

J. F. Finneran New President New England Branch.

BOSTON, Feb. 20.—At the January meeting of the New England branch of the A.Ph.A. James F. Finneran, the new president, occupied the chair for the first time. The other officers, elected at the previous meeting, are Prof. James O'Hare, of Providence, vice-president, and R. A. Newton, of the Massachusetts C.P., secretary and treasurer. Frank F. Ernst is the new chairman of the committee on professional relations, and W. H. Glover, of Lawrence, continues as the chairman of the committee on membership.

With the presence of a majority of the delegates from the three Massachusetts associations to the Pharmacopœial Convention, the work of that convention formed the subject of the discussion at the after-dinner exercises. Dr. Frank G. Wheatley took the ground that there were too many preparations in the U.S.P. for the same purpose, as for instance, cathartics, and that two or three of them would appear to be as effective and as practicable as 50 or 60.

Discussion, though informal, was decidedly helpful, and at the end, President Finneran invited Dr. Wheatley and Dr. Tyrode, the two physicians who were present and who will represent the Massachusetts Medical Society at the Pharmacopœial Convention, to attend the subsequent meetings of the New England branch of the A.Ph.A.

OHIO DRUGGISTS ORGANIZE MANY ASSOCIATIONS

Actively Engaged in Extending Branches of Ohio Ph.A. New Zanesville R.D.A. Elects Officers.

CLEVELAND, Feb. 20.—In line with the movement now on foot in this State to have the druggists of each county organized as a branch association to the Ohio Ph.A., the Ashland County Branch of the Ohio State Pharmaceutical Association was recently organized at Ashland. Coincident with the purposes of similar organizations, its members have in view the better uniting of the interests of proprietor and clerk, the general progress of pharmacy, the securing and enforcement of just laws, etc. Present at the initial meeting were C .S. Ashbrook, of Mansfield, president of the Ohio Ph.A.; C. M. Shafer, of Canal Fulton, drug inspector; C. L. McIntyre, of St. Marys, drug inspector, and J. H. Moreton, of Ashland, of the Ohio State Pharmaceutical Travelers. The officers of the association are: Chairman, J. H. King, of Ashland; vice-chairman, K. G. Ayers, of Perrysville; secretary, W. L. Rhoads, of Ashland; treasurer, Duff Pancoas, of Ashland; executive committee, R. N. Shaw, of Savannah; F. J. Bockley, of Ashland; H. J. Haudenschild, of Loudonville; K. G. Ayers, of Perrysville, and J. F. Ailer, of Ashland. The chairman appointed Duff Pancoas, W. L. Rhoads, F. J. Bockley and J. F. Ailer as a committee on pharmacy laws.

The Wyandot County Pharmaceutical Association, recently organized at Upper Sandusky, has elected the following officers: President, George W. Tschanen; secretary, A. Billhardt, Jr.; treasurer, J. D. Ewing, of Carey.

The recent meeting of the Auglaize County Branch of the Ohio State Pharmaceutical Association was held at the Hotel Steinberg, Wapakoneta, and presided over by President W. H. Doll, of St. Marys. During the day the home of D. J. Davis was thrown open to the members and an informal session was held in his parlors. In the evening, the visitors were the guests of the local members at Brown's Theater.

Another Ohio Ph.A. branch meeting was recently held by the Richland County organization at Shelby. Addresses were delivered on propaganda by James Lucas, William G. Black, Mansfield; Clyde Thrig, J. R. Kingsboro and H. L. Crowell, Shelby.

The druggists of Lorain County met at the Hotel Andwur, Elyria, recently and organized as the Lorain County Branch of the Ohio State Ph.A. Interesting and instructive addresses were delivered by Charles Ashbrook, president of the Ohio Ph.A., and Inspectors Shafer and McIntyre. The following officers were elected: President, E. U. Hague, Elyria; vice-

president, E. H. Neal; secretary, Henry A. Gill; treasurer, William Hoeveler, Jr.

The Zanesville Retail Druggists' Association, a branch of the N.A.R.D., has been organized in Zanesville, O. Officers have been elected as follows: President, W. P. Wells; vice-president, J. R. Johnson; secretary and treasurer, H. M. Hazlett.

PRESIDENT HUEGEL WILL FIGHT 'PHONE ISSUE.

New Head of St. Louis Retailers Has Ideas Which He Hopes Will Banish the Free Lunch Instruments.

St. Louis, Feb. 20.—Henry O. A. Huegel, President of the St. Louis Retail Druggists' Association at the January meeting, is launching his administration with some very definite ideas as to winning the fight with the Kinloch Telephone Company, which has recently been regarded as lost, by entirely different methods than those used whereby there was brought about a "telephone strike." The strike was not a success, as can be seen now for only about 40 druggists have discarded the 'phones because they were refused slot machines. About that many more ordered the 'phones out and then replaced them.

Mr. Huegel is not yet ready to make public his plan, but he is investigating the possibilities of making an individual demand under laws regulating such things and then through the Public Utilities Commission. This question will not be brought before the association as a body and that organization will not be asked to approve until results are shown and then every person will be in a position to use a slot Kinloch, an open Kinloch or do without the service as his requirements dictate, and there can be no ground for ill-feeling.

Mr. Huegel has been an active member of the R.D.A. and Mo.Ph.A. for a number of years and was acting chairman of the Mo.Ph.A. committee which succeeded in passing the new pharmacy law during the last Legislature. Other officers elected were: First vice-president, J. M. Good; second vice-president, John A. Fritz; secretary, Charles W. Stockhausen; treasurer, George Hasugen; directors, Charles Renner, Charles R. Judge, Frank Carey, Dr. Holscher and Charles V. Eckert.

The telephone situation was not mentioned at the meeting and nothing except routine business was discussed.

Drug Club Re-elects President Cliffe.

PHILADELPHIA, Feb. 20.—The activity and interest of the retail drug trade of Philadelphia in the Drug Club was again indicated at the recent annual meeting of that well known organization when William L. Cliffe was re-elected president. It was indicated by the reports of officers that the retail interests predominated in the membership. It was decided to suspend the initiation fee of $10 until May 1 next with the expectation of increasing the membership. The reports of officers and committees showed a healthy improvement in club affairs and the outlook for the future was most encouraging. The election resulted as follows:

President, William L. Cliffe; vice-president, Charles Rehfuss; secretary, Frank W. Smith; treasurer, Lewis H. Davis; board of governors, Walter A. Smith, David J. Reese, H. Augustus Seeds, Adam Pfromm, C. W. Haviland, George D. Feidt, Samuel B. Davis, Edward T. Hehe, Moses Rusch, Charles H. LeWall, William A. Lennox, Dr. E. J. Sayrer, Jeremiah D. McLerran, Walter P. Miller and Jacob Jones, Jr.

Brooklyn Pharmaceutical Association's Election.

At the annual meeting of the Brooklyn Pharmaceutical Association, held January 10, the following officers were elected: President, Emil C. Kranichs; vice-president, A. Sandbrock; second vice-president, W. T. Creagan; treasurer, W. Schneider; secretary, L. Jay Cohen, 520 Knickerbocker avenue. Martin H. Ittner was elected to membership, and two more made application for admission. Meetings are held on the second and fourth Mondays of each month at 671 Bushwick avenue. S. Schoenfeld is chairman of the press committee.

S. A. Eckstein Elected President Milwaukee R.D.A.

MILWAUKEE, Feb. 20.—At a recent meeting of the Milwaukee Retail Druggists' Association the following officers were elected: President, S. A. Eckstein; vice-president, Joseph H. Schmidt; secretary, William F. Kaiser; treasurer, Louis H. Kressin; executive committee, J. G. Mack, E. Schowalter, William Thomson, E. C. Ruecker, Otto Hackendahl, H. L. Emmerich and W. F. Kaiser.

PRESIDENT BURKE APPOINTS 1910 COMMITTEES.

New Head of P.A.R.D. Takes Hold of Duties in Satisfactory Manner to the Membership.

PHILADELPHIA, Feb. 1.—William T. Burke, the newly elected president of the Philadelphia Association of Retail Druggists, has had a busy time since he assumed the duties of that office. That he is eminently qualified for the position was indicated by the manner in which he handled the situation at the special meeting of the association when it was decided to withdraw from the N.A.R.D. Another perplexing question which he has practically disposed of has been the appointment of committees for 1910. With but two exceptions, these committees are now complete and are as follows:

Finance, William E. Lee, chairman; J. C. Perry and W. H. Gano; by-laws, C. G. Neeley, chairman; A. G. Keller, Robert Cadmus, Jacob Goldhaber and S. E. Betts; printing, Walter Rodwell, chairman; Clarence H. Campbell and S. H. Shuster, membership, William A. Carpenter, chairman; Frederick R. Keller, M. Greenblatt, C. A. Wolfe, R. L. Haus, C. L. Dobson, A. R. Hesske, Paul McConomy, H. C. Clapham, H. J. Siegfried, J. B. Reesnels, R. F. Blackwood and E. F. Kroh; press, Charles Rehfuss, chairman; Samuel B. Davis and Samuel C. Henry; reception, Frank H. Cope, chairman; C. E. Kling, E. F. Kessler, L. S. Sorber and C. L. Dobson; memorial, Dr. C. B. Lowe, chairman; J. J. Steineman, J. Grier Long, Ray Kottka and M. D. Allen; schedule, Samuel B. Davis, chairman; Charles Leedom, P. S. Rohn, W. H. F. Vandegrift and N. S. Steltzer; commercial interests, E. R. Gatchell, chairman; David H. Ross, Otto Kraus, U. G. Ruff and A. J. Frankeberger; legislative, Christopher Koch, chairman; E. H. Fahey, J. J. Finney, Samuel B. Davis and Henry R. Nolte.

The ethical preparations and the telephone committees will be announced later. The entertainment committee, one of the most important branches of the organization from a social as well as a financial viewpoint, serves during a portion of two administrations and the present committee will not conclude its work until early in the coming summer.

JOHN FERGUSSON IS CHOSEN PRESIDENT.

Successful Year of Philadelphia Drug Exchange is Brought to a Close With Enjoyable Banquet.

PHILADELPHIA, Feb. 20.—Under the most enjoyable circumstances, the Philadelphia Drug Exchange closed the 49th year of its existence last month when representatives of the 75 manufacturing and wholesale firms of which it is composed assembled at dinner at the Hotel Walton. There was but one sad feature, and that was when President John Fergusson, in his capacity of toastmaster, called upon the members to rise as a tribute to the memory of Mahlon N. Kline.

The speakers included Rev. Dr. Joseph Krauskopf, Dr. Francis H. Green, Rev. Arthur Phillips and Prof. C. P. Cochran, State chemist. The entire affair reflected the excellent management of Chairman Walter V. Smith and the other members of the committee of arrangements.

There was a large attendance at the annual meeting of the Exchange, January 25. As usual, the annual report of conditions in their application to the drug trade, prepared by Clayton F. Shoemaker, was the feature of the meeting. It was presented in printed form and adopted in its entirety. A resolution, supporting the movement for a parcels post, was introduced but after some discussion, upon vote, was rejected. A vote of thanks was tendered the retiring president, Dr. A. W. Miller, for his able conduct of the affairs of the Exchange during the past two years. The election of officers resulted as follows:

President, John Fergusson; vice-president, Harry B. French; secretary, William Gulager; treasurer, Edward H. Hance; directors, Charles E. Hires, A. Robinson McIlvaine, Dr. A. W. Miller, Adam Pfromm, Adolph G. Rosengarten, Clayton F. Shoemaker, Richard M. Shoemaker and Walter V. Smith.

Marquette Graduates to Form Association.

MILWAUKEE, Feb. 20.—A movement for a permanent organization was taken up at a recent banquet by the alumni of the pharmaceutical department of Marquette University. A committee made up of G. C. Mayer, Racine, and Richard Dreyer and George Boundry, Milwaukee, has been appointed to arrange for the organization.

Polk County (Iowa) R.D.A. Elects Officers.

DES MOINES, Feb. 20.—At a recent meeting at the Hotel Wellington the Polk County Druggists' Association elected the following officers: President, F. H. McArthur; vice-president, Ed. James; secretary, E. L. Twining.

N. Y. State Pharmacy Bill Advanced—Court Sustains Old Board.

Hearings at Albany and Conferences in This City—Text of Decision of Highest Tribunal in Favor of Present Law—Pertinent Points Treated at Length.

ALBANY, Feb. 20.—The Hill-Whitney State Pharmacy Bill has been favorably reported in the Senate.

At a recent hearing before the Assembly committee Thomas Stoddart, president of the State Ph.A.; former President Diamond, of the same body; F. E. Holliday, of the N.W.D.A.; Dr. William Muir and Warren L. Bradt, the two latter of the State Board of Pharmacy, were among those who argued in favor of the measure. Others present at the hearing were Thomas P. Cook, William F. McConnell, Ulrich Wiesendanger and Charles M. Woodruff.

Numerous objections were raised by Assemblyman Robert Conklin. It was subsequently shown that his protests were based on a copy of the bill as first printed and not as presented. Several provisions he objected to as unconstitutional, but his objections were ably answered by Mr. Bradt.

The final hearing will be held on March 1.

Conference in New York City at Which the Bill Was Discussed and an Understanding Reached.

At a recent conference held in New York City for the purpose of discussing the proposed new State pharmacy law, President Stoddart, of the N.Y.Ph.A., presided. Mr. Stoddart said that the meeting had been called upon the solicitation of certain interests of the drug trade in this city which were opposed to the measure. He said that the legislative committee of the N.Y.Ph.A. was not acting arbitrarily and that the wholesalers ought to look beyond themselves so that their products will be entered into every State in the Union.

Thomas P. Cook said he was sorry that the president should feel that there was any opposition on the part of the wholesalers and was inclined to think that the trouble lay more with the retailers. On the ground that it would mean a great amount of unnecessary printing, he objected to that part of the law requiring the full name, residence and place of business of the manufacturer, wholesaler, jobber or other person from whom the drug or drugs were purchased. Mr. Cook also contended that the inclusion of the phrase "and any amendments thereof" in the provision for the sale of drugs by wholesalers in accordance with the National Food and Drugs Act of June 30, 1906, was unconstitutional.

The consensus of opinion seemed to favor the elimination of all cocaine legislation from this law, excepting reference to the provisions of the penal code, and motions to this effect and to amend the present reading of the bill on this subject were proposed but not passed. The penal code inflicts a heavier penalty for these violations and Dr. Muir, Fred S. Rogers, who acted as secretary, and S. V. B. Swann thought additional legislation unnecessary.

F. E. Holliday questioned the constitutionality of providing different legislation for the sale of adulterated drugs by wholesalers from that for sales of the same by retailers. He thought that the adulteration clause in the National law which has been adopted by 26 States should be inserted in the New York law. He favored the exemption of goods imported into the State bearing government guarantees, from that part of the Act bearing on the responsibility of persons accused of violations of the provisions relating to adulteration, misbranding or substitution. As to the proposed new law as a whole, Mr. Holliday thought there was no general protest on the part of the wholesalers against it.

S. V. B. Swann announced that the German Apothecaries Society was unalterably opposed to placing the power to appoint members of the Board of Pharmacy in the hands of the Board of Regents, the latter body being a private corporation and that such a measure would be unconstitutional. Felix Hirseman thought that the Governor of New York State was perfectly able to appoint the members of the board, as much so as any Governor in the country. Why then should this power be put in the hands of the Regents? The German Apothecaries' Society does not approve of this bill but will not fight it.

Dr. Muir asserted that the Board of Pharmacy has been free from political influence and nothing had ever been pigeonholed. The New York board has led those of all other States and has been free from all outside influences. It has, moreover, been sustained by the courts three times within the recent past.

Peter Diamond declared that it would be far more dignified to have the board appointed by an educational rather than by a political body.

Dr. Muir saw in the increase in the chains of drug stores that it behooved pharmacists to retain as much influence as possible in appointing members of the board. The influence of large corporations would not bear as much on the regents as on the Governor. It would be a safeguard for the New York State Ph.A. to name the candidates for the board. The Attorney-General has already overruled that part of the proposed new law granting the board power to add to or detract from the schedules. This power is given to the regents. George H. Hitchcock thought that in a conspicuous place in every drug store not run by its proprietor a sign should be hung bearing the name of the manager.

Dr. Muir said the provision relating to prosecutions would mean a year's delay and cocaine cases would suffer. The Attorney-General would prosecute cases, thus making a big splurge and thereby hurting pharmacy. The board's deficiency is now $2000 and he thought that it should collect fines when suits were instituted. Mr. Diamond was of the opinion that the Attorney-General would collect the fines.

Hieronimus A. Herold, who represented the Alumni Association of the New York College of Pharmacy at this conference, characterized the afternoon's discussion as "distressing quibbling on the part of gentlemen supposed to have at heart the protection of public health." They stood in regard to the proposed law on one foot as professional men and on the other as merchants. He thought that pharmacists should enforce the law and that matters should not come to such a pass where the violator could go to his district leader and have prosecution called off. As to the presentation of names to the Board of Regents, insert the word "must" in this clause or drop the feature altogether.

MR. CONKLIN DISSECTS LATEST PHARMACY BILL

In Address to German Apothecaries' Society He Points Out Defects—Appointment by Governor Favored.

At the February meeting of the German Apothecaries' Society, S. V. B. Swann, chairman of the committee on legislation, reported that the pharmacy bill, as printed for introduction in the State Assembly, differed from that agreed upon at the last conference.

Assemblyman Conklin, present at the meeting as a guest, pointed out a number of conflicting provisions. He objected to the definition of a "council" without any provision for its creation. The introduction of the cocaine law into the measure; the necessity of naming nominees for appointment to the board when appointment would not be restricted to the same, and calling a violation a misdemeanor in one place and a felony in another, were criticized by Mr. Conklin. He branded as absurd the placing into the hands of the regents of police powers such as were conferred on the board by the proposed law. He advised that the execution of police powers be left to the health department or the department of agriculture and that the board of pharmacy be restricted to the examination and licensing of pharmacists. He intimated that a separate bill might be drawn up which would include corrections of the one under discussion.

Felix Hirseman said it was important that the pharmacists keep faith with the Governor and advocated that the bill provide for appointment of a board by the Governor. A resolution was adopted to this effect and that members of the board be actively engaged in pharmacy.

COURT'S OPINION SUSTAINING THE OLD BOARD.

Judges Unanimous in Deciding Points in Appeal Taken by a Department Store in Brooklyn Borough.

The full text of the opinion filed in connection with the recent decision of the New York State Court of Appeals sus-

taining the validity of the State Pharmacy Law has been received in this city. The opinion was written by Judge Willard Bartlett and was concurred in by six other judges. After reciting the fining of Gardner D. Matthews et al, Brooklyn department store keepers, for permitting an unlicensed clerk to sell drugs or medicines, the court says:

As the allegations of the bill of particulars were clearly established by the proof upon the trial, it appeared that the defendants conducted a large department store in the Borough of Brooklyn, employing a pharmacy in charge of a duly licensed pharmacist. This pharmacist, however, was not present at the time of the sales in question, which were made by an unlicensed saleswoman. The absence of the State Board of Pharmacy testified that all the articles sold, namely, tincture of iodine, spirits of camphor and tincture of arnica, were medicines and that the tincture of iodine was a poison. A judgment against the defendants was rendered which has been affirmed by the Appellate Term and the Appellate Division and in affirming that judgment counsel for the appellants presents two questions for our consideration: (1) Are the articles involved, tincture of iodine, tincture of arnica and spirits of camphor, when sold in sealed bottles, within the exceptions of the statute, or do they come within the term "medicines" as used in section 260 of the Laws of 1900, chapter 607 (the Pharmacy Law), which prohibits the sale, under penalties, of "medicines or poisons" except in the presence and under the supervision of a licensed pharmacist? (2) If the articles in question are medicines within the prohibition of section 260 of the Pharmacy Law, is that portion of the statute which restricts the sale of domestic remedies, or other perfectly harmless preparations, to licensed pharmacists a valid exercise of the police power or is it an invasion of private rights and unconstitutional?

As to the first question, I think that the courts may take judicial notice of the fact that tincture of iodine, spirits of camphor and tincture of arnica are medicines; and so far as tincture of iodine is concerned the uncontroverted evidence in the case proves that it is a poison. It is true that spirits of camphor and tincture of arnica are commonly known as domestic remedies, but this fact does not lessen their medicinal character. It is obvious that the same precautionary regulations may not be required in respect to the sale of medicines which are harmless if pure and properly used, as would be appropriate in respect to the sale of poisonous substances; but I can see no reason why if the police power embraces regulation of the sale of medicines of a dangerous character it may not also be legitimately extended over the sale of medicines generally, if only in order to insure their purity.

We thus come to the second question whether legislation is constitutional which restricts not merely the sale of poisons, but the sale of domestic remedies or perfectly harmless medicinal preparations.

While the constitutional validity of a statute regulating and restricting the sale of drugs and medicines does not appear to have been directly involved in any case heretofore passed upon by this court, the authority of the Legislature to control and limit the sale of drugs and medicines has long been judicially recognized in this State.

In People vs. Rontey (4 N. Y. Supp. 235; affirmed on opinion below, 117 N. Y., 624) the defendant was convicted for having unlawfully conducted a pharmacy in the City of New York, not being a registered pharmacist as required by the New York City Consolidation Act. The judgment of conviction was affirmed by the General Term of the Supreme Court in an opinion by Mr. Justice Brady, which was adopted by this court when the case came here as a correct exposition of the law. In speaking of the nature of the statute Mr. Justice Brady said it was a police regulation designed to insure greater safety to the people in requiring that drugs could be dispensed only by experienced persons

"Public safety," he said, "must be regarded as superior to any private rights," he said, "and the defendant's business must yield to the necessities recognized by proper legislation." In People vs. Abraham (16 App. Div. 58) the defendants were convicted of having retailed medicines in violation of the prohibition of a statute making it unlawful for any person except a registered pharmacist to open or conduct any pharmacy except under the immediate supervision of a registered pharmacist. The judgment of conviction was affirmed by the Appellate Division, but the opinion does not indicate that the constitutionality of the statute was questioned. Many other New York cases could be cited where language is used in the opinions clearly assuming the existence of the legislative power, which is denied by counsel for the appellants upon his appeal.

The constitutionality of such legislation is affirmed by the leading text writers and it has been upheld by the courts of last resort in numerous other States in the Union. "The sale of poisonous drugs unless labeled" is among the safeguards enumerated by Chief Justice Cooley in his work on Constitutional Limitations as subject to be forbidden by a State in the exercise of the police power. (Cooley's Constitutional Limitations (7th ed.) p. [illegible] Mr. Henderson, in his treatise on State and Federal Control of Persons and Property (Vol 1, p. 512) says that [illegible] "and can be thrown around the use of [illegible] dangerous drugs without [illegible]

A few of the leading cases may be cited which uphold the doctrine thus asserted. An Oregon statute forbidding the sale of [illegible] was held in the case of Young Jon (28 Fed. Rep. 309) by the District Court of the United States for the District of Oregon (Deady, J.) [illegible] Ah Chew (16 Nev. 50) where this question arose under the police power recognized in the [illegible] and [illegible] the police of every State in the Union [illegible] the good order and peace of society, for the prevention of crime, misery and want the Legislature has authority to place such restrictions upon the sale or disposal of opium as will mitigate if not suppress its evils to society." In Exparte Mun Luck (29 Oregon 421) the Supreme Court of Oregon held that a statute was constitutional which went so far as to make it a criminal offense to have possession of opium without having a license therefor or without having obtained it on the prescription of a physician or pharmacist for medicinal purposes.

"The sale and disposition of such a drug," said the Court, "may unquestionably be regulated and controlled by law and whether its nature and character is such that for the protection of the public its possession by unauthorized persons should be prohibited is a question of fact and of public policy which belongs to the legislative department to determine." In State vs. Forcier (65 N. H. 42) it was held that the enactment of a statute requiring retailers of drugs, medicines and chemicals to submit to examination and procure a license was a sanitary regulation within the police power of the State. "Undoubtedly the Legislature has the right under the police power to pass enactments for the benefit and promotion of the public health." (Noel vs. People, 187 Ill. 587, 593). In the same case it was held that the provisions of the Illinois Pharmacy Act of 1905 in so far as they prohibited persons not being registered pharmacists from retailing or dispensing medicines prepared or compounded by themselves were valid as a proper exercise of the police power in the interest of the public health. A Wisconsin statute imposed a penalty upon any person not being a registered pharmacist or not having a registered pharmacist in his employ who should keep a pharmacy store or shop for retailing, compounding or dispensing medicines. The final purpose of the law was declared to be "to prevent any drugs, medicines or poisons from being put up and sold in such store or shop except by or under the supervision of a person of the requisite qualifications." The Supreme Court of Wisconsin held that it was within the power of the Legislature to protect the health and lives of citizens throughout the State from improper, dangerous and destructive compounds put up by incompetent or inefficient persons. It is to be noted that this Wisconsin statute related not merely to the sale of drugs and medicines generally so that it included harmless medicines as well as those of a dangerous character (——vs.——).

As has already been suggested, there are strong reasons relative to the public welfare which make it proper that regulations concerning the sale of drugs and medicines should not be confined to poisons, but may be extended so as to embrace what are known as harmless household remedies, that is, which may be harmless if properly prepared. The injury to the public health which might ensue if such medicines were carelessly or ignorantly compounded so as to contain poisonous ingredients or deceptively, so as to be something different from what they purported to be, is manifest. The police power logically extends to such medicines no less than to poisons and other lethal medicinal agents.

It is suggested that the Pharmacy Law (for which the existing Public Health Law, chap. 45 of the Consolidated Laws, has now been substituted) is objectionable because it expressly permits the sale of certain known poisonous domestic remedies by merchants or traders in unincorporated villages or villages of the fourth class, provided their place of business be more than three miles distant from a drug store. In answer to this objection it is only necessary to refer to a Minnesota case in which a similar question was raised. (State vs. Donaldson, 41 Minn. 74). The Minnesota Pharmacy Act of 1885 contained a general prohibition forbidding any person not a registered pharmacist to retail, compound or dispense medicines, followed by a proviso that nothing contained in the statute should prevent shopkeepers whose place of business was more than one mile from any drug or apothecary shop from dealing and selling the commonly used medicines and poisons, if such medicines and poisons had been put up by a registered pharmacist. This one mile limit in the proviso was attacked as an arbitrary distinction, unwarranted by reason and not demanded by any necessity. The Supreme Court of Minnesota dealt with the objection as follows: "Doubtless, the use of impure medicines or dangerous drugs is just as injurious to those who buy them one mile from a drug store as to those who buy them within that distance; and, if this was the only thing to be taken into account, the discrimination would be purely arbitrary. But the Legislature had to deal with this as a practical question, and had a right to take into consideration the convenience of the public. In sparsely settled districts frequently there is no pharmacy or drug store near at hand. In cases of sickness it is often absolutely necessary to obtain medicinal remedies promptly in order to save life. The question was, how far it was practicable to protect the public from the sale of impure or dangerous medicines and drugs, and at the same time have due regard to the convenience of those living at a distance from a drug store?

To meet the requirements of the situation, the legislature made an exception so as to allow shopkeepers whose place of business is more than a mile from a drug or apothecary shop to deal in and sell the commonly used medicines and poisons, if put up by a registered pharmacist; thereby protecting the public, especially in the centres of population where they most need it, as far as practicably consistent with the convenience or necessities of those living in the rural districts. We do not think that such a distinction is either arbitrary or unreasonable."

We entertain no doubt as to the constitutionality of the provisions of the Pharmacy Law under which the penalties in this case were recovered against the defendants and as no other question is raised it follows that the order appealed from must be affirmed.

CULLEN, C. J., GRAY, EDWARD T. BARTLETT, HAIGHT, HISCOCK AND CHASE, JJ., concur.

Order affirmed with costs.

Terse Comments on Dr. Stewart's Ideal of the Future of Pharmacy.

Paper on Page 133 of February Era Arouses Interesting Discussion, Trend So Far Being Against Uniting Functions of Pharmacist and Physician in One Man.

SELF-PROTECTION THE ONLY VALID REASON.

Physician's Work Should Not Be Hampered by Commercial Problems—Survival of the Fittest.

Fred S. Rogers, of Middletown, N. Y., former president of the New York State Pharmaceutical Association:

It would seem to me that the profession of medicine is so important, so vital to the welfare of the people that no physician should consider it expedient, humane or proper to embark in any enterprise which would divert from his sick people any of the ability for clear thinking diagnosis and treatment which is necessarily the case when commercial matters arise with their diverse and complex problems. It is doubtful indeed if the physician with the real welfare of his patients at heart can successfully practice pharmacy, either openly, or in the form of a drug store in his back office. I believe that the physician who does this is apt to be far more guilty of substitution than any real pharmacist, although the latter has come in for a very large share of unjust condemnation on this score.

The only valid excuse, in my judgment, which would cover a pharmacist for actually taking up the practice of medicine in connection with his store would be solely for the purpose of self-preservation and to retain a legitimate living. In so many localities where the competition today is actually more keen between the dispensing physician and the retail pharmacist than between pharmacists themselves, I could excuse the latter for adopting the proposed plan as a means of self-protection, and I believe that with his accessibility to the public and the common ground on which he meets his people, there are many of the minor ills which he could successfully treat, with proper educational qualifications. (These qualifications, of course, with the present standard of pharmaceutical training, could be readily obtained.) At the same time, this latter idea is one which should be greatly deplored and should not be adopted except in case of continued determination on the part of dispensing physician to compete with active pharmacy.

The drift of present day legislation toward greater and greater restriction, qualifications and requirements are all tending toward "higher pharmacy," and yet in no wise increasing its income, and a continuance along these lines will necessarily result in the survival of the fittest—the pharmacist or the physician.

EVERY PHARMACY SHOULD HAVE LABORATORY

Prof. Sayre Opposes Combining Two Professions of Medicine and Pharmacy in One Man.

By Prof. L. E. Sayre, of Lawrence, Kan., dean of the School of Pharmacy, University of Kansas, member of Revision Committee of the United States Pharmacopoeia:

I have not had the time to read Dr. F. E. Stewart's article, but I know my friend Stewart's views so well, that it is not necessary for me to read what he has said.

I do not believe that it is any more necessary for the pharmacist to study medicine and thereby obtain a license to practice medicine than it is necessary for a physician to study and graduate as a pharmacist and obtain a license to practice pharmacy. While it is desirable to have the physicians and pharmacists broadly educated, we should always keep in mind that the practice of pharmacy and medicine are two absolutely distinct callings.

In our common warfare against disease, it should be recognized that the pharmacist prepares and brings to the physician the ammunition, and the physician with his generals and captains control the use, and the application of this ammunition. It is my opinion that it is not the province of the physician to operate, as a part of his profession, in the pharmaceutical laboratory—to discover and *prepare* agents for warding off and treating diseases. He has another duty which should require all of his attention. It seems to me that there is wide enough field in each of the professions—that the work of each should be differentiated and segregated in order to obtain the best results. It is true that the two professions interlace one another in many directions, but we cannot combine *them successfully* to produce the best results for the professions interested and for the public good. We don't want to make mediocre dispensing doctors, as Dr. Stewart's scheme would do. We have too many now.

Now, in regard to the question of instruction that the pharmacist should have to master his calling, and to serve the interest of humanity most effectively, it seems to me that there is an element of truth in what Dr. Stewart has to say, "A thorough knowledge of medicine would be a great benefit to the pharmacist," undoubtedly, but it is expecting too much of him, that he prepare himself in all of the various medical lines. I believe we might well add to the present courses in pharmacy such courses of the medical school as therapeutics, bacteriology and experimental pharmacology. The training of the pharmacists of today should be, it seems to me, broader in the medical lines than it has been in the past. I attended a meeting of a medical association recently where it was plainly brought out, that the busy physician had not time to do the laboratory work necessary for the various recent methods of diagnoses. It was made clear to me, as never before, that we should have in every drug store, an *available laboratory*, a chemist, bacteriologist, and a consulting pharmacologist. We are fast approaching the time when such service will be, not only appreciated, but almost a necessity. If the pharmacist is fully awake to his interest and is alive to the interest of his calling, he will seize the opportunity and prepare for this future demand of his profession.

SEES SIGNS OF BETTER THINGS FOR PHARMACY.

Tendency Toward Separation of Commercial and Professional Pharmacy—No Unity With Medicine.

By Prof. Frederick J. Wulling, dean of the College of Pharmacy of the University of Minnesota, former president Northwestern Branch of the A.Ph.A., Minneapolis:

I am already on record as maintaining that a pharmacist should be a medical specialist whose specialty should lie in the field of pharmacology, but his training and aims should not be directed toward diagnosis and prescribing. Dr. Stewart's plan would practically mean the unification of the practice of pharmacy and medicine into one class. I do not believe this will be realized for all growth has been from the homogeneous to the heterogeneous. The vocation of pharmacy has grown out of that of medicine as medicine has grown out of priesthood.

If pharmacists were to study medicine to a degree to fit them to administer upon minor cases, they would have to acquire an ability that would enable them also to administer upon all cases. The result would be that we would have only physicians and no pharmacists. If the proposed medically educated pharmacist could be held down to the treatment of minor cases, there would be a conflict with the major medical practitioner that would exceed all our present day troubles.

The question whether pharmacy is a profession will soon be answered affirmatively, for the conflict now going on within the ranks of pharmacy between the professional and the commercial will duly result in the separation of commercial pharmacy from professional pharmacy. If pharmacists as a whole had the same degree of training and capacity for the practice of professional pharmacy as the physician has for the practice of medicine, present day conditions could not exist.

I see signs of better things for professional pharmacy in the course of the pharmaceutic events we are now experiencing. The entering wedge of the separation of professional pharmacy from commercial is receiving occasional taps of fairly respectable force as is evidenced by the recent withdrawal of the Philadelphia Association of Retail Druggists from the N.A.R.D. because of the latter's alleged relationship with the A.D.S. While I am not certain whether this was a wise step, I yet am certain that many Philadelphia pharmacists and

pharmacists all over the country have seen a look [illegible] or their chosen profession that they are always willing to defend it. The greatest [illegible] comes from these men. On the other hand, those pharmacists who by inclination or necessity devote their energies toward enlarging their business along commercial lines are laying the foundation toward the calling that will correspond to that of the "druggists" in some of the European countries. Indeed it is strange that not more establishments have arisen in which all of the activities of the present drug store except the dispensing of prescriptions, are carried on. Establishments that can buy and sell all such things not expressly or impliedly prohibited by the State law except by registered pharmacists, if rightly conducted, will surely be profitable and honorable.

Dispensing pharmacies, in which only physicians' prescriptions will be dispensed and physicians' supplies and sick-room necessities be kept, will also be found profitable. The registered [illegible] will preside over such an establishment will need to possess a very thorough pharmaceutic training so that he will be more nearly the equal of the physician in intellectual and technical capacity than the average present registered pharmacist is. This change has been going on for some time, though it has not been very pronounced. The growing pains of which one hears more frequently now will soon result in the respectable growth of each of the two divisions of the present pharmacist's vocation and each will be honorable and respectable.

PROFESSIONS OVERLAP, BUT NEEDN'T CONFLICT.

Physician at Head of University of Nebraska Outlines Reasons for Not Favoring Dr. Stewart's Plan.

By Reuben A. Lyons, M.D., director of the School of Pharmacy, head of department of pharmacology in the School of Medicine, University of Nebraska, Lincoln:

I am not a pharmacist. I am a physician, and as head of the School of Pharmacy of the University of Nebraska, as well as the head of the department of pharmacology in the College of Medicine of the same institution, I am vitally interested in both pharmaceutical and medical education. It was with considerable interest, therefore, that I read Dr. Stewart's paper.

By pharmacy at the present time, is meant the science and art of preparing, preserving, compounding and dispensing medicine. In order that a man may work intelligently in any one or more departments of this science, he requires training in many related subjects, such as botany, pharmacodynamics, physics, etc. In many cases these sciences are the same as those required to intelligently pursue the study of medicine. While medicine and pharmacy, in a sense, overlap in study, they need not and should not conflict in practice. I do not consider the study of medicine to be an ideal preparation for the practice of pharmacy; neither do I consider the study of pharmacy an ideal preparation for the practice of medicine. For example, energy and time is lost in the study of the diagnosis of disease for the student who intends to practice pharmacy and pharmacognosy and pharmaceutical chemistry are of little importance to the physician.

In my opinion the student of pharmacy who has received a training in a school where the fundamental biological and chemical sciences are taught properly is in as good a position to educate the laity along lines as essential to health as is the average medical graduate. Physicians have become dispensers largely through ignorance of the physiological action of drugs. Their ignorance could be covered up by dispensing their own remedies in any particular case. With the advent of pharmacodynamics in our medical schools, this factor disappears. No busy practitioner has time to prepare his own medicines. He wants a standard preparation and for this he must depend upon an expert pharmacist. The physician studies pharmacodynamics that he may know how to apply drugs in the treatment of disease. The pharmacist studies pharmacodynamics in order that he may standardize his drugs. And thus we see the fields of pharmacy and medicine defining their own limitations and as time goes on, we shall see the work of the professions still more highly specialized but never separated. It is by the united efforts of philanthropic specialists that the greatest good will come to humanity. I believe it is for the best interest of medicine, pharmacy and the public that we have no physician-pharmacists or pharmacist-physicians.

TOO MANY DOCTORS NOW—NO MORE NEEDED.

Mr. Apple Fears Results if Pharmacists Should Take Up Practice of Medicine by the Wholesale.

By Franklin M. Apple, Ph.G., former chairman A.Ph.A. committee on practical pharmacy and dispensing, chairman propaganda committee of the Philadelphia Association of Retail Druggists, Philadelphia:

Concerning Dr. Stewart's paper entitled "Shall We Have a Profession of Pharmacy?" I must state that I have been and am at this writing kept too busy to give the subject the thought and consideration it deserves, but will venture an expression of opinion at your behest.

If the theoretical results outlined in the paper would prove to be the true results of the universal practice of pharmacists studying medicine and obtaining a license to practice, it would appear to be the proper course to pursue; but, as we can only base our estimate of the future upon the records of the past, with any degree of certainty, I am rather skeptical as to the outcome of such a course of action.

I am afraid that if the course suggested were to be followed it would result in legalizing many undesirable illegal practices of the present time, such as counter prescribing; and, if the course of study demanded of the pharmaceutical-medical men were not of the highest possible standard, it certainly would not prove of advantage to society, for a little knowledge is conceded to be a very dangerous thing.

If we are to judge of the standards of the proposed medical men, who would almost undoubtedly combine the practices of medicine and pharmacy, by that of many of the present day medical-pharmaceutical stores, we can have but slight hopes for effective work for altruistic ideals, scientific attainment and the general good of humanity, for many of them are veritable medicine feeding stations, as the degree of financial success is dependent upon the amount of medicines or placebos prescribed and dispensed for the patients.

Again, combining the practices of medicine and pharmacy makes such demands upon the time of those so engaged that it is an absolute impossibility for them to keep posted upon either medical or pharmaceutical advancements, and as for their being enlisted into the ranks of uplifters in either calling, it is beyond question almost impossible. Cite, if possible, to me a dozen men so engaged in making a livelihood who are lending material aid to the reform efforts being put forth in either profession today.

The profession of medicine is acknowledged to be overcrowded today and what would be the results to the practices of the medical men if such wholesale accessories were to be made to their ranks? I hate to contemplate, for necessity is a stern master and forces many ofttimes to follow practices they do not altogether condone.

The creator always has the advantage over the beneficiaries of his creation and such being the case, quite naturally the medical side of the question would receive the preference to the serious detriment of the profession of pharmacy and to the ultimate disadvantage of the public—for they cannot honorably be expected to support more than a respectable number of medical men to minister to their bodily needs, and they have too many of the former today.

We must not lose sight of the fact that the county medical associations do not admit to membership physicians conducting drug stores; hence what would be the result of the proposed custom to the medical societies, the benefits they bestow upon their profession and to the interests of the public?

What is needed today is *better qualified, practical pharmacists and greater discrimination upon the part of medical men in favor of the fully qualified profession of pharmacy*—for the best interest of *all* concerned, the public, the physicians and the pharmacists. A substantial reward is the most effective one and will create the most lasting impressions, so long as it is necessary to earn at least a sufficient amount of coin wherewith to purchase sufficient food with which to keep the spark of life alive in one's body and to clothe one's self decently and comfortably.

I repeat that I doubt the practicability of the plan proposed, hence cannot subscribe to that portion of the admirable address of Dr. Stewart, which I had the pleasure of hearing him deliver.

(Additional comments on Dr. Stewart's Paper will be found in subsequent issues of the ERA.)

THE QUIZ MASTER

A MONTHLY SERIES OF PRACTICAL AND EDUCATIONAL QUESTIONS FOR DRUG CLERKS AND STUDENTS, WITH THREE CASH PRIZES EACH MONTH FOR THE MOST CORRECT ANSWERS.

THREE PRIZES of $5.00, $3.00 and $2.00 respectively, will be paid each month to the three persons submitting the largest number of correct answers to each monthly series of questions. In the event of a tie for any one of the prizes offered, such prize will be equally divided among the successful contestants. This competition is open to all who may desire to compete.

ANSWER BY NUMBERS and write your answers upon letter size paper (8x10 in.), one side only, with your Name and Address at the top of each sheet. Also number your sheets.

ALL ANSWERS for each month's series of questions must be sent at one time, and must be with us not later than the 15th of the following month.

CORRECT ANSWERS to each series of questions and the names of the three contestants who have been awarded the prizes will be published in the Era, after the close of the respective contests.

WE INVITE our readers to send us their questions for publication in this department, particularly questions related to the practical work of drug clerks.

ALL COMMUNICATIONS relating to this department should be kept separate from other correspondence, and addressed to

The Quiz Master
Care The Pharmaceutical Era 90 William St., New York

QUESTIONS, MARCH SERIES, 1910.

1—What are some of the advantages of fluidextracts over tinctures?

2—What is meant by the net weight of a substance?

3—In chemistry, what is meant by a molecule?

4—Are molecules visible to the naked eye?

5—How much of the official sulphur ointment would be necessary to make an ointment weighing 150 grams and containing five per cent of sulphur? Show work.

6—What are four official volatile oils which contain cineol?

7—In toxic doses, what is the action of strong acids?

8—From what plants is caffeine principally obtained?

9—What are the cotyledons of a seed?

10—Do all seeds have the same number of cotyledons?

11—What are the fundamental structural elements which make up all tissues and organs of the body?

12—What effect does exposure to air have upon monohydrated sodium carbonate?

13—What are the ingredients in cochineal color, N.F.?

14—When a drug is percolated, is the absence of color from the percolate always an indication that the active constituents have all been removed?

15—What are four official liquid solvents which have a lower boiling point than water?

16—In what class of preparations is acetanilide frequently an important ingredient?

17—If the pharmacy laws of your State require the registration of poisons when sold, what are four poisons which must be so recorded?

18—What is the difference in the color of a solution of iodine in alcohol and of a solution of iodine in chloroform?

19—Of what U.S.P. spirits is ammonia water a constituent?

20—What free acid is formed when glycerin, borax and water are mixed?

21—Which is easier to dissolve in water, powdered acacia or granulated acacia?

Illinois Pharmacist a Prize Winner.

Druggists and students are always glad to hear of work successfully accomplished. One who has just completed a test of more than ordinary interest is G. L. Truckenmiller, who was awarded first prize in a recent contest of the Quiz Master's Department. Mr. Truckenmiller is a native of Wurtemburg, Germany, but when only two years of age immigrated with his parents to the United States. The family located at Petersburg, Ill., and in this town, at the age of thirteen, the subject of our sketch began his pharmaceutical career in the drug store of John G. Fischer.

For about seven years young Truckenmiller, under the tutelage of Mr. Fischer, applied himself diligently to the study of pharmacy, but at the end of this period, desiring to become still more proficient, he entered the Philadelphia College of Pharmacy, where he took a full course of instruction. After completing his collegiate work, he was employed in various drug stores, and at present is with J. T. Bauer, a druggist of Stonington, Ill.

22—What change does chalk mixture undergo soon after it is prepared?

23—The following names are synonyms for what preparations: (a) Turlington's balsam; (b) elixir corrigens; (c) laxative elixir; (d) Javelle water?

24—What are four distilled spirituous liquors which contain not less than 30 per cent by volume of alcohol?

25—What is the average dose for Sun cholera mixture, compound powder of pepsin, fluidextract of hyoscyamus, and tincture of myrrh?

26—What is the nature of the small transparent dots which finely mark jaborandi, and which are visible when the leaflet is held up to the light?

27—Which will usually evaporate more rapidly, a thin mobile liquid or a dense and viscid liquid? Briefly explain your answer.

28—In a drug store, what is meant by stock solutions?

29—What is the reaction of a solution of potassium hydroxide to litmus paper?

30—What is grindelia, and what is the botanical name of the plant from which it is obtained?

31—Why should crude drugs always be thoroughly dried before storing?

32—What are at least four common names for taraxacum?

33—What occurs when oil of rose is stored in a moderately cool place?

34—What is a good method for dissolving a powder of light weight in water?

35—When an aqueous liquid is to be mixed with an alcoholic liquid, should the former be added to the latter, or should the alcoholic liquid be added to the aqueous liquid?

36—What is the objection to storing rubber goods in a cold place?

37—How many cubic centimeters in a quinine can or container having a rectangular base 4 by 5 inches, and a height of 6 inches? Show work.

38—What occurs when a piece of sodium is thrown on water?

39—What are some agents which will frequently remove iodine stains from the hands and utensils?

40—What is meant by saying a drug is indigenous to a certain country?

41—Why is syrup of wild cherry sometimes dispensed as a vehicle for tincture of digitalis?

42—What occurs when the inner surface of cascara sagrada bark is moistened with a solution of potassium or sodium hydroxide?

43—What is malt?

44—What are compressed tablets?

45—What is the appearance of silver nitrate?

46—What effect does metallic mercury have upon most metals?

47—Which of the official cinnamon barks occurs in the form of long tightly rolled quills?

48—What purposes does resin serve as a constituent of plaster masses?

49—What are the chief medicinal constituents of lobelia?

50—What is the longest termination of the following prescription, and what are the metric equivalents for the quantities used, respectively?—

R Extract	gr XV
Powder	gr IV
Aquæ	ʒ ss

M. S. More dicto utendum.

Competitors, Please Notice.

The above list of questions is the complete series for March, and all who desire to compete for the prizes should see that their answers are received by the Quiz Master not later than April 15. Do not send your answers in parts, but mail them all at one time, and be sure to follow the instructions given at the head of this department. Answers in the handwriting of the competitors are desired, although such answers transcribed on a typewriter will be accepted. Careful penmanship is to be commended and this as well as neatness, order and spelling will be considered in grading the papers and awarding the prizes.

The judges of the January contest of the Quiz Master's Department have awarded the prizes as follows:

First prize, $5, Chris Hansen, Minden, Neb.

Second prize, $3, Charles K. Stotlemeyer, Hancock, Md.

Third prize, $2, Arthur W. Reum, Minneapolis, Minn.

Contestants wishing to know the grades which they have made in January contest may obtain this information on request by sending two cents for postage to the Quiz Master.

The Quiz Master.

Questions and Answers, January Series, 1910.

1—What is an official vegetable drug which is said an anthelmintic; (b) a diuretic; (c) an anodyne; (d) a cathartic?

(a) Chenopodium; (b) uva ursi; (c) opium; (d) podophyllum.

2—What is a tonic?

The term tonic is very elastic, though in a general way it is applied to those medicines or agents which promote nutrition and give tone to the system.

3—What are the ingredients in compound tincture of gentian?

Gentian, bitter orange peel, cardamom, alcohol and water.

4—What are English equivalents for the following Latin contractions: (a) chart.; (b) f.s.a.; (c) garg.; (d) post prand.?

(a) Paper; (b) let there be made according to art; (c) gargle; (d) after dinner.

5—What is the official Latin name for (a) carbolic acid; (b) aqua fortis; (c) Donovan's solution; (d) sal benzoin?

(a) Phenol; (b) acidum nitricum; (c) liquor arseni et hydrargyri iodidi; (d) acidum benzoicum.

6—What is the official average dose of lead acetate, soluble ferric phosphate, solution of magnesium citrate, aromatic spirit of ammonia?

Lead acetate, 1 grain; soluble ferric phosphate, 4 grains; solution of magnesium citrate, 12 ounces; aromatic spirit of ammonia, 30 minims.

7—Why should soap not be used as a base for suppositories containing metallic salts?

Soap is incompatible with metallic salts, and if used with them would form insoluble compounds.

8—What is the botanical source of (a) santonica; (b) stramonium?

(a) The dried unexpanded flower-heads of artemisia pauciflora; (b) the dried leaves of Datura Stramonium.

9—How many fluidounces at 25° C. in 8 ounces (avoir.) of U.S.P. [illegible] work.

4.1998 + fl. oz. Since the weight of a fluidounce of water is 456.30 + grains, and the specific gravity of sulphuric acid is 1.826, then in one fluidounce of sulphuric acid there are 833.3618 + grains (456.30 × 1.826 = 833.3618 +), and since in one avoirdupois ounce there are 437.5 grains, then in eight [illegible] there are 7500 grains (437.5 × 8 = 7500), which is equivalent to 4.1998 + fl. oz. (7500 ÷ 833.3618 = 4.1998 +).

10—What, pure and fresh, what is the color of most volatile oils?

When pure and fresh most volatile oils are colorless.

11—What is aloin? What is the appearance of this drug?

Aloin is a neutral principle obtained from several varieties of aloes. According to the Pharmacopœia it is chiefly prepared from Curaçao aloes. It occurs in the form of a microcrystalline powder or minute acicular crystals and is lemon-yellow to dark yellow in color.

12—What are sternutatories? Name four vegetable drugs of this class.

Sternutatories are agents which, when locally applied to the nasal mucous membrane, produce sneezing and increase the nasal secretion. Quillaja, veratrum, euphorbium and sanguinaria.

13—What is a salt mouth bottle?

According to the dictionary, a salt mouth bottle is one having a wide mouth with a glass stopper, but by many druggists the term is frequently applied to any bottle having a wide mouth, which is intended as a container for bulky drugs, particularly crystalline chemical salts.

14—What is the advantage in having the name of the patient upon the prescription and the label?

It assists in identifying prescriptions when prepared and in avoiding mistakes in the administration of medicines; it also gives the pharmacist an opportunity to become familiar with names of the patrons of his prescription department.

15—In the directions for preparing exsiccated alum the Pharmacopœia says "Place the alum in a tared shallow dish, etc."; what is meant by the word "tared"?

The word "tared" means weighed and in this case the alum is to be placed in a dish, the weight of which has been predetermined.

16—What is the chemical formula for antimony and potassium tartrate? What is a method of preparing this salt?

$2K(SbO)C_4H_4O_6 + H_2O$. It is prepared by dissolving freshly made antimonous oxide (while yet moist) in a solution of potassium acid tartrate, and upon concentrating the solution so formed tartar emetic separates in colorless, transparent rhombic crystals.

17—Why are the doses usually smaller for medicines administered hypodermatically, than the doses of the same medicines introduced into the body by other methods?

Medicines administered hypodermatically are brought directly and suddenly into the circulation and thereby effect a full action in smaller doses than when they are introduced into the body by methods requiring more time for the absorption of medicinal agents.

18—What is a cerate?

A cerate is a semi-solid mixture of wax with a fat or fixed oil, with or without the addition of medicating substances, intended for external application only, and which when applied to the skin will become soft but does not liquify.

19—What is the percentage by weight of boric acid in a saturated aqueous solution of this acid? Show work.

5.26 + per cent. Since boric acid is soluble in 18 parts of water, there will be one part of the acid in every 19 parts of the saturated solution, and one part of the saturated solution will contain 0.0526 parts of the acid (1 ÷ 19 = 0.0526 +); in 100 parts of a saturated solution there will be 5.26 + parts or 5.26 + per cent of boric acid (0.0526 × 100 = 5.26 +). This problem may also be solved by proportion as follows: 1 : 19 :: X : 100 = 5.26 + or 5.26 + per cent.

20—What is your idea of the proper style of label for prescription use? Give reasons.

A label well adapted for prescription purposes is one printed with black ink upon white paper, and bearing the name of the pharmacist with spaces reserved for directions to the patient, the number of the prescription and the name of the physician. If desired, blank space may be left for inserting the date and the name of the patient. In all cases the label should be plain and neat, and the writing carefully executed, and perfectly legible.

21—What color changes result from the action of a few drops of concentrated sulphuric acid and a fragment of manganese dioxide upon a sample of strychnine?

Concentrated sulphuric acid and manganese dioxide, acting upon strychnine sulphate, first produce a blue color which changes to a deep violet, then to purplish-red, cherry-red and finally to orange or yellow. The best results are obtained by using very small quantities of the reagents.

22—What is the solubility in water of (a) red mercuric oxide; (b) calcium chloride; (c) methyl salicylate; (d) sugar?

(a) Almost insoluble; (b) 1.3 parts; (c) sparingly soluble; (d) 0.46 parts.

23—What are two U.S.P. liquids whose odors closely resemble the odor of oil of wintergreen?

Methyl salicylate and oil of betula.

24—What is the external therapeutic action of iodine?

Iodine, applied externally, acts as an irritant, disinfectant, absorbent and alterative.

25—What is meant by the term "bumping" as applied to boiling liquids?

Bumping is the formation and bursting of bubbles in certain liquids when such liquids are boiled in glass containers having smooth surfaces.

26—Until the doctor arrives, what temporary aid would you give to a person who had fainted?

First place the person flat on a couch or on the floor, with the head lower than the rest of the body; next, loosen the clothing, and secure free access to fresh air; the face should be sprinkled or dashed with cold water, and smelling salts carefully applied to the nostrils. If the person is able to swallow, some authorities advise the administration of a stimulant, such as a small quantity of aromatic spirit of ammonia, wine or brandy.

27—Ether is used in the preparation of what two U.S.P. spirits?

Spirit of ether and compound spirit of ether.

28—What are some other oils than olive oil to which the name sweet oil is sometimes applied?

Cottonseed oil and rapeseed or colzaseed oil.

29—What is briefly the treatment in case of acute poisoning by arsenic?

Promote vomiting with warm water or with mustard, and give at once large quantities of the official preparation of ferric hydroxide with magnesium oxide. For the collapse brandy may be administered subcutaneously, and warm applications made to the abdomen and extremities.

30—Why is the use of wood alcohol in medical preparations prohibited?

While chemically pure wood alcohol is said to be non-toxic, the use of wood alcohol internally in any form is prohibited by the Federal Food and Drugs Act because blindness and even death has resulted from the employment of the commercial grades of this liquid.

31—What simple chemical test will distinguish borax from sodium carbonate?

Hydrochloric acid will cause an effervescence, if added to the sodium carbonate, but will not have this action upon the borax.

32—What action does heat have upon lime water?

Heat causes a turbidity due to the separation of calcium hydroxide which redissolves when the liquid is cooled.

33—What are plasters as designating a class of official preparations?

Plasters are solid medicinal preparations intended for external application, which are firmer and more tenacious than cerates, but become soft and adhesive at the temperature of the body.

34—What are four official drugs which are obtained from the animal kingdom?

Pepsin, gelatin, cantharides and cod liver oil.

35—Where are the Molucca Islands? What are two spices which are chiefly obtained from these islands?

The Molucca Islands, also known as the Spice Islands, lie between Celebes and Papua, and are in the Malay Archipelago. Cloves and nutmeg.

36—How does red mercuric oxide differ in chemical composition from yellow mercuric oxide?

They are the same in chemical composition.

37—What occurs if a piece of metallic zinc is suspended by a string in a strong solution of lead acetate?

The zinc will displace the lead in the acetate, and, if the container is not disturbed, the lead so displaced will become attached to the string, forming a mass of crystals commonly known as a "lead tree."

38—What is structural botany?

Structural botany treats of the various plant organs or parts of plants, and with their forms and modifications.

39—What are the chief active medicinal principles in (a) senega; (b) belladonna leaves?

(a) Polygalic acid and senegin; (b) atropine, belladonnine and hyoscyamine.

40—How many avoirdupois pounds in eight apothecary pounds? Show work.

First Young Woman to Win a Prize.

Miss ELSIE DAY,
Lincoln, Neb.

The first young woman to win any of the prizes in the Quiz Master's Contests is Miss Elsie Day of Lincoln, Neb. She has competed in three of these contests, and in each of them has received one of the prizes. In the October Contest she took third prize, in the November contest she advanced to the winner of the second prize, and in the December contest was awarded the first prize. Miss Day graduated from the academic department of the University of Nebraska in the class of 1908, receiving the degree of Bachelor of Arts, and on account of high scholarship was elected a member of the Phi Beta Kappa fraternity. At present Miss Day has a fellowship in physiology, and is a student in the recently established school of pharmacy of the University of Nebraska. The ERA congratulates Miss Day for winning these numerous honors, and is pleased to welcome her among the contestants of the Quiz Master's Department.

6.5829 + avoir. lbs. In one apothecary pound there are 5760 grains and in eight apothecary pounds there are 46080 grains (5760 × 8 = 46080) which amount is equivalent to 6.5829 + lbs. avoir. [46080 ÷ 7000 (grains in 1 lb. avoir.) 6.5829].

41—What is sublimation?

Sublimation is the term applied to the process of vaporizing volatile solids and condensing the vapor back again into a solid.

42—What are two official drugs prepared by sublimation?

Iodine and sublimed sulphur.

43—What methods of making tinctures are recognized by the Pharmacopœia?

Three methods, namely, by percolation, maceration and by solution or dilution.

44—What constituents of a prescription are termed "the basis"?

The basis of a prescription consists of the chief or active medicinal ingredients.

45—Why is a Wedgwood mortar, the inner surface of which has worn smooth, not suitable for the trituration of drugs?

In the process of trituration much depends upon the grinding action exerted upon the drug by the contact between abraded or roughened surfaces. A mortar having a smooth inner surface presents no such surface, and is therefore not adapted for the proper trituration of drugs.

46—How can the inner surface of a Wedgwood mortar, which has become smooth, again be made rough?

A rough surface may be imparted by occasionally triturating a little coarse emery in the mortar.

47—What is meant by an amorphous substance?

A solid substance is said to be amorphous when it shows no crystalline structure.

48—Is it proper to dispense boiled linseed oil on an order calling for linseed oil?

No, the Pharmacopœia specifically states that boiled linseed oil is not to be dispensed for linseed oil.

49—Why is methylene blue inconvenient to dispense?

Methylene blue is inconvenient to dispense because of its intense color, which makes it very difficult to handle without soiling all utensils or other apparatus with which it may come in contact.

50—Why should thermometers stand for about two years before they are used?

The glass of thermometers continues to contract sometimes for a year or more after the tubes are sealed, and therefore thermometers cannot be considered to register correctly until after this contraction is completed. For this reason they should not be officially tested until this period of time has elapsed.

BOARD EXAMINATIONS

New Jersey.

TRENTON, Feb. 20.—The next examinations of the New Jersey State Board of Pharmacy will be held at Trenton, April 21 22. Secretary Henry A. Jordan announces that the following were successful at the January examinations:

Registered Pharmacists—Frederick C. Beck, Atlantic City; Aaron Bernard, Philadelphia; Alexander M. Bess, New York; Howard L. Cortelyou, New York; Vincenzo D'Amore, Newark; Peter F. De Dato, Atlantic City; Wm. S. De La Hoode, Bayonne; Wm. S. Dorrenbacher, Newark; Samuel Fruchtman, Newark; Samuel S. Kirschstein, Perth Amboy; Benjamin J. Lemm, Jersey City; Wm. J. Lyons, Newark; George S. Mafe, East Orange; Henry Oberly, Newark; Morgan M. W. Osborne, Jersey City; Louis Ross, Newark; Joseph Quaremba, Atlantic City; David Rascoe, New York; Leo Rosenbauer, Jersey City; Nathan T. Schreiber, Newark; John Scavo, New York; Charles E. Vernon, Newark.

Registered Assistants—Walter L. Bischoff, Haddonfield, N. J.; Le Roy Forman, Trenton; Edward A. Fox, Elizabeth; Samuel Fruchtman, Newark; Joseph B. Grossman, Newark; Bertha Lewit, Newark; Leo M. McElroy, Newark; George E. Morris, Jersey City; Wm. L. Rowland, Highlands, N. J.; Benjamin Seigle, Newark; Robert Seller, Long Branch; William Sauer, Jersey City.

Illinois.

SPRINGFIELD, Feb. 20. At the January meeting of the Illinois State Board of Pharmacy in Springfield, 18 out of a class of 47 applicants for registered pharmacist, and 12 of the 16 candidates for assistant pharmacist passed successful examinations. Their names follow:

Registered Pharmacists—Bella L. Galsin, Edward E. Luken, Frederick Ruecker, Max Stine, M. A. Serritella and Gustav A. Wester, all of Chicago, and James T. English, Carrollton; Roy L. Irwin, Decatur; Thomas Q. Mathis, Granite City; Hugh McCaslin, Nokomis; Harold N. Ruud, Galesburg; J. Robert Shine, Mattoon; John R. Sims, Perry; John E. Sisk, Marion; Charles E. Flaugher, Grafton; B. F. Hudson, Moweaqua; J. I. Lawrence, Arthur, and Joseph D. Proffit, Anchor.

Assistant Pharmacists—L. R. Crawford, Hyman Lebovitz, Charles Gimbel and Arnold P. Nicks, all of Chicago, and Charles E. Brady, Jacksonville; Harry Bugg, Springfield; Elton H. Elder, Decatur; Lester T. Loomis, Medora; Cora Miller, Pana; H. P. Obermeyer, Jacksonville; Roy R. Ogg, Springfield, and F. D. Williamson, Upper Alton.

The next meeting of the board for the examination of registered pharmacists will be held in Chicago on Tuesday, March 8. On the following day an examination will be conducted for assistant pharmacists. For this examination applications with the necessary proofs must be on file in the Springfield office not later than Friday, March 4. The next apprentice examinations throughout the State will be held on March 4.

Indiana.

COLUMBUS, Feb. 20.—Theodore G. E. Otto, of this city, secretary of the State Board of Pharmacy, has announced the successful applicants for certificates as a result of the examination held in Indianapolis in January:

Registered Pharmacists—Millard William Bartholomew, Morocco; Earl Bruce Brookbank, Terre Haute; Charles L. Englehart, Brazil; Earl E. Goodnight, Lafayette; Otis O. Hocker, Monroe; M. Leonissa Sister, Lafayette; M. Sabina Sister, Lafayette; Stephen N. Markland, Pekin; Edward P. McCarthy, Indianapolis; Burton B. Owens, New Albany; Russel H. Phares, Liberty; Carl M. Sauter, North Judson; James S. Shaffer, Corydon, and William Wernert, Spencerville.

Registered Assistant Pharmacists—James G. Congdon, Bristol; Virgil F. Conner, Shelbyville; John T. Donaldson, Kokomo; Clarence Gates, Parker; Bruce M. Gildersleve, Lafayette; Clark D. McKenney, Shelbyville; Lee F. Remetter, Indianapolis, and Charles V. Timmons, Lafayette.

California.

SAN FRANCISCO, Feb. 20.—The next meetings of the California State Board of Pharmacy will be held in Los Angeles during the week commencing April 4 and in San Francisco during the week commencing April 11. At the last examinations the following were successful:

Assistants—Cecil Eugene Alberts, Will G. Lidley, W. C. Kaiser, Paul H. Gibson, Victor Verrall Goodbrett, David Herman Pencovitz, J. O'Belle Hardage, C. G. Ives, Frank R. Rogan, Carl M. Johnson, W. W. Hansen, Arthur K. Silberstein, Frank E. Leslie, [illegible] Matthew Campbell, Charles Lincoln Fay, Oswald H. [illegible], Fred Edman Hedstrom, Eugene B. Kemper, Harry G. Skinner, William Henry Ames, William Jasper [illegible], P. T. [illegible], [illegible] G. Mellon, C. L. Bowles, [illegible], [illegible], [illegible], R. V. L. Rice, [illegible], [illegible], [illegible],

The SODA FOUNTAIN and CANDY COUNTER

Philadelphia Pharmacist Delights to Initiate Children in the Pleasures of Soda.

View of portion of Harry G. Comp's pharmacy in Philadelphia. Mr. Comp is seen standing at the cash register.

A year ago Harry G. Comp, a prominent pharmacist of Philadelphia and member of the Pennsylvania State Pharmaceutical Association, started to educate the coming generation to the delights of good soda with service so designed as to meet the needs of the youthful patrons of his busy store at Ridge avenue and Diamond street. Today the serving of children has become not only a striking feature of his large soda business but is an indication of the demand from the little ones for what is fast becoming recognized as the National drink of Americans. It has been the development of one of Mr. Comp's own ideas which, he admits, has been a wonderful trade winner for the other departments of his business.

Always a student of his patrons and always anxious to cater as much as possible to the desires and sometimes the whims of the great variety and classes of people with whom the druggist comes in contact, Mr. Comp discovered that the serving of children at soda fountains was always attended with great inconvenience to the child as well as annoyance to mothers, big sisters or nurse maids who accompanied them. Accordingly when a year ago he installed a handsome new fountain in his store, as a part of the equipment he ordered tables for soda drinkers, and among them small ones, solely for little children. There were dainty little chairs to match with little trays for the soda glasses and little paper doilies and napkins for the most fastidious "little mother."

The result was immediately apparent. The Comp pharmacy is located in a good residential section and is close to Fairmount Park, Philadelphia's great pleasure ground both summer and winter, and it was not long before fond mothers were bending over happy little groups about the little tables, sipping soda water. It has been the same in winter's snow and summer's heat and it is indeed a picture to see with what evident enjoyment the six-year-olds appreciate the efforts of the thoughtful pharmacist.

Mr. Comp declares that the children come from far and near to drink soda at the little tables in his store and naturally other business has followed this lead of the children. Family trade which he admits he could not have hoped to secure, has come to him through this medium, entirely unsolicited and, what is more, it has come to stay. Naturally the "grown-ups," waiting on their little charges, have put in the time with a glass of soda, too, either at the counter or at one of the other tables or have left the little ones to their own enjoyment while they placed their orders for prescriptions, toilet articles or other goods.

And in other departments, Mr. Comp and his assistants make it a rule never to overlook a child or make them wait while a late comer who is an adult gets in ahead of them. Another infallible rule is that of cleanliness and the proprietor takes no little amount of pride in having his patrons go behind his soda counter or his prescription case and see the orderly system as well as the sanitary features of both departments. There is never a day that every bit of metal work about the fountain is not polished to the limit and one never

sees behind the counters trays of soiled glassware, broken straws or other unsightly litter, the impression of which is so unfavorable to always-critical patrons.

Mr. Gump's prices range from 5 cents for ice cream sodas and the plain drinks to 10 and 15 cents for sundaes and the egg drinks and it is no uncommon sight, principally in the afternoons and evenings, to see every one of the 28 seats at the tables and along the counters, filled with soda drinkers. Most of them are women and children, but the proprietor says that he has noticed that the number of male patrons is steadily increasing since he [illegible] to him.

FORMULAS

[illegible] tionery.—Editor Era.

Chocolate Fluff.

Vanilla cream, 1 ounce; chocolate syrup, 1 ounce; whipped cream, 1 ounce; fill glass with carbonated water, add a red cherry and serve with a spoon and straw.

Southern Limeade.

In [illegible] pineapple syrup, ½ ounce banana nectar syrup and sufficient shaved ice. Squeeze in the juice of 1 lime, fill with carbonated water and add a slice of fresh orange and a red cherry.

Minted Ice.

On a cone of lemon sherbet (Hisher No. 12) pour a ladleful of creme de menthe syrup diluted one-half with simple syrup and on top put a creme de menthe cherry.

Chocolate Sandwich.

Grate a suitable amount of bitter chocolate and sweeten the taste with granulated sugar. Melt a small quantity of butter and add the chocolate to it. Take from the fire and cool. When cool, moisten with a little cream so that the mixture will spread nicely between thin slices of buttered bread. This makes a very dainty sandwich for serving at the fountain.

Outlook High Ball.

Pineapple syrup, 1 ounce; cherry syrup, 1 ounce; grape juice, 2 ounces; place in 12-ounce glass two-thirds full of cracked ice; add a slice of fresh orange in the center of which is a green cherry; fill the glass with carbonated water and serve with straws. Price, 10 cents.

Drummer's Delight.

Into an 8-ounce glass put 1 ounce of grape juice, 1 ounce of cherry syrup and sufficient cracked ice. Fill with carbonated water, coarse stream. Sells for 5 cents.

Boston Cooler.

Into a 12-ounce glass place 1 ounce lemon syrup, ½ ounce raspberry syrup and a dash of solution of acid phosphate. Fill the glass half full of shaved ice, adding sufficient carbonated water, coarse stream, to complete the measure. Top with a slice of orange and one cherry.

English Walnut Frappe.

Place a cone of ice cream in a sherbet glass. Over this pour a layer of syrup (preferably chocolate, cherry or maple) and [illegible] whipped cream, over it put a few more walnuts and top off with a maraschino cherry.

Colonial Chocolate.

Take one dipperful (12 to the pound) of vanilla or chocolate ice cream, place it in a sundae cup and over it pour in the order named 1 ounce of chocolate syrup, 1 ladleful of [illegible] Price, 15 cents.

Plain Pudding Glace.

Arrowroot, 1 tablespoonful; stoned raisins, 2 ounces; currants, 2 ounces; citron, 2 ounces; sugar, 2 cupfuls; milk, 1 quart; [illegible] ½ pound; 2 [illegible]

Boil the milk and dissolve the chocolate in it. Rub the arrowroot up with a little cold milk or water, and stir in. When thickened, stir in very carefully the two eggs mixed smooth with a little cold water, set aside to get cold, and then add the fruit and flavorings. Whip the cream, add the sugar to it, and at the moment of freezing add this mixture to the chocolate. Pack in a mold, freeze, and serve with whipped cream sauce. Do not allow any salt to get into the frozen pudding when putting it into the mold. Cover it tightly and set in a bucket with ice and salt until used.

Orange Sherbet.

Cook 8 pounds of icing sugar and 3 quarts of water to a [illegible] from the fire and add the juice of 3 dozen oranges, the gratings of 2 orange peels, 1 ounce solution of citric acid and the whites of 6 eggs.

Nadja.

Raspberry syrup, 2 ounces; yolk of 1 egg; cream, ½ ounce; shaved ice, 3 ounces; vichy water, q. s. Mix the syrup, egg yolk, cream, ice and a portion of the water in an egg shaker; mix well by stirring with a spoon, strain into a 12-ounce glass and fill with vichy water.

Cherry Lime Bushay.

Into a lemonade glass two-thirds full of shaved ice pour 1 ounce wild cherry syrup; then add the freshly expressed juice of one lime, and a ladleful of crushed cherry fruit. Shake well, fill the glass with carbonated water and top off with a cherry and slice of orange.

Pineapple Milk Punch.

Place in a shaker glass 1½ ounces of pineapple syrup, 8 ounces of cold cream and 1 spoonful of vanilla ice cream. Shake thoroughly and serve in a straight 12-ounce glass; top with whipped cream, a cherry and a slice of pineapple.

Mexican Sundae.

Place a No. 8 cone of vanilla ice cream in a sundae dish and surround the base of the cone with pineapple, sliced; then pour on 1 ounce of chocolate syrup, sprinkle with chopped nuts, cover with whipped cream and top off with a maraschino cherry.

Hot Egg Orangeade.

One egg, juice of half an orange, 2 teaspoonfuls of powdered sugar; shake, strain, add a cup of hot water, stir and serve with nutmeg.

Carbonated Fruit Punch.

Strawberry syrup, 10 ounces; orange syrup, 10 ounces; pineapple syrup, 10 ounces; lemon juice, 2 ounces. Mix. Put 1½ ounces in a large glass one-third full of shaved ice and nearly fill the glass with carbonated water. Add a few strawberries, a slice each of pineapple and orange and serve with straws.

Pineapple Frappe.

Pineapple syrup, 1½ ounces; ice cream, 2 ounces; sweet cream, 3 ounces; cracked ice, ½ glassful; shake, strain, toss and serve.

Turkish Sherbet.

Crushed peach, ½ ounce orange syrup, ½ ounce nectar syrup, ½ ounce; solution of acid phosphate, sufficient. Serve in tall glass with shaved ice and trim with whole or sliced fruits.

Creme de Cocoa.

Shaved ice, one-third glassful; chocolate syrup, 1½ ounces; sweet cream, 2 ounces; milk, a sufficient quantity. Shake and strain into another glass in which has been placed one tablespoonful of whipped cream. Grate chocolate over top and serve.

Cream Freeze.

Shaved ice, ½ glassful; ice cream, 3 spoonfuls; pistache [illegible] Place in glass and stir [illegible] with a spoon; fill the glass with carbonated water and again mix with the spoon.

Glasgow Frappe.

[illegible] ½ ounce, 1 egg, powdered sugar 1 tablespoonful; shaved or cracked ice, ½ glassful. Shake, strain into a 12-ounce glass and fill with ginger ale.

Just 1311 formulas are given in the new edition of the Dispenser Soda Water Guide. Every fountain operator needs it.

Fountain Advertising.

Valuable Off-Season Hints and Suggestions for Promoting the Publicity Department.

Of recent years it has been the custom to celebrate "Tag day" in many places. Tags would be fastened upon the coats or dresses of friends, and a demand made for ten cents, or more, to pay for the tag, the proceeds being used for charitable purposes.

From this custom a Kansas fountain owner evolved an exceedingly clever and amusing advertising scheme, which is particularly adapted for similar cities, and especially for towns having higher educational institutions.

The Kansan had one thousand small, string tags printed. Five hundred were printed in bright blue, and the other five hundred in brilliant red. These tags were consecutively numbered from 1 to 500 on the red and from 1 to 500 on the blue tags. The wording on the tags was as follows:

Find the BLUE tag bearing the same number that this tag bears. Trade your other one for it. Take the two tags bearing the same number to THE KANSAS CRYSTAL SODA FOUNTAIN and receive a glass of soda FREE. No tags will be accepted after May 1.

The wording on both tags was the same, except that on the blue tag the word RED was substituted for BLUE.

There were also prepared five hundred small circulars reading as follows:

"We are sending you herewith two tags. These you should fasten prominently upon your coat or dress. You will note that one is printed in blue and the other in red, and that they bear different numbers. If you have Red tag number 100 somebody has BLUE tag number 100. If you have BLUE tag number 49 somebody has RED tag number 49. You should look for tags bearing the same numbers as the tags you have, but in the contrasting color. When you find a BLUE tag bearing the SAME NUMBER as your RED tag, trade your BLUE tag for it. Bring us the red and blue tags bearing the same numbers and receive a glass of soda water FREE.

"You will see that this is a real game of tag. The one who sees the desired number upon another FIRST and says 'Tag,' wins; while the other gives up his or her tag and is 'It.'

"Aside from receiving a glass of THE BEST SODA WATER IN THE CITY, you will have lots of fun matching tags."

One of these circulars, together with a red and a blue tag was mailed in a sealed envelope. It will be seen that the advertising value of this scheme depends largely upon the class to whom the tags go. They should not be mailed to children, nor to elderly people. Our Kansas friend mailed his to college students of both sexes. He mixed up the tags and chose one of each color for each enclosure, and in a few cases the envelope, by chance, held an already matched pair.

An Improvement.

While our Western friend was delighted with the advertising results of his scheme, we suggest that the possibility of hard feeling or objectionable horse-play might be avoided by pairing the tags before mailing, so that when the holder of 100 red found the holder of 100 blue, the matching would be the same for both and each would get a "pair." Thus, by a little care in mailing 1 blue and 10 red could be sent to one person and 1 red and 10 blue to another, thus assuring an equal trade when the holders met. Thus, one match would make two pairs.

The Weather Prophet Contest.

This was a simple contest and one in which there was no room for trickery. Outside of the drug store door hung a large, plainly graduated thermometer. The contest consisted of guessing what temperature that thermometer would register at a stated moment, some time in the future. Upon the soda counter was a locked box with a slot to admit tickets. Over the fountain hung a large card lettered as follows:

"How warm will it be, as shown by the thermometer hanging outside our front door, at precisely 3 p. m. on May 15? From now until May 10 any individual, without restriction, so desiring, will be given one guess. The guesser coming nearest to the exact temperature will be given $5 worth of soda tickets. The next four will be given $4, $3, $2 and $1 worth, respectively. If there are any ties, the prizes will be increased in number accordingly. A committee of well-known citizens will look at the thermometer precisely at 3 o'clock on May 15, and will then open the box and examine the guesses. Ask our soda fountain man for a ticket, make your guess, write your name plainly, and slip the ticket into the box."

Hand bills describing the contest were distributed from house to house and placed upon the store counters. The contest commenced two weeks before its close. It is said to have very greatly stimulated business.

Buttons.

Advertising buttons were extensively used for a number of years, and then sank into disuse so rapidly, that, like all periodic things—and every thing is periodic—the time has now arrived when they may be once more advantageously employed. Those who have tried buttons and been dissatisfied with results have usually had only themselves to blame. The relative advertising value of a button the size of a dime and one the size of a half-dollar corresponds closely to the value of those coins You may say that "only kids will wear them." Granting that this is so, although experience seems to prove to the contrary, a prominent button on a "kid" makes a walking advertisement of him.

Buttons have been seldom used to advertise soda water. They might often be used advantageously. Aside from the size, the next most important thing is the lettering. A big button with little text on it, is likely to prove the best. Have the buttons of only two colors and use the plainest block letters. Red on white or green on red, are good combinations.

A few striking words will attract the most attention. On a large white button, print in red the phrase, "I'm cool. Smith's soda did it." Other suggestions are: "Don't be hot! Get a cooler at Smith's." "Drink Smith's soda and keep cool." "Ice up at Smith's fountain." "Beats the water wagon. Smith's soda." "A great cooler. Smith's soda." "Purity and pleasure in Smith's soda."

"It is hard to advertise soda water" is a cry that is often heard. It is difficult to advertise anything that is intended to be consumed at the place of purchase. It is difficult to advertise either restaurants or liquor places, directly. Successful advertising of the soda fountain is often largely dependent upon the use of indirect methods. For this reason many may deny the value of nine out of ten of all the soda advertising schemes that are proposed. But the intelligent advertiser in all lines recognizes the value of contributory publicity and in advertising his fountain he should recognize the necessity of it. Whatever other department of the business is being advertised, the fountain should be mentioned in connection with such advertising. In conclusion, let us repeat that oft expressed truth, "There is no use in advertising the fountain unless that advertising is backed by pure, palatable beverages properly served"—and proper service is still the thing most lacking.

WHIPPED CREAM.*

Cream is not only a delicacy which most persons relish, but is a very important food as well. It consists very largely of the fat of milk (butter fat), with some water and a little protein, carbohydrates, and mineral matter, and is one of the very valuable sources of fat in the diet, as it supplies this constituent in a palatable and readily digestible form.

The use of cream in the household with fruits, cereals and other foods is too well known to need mention, and in such cases, as well as when an ingredient of custards, puddings and other made dishes, it not only helps to make the dish palatable but contributes much to its nutritive value.

Its most important use, of course, is for the manufacture of butter and cheese. In recent years the manufacture of ice cream under commercial conditions has grown into a very large industry and requires great quantities of cream. It is also very largely used by confectioners as well as home cooks for making whipped cream, which finds so many uses in cookery and on the table. When cream is beaten or whipped fine bubbles form which do not break readily, and a foam results much like the beaten white of egg. Too long beating results in the separation of the butter fat and the formation of butter. A good quality of whipped cream consists of a

*Compiled from Maryland Sta. Bull. 136.

dense foam which has sufficient body or firmness to enable it to stand up well.

It seems fair to say that no entirely satisfactory explanation of this property of whipping has been given, though several have been offered. The question was studied some years ago at the Wisconsin Experiment Station and the results suggested that the calcium content of the cream might have something to do with it, as the addition to cream of a small amount of lime-water containing sugar materially aided whipping.

At the Maryland Station C. W. Melick has carried on recently a series of experiments to ascertain the effect of different factors on the production of whipped cream. The thickness of cream is one of the conditions generally considered important in the household and so the effect of the proportion of butter fat was studied, as well as the effect of the temperature of the cream, the amount of lactic acid present, the effect of centrifugal separation in comparison with top skimming, and the effect of pasteurization. In making whipped cream sugar and flavoring matters are commonly used, and so tests were made in which sugar, salt, vanilla and gelatin were added, as well as junket, dried milk powder, cornstarch, egg albumen and viscogen; that is, the solution of sugar and lime referred to above were added to the cream. The effect of the period of lactation on the whipping quality of cream was also taken into account. In each of the experiments sample lots measuring 50 cubic centimeters were whipped with an egg beater in a porcelain mortar under similar conditions, normal sweet gravity being used as a standard for comparison in every case.

According to the summary of experimental data, no difference was observed in the whipping qualities of gravity and separator cream, and Professor Melick concludes that when differences are experienced in the household they are due to other factors and not to the method of removing the cream from the milk. The conclusion was reached that for whipping purposes cream should contain at least 20 per cent of butter fat, and in the experiments reported the best results were obtained when the fat content ranged from 25 to 40 per cent. A low temperature was also found to be an important factor, and for the best results cream should be kept at a temperature of 35° to 45° F., for at least two hours before whipping, and then the cream should be whipped in a cool room. For good results the cream should be from 12 to 24 hours old, in order that there may be an opportunity for the development of a small amount of lactic acid in the cream.

The addition of one-tenth to three-tenths per cent of commercial lactic acid to cream facilitated its whipping, and made it possible to whip cream which was fresher, which contained less butter fat, and which was warmer than is [otherwise] advisable for the best results.

Professor Melick states that the acid affected the gelatinous consistency of the casein and albumen and thus facilitated the incorporation of air in whipping, and that when it is desired to use fresh cream the addition of three-tenths per cent commercial lactic acid serves the purpose of the acid which would develop in the cream on standing. Pasteurized cream it was found could be whipped as easily as unpasteurized if it was thoroughly cooled and held at 35° to 45° F. for at least two hours before whipping. For the most satisfactory results it was found that cream should whip in 30 to 60 seconds. When a longer time is required there is danger that some of the butter fat will separate, as in churning.

The use of viscogen facilitated the whipping of cream to a greater extent than any of the other ingredients, it is stated, with the exception of lactic acid.

It proved less effective than the latter and also less effective than a low temperature. The addition of viscogen caused cream to remain sweet from 12 to 24 hours longer than it otherwise would.

The use of powdered sugar, powdered milk, salt, caramel, gelatin, junket and cornstarch, each facilitated the whipping [illegible] extent. None of them proved as effective as a low temperature and the development or addition of lactic acid. The addition [illegible] 40 per cent or of cream when whipped.

The use of egg albumen with cream when whipped separately and mixed produced a lighter foam, but had no effect upon the time required to whip. When mixed before the egg albumen was whipped, at temperatures above 40° F., the whipping was retarded.

The use of vanilla extract used in ordinary quantities had no effect upon the whipping qualities of cream.

The charging of cream with carbonic-acid gas without pressure had no effect on its whipping qualities, but caused it to remain sweet from 12 to 24 hours longer [than is otherwise the case].

The use of cream from cows near the end of their lactation period whipped with slightly more difficulty than did cream from fresh cows.

Whipped cream will not keep sweet as long as unwhipped cream.

When any additions are made to cream to facilitate whipping it should be so labeled as to not deceive the purchaser.

Soda Fountain Notes.

—J. FRANK PICKETT, who deserted the ethical for the commercial side of pharmacy and who has been expatiating upon the possibilities of the soda fountain as a drug store accessory for several years, is in charge of the new office at 504 Arch street, Philadelphia, of George Spalt, a manufacturer of soda fountains and store fixtures in Albany, N. Y.

—ONYX soda fountain is an attraction in the new pharmacy opened by Davison & Watson, Atlantic and Connecticut avenues, Atlantic City, N. J. At the opening the store was brilliantly illuminated with multi-colored lanterns and the appreciative visitors were regaled with free soda water, ice cream, candy and cigars.

—MODERN opal onyx fountain is being installed by the J. F. Boom Drug Company, Fifth and Main streets, Evansville, Ind. The company already enjoys a good soda patronage and this is expected to be greatly enlarged. A filter which is in use insures absolute purity of the water which is used by the company.

—AT Bridgeton, N. J., Glaspell & Cuskaden have just held a formal opening of their new drug store in South Laurel street. A cozy rest and waiting room, equipped with telephones, and a soda fountain are features. The fountain is presided over by Robert Tyler.

—LATEST style soda fountain will be installed in the W. M. Divan pharmacy, 328 South street, Springfield, Mo., by Louis Hinton and Ed. J. Hughes, who have formed a partnership to conduct the business. The building is being remodeled and redecorated.

—ONE of the finest fountains in Michigan has just been installed by the Rollins Bros. Drug Co., 151 South Burdick street, Kalamazoo. It is of the iceless type. Six new marble base show cases also have been placed in the store.

—C. H. HUBBELL, of McPherson, Kan., has remodeled his drug store and installed a fine new soda fountain. The place now looks fully as refreshing as the refreshments which are furnished to the fountain patrons.

—GEORGE SCHLEMMER is installing a soda fountain in his new drug store at Green and Market streets, Crawfordsville, Ind. Candies also will be sold.

—FAIRFIELD, Conn., will have a new soda fountain in the pharmacy and confectionery of W. C. Kinsella, which is to be fitted up in modern style.

—STANDARD PHARMACY, at Elizabeth City, N. C., has installed a Lippincott fountain which is one of the finest in eastern North Carolina.

P. A. GROSECLOSE & Co., Roneeverte, W. Va., have installed a splendid new soda fountain in their pharmacy.

Halley's Comet Suggests a New Side Line.

With Halley's comet likely to switch into sight almost any time upon its periodical 77 year trip—unless indeed it becomes inadvertently derailed by some unexpected planetary influence—there is ample excuse for Geraldine and Adolphus to spend long evenings scanning the star-lit heavens. Why not stock choice cut-glass as a side line? It is in high favor for wedding gifts.

Neglecting Business.

Young Doctor—Just think, six of my patients recovered this week.

Old Doctor—It's your own fault, my boy. You spend too much time in the club.

MOSTLY PERSONAL

Dr. Lederle Again Head of New York City's Health Department, the Greatest in the World.

With nothing in the world to approach it in the scope and sphere of its field of action the Health Department of the City of New York is an organized and effective medium for the preservation of the public health that is remarkable in many ways. With the growing importance of this branch of the public service and its intimate relations to pharmacy, to say nothing of its probable utilization in minimizing the evils of cold storage which have caused such unwarranted advances in the cost of living, the largest governmental department of this nature is of more than ordinary interest, an interest which extends to the personality of the executive head.

In assuming the reins of government of New York City recently, Mayor Gaynor recalled from private life a former Health Commissioner, Dr. Ernst J. Lederle, who is well and favorably known to the pharmacists of the country. Dr. Lederle's acceptance of the office is in the nature of a sacrifice of private interests to public spirit which is a guarantee that his administration will be of great benefit to the public. As Health Commissioner his salary is $7500 a year, and in accepting the place he has resigned two other offices paying twice that sum: member of the State Water Board, $10,000 a year; consulting engineer to the City Water Supply Board, $5000.

Dr. ERNST J. LEDERLE,
recently reappointed health commissioner of New York City.

As former head of the department under Mayor Low, Dr. Lederle had acquired experience and achieved a record of value to himself and to the city. In again entering upon the exacting duties of the office no doubt the magnitude of the task, as well as the enormous possibilities of further contributing to the healthfulness and physical benefit of his fellow citizens had much to do with his decision, for he approached a second term with reluctance that could only have been overcome by a full appreciation of a natural sense of public duty.

Dr. Lederle's first connection with the department began long before that of many of his present subordinates and he ranks as a veteran in the service—with all that this implies—so that he enjoys an advantage far beyond the privilege of a new incumbent. Moreover, under the Low administration he completely reorganized the department, weeded out the then useless dead wood and installed administrative reforms which have been of incalculable benefit to the city. Idlers were driven out, politicians were barred and a new order of affairs began. No fewer than 187 employees lost their positions within an incredibly short time and in a reclassification of men, duties and methods the city saved $100,000 annually, while the efficiency of the department was increased many fold.

With the passing of politics in the department citizens found that complaints were acted upon promptly and without reference to the ward bosses, valuable records of births, marriages and deaths were resurrected from decay and installed in a fireproof vault, records were made accessible, indexes were brought up to date, in fact the entire office was put upon a business basis. Scarcely had these improvements been made when Dr. Lederle was confronted by a smallpox epidemic of unusual proportions. The disease was prevalent also in other cities and the cosmopolitan character of New York, with a large floating and migratory population, made the problem one of extraordinary gravity.

In fighting the disease Dr. Lederle organized a corps of 200 vaccinators, in addition to the machinery of the Health Department, and began a campaign of publicity which lasted for almost half a year. In addition to the extraordinary methods of combating the dreaded contagion, every house, school, business place and tenement was invaded and more than 800,000 persons were vaccinated. It was a campaign worthy of a military general and the number of deaths from smallpox decreased from 410 to 3 annually. In the course of the fight the commissioner brought about improvements in hospitals and the enlargement of facilities for handling contagious diseases that marked a new era in this branch of municipal economy.

Another important achievement was the establishment of an efficient system of medical inspection of the pupils in the schools. Nurses were employed to care for sick children when necessary and as a result not only did contagious cases diminish in number, but there was a decrease in other ailments due to prompt attention and preventive measures. One discovery was that trachoma was rampant in many of the public schools and Dr. Lederle, with the assistance of Bellevue and allied hospitals, established an eye and ear clinic for the treatment of this disease.

Malaria also received attention and property owners were compelled to drain and fill the breeding places of mosquitoes. In coping with diphtheria a system was put into operation for the collection and examination of cultures, the results being given to the physicians immediately. It was Dr. Lederle who, in 1902, laid the foundation for the city's campaign against tuberculosis and through a system of reporting by physicians and hospitals practically every case was called to the department's attention. A suggestion which he then made for a municipal sanitarium for tuberculosis patients was subsequently carried into effect.

Public nuisances, offensive trades, lodging houses and unsanitary buildings were all included in the widened scope of inspection work, and the problem of safeguarding the city's milk supply was handled in a way that had not been attempted before. It is illuminating as showing what Dr. Lederle may do if he takes up the problem of minimizing the cold storage evil. Inspectors were sent into the country districts, as many miles away as was necessary, to examine dairies, the sources of supply, and to educate farmers to the proper idea of sanitary milk production. Transportation methods were examined, samples of milk were taken for analysis from the freight terminals, dealers who were caught adulterating milk were arrested, convicted, and in some cases driven out of business.

A provision of the Sanitary Code which prohibits the sale of milk in stores communicating directly with living rooms was rigidly enforced, much to the dissatisfaction of small grocers, with the result that numbers either gave up the sale of milk or conformed to the law. The pure milk crusade and the work of a corps of summer inspectors of tenement houses combined to greatly decrease infant mortality. All the time the department was making progress in the old established functions of a health department, with the result that the disease records showed decreases, especially those of a contagious nature.

Dr. Lederle is of German parentage and he was born about 45 years ago on Staten Island, New York City. He was graduated from the Columbia School of Mines in 1886 and two years later joined the staff of the Health Department. He received the degree of Ph.D. from Columbia in 1895 and then went abroad to study, spending much time in the investigation of sanitary questions relating to food, water supply and drainage. After he left the department at the end of 1903 he was given the honorary degree of Sc.D. by Columbia. Dr. Lederle, in addition to many other associations, is a member of the American Chemical Society, the Society of Chemical Industry and the Chemists' Club. During his early connection with the department he served first as assistant and then as City Chemist.

Personally Dr. Lederle is the type of man who inspires friendship and confidence. He is large physically, of great energy, but dispassionate and with no bluster, or manifestations of impatience. He is a good listener, terse and expressive in his conversation, as well as impressive when he looks steadily out of his clear blue eyes in replying earnestly to a caller's observations or questions. There is, moreover, always

the [illegible] that he knows whereof he is speaking and does not [illegible] because he is sure of his ground, a fact which has been demonstrated in his remarkable [illegible] in the service of [illegible] Dr. Lederle is probably the only man [illegible] within present memory who has never been criticised and whose judgment has not been questioned by the newspapers or citizens. His record is unique in this respect, as well as in others.

—LEVI WILSON, of Abelmarle-Hall Company, Waterbury, Conn., was a recent visitor in the New York drug trade.

—GEORGE W. MUTTER, head of the purchasing department of Parke, Davis & Co., returned recently to Detroit after a visit of several days in this city.

—NATHAN A. COZENS, recording secretary of the Philadelphia Association of Retail Druggists, is again attending to his duties after a severe attack of the grip.

—DR. W. H. REED, a veteran pharmacist, of Norristown, Pa., and the president of the Montgomery County Retail Druggists' Association, is convalescent after a long illness.

—JOSEPH E. TOMS, secretary of the N.W.D.A., announces the arrival of a new member to his family—a girl. As Mr. Toms already has two boys, the young lady is a welcome addition.

—CHRIS JOHNSON has severed his connections with the Jewett Drug Company of Rice Lake, Wis., and will take a course in the school of pharmacy at Marquette University, Milwaukee.

—C. M. WARNER, Indianapolis representative of Eli Lilly & Co., has just returned from a two weeks' pleasure trip to the Southwest, visiting points along the Texas coast and the Mexican border.

—NORMAN MCLEOD, traveling auditor of Parke, Davis & Co., was a recent visitor for a week at the New York office, having come from Detroit on business. From this city he proceeded to London.

—CHARLES G. LYON, '00, who is one of the proprietors of the Beach Drug Company, at Beach, N. D., visited the College of Pharmacy of the University of Minnesota recently while on his way to his old home in Plainview, Minn.

—JNO. F. QUEENY, president of the Monsanto Chemical Works, St. Louis, recently entertained the office and laboratory forces at an elaborate dinner at his home in recognition of a 50 per cent increase in business last year.

—DR. B. F. HOYT, of Mellen, Wis., who recently sold his City Drug Store to Charles J. Norton, is away enjoying a vacation of two months duration, after which he will devote his entire time to his professional practice.

—SAMUEL MCCONEMY, of the sundries department of Schieffelin & Co., New York City, was recently married to Miss Mabel Hopple. Mr. McConemy's many friends throughout the State unite in extending him their congratulations.

—S. E. BETTS, who looks after the interests of his fellow-members of the Philadelphia Association of Retail Druggists in the Sixth District as a member of the executive committee, has been a sufferer with rheumatism recently, but is now convalescent.

—DR. HARVEY W. WILEY was one of the speakers at the annual banquet and meeting of the Harvard Club of Philadelphia. Dr. Wiley was graduated from Harvard in 1873 and there is no more loyal and active son of "Fair Harvard" than the big Government expert.

—WITH the beginning of the new year C. M. Henderson, Jr., son of the head of C. M. Henderson & Co., Sardis, Miss., was installed as a partner. The elder Henderson has long been in the drug business in Sardis and is one of the most prominent and successful men of that town.

—H. W. COALE, of H. W. Coale & Co., Stockton, Cal., was recently in New York arranging for agencies. This company consists of Mr. Coale and W. J. Haulen and is establishing a business of manufacturing agents on the Coast. Mr. Coale for several years represented the Meyer Bros. Drug Co.

—J. E. Rossman and Charles Helling of Beaver Dam, Wis., and William Schmidt of Hartford, Wis., all well known druggists were in Milwaukee recently taking part in the State pony bowling tournaments. All three druggists are acknowledged as "cranks" in bowls and made high records.

—PROF. HENRY KRAEMER recently headed his special class in bacteriology at the Philadelphia College of Pharmacy in a tour of the extensive laboratories of the H. K. Mulford Company, at Glenolden, Pa., where the methods of producing antitoxin were explained by the various heads of departments.

—HERBERT J. WATSON, who is in charge of the bacteriological and pathological work of the State Board of Health of Delaware, delivered an interesting address before the members of the special class in bacteriology at the Philadelphia College of Pharmacy. Mr. Watson was graduated from that institution in 1901.

—JOSEPH A. HEINTZELMAN, who a few years ago retired from active business and turned the well-known Heintzelman pharmacy in Philadelphia over to his son, Joseph Heintzelman, Jr., was severely burned on the hands in trying to extinguish a fire which was discovered in the apartment house over the store.

—JOHN SCHEIDERER, head pricer and a stockholder of the Milwaukee Drug Company, has been smashing records in the various pony bowling tournaments that have been held in Milwaukee. In a recent game between the Millioki and the Calumet clubs, Mr. Scheiderer stacked up honors for the Millioki club by rolling a score of 276.

—DR. W. T. THACKERAY, general sales manager of the Abbott Alkaloidal Company, was a recent visitor to New York and other Eastern cities. The doctor has been connected with the pharmaceutical interests for the past forty years and his old friends were glad to see him looking so hale and hearty. He reports the company's business as past the million mark and rapidly increasing.

—FRANKLIN M. APPLE, chairman of the Twelfth District organization of the Philadelphia Association of Retail Druggists, is steadily increasing the interest and attendance at the monthly meetings of this strong affiliation by the selection of live and important issues as topics for discussion and action. This course on the part of the chairman and others of the members is making the district the strongest in the Quaker City.

—CHARLES REHFUSS, one of the best known pharmacists in Philadelphia, was pleasantly surprised on February 15 by about twenty of his friends, principally in the drug trade, who celebrated the anniversary of his birth—his friends don't know just which one—by stealing into his home in fantastic costume and taking possession of the entire establishment. The surprised host admitted that it was one of the few times that he had been caught napping.

—DR. WILLIAM J. MCKNIGHT, of McKnight, Son & Co., Brookville, Pa., and his wife, recently celebrated their golden wedding. Present on this occasion were their children and grandchildren, some of whom came a long distance to participate in the festivities. Mr. McKnight has, besides his practice as a physician, served as a State senator and is a veteran of the civil war. He is also the author of a "Pioneer History of Western Pennsylvania."

—WILLIAM F. KUDER, an old and faithful worker of the Northern Ohio Druggists' Association, has moved with his family from Cleveland to the Golden West. He has written from Boise, Idaho, to his old friends giving the results of some of his observations. Cut prices are practically unknown, merchants are interested in ranches or small fruit farms and druggists run heavy on side lines. Druggist Whitehead, of Boise, is credited with having cleared more than $10,000 last year on 40 acres of prunes.

—DEAN WULLING, of the College of Pharmacy of the University of Minnesota, has just been elected to the vice-presidency of the Minnesota Academy of Sciences. The president of the academy, T. B. Walker, is away practically all the time, so that the direction and control of the academy devolves upon the vice-president. The office is important and responsible, especially during the ensuing year because the academy will be the chief host of the American Association for the Advancement of Science, which meets in Minneapolis in December of this year.

—WILLIAM E. ROOT, head of the drug department of the Dr. Miles Medical Company, Elkhart, Ind., resigned recently and has been succeeded by Eugene Luke, formerly chief clerk at the Houseworth Brothers' Opera Pharmacy. Mr. Root will engage in the development of fruit lands in Okanogan Valley, Washington, about 60 miles south of the Canadian border. Mrs. Root contemplates spending some time with relatives in California, and their son, Harold Root, will remain at Rose Polytechnic School to finish his course. Mr. and Mrs. Root have always been closely identified with Elkhart affairs during their long residence in that city.

FIRST AID TO INJURED AT MANHATTAN PH.A.

Brig.-Gen. Davis, N.V.E.S., Describes Organization. Treatment of Wounds Outlined by Dr. Muren.

At the February meeting of the Manhattan Pharmaceutical Association held at the New York College of Pharmacy the regular routine of business was dispensed with to make way for an address delivered by Brig.-Gen. F. Elbert Davis, Ph.G., M.D., Adjutant-General, "National Volunteer Emergency Service." General Davis, in his introductory remarks, said he entered a drug store in New York City 31 years ago and had engaged in the business for seven years. Of the men in the profession that he had become acquainted with at that time, 60 per cent were now practicing medicine or were engaged in some other business.

As to the "National Volunteer Emergency Service," he said that its membership was open to any male or female over 18 years of age, and the cadet corps is open to children of from 10 to 18 years of age. The service is divided into three departments, one of which is a medical corps and is made up of physicians and pharmacists and another is styled the public health corps. The latter has as its object systematic aid and relief work, in either war or peace, the organization of a system of supply, the distribution of explanatory literature, hospital economy, fire protection in theaters, etc. General Davis discussed the pharmacist as a quarantine officer and pointed out his usefulness in typhoid epidemics. He also described the gold cross, the symbol of the service, and pointed out its significance. It is the insignia used by the old hospital service.

Brig.-Gen. G. Morgan Muren, M.D., Surgeon-General, N.V.E.S., gave a short talk on "First Aid by the Druggist." He asserted that in rendering first aid to the injured, the pharmacist was between the devil and the deep, blue sea. If he carries the work too far he is criticised and if he goes not far enough he is called hard-hearted. He decried the application of chemicals, astringents or antiseptics to the usual wounds and described the proper way of making a tourniquet. Dr. Muren also enlarged upon the first aid treatment for broken limbs, shock, apoplexy, etc. He saw no harm in the counter-prescribing of gargles, cough cures and such preparations and said that the pharmacist had to prescribe for a certain class of people. In some cases of shock, he though the pharmacist should be allowed to use the hypodermic needle.

The late ROBT. W. JOHNSON, of New Brunswick, N. J.

Dr. William C. Alpers regretted the fact that despite his knowledge of medicine he was not allowed by law to alleviate the condition of some of the injured people brought into his store. He strongly objected to the treatment of the eye by pharmacists, in which stand he was supported by Dr. Muren.

Refreshments and dancing followed the above addresses and discussion. The attendance was large, due to the efforts of the new president, Charles H. Lowe. Mrs. Lowe was among those present.

Marriage Mentions.

—CHARLES WILCOXSON WHITTLESEY, of C. W. Whittlesey & Co., wholesale druggists, New Haven, was married recently to Miss Mary Reed Eastman, of Albany. Mr. and Mrs. Whittlesey are at home at 220 Sherman avenue, New Haven.

—ROBERT N. MENEFEE, manager of the Hancock Liquid Sulphur Company, Baltimore, slipped away to Ellicott City about February 1 and was married to Miss Elizabeth C. Bayline. The couple then went on a wedding trip to Florida.

—THOMAS F. FAXON, of the Faxon-Gallagher Drug Company, Kansas City, was recently married to Miss Aloysia Donahue. They came to New York on their honeymoon trip.

—EMIL SCHULTZ, of the Schultz Bros. Drug Company, of Menasha, Wis., was married on February 16 to Miss Katherine H. Williamson, of Oshkosh.

R. W. JOHNSON, PLASTER MANUFACTURER, DEAD.

Founder of Two Big Enterprises, Originator of Red Cross Supplies, Victim of Bright's Disease.

NEW BRUNSWICK, N. J., Feb. 20.—Robert Wood Johnson, one of the founders of the firm of Seabury & Johnson, and since 1887 president of Johnson & Johnson, died recently of Bright's disease at his home near this city. Although Mr. Johnson had been in poor health for some time, he had been absent from his business only six days, and the end was unexpected by the hundreds who knew him. A man of unusual energy and endowed with that patient attention to details which makes commercial success, he had established in his forty or more years of business life an enterprise which placed him in the ranks of the millionaires and gave employment to 1500 men.

Mr. Johnson was born in Carbondale, Pa., February 15, 1844, his age being almost 66 years when taken away. He was the son of Sylvester Johnson and Louise Wood; the father, a descendant of an old New England family that had settled in Massachusetts about 1650. His early education was obtained at the public schools in Carbondale, and later at the Wyoming Seminary, at Kingston, Pa. As a young man, he engaged in the retail drug business but gave this up to become a drug broker in New York City. In 1874 he organized the firm of Seabury & Johnson, and started to make plasters on an India rubber combination. He succeeded in making all the plasters in the Pharmacopœia with a rubber base and created a new era in plaster making. His idea was to enlarge the scope of plaster medication and with this in view he studied diligently the advances made in antiseptic treatment, and worked continuously to improve the facilities for this treatment.

In addition to owning the controlling interest in Johnson & Johnson, its founder held at the time of his death large investments in a half dozen or more successful industries.

The deceased is survived by one sister and three brothers. Of the latter, James W. Johnson, the youngest, who has worked hand in hand with his brother in building up the business, has succeeded to the presidency. He also leaves a widow, Mrs. Evangeline Armstrong Johnson, and four children.

In politics, Mr. Johnson was a Republican and although he never actively identified himself with the party, he nevertheless took a deep interest in all public affairs relating to municipal, State or National government. He was a member of the National Geographical Society, the Red Cross Society, New Brunswick Board of Trade and numerous other organizations. Mr. Johnson left $2500 each to New York C.P. and Philadelphia C.P.

J. F. Macdonald, Telephone Representative, Dead.

CHICAGO, Feb. 20.—Druggists here were shocked to learn of the death on the 16th of J. F. Macdonald, telephone representative of the N.A.R.D., which occurred unexpectedly, although he had been ill with pneumonia for several weeks. In the afternoon he talked by 'phone on the St. Louis situation and other telephone matters with the National chairman, Wilhelm Bodemann. Mr. Macdonald was popular with the druggists and had done much to improve their status in telephone remuneration. The Chicago Veterans sent a letter of sympathy and condolence to his widow.

Ends Life After Return From His Wedding.

MCCLUSKEY, N. D., Feb. 20.—The day after his return from his wedding trip recently, R. A. Rust, druggist, 23, ended his life with carbolic acid. His bride of two weeks could throw no light on the cause, nor could any reason be discovered. Rust's parents are wealthy.

(For Obituary Notes see Page 282.)

NOTE—A, advanced; D, declined; C, correction; N, new.

See page 294 for Price List Changes and page 296 and following pages for Prices Current.

NEW YORK, Feb. 21.—Conditions throughout the drug and chemical trade since our last report have been satisfactory in the main, moderate jobbing quantities of the various seasonable descriptions being in particular demand. Round lots have received very little attention, but the movement into consuming channels has been of fair volume and values have been maintained with a fair degree of steadiness. Opium is lower both at primary sources of supply and in the local market. Quinine continues steady at the old prices. Norwegian cod liver oil is higher and there have been advances in the prices of salts of lithium, bismuth and iodine preparations. Spanish saffron is lower and buchu leaves, short, are easier without any material change in value. Bales of new crop of the latter are due, however, and a lower market is looked for.

OPIUM—The market has a dull and uninteresting appearance with no improvement in demand in sight. The latest reports from Smyrna state that the stock of good material is very much reduced and in the hands of strong holders who would have to be well paid before they would consent to sell. The arrivals in Smyrna for the week ending January 28 amount to 1869 cases, against 2003 cases on the same date last year. Local jobbers show but little interest in the news from primary markets, but have reduced their quotations as follows: Natural, $5.75@$6.00; granulated, $6.75@$7.00; powdered, U.S.P., $6.75@$7.00.

COD LIVER OIL—The reports from Norway by cable are far from satisfactory regarding the result of the catch and unless the condition of the fish improve a much smaller quantity of oil will be produced this year. Cable advices of a few days ago state that the production of cod to February 15 is as follows: 500,000 fish, producing 383 barrels of oil, in 1909 2,000,000 fish, produced 660 barrels of oil. The total production in all districts, including Lofoten, for the present year is 3,600,000 fish, producing 2640 barrels of oil, while last year 3,400,000 fish produced 3330 barrels of oil. As a result the local market shows a decided firmness and prices have been advanced to $1.00@$1.10 per gallon; barrels, $28@$30; half-barrels, $15.50@$16.50. Even at these prices holders offer very cautiously and decline to sell except in a limited jobbing way. At best, the market is feverish and prices are likely to be advanced on cable advices of a higher primary market.

QUININE SULPHATE—There are no quotable changes in prices to report, manufacturers still maintaining their schedules on the old basis of 14c. for bulk in 100-ounce tins. The bark shipments from Java during the first half of the current month were 540,000 pounds, as against 360,000 pounds for the corresponding period last year. The 58th public auction of Amsterdam quinine is scheduled for February 25, when 50,000 ounces will be offered. At the present time only a moderate routine movement into consuming channels is reported by dealers.

SAFFRON, SPANISH—Valencia is in better supply and offered more freely, several lots which were detained by the Government having been released. The market is easier and jobbers have reduced prices to $11.00@$11.50 per pound.

MENTHOL—Is again weaker, cases being offered at $2.70 per pound. For broken lots the usual advance is asked.

LITHIUM PREPARATIONS—Manufacturers have advanced prices and for the various salts quote as follows: Acetate, 19c. an ounce; bitartrate, 19c. an ounce; carbonate, 92c.@$1.00 per pound; citrate, $1.32@$1.40 per pound; glycerophosphate, 65c. an ounce; salicylate, $1.10@$.120 per pound.

IODINE—Is also higher, resublimed being quoted at $2.95@$3.10 per pound.

IODOFORM—In sympathy with the advance in the price of iodine, both crystal and powdered iodoform have been marked up to $3.40@$3.60 per pound.

POTASSIUM IODIDE—The iodides are all higher on the basis of manufacturers' quotations for iodine, as follows: Potassium, $2.10@$2.25 per pound; sodium, $3.15@$4.25 per pound; ammonium, $3.75@$4.00 per pound.

BISMUTH PREPARATIONS—Have been advanced in price by manufacturers, and the revised quotations are on the basis of $2.25@$2.35 for subcarbonate, $1.95@$2.15 for the subnitrate, $2.50@$2.65 for citrate, $2.15@$2.25 for salicylate, 64 per cent; $1.95@$2.15 for subgallate, $3.65@$3.90 for subiodide and $4.15 for sub-benzoate.

OIL ORANGE, SWEET—The Government authorities claim that this article is subject to a duty of $1 per pound, which importers are paying under protest. It is a question whether this duty will be refunded and in consequence prices have been advanced to $2.75@$3.00 per pound.

PICHI—There is some inquiry for this article, but the market is almost bare and what little there is in stock is held at 50@55c. per pound.

DIGITALIS LEAVES—Primary markets are again higher and stocks very much reduced. Single bale lots are quoted at 32c. per pound; less, 40@50c.

PEANUT OIL—Primary markets cable an advance and jobbers are asking 75c. per gallon in barrel lots.

IPECAC—Rio continues very scarce on the spot and held to arrive at $1.85. Present quotations on usual druggists' quantities are $1.85@$1.95 per pound. Carthagena is in more demand and quoted at $1.30@$1.40 per pound. Powdered, 10c. per pound higher.

VALERIAN ROOT—Owing to a sharp advance in primary markets, the price of Belgian has been advanced 7c. per pound. A further advance is probable.

OLIVE OIL—In the countries of production the price of both ordinary and edible varieties of the oil is advancing and it is difficult to form an opinion how the market will go when supplies are increased, but many are inclined to believe that lower prices will not be seen for some time to come. In fact, prices for lower grades of oil have advanced very materially since the first of the year.

CASTILE SOAP—Jobbers have adopted a uniform method of quoting Conti's soap by the box, no deductions being made for the weight of the box. The revised prices per box for the different varieties are as follows: Green, $5.00; mottled, genuine, $5.25; white, $5.70.

OIL CUBEBS—The scarcity of cubeb berries is becoming more pronounced, as some of the larger stocks are being withdrawn from the market. The oil has recently experienced several advances and is now quoted at $4.00@$4.25 per pound.

DIAMOND DYES

Have a Limitless Field

There's no end to the profits you can make from Diamond Dyes. Every woman can find use for them.

And to help you get the most profits, we are spending over $150,000 a year to tell women of the countless practical, money-saving uses—to send them to you to buy.

Keep a complete assortment of colors always on hand. Be ready to fill every order. Help us make this extensive advertising campaign profitable, both to *you* and to us.

HERE IS THE TRUTH ABOUT DIAMOND DYES

It is a chemical impossibility to color Silk and Wool (animal material) and Cotton and Linen (vegetable material) equally as well with the same dye.

Any DYE Chemist will tell you this fact. Of course it sounds easier to trust to luck and use one dye for both. But remember, an economy is not real economy unless it is successful. Do not be misled by imitations of Diamond Dyes.

The "Ten Pin" Bottle

PATENTS, TRADE MARKS, ETC.—(See Page 270.)

PATENTS.

Granted January 25, 1910.

947,272—Benjamin Alderson and Amos Colleson, Brooklyn, N. Y. Bottle-cap assembling machine.

947,314—Frank C. H. Strassburger, assignor to Bottlers' Machinery Manufacturing Co., Chicago. Centering bell for bottle-filling machines.

947,320—Hermann Pape, Hamburg, Germany. Process for the preparation of zinc oxide for reduction.

947,421—Frederick F. Scotford, Berkeley, Cal. Bottle.

947,502—Olof N. Tevander and Arthur Manierre, Chicago. Method of sealing bottles.

947,508—John H. Utley, Camden, N. J. Process of purifying animal charcoal and the product thereof.

947,640—John H. Jefferson, Osmond, Neb. Display stand.

947,646—Emil T. Palmenberg, New York. Display stand.

947,662—Barney Hart, Jacksonville. Turpentine still.

947,715—Albert Lecoeur, assignor to Societe Anonyme le Crinoid, Rouen, France. Process of making solutions of cuprammonium hydroxide.

947,741—Johan J. Rink, Copenhagen, Denmark. Apparatus for the electrolytical decomposition of alkali-chloride solutions.

947,749—Frank S. Havens, Hartford, assignor to Harrison Bros. & Co., Inc., Philadelphia, Carboy.

947,775—Joseph Hauk, Jr., assignor to Twentieth Century Machinery Co., Milwaukee. Bottle-washing machine.

Granted February 1, 1910.

947,847—Frederick Recht, New York. Container for bottle caps.

947,852—Geo. A. Roberts, Winnipeg. Non-refillable bottle.

947,917—Frederick G. Kollenberg, assignor of one-half to P. R. Lancaster, Owensboro, Ky. Funnel.

947,934—Walter H. Perkins, assignor to Waterbury Mfg. Co., Waterbury, Conn. Powder box.

948,061—Edward C. Lovell, Bristol, Eng. Machine for labeling packets, tins, or the like.

948,084—Lorenz Ach, assignor to C. F. Boehringer & Soehne, Mannheim-Waldhof, Germany. Esters of digiycollic acid and preparation of same.

948,155—Arthur G. Whiteborne-Cole, Brighton, Eng. Vaporizer for medicines.

948,158—Kristian Birkeland, Christiana, Norway. Process of utilizing nitrous gases.

948,204—Rene Bohn, assignor to Badische Anilin & Soda Fabrik, Ludwigshafen-on-the-Rhine, Germany. Indanthrene monosulfonic acid and process of making same.

948,286—Orla Topp, Copenhagen, Denmark, assignor to Isidore Gluck, New York. Process of wiring bottles.

Granted February 8, 1910.

948,323—John Harris, Cleveland. Blowpipe.

948,420—George H. Gumbel, Brooklyn. Non-refillable bottle.

948,536—Horace E. Walker, Detroit. Non-refillable bottle.

948,569—Ross B. Yerby, Brooklyn. Bottle-capping machine.

948,596—Walter L. Bodman, assignor to Isaac Rheinstrom, Cincinnati. Bottle-washing machine.

948,698—Georg Kirkegaard, New York, assignor to Imperial Stopper Co. Duplex capping machine.

948,726—Birger F. Halvorsen, assignor to Norsk Hydro-Elektrisk Kvaelstofaktieselskab, Christiana, Norway. Method of absorbing dilute nitrous gases.

948,846—Frank Blumenthal, Chicago. Bottle.

948,875—Oliver P. Davis, Ault, Colo. Blowpipe.

948,915—James P. Boardman, Conigate, Okla. Non-refillable bottle.

948,919—John E. Campbell, Charleston, W. Va. Bottle.

948,930—Alfred Meyer, Mulhausen, Germany. Process of preparing medicaments.

Granted February 15, 1910.

949,036—Charles F. Jenkins, Washington, D. C., assignor, by mesne assignments, to Single Service Package Corporation of [illegible] Paper bottle.

949,134—Nathan Sulzberger, New York. Local anesthetic.

949,170—Allen De Vilbiss, Toledo. Closure for fluid receptacles.

949,220—Hugh Corrigan, Cleveland. Non-refillable bottle.

949,267—Freeman N. Young, Cambridge, Mass. Bottle-labeling [illegible]

[illegible] Asbury.

[illegible] Mary J. Rogers, Chicago. Medical [illegible]

949,388—Christina Winlack, Niles, Mich. Combined container and [illegible]

[illegible] Irey, Steubenville, Ohio. Bottle-[illegible]

949,476—James M. Hicks, Summit, N. J., assignor to Auto Stopper Company, New York. Locking mechanism for vessel-filling [illegible]

949,477—James M. Hicks, assignment as above. Method of [illegible] to [illegible]

949,478—James M. Hicks, assignment as above. Sealing-cap [illegible]

[illegible] A. Hall, Newark, N. J. [illegible]

Bill Reported for Patent Appeals Court.

WASHINGTON, Feb. 20. The bill introduced by Senator Beveridge, of Indiana, "to establish the United States Court of Patent Appeals" has been favorably reported to the Senate. The bill creates a court to be composed of a Chief Justice and four Associate Justices, with a marshal, clerk and other officers. The Chief Justice of the court shall be appointed by the President and Associate Judges are to be designated by the Chief Justice of the United States from among the judges of circuit or district courts of the United States, two to sit for three years, and two for six.

The bill provides for an annual term of the court in Washington beginning on the second Monday of October, with adjournment from time to time as the court shall order. Four [illegible] shall consist a quorum for business. The bill provides a salary of $12,000 a year for the Chief Justice and for the Associate Justices a sufficient sum in addition to such [illegible] Federal judges to bring the total annual salary up to $14,500.

Indispensable to all druggists is THE ERA Price List.

The Sanitary Way

Jersey-Creme Sanitary Straw Dispenser for use at Soda Fountains

An up-to-date SANITARY DEVICE that excludes FLIES, INSECTS, and germ-laden DUST; prevents the spreading of disease and protects the health of millions of thoughtless people—the Acme of PERFECTION and PROTECTION.

Price $5.00, by Express Prepaid

The Jersey-Creme Sanitary Straw Dispenser

is a MONEY SAVER and a MONEY MAKER. It will dispense but one straw at a time and actual demonstration has proven that this device will positively cut your straw bill in half. No chance for BREAKAGE; no chance for SPOILAGE, and 99 per cent of all straws purchased will be actually used by paying customers. Each individual customer can wait upon himself, thereby saving the straws that are often times furnished to customers who do not want them.

IT WILL INCREASE YOUR BUSINESS

for by this evidence of sanitary methods at your fountain many customers will be attracted and induced to return to avoid the contraction of infectious and contagious diseases, to which they are subjected when using the germ breeding straws from straw receptacles ordinarily used by other fountains.

WRITE US FOR INFORMATION CONCERNING OUR SPECIAL OFFER

It will enable you to equip your fountain and tables with *JERSEY-CREME SANITARY STRAW DISPENSERS* without cost to you.

Write today. Your request will bring full particulars. When replying, address Dept. No. 9

JERSEY-CREME COMPANY

Sole Distributers

19 JERSEY-CREME BUILDING **FORT WORTH, TEXAS**

The "Liquid" Expanding—Mammoth New Chicago Plant a Marvel.

We illustrate the mammoth new plant being built by the Liquid Carbonic Company at 31st street and Kedzie avenue, in about the geographical center of the city of Chicago.

When completed, this will be by far the largest plant of the kind in the world.

The main building is over 1000 feet long, and other buildings are in proportion. The plant and its equipment will cost upward of one million dollars, and will be completed in August or September of this year.

The plant is being constructed throughout of brick and reinforced concrete, in a manner that will make it one of the most sanitary, fireproof plants of the country.

Arrangement for expeditious handling of materials in progress of their construction is also as nearly perfect as the best engineering practice can devise.

This machinery equipment, when the time comes, will make an extremely interesting story for the technical journals, because the equipment will be one of exceptional interest to the student of labor saving multiple working machines—multiple drills, multiple wood borers, devices for drilling holes in marble, etc., will be installed, thus giving to the company the triple advantage of labor saving, accuracy and uniformity in product.

Building a Soda Fountain.

Every operation in connection with the construction of a soda fountain will be carried on in this plant.

The mahogany, birch, oak or other lumber is brought in in its raw state, air-seasoned in the lumber yards on the plant, then kiln-dried and further seasoned, under cover, then sent to the wood-working departments where it goes through the manifold operations leading up to the finished wood work. The

New Plant of The Liquid Carbonic Co., Chicago. Covers 25 Acres of Ground and is the Largest Plant of the Kind in the World.

It will be seen that one edge of the plant is skirted by the south branch of the Chicago River, a navigable stream, and that heavy raw materials such as lumber, marble, onyx, pig-iron and fuel can be brought in by the shipload. The plant is also connected with both the outer and inner freight belt systems of Chicago by means of switch tracks that ramify through the yards, and enable the direct unloading of railroad freight from the cars to the departments where it is required.

At the dock front will be seen an overhead electrical traveling crane. By this means the marine freight can be transferred direct to the plant without making it necessary to handle anything by manual labor, and this same overhead crane serves the railroad switch tracks. It connects at right angles with other cranes in the plant, so that all materials of whatever kind can be transferred from point to point without requiring human labor.

The view of the works given in the picture is from the north, so that the right hand end of the picture is to the west.

To the west of the big building shown in the picture will be another structure, the gray iron foundry in which castings for carbonators, bottlers' machinery and other machinery will be [illegible].

Adjoining this to the rear are the marble and onyx shops, marble saw mill, and the great woodworking shops. All the heavy raw material, therefore, starts at that end of the plant [illegible] toward the center of the plant, then southward through various finishing stages to the south end of the main building where will be the erecting rooms.

The four floors and basement of this main building and the various departments on the floors are connected electrically by means of various conveying and elevating devices, the result being a high degree of dispatch in the progress of the work, [illegible] so do the drudgery in every point in every operation.

The thousands of machines to be installed in this great plant [illegible] head belting and shafting being almost wholly eliminated.

wood carving department alone is a room larger than the whole wood-working plant of some of the smaller soda fountain manufacturers.

Hydraulic machinery for compressing the five-ply veneer panels of the wood work and other machinery for compressing the processed cork into slabs will be placed in their proper positions in the progress of these materials.

Similarly, onyx and marble is received in huge blocks weighing many tons, is sawed into slabs in the sawing room, put through various polishing and finishing processes, cut up and otherwise fabricated for its special use.

The art-glass department is one that will receive special attention because of the increasing demand among soda fountain buyers for electrically illuminated art glass work in their fountains.

This glass is imported in sheets and a corps of designers and artists is constantly at work laying out designs which are cut onto the glass, and the glass separated into thousands of tiny pieces, which are put together like a picture puzzle. Lead or copper is used for the matrix.

Metal working rooms—where such parts as draft arms, draft stands, workboards, etc., are made—will be equipped for performing every operation from the raw material up. This means brass, bronze and metal foundries for the cast parts, and sheet metal working tools and equipment for the sheet parts, with the various finishing and plating operations in their due course.

The assembling rooms in which the finished foundry parts are put together, will occupy practically all four stories of the big south wing of the main building. Here highly skilled labor, working with every electrical help, joins the finished parts and gives them the last touches that makes the Fountain Beautiful.

Carbonators and Machinery.

Similarly, in the manufacture of carbonators.

Foundries at the west end of the plant make the iron cast-

PURE ALKALOIDS

There is no class of medicinal chemicals in which extreme purity and uniformity are of greater importance than in the Alkaloids. Consistent with the high standard of excellence which we strive to maintain in all of our products, our Alkaloids may be relied upon to conform to the most rigid requirements for purity. Special attention is directed to the following:

Cocaine Hydrochloride, Codeine Alkaloid and **Sulphate, Atropine Alkaloid** and **Sulphate, Apomorphine Muriate Crystals, Aconitine, Caffeine, Caffeine Citrated, Digitalin, Diacetyl-Morphine, Diacetyl-Morphine Hydrochloride, Hyoscine Hydrobromide, Homatropine Hydrobromide, Ethyl-Morphine Hydrochloride, Morphine Sulphate** and **other Salts of Morphine, Pilocarpine Hydrochloride, Scopolamine Hydrobromide, Strychnine Alkaloid** and **Salts, Etc.** *Specify "M.C.W."*

ST. LOUIS NEW YORK

AGENCY FOR *Whitman's* CHOCOLATES AND CONFECTIONS

A Sign that People are Seeking

"With money in their hands"

Our system of selling our package Chocolates and Confections through selected, protected sales agencies makes it a little difficult, sometimes, for the public to buy Whitman's.

Whitman's are not "on sale everywhere."

Every mail brings inquiries "Where is your agency in——?" ranging all the way from Eastport, Maine, to Santa Barbara, California

We limit our sale to protected agencies and cultivate close relations with each agent, endeavoring through each store to supply *fresh* packages to all the fine candy trade that it can possibly reach. We send inquiries to his store, advertise him to the best people by *direct advertising*. But we can't reach the transient trade. He must attend to that.

The costly "general advertising" of Whitman's in the leading publications is all in the interest of the local agent.

The store that has the Whitman agency does wisely to see that the outside display signs are large enough and striking enough to let everyone who passes by *know* that the Fussy Package (and all the others) can be bought inside.

Millions of well-to-do Americans who want the best are hunting the Whitman agent everywhere.

If you have the agency—or if you should get it—*let these people know.*

Write for new catalogue of packages in true colors, samples of advertising matter and our offer to the leading druggist.

STEPHEN F. WHITMAN & SON, Inc., FOURTH AND RACE STREETS *Philadelphia, U.S.A.*

ROTTERDAM

A MEANS
of Displaying Goods

You know the necessity
We know the means of meeting it.

Do you know why the business man, of the new world of business—the successful one—gets there?

Simply because he has nerve to toss to the scrap pile any system of policy, piece of machinery or set of furniture, no matter how little worn, the moment he discovers something that will serve the purpose better, and can calculate it will net him a better profit.

In less than ½ doz. quantities, each, 75c.

STOVAINE
IS A GREAT SUCCESS

Not as a spinal anesthetic, excepting in the hands of the most skilled, like the brilliant Jonnesco (for the idea of the injection of the spinal canal with all its dangers will never become popular with the patient, nor will the average man care to undertake it) but as the basis of Anesthaine, Abbott—non-secret, without cocaine, widely adopted and successfully applied in all the varied conditions for which local anesthesia may properly be used.

Anesthaine is being widely advertised to the Medical Profession, therefore you should stock, modestly, to care for the demand that is sure to come. Ask your jobber. Literature on request.

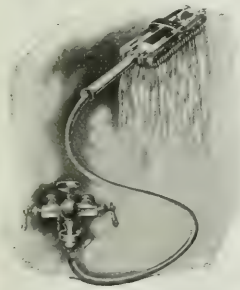
Big Spring Seller—Big Profits



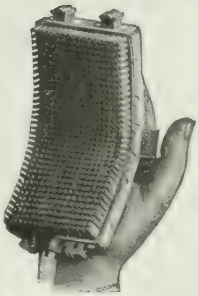
250,000 Spraybrushes Will Be Sold Within Next Six Months. You Can Sell a Profitable Number in Your Territory

THE KNICKERBOCKER SPRAYBRUSH is a big Spring seller because it has many **superior** features and is well **advertised.**

Full and half-page advertisements, effectively illustrated, will appear throughout the Spring and Summer months in the biggest and best publications of national circulation. This advertising will send many purchasers to your store, and when you show them this handsome brush and explain that every purchaser gets the use of **three** brushes—the bath, shampoo and massage—for the price of **one,** they will willingly pay the reasonable price for the

Knickerbocker Spraybrush

It can be easily attached to any bath-tub faucet, and has a **siphon attachment** for homes not supplied with running water.



SELLING POSSIBILITIES IN YOUR TERRITORY

When you consider the fact that thousands of homes in your territory have bath-rooms, not one of which will be **complete** until the KNICKERBOCKER SPRAYBRUSH is made part of the equipment, you will appreciate the large demand and sale which they will have in your immediate district.

What dealer cannot sell one dozen within the first thirty days? The sale of the SPRAYBRUSH is not limited to one sex or class. Purchasers are about equally divided between men and women, and the reasonable price is within the reach of practically everyone.

Because of its **universal** use you will sell SPRAYBRUSHES to ninety per cent of your **best** customers the first year. The SPRAYBRUSH makes the indoor bath as vigorous and healthful as a splash at the seaside. Gives all the benefits of an overhead shower, at only a fraction of the cost. **It sells—it pleases—it repeats.**

WRITE TODAY for descriptive catalogue and attractive prices to dealers. We furnish (free) advertising and other helps to make a **LIVELY SALE FROM THE START.**

THE PROGRESS COMPANY, 916 Rand-McNally Building **CHICAGO, ILL.**

WILL USE ALL OF OWN DRUG IMPORTATIONS.

Parke, Davis & Co Withdraws From the Crude Drug Jobbing Trade—No Longer Needs Aid

The drug trade was much interested last week in the announcement made by Parke, Davis & Co. of the withdrawal of that corporation from the jobbing of crude drugs in the general market. As the concern has contributed a great volume of business the announcement came with some surprise to the trade. Practically the entire importing business of the company was located in this city. Following is the announcement:

"Twenty years ago Parke, Davis & Co. were much smaller customers of the importing department than they are today. In fact, at that time the selling of crude drugs on the outside was necessary to give the required volume to the buying power. At the beginning the importing department was established to buy the best drugs it was possible to obtain anywhere in Detroit. By research work we were to the drug trade and to many other lines of trade the largest crude drug business in the world was developed. In this way the buying of crude drugs in foreign countries was greatly assisted.

"But such aid is no longer necessary. Parke, Davis & Co. are today the largest consumers of crude drugs in the whole world. For their own consumption they are in a position to buy on an immense scale. They no longer need to sell a part of their purchases. For this reason they will discontinue the selling of crude drugs to pharmaceutical and other manufacturers, and in the future they will limit their importing to their own requirements for manufacturing purposes only.

"The large amount of capital which will be released from the crude drug stock will be used by the firm in developing new departments of their manufacturing work, which is growing very fast."

W. B. Kaufman, at the head of the importing department, and who will remain with the corporation, when interviewed, referred to the statement and added:

"This is a matter that I have had up on the carpet with our management for some time past, and I feel relieved to be able to get rid of a part of my harness. The work for years has been extremely onerous. If something of this kind had not been decided on I should have felt obliged to take a much needed rest; since my operation for appendicitis last spring I have felt that I must ease off a bit. On this account the house has thought it well to discontinue the selling end of the business."

DR. HASKELL GOES TO LILLY LABORATORIES.

DR. C. C. HASKELL.

The scientific department of Eli Lilly & Co. recently engaged the services of Dr. Charles C. Haskell, who will give his time to experimental therapeutics and pharmacology. Dr. Haskell is a native of Columbia, S. C. In 1905 he graduated from the University of Virginia with the degree of A.B. Following the completion of his academic work he entered the medical department of the university, remaining one session, afterwards matriculating in the Harvard Medical School, from which institution he received his M.D. degree in June, 1908.

Since graduation Dr. Haskell served as interne one year in the Long Island Hospital, Boston; as physician to the Floating Hospital of St. John's Guild, New York, and as interne in the Willard Parker Hospital (for scarlet fever and diphtheria) of the New York Health Department, from which institution he came to the Lilly laboratories.

Much work has been done in physiological testing and assaying by the Lilly laboratories under the direction of C. R. Eckler, formerly of the University of Michigan. The addition of Dr. Haskell to the department of pharmacology will enable the work to extend into experimental therapeutics much farther than heretofore.

Just 1311 formulas are given in the new edition of the Dispenser Soda Water Guide. Every fountain operator needs it.

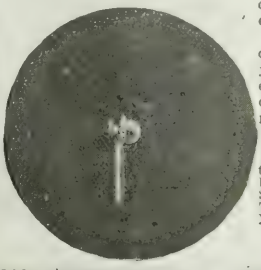
THE PORTABLE SODA TABLE is Superior to Your Old Style Table

How many portable soda tables do you need? That is really the only question you should decide—How many? Decide now before the rush soda season. Just see how far superior our **Portable Soda Table** is to your old style table, which is always in the way when not in use. The Portable Soda Table works just like magic. It can be set up or taken down in a jiffy. Look at the other tables you have in your store. When not in use they take up valuable room—you can't move them out of the way. But —with the **Portable Soda Table**, all you need do, is take off the top, collapse the legs and stand it in the corner. It takes up no more room than an umbrella.

Look at the illustration. The groove around the outer edge of the table top prevents liquids from spilling on customers. The top can be lowered or raised, for children or adults, as the occasion demands.



During your rush season, customers will not wait, if all your tables are in use. They go to your competitor. Prepare for this emergency with a few **Portable Soda Tables.** Your soda dispenser can take a table out of its corner and put it up in a jiffy, ready to make money for you.

SAVES SPACE—KEEPS CUSTOMERS—MAKES MONEY

Ask your jobber to put one or more with you on trial. If he hasn't them, write us. We gladly send our tables anywhere on ten days' approval. If not entirely as represented, your money refunded without question. Styles. Nickel-plated and polished or oxidized. **Legs straight or curved.** Table surface 18, 20 or 24 inches. Birch or Quarter sawed Oak. Finished in Mahogany or Antique Oak.

Price 18 inch top, Nickel-plated or oxidized, $5.50.

Capable representatives wanted—Good money

CHOCOLATE COOLER CO., 75 Alabama St., Grand Rapids, Mich.

MARCHAND'S
MEDICINAL PREPARATIONS

If you, Mr. Pharmacist, had devoted over *a quarter of a century* to the manufacture of five high grade preparations with only one standard of purity and uniformity, wouldn't you feel they were better than those made by a newcomer?

Then, is it any wonder we are proud of *our* preparations?

We were the first to manufacture Peroxide of Hydrogen (Marchand's) for medicinal purposes—that was thirty-one years ago—we are the PIONEERS.

PHYSICIANS KNOW

That MARCHAND'S PEROXIDE OF HYDROGEN (medicinal, 15 Vol.) is superior, because it is 50% *stronger* than the ordinary U.S.P., 10 Vol., and because it contains *NO ACETANILID*, and is absolutely free from any impurities.

That HYDROZONE (30 Vol.) is *THREE TIMES AS STRONG* as the ordinary preparations, and that it is the *most powerful of all germicidal agents*, yet is *absolutely non-poisonous.*

That GLYCOZONE ($C_3H_8O_4+C_8H_8O_3$), because of its remarkable properties is of signal value when applied to inflamed mucous membranes or other tissues. It is especially serviceable in acute and chronic forms of gastritis, intestinal catarrh, gastric ulcer, etc.

HYDROZONE AND MARCHAND'S PEROXIDE OF HYDROGEN (Medicinal) are put up in the best quality of flint glass bottles, for the reason that flint glass is not so brittle as amber glass. This, in connection with Marchand's improved process of manufacture, reduces the risk of breakage to a minimum.

When a prescription or a request comes to you for **MARCHAND'S PEROXIDE OF HYDROGEN (Medicinal), HYDROZONE, GLYCOZONE, MARCHAND'S EYE BALSAM** or the **DREVET MFG. CO.'S U.S.P. H_2O_2 Official**, see that it is dispensed and no attempt made to urge anything else upon the customer.

Your profit is LARGER than it would be if you urged the sale of an inferior article.

BUSINESS NOTICES

(New Advertisements Continued from Page 286)

the season. You should write to them for descriptive catalogue.

The Risdeed Co., in their advertisement of Risdeed Castor Oil in Pound cans, offer to send one pint to make a handsome [illegible] and pouring can.

The Royal Typewriter Co. have entirely new copy in their Royal adv. this month, and it should be read by every [illegible] and interested in typewriter.

Schieffelin & Co. want you to write for a sample of [illegible]. Try it at home or at the office.

Sharp & Dohme, in their advertisement of Sal Laxa, [illegible] Made Right—Priced Right—Sold Right. Three sizes. The full formula is on the label. Read their advertisement and see that your stock of this salt is full.

Chas. E. Sholes Co. advertise Sense in Scents, a new booklet of suggestions for the Easter season. Read their advertisement and send for the booklet above mentioned, and also for a copy of their catalogue.

Star Rubber Co. have an entirely new advertisement for their Star Seamless Water Bottles. Write to them for their new catalogue and Special Offer.

Frederick Stearns & Co., Detroit, Mich., in their advertisement in this issue, state "To make the finest vanilla flavoring extract or syrup for Soda Fountain, use Vanilla Concrete—Stearn's." This firm offer to send you an ounce of this vanilla for $1.

Wells & Richardson Co. advertise that Diamond Dyes have a limitless field and that there is no end to the profits you can make in selling these dyes.

Wheeling Corrugating Co. show one of their Metal Ceilings. Wheeling ceilings are made in all designs for all kinds of rooms. They are [illegible] and sanitary.

M. R. Zaegel Co., Sheboygan, Wis., are advertising the "Z M O," a [illegible] machine. Write to them and mention this [illegible] you can get it for you in the ERA.

$15,000 a Month to Reach 12,000,000 People.

Nearly $200,000 [illegible] $15,000 a month [illegible] to be spent during the year in advertising Diamond Dyes. Good, straight-from-the-shoulder advertisements will be run in 46 publications, including the best women's magazines in this country and Canada. Full-page spaces in black and some in two, three and four colors have been arranged for. Thus the news that Diamond Dyes tell will be placed in the homes of over 12,000,000 [illegible]. This expenditure [illegible] through the growth of the Wells & Richardson Co., manufacturers of Diamond Dyes. This growth has been steady and sure, built upon merit alone, which enables Wells & Richardson Co. to declare Diamond Dyes "The Standard of the World." This merit, together with the high class of advertising which introduces Diamond Dyes to the consumer, has aided dealers throughout the country to build up a business and reap a profit greater than one would think possible on a 10-cent article.

Every woman's publication of large circulation for a number of years has been carrying this advertising of Diamond Dyes with their story of economy, and usefulness, and magic-working changes of color and the work they do. It is a recognized fact that manufacturers whose goods have little or no merit cannot afford to continue advertising, for it is impossible to build up a steady trade. So the continued advertising of Diamond Dyes is the housewives' safeguard against poor dyes, waste of time and money. Unless the user were pleased with her purchase, the manufacturers couldn't expect to secure re-orders.

The advertising of Diamond Dyes will be read by over 12,000,000 women and is bound to increase the sales of the product. The dealer should take advantage of this great advertising campaign.

PROVEN AMERICA'S FINEST
DISPENSING LIQUOR

BUSINESS NOTICES

The Dollar Side.

A booklet [illegible] fountain [illegible] recently issued by the L. A. Becker Company, Chicago, Ill., under the title which is used as a caption to this notice. It deals with the soda fountain question from the dollars-and-cents side, from the point of view which is the most vitally interesting to the man who is running the fountain. Send for this booklet and read its arguments and study the facts it presents. It will pay you. The text is both interesting and convincing. It emphasizes the necessity for strict attention to those little details and niceties of service which go so far to make the fountain popular and insure its success. Some practical illustrations of the profits resulting from a business-like operation of the soda department are furnished, the exact figures of cost, expense and profit, on apparatus, materials and product being given in minute detail. The story is interestingly told and the conclusions are obvious. The mechanical features of the booklet deserve commendation likewise.

New Sizes of Dioxogen.

Since August 15, 1909, the Oakland Chemical Company, has been filling orders for DIOXOGEN with the new size bottles containing 5 1-3, 10 2-3 and 20 ounces, respectively, instead of 4, 8 and 16 ounces. They have purposely withheld public announcement of the new sizes until the trade could have ample time to dispose of old stock. The first announcement of the new sizes will be made in a double-page advertisement in the *Saturday Evening Post* about March 1. This will be followed by similar announcements in many other magazines. As the trade has been fully protected by advance notice and by withholding the public announcement for seven months after the new sizes were placed on the market, new goods will not be supplied to replace stocks of the old sizes. Dealers who have not yet stocked the new sizes, should order at once so they will have the new goods on hand when the public announcement appears.

Castor Oil in Powder Form.

At a meeting of the New York Section of the Society of Chemical Industry held May 21, 1909, Dr. Otto B. May read a paper describing a method of preparing oils in powder form. The powder really consists of a dry mixture of the oil and magnesia, but the fat globules are so thoroughly absorbed as not to be visible even under a microscope. A preparation made from castor oil by this means has been placed on the market under the name of RISICCOL and is being most favorably received by the medical profession. Every druggist in the country is urged to stock this preparation and advise his local physicians and patrons about it. In the large cities in the East it is said to have largely supplanted the use of the pure castor oil, some very prominent doctors have even predicted that within a few years this preparation will take the place entirely of the old remedy. Samples will be furnished on application by the Risiccol Co., 118 William street, New York.

Cordial Reception for Trade Excursionists.

The first Philadelphia Trade Expansion Excursion under the auspices of the Merchants' and Manufacturers' Association was held from February 1 to 3 and visited 18 cities and towns in eastern Pennsylvania. The delegation comprised 75 representatives of the leading houses of Philadelphia, the trip being made in a special train of five Pullman cars. In many of the cities visited, prominent pharmacists were on the local committees to meet the delegates and took part in the receptions of the local boards of trade and business men's associations and their welcome to the representative of the H. K. Mulford Company, Philadelphia, was particularly cordial, as this was the only pharmaceutical or drug house represented on the delegation.

THE ERA Price List is invaluable to all druggists.

Here's the Point:

You proclaim yourself a discriminating buyer—establish your business upon the highest level of professional confidence—by dispensing **'Roche' chemicals** and **alkaloids.** Why? Because physicians have learned, through their acquaintance with Digalen, Thiocol, and other widely used 'Roche' products, to **put their trust in anything bearing the 'Roche' symbol.** The other day one of New York's leading ophthalmologists said to us—**"Your Homatropine is the best I have ever used."** The fact is, we specialize in the production of **chemicals, alkaloids, and specialties of rare quality.**

Specify 'ROCHE' when ordering the following:

Aconitine	**Atropine**	**Eserine**	**Hyoscine**
Arecoline	**Colchicine**	**Homatropine**	**Pilocarpine**

(in vials of 1, 2, 5, 10, and 15 grains, and upward.)

Benzo-Naphthol	**Hexamethylenetetramine**
Benzoic Acid	**Iodides**
Bismuth Salts	**Kresapol**
Bromides	**Morphine**
Brucine	**Phenolphthalein**
Caffeine	**Salicylic Acid**
Carbolic Acid, U. S. P.	**Salol**
Cocaine	**Saponin**
Codeine	**Sodium Benzoate**
Creosote (Beechwood)	**Sparteine**
Cumarin	**Strychnine**
Guaiacol (Carbonate)	**Theobromine**
Guaiacol (Liquid)	**Veratrine**

The Hoffmann-La Roche Chemical Works
65 Fulton Street, New York

BUSINESS NOTICES

Bobbe Litho Co. to Sell Direct to Dealers.

The Bobbe Litho Company, New York, manufacturers and importers of post cards, who formerly supplied none but the wholesale and jobbing trade, have resolved to go direct to the dealer through the issuance of a trade catalogue, at prices which they claim are so low as to give the dealer the benefit of the jobbers' profits and the salesmen's commissions. They have purchased a plant which they manufacture formerly made and now make them equally well here, in lots of 500 of a subject with a photo finish that far excels many of the photographic view cards that are sold throughout the country. They deliver views in two weeks' time.

With the Best in Quality; Costs a Third Less.

The Royal Typewriter Co., 364 Broadway, New York, present in a very convincing manner their argument that it is foolish to pay more than sixty-five dollars for a typewriter when for that price may be secured the "Royal," which has no superior at any price. They make a special appeal for druggists and physicians, with medical Keyboard and label-writing attachment. The Royal is a thoroughly practical machine, capable of doing all kinds of work, yet costing a third less than other makes. An inquiry for full information will bring descriptive literature and other evidence to convince the skeptical of the thorough utility and genuine value of the Royal. It is pictured in the advertisement in this issue.

F. A. Thompson & Co. Elect Officers.

The shareholders of F. A. Thompson & Co., manufacturing chemists, Detroit, Mich., held their annual meeting on February 15 and elected the following officers: President, F. A. Thompson; vice-president, Dr. J. E. Clark; secretary, John McFarlane; treasurer, Fred. Guenther; these officers, with O. B. Taylor, R. E. Roseman and James H. Flinn, constitute the board of directors. The company, in addition to manufacturing pharmaceutical products, claims to be the only firm in the Northern States producing nicotine preparations for the destruction of insects.

Cannot Sell Imitation Syrup of Figs.

Federal Court at Dallas, Texas, has granted an injunction against the Dallas Syrup Company, of that city, permanently restraining it from manufacturing and selling an imitation syrup of figs. A similar injunction has been issued against the Cumberland Manufacturing Company, of Nashville, Tenn. The actions were prosecuted by the California Fig Syrup Company, which has also won a decisive victory in the British High Court of Appeals, which has reversed the lower courts and decreed the right of the company to trade mark the name of its preparation, California Syrup of Figs.

Big Postal Card Season in Sight.

A salesman for the National Calendar Company, Cincinnati, Ohio, tells us that all indications are that the coming summer will be the best season that post cards have ever had. The dealer should get in early with his new cards, and especially local views, without which no rack is complete. If in doubt where to place your orders for view cards write to the firm named for their samples. They claim to be the first makers of hand-colored cards in America, old enough to know good cards and young enough to skilfully prepare them.

Price Lists, Catalogues, Pamphlets, Etc., Received.

BURROUGHS WELLCOME & CO'S Price List of Fine Products, 1909-10. ½ pound cartons	lb. .45
¼ pound cartons	lb. .55
⅛ pound cartons	lb. .60
1 ounce cartons	lb. .65
½ ounce cartons	lb. .85

Regular discounts remain unchanged.

Up State Drug Company Becomes Its Own Landlord.

The three-story building 109-111 Genesee street, Auburn, N. Y., which has been occupied for thirty years by the Charles H. Sagar Co., has been sold to Marion G. Culver and Charles B. Sears. Mr. Sagar opened a drug store at this location in 1880 and nine years later made Messrs. Culver and Sears partners. In 1893 they purchased Mr. Sagar's interest, the latter retiring from business. Mr. Culver has also purchased a fine residence.

HOSTETTER'S STOMACH BITTERS REVISED FORMULA CAN BE SOLD WITHOUT PAYMENT OF TAX.

OFFICE OF
Commissioner of Internal Revenue.

Treasury Department,
Washington,

The Hostetter Company,
59 & 60 Water Street, Pittsburgh, Penna.

September 7th, 1909.

Gentlemen:--

Referring to previous correspondence and to your verbal inquiry, you are advised that special tax is not required for the manufacture of Hostetter's Bitters under the formula heretofore approved by this Office, nor for its sale in good faith for medicinal use only.

Respectfully,

R. E. CABELL,
Commissioner.

SPECIAL FREE GOODS OFFER for WINDOW DISPLAYS

Owing to the great success which has attended our Special Free Goods Offer for Window Displays, and the many requests which we are receiving from the thousands of retail druggists who wish to avail themselves of the opportunity, we have decided to extend the time for making the window displays and obtaining the free goods from January 1, 1910, to May 1, 1910.

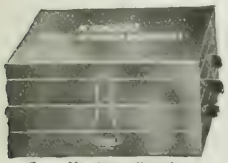
For displaying our signs one week, or more and purchasing

6 Doz. SYRUP OF FIGS and ELIXIR OF SENNA @ $4.00, less 5%, ½ Dozen Free.
12 Doz. SYRUP OF FIGS and ELIXIR OF SENNA @ 4.00, less 8%, 1 Dozen Free.
24 Doz. SYRUP OF FIGS and ELIXIR OF SENNA @ 4.00, less 8%, 2 Dozen Free.

Freight prepaid on 24 dozen orders, but not on smaller lots.

To get the benefit of the above special offer please sign the special offer blanks to be had of us and of all wholesale druggists. Now is the time to get the benefit of the free goods in connection with this feature of our advertising campaign, and thanking the druggists generally for their cordial co-operation, we are

Yours very truly, CALIFORNIA FIG SYRUP CO.



No. 400. Closed

Every Druggist Can Sell HARMONICAS With the C-D-C Device

The Handsomest and Most Practical Harmonica Display Cabinet Ever Devised. It Sells Harmonicas

The C-D-C DEVICE consists of a three tray cabinet of the best seasoned wood, beautifully finished in a dark mahogany piano polish, and when closed resembles an elaborate jewel case. Owing to its novel arrangement and peculiar construction, it can be thrown open and closed in a moment's time. When the Cabinet is open the Harmonica display is exceptionally attractive, exhibiting its entire contents of 38 Harmonicas at one time, and showing the instruments to a great advantage. When closed, the complete Cabinet occupies a minimum of space (10¾ inches wide, 9¼ inches long, 5¾ inches high), being much less than a foot square. Thus, it will be seen what an ideal self-selling proposition this new Collapsible Display Cabinet is. The Cabinet costs you nothing, and besides, you are the gainer by over 50 PER CENT. cash profit on your investment. The C-D-C DEVICE contains 38 pieces of the very best selling

HOHNER HARMONICAS

assorted in 16 different styles, all keys, and can be retailed at the following prices:

ASSORTED HARMONICAS		YOUR INVESTMENT	YOUR GAIN
16 pieces to retail at 25c.	$4.00	$8.75 Per Cabinet and Harmonica Assortment	Over 50% Cash Profit and a superb Display Cabinet

COCAINE REPORTS BILL CALLED UNNECESSARY.

Drug Trade Section, Unwilling to Oppose Anti-Narcotic Legislation, Will Urge an Amendment.

At a recent meeting of the Drug Trade Section of the New York Board of Trade and Transportation there was a discussion of the bill introduced at Albany by Assemblyman A. E. Smith, to amend the charter of New York City in relation to the sale of cocaine and eucaine. Secretary William F. McConnell was instructed to communicate with the responsible parties and urge them to amend the proposed measure. It was the consensus of opinion that the section should not officially oppose the bill, but all present objected to the unnecessary routine work that would be necessitated if it took effect. The records now required of all cocaine and eucaine sales are always open to the police and the only reason that could be suggested for the proposed new requirements was that the police might be better enabled to secure evidence for prosecution than under the present law. One of the members asked why, if the measure was so important, the whole State should not benefit by it rather than only New York City? Another classed it as a discrimination against the drug trade in New York City.

Assemblyman Smith's bill provides that wholesalers and retailers selling to persons or corporations cocaine or eucaine and their respective salts shall file a daily report with the police commissioner, giving date of sale, quantity sold, name and form in which sold and name and address of purchaser. Violations shall be classed as misdemeanors punishable by a fine of not less than $100 nor more than $1000, or imprisonment for not less than six months nor more than one year, or both.

Committees of the N.W.D.A. for 1910.

Charles S. Martin, president of the N.W.D.A., has announced the following chairmen of committees for the current year:

Entertainment, W. E. Greiner, Dallas, Texas; commercial travelers, Ludwig Schiff, Los Angeles; credits and collections, W. A. Hover, Denver; drug market, J. L. Hopkins, New York; fire insurance, George W. Lattimer, Columbus, Ohio; fraternal relations, J. T. Kennedy, Minneapolis; legislation, Charles A. West, Boston; membership, A. S. Brooks, Detroit; memorials of deceased members, H. J. Schnell, New York; paints, oils and glass, Levi Wilcox, Waterbury, Conn.; passenger rates and routes, Thomas P. Cook, New York; prevention of adulteration, Christian Beilstein, New York; proprietary goods, Wm. Jay Schieffelin, New York; relations with local associations, city and interstate, C. E. Bedwell, Omaha, Neb.; trade marks, George M. Besett, Burlington, Vt.; transportation, Winthrop G. Noyes, St. Paul, Minn.; special committee of commercial travelers, R. S. Johnston, New York; special committee on regulations for transportation of inflammables, Wm. Jay Schieffelin; special committee on revision of constitution and by-laws, Thomas F. Main, New York; special committee on standards and tests of the U.S.P. and N.F., Thomas F. Main; special committee on suits against members, Albert Plaut, New York.

Philadelphia Drug Club and Red Lilly Bowlers Clash.

The Red Lilly bowling team of the New York branch of Eli Lilly & Co. entertained the Philadelphia Drug Club team recently, the occasion being the second in the series of match games that are being rolled between the two aggregations. The members of the latter team were lunched at the Drug Club, after which the games took place at the Terrace Garden alleys. The singles were won by Frank W. Smith, the Quaker City captain, the five-man team event was captured by the local team and the visitors carried off the two-man contest. This last event has been won twice by the Philadelphia bowlers, but the other two remain to be decided by the rubber games which will be rolled at a future meet on neutral ground, probably within a few weeks at Atlantic City. After the bowling the New York team entertained the visitors with a dinner, which was also attended by Col. John W. Lowe, of Boston, and L. C. Tinker, of Providence. The party spent the evening at the Hippodrome.

Explosion Gave Firemen a Difficult Task.

In a fire which did $25,000 damage to George Lueders & Co.'s building, 218 Pearl street, Manhattan, recently, several successive explosions of oils and drugs made it dangerous for the firemen. The loss is covered by insurance.

Just 1311 formulas are given in the new edition of the Dispenser Soda Water Guide. Every fountain operator needs it.

WE PAY THE FREIGHT

ASK YOUR JOBBER FOR THE
ADVANCE FEVER THERMOMETER

Perfectly Aseptic, equipped with Lenz Finders and anti-rolling devices, provided with means to limit the extent to which it should be inserted into the body.

(Patented October 6th, 1908)
Insertion Aseptic — Projection for Antirolling

Lenz Finder — Lenz Finder

The Advance is actually the only improvement in Fever Thermometers which has been demanded by the profession for many years.

STANDARD PRICES for Advance Thermometers

½ Min. Registration, with Certificate, in Rubber Case.....$6.50 per dozen
1 Min. Registration, with Certificate, in Rubber Case .....$6.25 per dozen
2 Min. Registration, with Certificate, in Rubber Case .....$6.00 per dozen

RED OR BLUE BULB FOR RECTAL USE.

1 Min. Registration, with Certificate, in Rubber Case .....$6.25 per dozen

Every Instrument tested by the Certified Government Standard and fully guaranteed.

On the ordinary thermometers the scale is so located that a portion thereof is inserted into the mouth or other organs of the body when making a test of the bodily temperature, and by reason of this fact that portion of the scale which is inserted into the body is worn off, and, in addition to this, the coloring material of the scale gets into the body, and this is one great objection which THE ADVANCE THERMOMETER obviates. Any manufacturer pretending to sell THE ADVANCE is making fraudulent claims and will be brought to justice through the intervention of the U. S. Patent Courts. Manufactured by

CHARLES NURNBERG CO.

IN USE SEVENTEEN YEARS.

THIS TRADE MARK IS THE PROPERTY OF

KRESS & OWEN COMPANY NEW YORK

$5.50 PROFIT
on a
$6.00 ORDER

Would you spend 50c. to make $5.50 and at the same time insure the future regular patronage of twenty-five people? You can do it if you co-operate with us in the sale of

KRANK'S
PINK BLUSH
MASSAGE CREAM

A quality article, a toilet necessity so near perfection that in the short time it has been on the market the sales are wonderful.

Thousands of Dollars for Advertising

To tell the people of its merits and direct them to the druggists.

To make our plan a complete success, we wish your co-operation in selling an article of merit, under the *protected price selling plan*, which pays you a profit of 50 per cent. You have the same opportunity as your competitor, you buy and sell at just as low a price as he can

If you are interested in our proposition send for our booklet which explains all about our advertising campaign. How Pink Blush is marketed, and how to make $5.50 profit on a $6.00 order. Write us today.

ALFRED J. KRANK Laboratories
153 SIXTH STREET ST. PAUL, MINN.

The Necco Seal that Helps You Sell

NECCO SWEETS are half sold for you before you give your order, for the NECCO Seal is everywhere the sign of confectionery quality. This, and our extensive advertising campaign in a wide list of the best magazines, *help you sell.*

Over 500 popular varieties, including

They All Want

PINEX

The Biggest Selling Cough Remedy That Ever Happened

It does the work—it has the merit. It makes friends—always. It gives your customer a lot for his 50 cents. And it repeats like sixty. One of the biggest money makers that a druggist ever touched.

It's Heavily Advertised

The demand keeps growing. If you are not handling it, someone else is getting your profit. We guarantee Pinex and ***guarantee the sale.*** Also guaranteed under the Pure Food and Drugs Act June 30, 1906. Serial No. 7561.

Don't Lose These Sales!

Don't let your people get the habit of going elsewhere. Order some from your jobber. If it doesn't sell, fire it back. The only way you can lose is by waiting until you lose sales.

The Pinex Co., Fort Wayne Indiana

WHEN YOU ARE BUYING LOCAL VIEW CARDS

Why not buy them from the house that makes most of the BEST ones seen in the Central and Western States?

¶Prices better than Germany can offer and SUPREME QUALITY at the Price. Samples cheerfully sent anywhere.

MacKellar's

If your jobber does not send you MacKELLAR'S, he does not send you GENUINE Willow Charcoal (Salix)—but he charges you as much, mark that. Furthermore he is not likely to send you MacKellar's unless you SPECIFY IT. He has a reason. Every GENUINE package, barrel or carton, bears the words "MacKellar's Mills, Peekskill, N. Y." Order from your jobber.

R. MacKellar's Sons Company

CHARCOAL

We PROTECT You

Under the
Pure Food and Drugs Act
of June 30, 1906.
Our Serial Number is 1867.
This appears on all
Chi-ches-ter Preparations.

We HELP You

By advertising in Newspapers, we make customers for YOU. This increases your demand and sales and you are in a position to buy in larger quantities and get the benefit of our Money-making Premiums.

We GIVE You $6.00

Every time you buy Chi-ches-ters Diamond Brand Pills in $16.00 lots we GIVE you a premium that can be sold for $6.00 cash. This makes your profit $14.00 on the transaction—nearly 100 per cent. We do even better than that. Drop us a postal card, mentioning this magazine, and we will tell you all about it.

VERDICT AGAINST MR. LUYTIES.

Justification of the minority stockholders' suit against Mr. Luyties, former president of the Sanitol Company, is found in the decision of the Missouri court that he must pay back $722,060 and declaring that the formulas for which he charged $200,000 were worthless. The court is plain in language in charging Mr. Luyties with "scuttling the assets" of the concern but it is gratifying to learn that the company is solvent and under the administration of receivers appointed by the court restitution will be enforced and the stockholders will not suffer. The courage of the handful of minority stockholders who fought for their rights against almost overwhelming opposition is a notable display of the uplift of honesty in present day commercial conditions. A brief mention of the judgment will be found on page 394 and further particulars will be given in subsequent issues of the ERA.

THE "CHAIN" DRUG STORE PROBLEM.

Of vital importance to all druggists is the question of the feasibility of the so-called "chain" drug stores and in this issue, pages 341 to 346, we print a great deal of information on the subject, including the action of the American Druggists' Syndicate in trying to protect its members from competition which they fear from the Riker, Hegeman, Liggett and other chains. Views are given of competent observers, from various perspectives, that throw much light on the situation. As we read between the lines, small and compact "chains," closely located, under exceptionally capable and enterprising management, are practicable, while enormous "chains," scattered all over the country would probably prove to be so unwieldy as to fall of their own weight in the shape of the incubus of weak or rotten links.

Simmered down, it is more than likely that the A.D.S. will find it more expedient to aid and protect its members through temporary assistance when confronted with too great competition than it will to purchase numerous stores and form a gigantic "chain." Developments will be observed with interest and our readers will be kept fully and impartially informed.

NEXT MONTH'S CONVENTIONS.

As the time approaches for holding the Ninth convention for the revision of the U.S.P., professional interest on the part of physicians and pharmacists continues to increase and it is safe to say that the gathering in Washington beginning on May 10 will be of a most notable character. Conditions have so

changed since the last revision was completed, largely through the passage of the Pure Food and Drugs Act, that the importance of the convention far exceeds that of any of the conventions that are now laid away in history.

The 1910 convention of the A.Ph.A. at Richmond, also occurs in May, the dates being the 3d to 10th. There has been lively interest in this meeting and the attendance promises to be large, while the proceedings cannot fail to prove of great value to the participants. The members are familiar with the programme, which offers many attractions, while the certainty of generous Southern hospitality ensures physical gratification as well as mental pleasure for those who attend.

ENFORCING THE PURE DRUGS LAW.

It is a remarkable showing that the government officials have made in administering the Pure Food and Drugs Law in the favorable verdicts obtained in 202 suits, with only 3 defeats, this exhibit not including the government victory in the famous Cod Liver Oil case, mentioned on page 394 of this issue of the ERA. Just as we go to press a large number of interesting and important judgments have been received from Washington and these will be summarized and presented in the April issue of *The Soda Fountain*, for the benefit of our readers who may not wish to wait for the information until the May ERA appears.

CHARLES FREDERIC CHANDLER.

Some one has well said that "the greatest monument any man can rear for himself or leave to mark the place he has filled in the world, is that in his time, in the age and generation in which he lived, he made the best of his opportunities." That Prof. Charles F. Chandler has reared for himself such a monument, is the unanimous opinion of all those with whom and for whom he so conscientiously labored for nearly half a century. A man of large vision and constructive ideas, it may be truly said of him that he has devoted the greater part of his time to the unselfish service of his fellows. Particularly is this true of his work for pharmacy, and it is pre-eminently fitting that the pharmacists of New York should honor and extend to him their best wishes for the full enjoyment of his cessation from labor and of many years of health and strength.

"AN UNEQUAL CONTEST."

A circular recently sent, under this caption, to manufacturers of druggists' sundries by a prominent dry goods journal is one of the most remarkable attempts we have ever seen in the direction of embittering the feeling between retail druggists and their department store competitors. The circular is a rabid appeal to manufacturers to fight the retail druggists and use the advertising columns of the journal in question for that purpose. We do not believe the manufacturers of druggists' sundries will either support or tolerate any movement of this description, for most of them appreciate the importance of the retail druggists as distributers of their goods and realize that the good will of the latter is a valuable asset in their own business. This "appeal to arms" can be safely ignored by the manufacturers, who have little to gain and much to lost by pursuing any other course.

ASSEMBLYMAN CONKLIN ON DECK AGAIN.

With the legislative session at Albany drawing toward the end and the much revised Pharmacy Bill advanced so that its friends hope for its passage, news comes that Assemblyman Conklin has introduced two new bills intended to knock out the present State Pharmacy Law. One bill abolishes the present board and divides its duties between the State Board of Health and a State board of examiners in pharmacy, the latter to be a creature of the State Board of Regents. The second bill is supplementary and provides for nine examiners to be appointed for three year terms by the Regents. Just what Mr. Conklin hopes to accomplish is a mystery, unless it be the defeat of the Hill Pharmacy Bill, for which the State Ph.A. representatives are working assiduously. With the present law declared constitutional, both by the Court of Appeals and in an interesting opinion by Mr. Justice Spiegelberg, (printed on page 354,) the great mass of pharmacists in the State will not care much if the Legislature fails to change the Pharmacy Law; in fact there is now apparent a distinct feeling of weariness over the annual commotion at Albany over the statute governing the drug trade.

That humble benefactors of mankind are not always forgotten was shown recently in a notable way by the unveiling of a shaft in Paris to the memory of Horace Wells, hailed as the discoverer of the use of nitrous oxide gas to prevent pain in dental operations. Wells died a suicide in this city more than sixty years ago, little dreaming that international honors were awaiting his memory in the then far future. Belated though the tribute comes, it will perpetuate the recognition of the benefaction given to the people of the world by this unfortunate American.

In our foreign trade in drugs and chemicals only 25 per cent of the total consists of exports, one-quarter being patent medicines, which is a condition that can be greatly improved. The Latin-American countries offer especially good fields for our drug trade exporters and the Bureau of American Republics at Washington, of which Hon. John Barrett is director general, is in a position to aid our manufacturers in practical ways in increasing the commerce between the United States and her sister republics on this hemisphere.

With the headlines in the newspapers announcing the formation of a "Big $25,000,000 Drug Trust" by the A.D.S. wouldn't "anti-trust" in the window corners look rather odd to some of the prospective patrons of the chain stores?

Assemblyman Conklin's prediction that the Hill-Whitney Pharmacy Bill will not be signed by Governor Hughes, should it pass the Legislature, is worth taking note of. Mr. Conklin, on a previous occasion, proved to be a good prophet.

Sabbath rest advocates will laud the mayor of Elkhart, Ind., for closing all the drug stores, as well as other stores, on Sunday. In some localities this is the only way in which this problem will be solved.

If Mr. Morris carries out his threat of criminally prosecuting Mr Laynes for burning the Sanitol books the population of Jefferson Prison will likely be one larger.

Considerable interesting drug trade news finds its way into the pages of *The Soda Fountain*. Only $1 a year.

CORRESPONDENCE

Wants A.Ph.A. to Meet in New Orleans in 1911.

Editor The Pharmaceutical Era:

I hope the Era may see it as I do and speak out for New Orleans as the meeting place of the A.Ph.A. in 1911 and I expect you to say that Godbold wants the association to meet here at that time for the following reasons: Because the business men of New Orleans, through the Progressive Union, and the pharmacists of Louisiana, through the State and local associations, have invited the A.Ph.A. to meet here; and because that at the time of the meeting in 1911 it will have been just twenty years since the association last met here. The time when the association usually meets has been changed from fall to spring for the Richmond meeting to be held this year, and this change, in the opinion of Secretary Caspari, should not occur oftener than once in ten years. I have letters from about fifty members of the A.Ph.A. agreeing with me that personally they would like to have the annual meeting held here in May, 1911.

I also have two letters in which the writers oppose my scheme because, in their opinion, the A.Ph.A. could secure more new members by holding the meeting in some large city where we have no new members. So far as I know we are not wanted to meet in such places by the local druggists. One member, who resides in a large city, writes that he agrees with me that it is time to hold another meeting in New Orleans, while another says that he could give fifty-seven reasons why the A.Ph.A. should meet here. If you can get this letter in the Era so that the members of the A.Ph.A. will see how anxious I am to have them come to this city in 1911 I will feel greatly obliged. F. C. Godbold.

New Orleans, March 20.

Questions for Retail Clerks to Answer.

Editor The Pharmaceutical Era:

How about organizing a National Retail Drug Clerks' Association? For the past few years many of the better class of clerks have been trying to organize a retail drug clerks' association. So far they have succeeded in organizing local clubs, but it is time to organize into a National body. The drug clerks are the only semi-professional working people without a National organization. George T. Barwell, of Detroit, Mich.; Henry J. Diehl, of Buffalo, N. Y., myself and several others have been in correspondence in regard to holding a National convention at Detroit next June.

What have the majority of clerks to say about such a plan? No doubt many of you are contemplating taking a vacation next summer. Why not arrange to go to Detroit as a local delegate from your town or city?

By attending the convention you would come in contact with clerks from every part of the United States. You could give your opinions of drug conditions as you see them, and you could hear others. Detroit is one of the most beautiful cities in the country. Bring it up at the next meeting of your local drug club and let Mr. Barwell know your intentions.

Never was there a better time than now to organize, for there is a tendency to "cigarize" the retail drug business and your employer will want to keep you. Without our aid the various combines will not be very successful.

There are many details that a National body could remedy; for instance: shorter hours, increase in salary, etc.

Mt. Jewett, Pa. D. N. Robin.

Blair Preparations Defended as Ethical.

Editor The Pharmaceutical Era:

In your March issue, on page 233, you publish a letter said to have been sent by the Henry C. Blair Company to the American Drug Syndicate, of Minneapolis, Minn., quoting prices on Iodone products manufactured and sold by our company. Incidentally Mr. Huhn is quoted as questioning the ethicality of this letter. A most careful consideration of the whole matter, however, discloses the fact that Mr. Huhn attributes the declared lack of ethics not to the letter itself, but to the fact of its being sent to the American Drug Syndicate at Minneapolis.

While we fail to see wherein the matter is at all a question of ethics, we do believe that it involves the question of business policy as evidenced by the following letter which has recently been mailed:

American Drug Syndicate, Minneapolis, Minn.:

Gentlemen:—The fact having been brought to our attention by the March number of The Pharmaceutical Era that your firm inadvertently received one of the circular letters sent out by us on January 18, 1910, to the wholesale and jobbing drug trade of the United States, we beg that you favor us by destroying same, as our business policy is to supply our Iodone products as far as is possible only through the regular jobbing houses of the country.

Your receipt of one of these circular letters was due to the fact that the largest addressing company in Philadelphia was directed by us to send this letter to all wholesale drug houses in the United States, and until we saw the March number of the Era, we were unaware that your firm was included in the addressing company's list of jobbers. Yours very truly,

The Henry C. Blair Co.

While the above letter is self-explanatory, we desire to add that we thought the headquarters of the American Druggists' Syndicate was in Brooklyn, N. Y., and not in Minneapolis, Minn. We would also point out that the marketing of Iodone preparations is on the 2, 4 and 8 plan in strict accordance with the expressed wishes of the N.A.R.D. Moreover, Iodone preparations made and sold by The Henry C. Blair Company are not nostrums but products of a definite chemical substance, phthalic anhydride periodide $(C_6H_4C_2O_3)_2$ $KI.I_4$, which is characterized by the liberation of free iodine on contact with moisture. They have been accepted by the Council on Pharmacy and Chemistry of the American Medical Association and included with New and Non-official Remedies. If, therefore, this is not an ethical proposition in every sense of the term, we would like to have Mr. Huhn define his ideas of ethics. We are, yours very truly,

The Henry C. Blair Co.
Henry C. Blair, Pres.

Philadelphia, March 16.

Comments on U.S.P. and N.F. Formulas.

Editor The Pharmaceutical Era:

Kindly publish the following suggestions relating to U.S. Pharmacopœia and National Formulary preparations: For elixir of gentian I suggest the use of Professor Hallberg's formula, viz., extract of gentian, 10 gm.; boiling water, 50 cc.; aromatic elixir, enough to make 1000 cc.

All elixirs containing strychnine should be made uniform in strength. A few more elixirs and containing less alcohol than those now official should be provided for. Syrup of hypophosphites, U.S.P., ferments very easily and if the formula cannot be improved it should be dropped, as the elixir of hypophosphites could take its place. The formula for tincture of iodine could be improved so as to save time and insure perfect solution by dissolving the iodine and potassium iodide in 35 cc. of water and enough alcohol to make 1000 cc. (See Bulletin A.Ph.A., March, 1910, page 166.)

The most neglected part of pharmacy is that relating to the preparation of ointments. In the 8th Revision of the Pharmacopœia the formulas were improved to a certain extent, but there are still some left which need attention, especially those in which a lard base is employed. I have found that most of the lard bought in the market turns rancid and acid very easily, and even when benzoated it will become granular. The time is past when druggists can prepare their own lard under present conditions and, as said before, it is next to impossible to get lard that will insure the preparation of satisfactory ointments. An ointment base consisting of hydrous wool-fat, 1 part; petrolatum, 3 parts, I have found very good for the preparation of the following ointments in the place of lard as a base: iodoform, belladonna, stramonium, iodine, chrysarobin, nut gall, sulphur and veratrine. This base could also be used in place of simple ointment which could be omitted from the list as it is hardly ever prescribed. The ointment base I recommend not only makes a nice smooth ointment, but is more readily absorbed and does not turn rancid and granular. Yellow oxide of mercury ointment ought to be reduced from 10 per cent to 2 per cent, as a salve of the latter strength is only prescribed for the eyes. W. J. Koch.

New York, March 15, 1910.

Veteran's Record is 125,000 Prescriptions.

Alex. Patenaude, formerly of Norway, Dickinson County, now of Iron River, has been in the drug business 38 years. In that time he has put up over 125,000 prescriptions. It is believed he holds the record for upper Michigan.

BOOK REVIEWS

NEW AND NON-OFFICIAL REMEDIES, 1910. Containing descriptions of articles which have been accepted by the Council of Pharmacy and Chemistry of the American Medical Association, prior to January 1, 1910. 12mo. 256 pages. Paper, 25 cents. Cloth, 50 cents. Chicago: Press of the American Medical Association.

This is the 1910 edition of the annual New and Non-official Remedies, issued by the Council on Pharmacy and Chemistry of the American Medical Association, and contains descriptions of all articles approved by the Council, up to December 31, 1909. There are also descriptions of a number of unofficial non-proprietary articles which the Council deemed of value. The action, dosage, uses and tests of identity, purity and strength of all articles are given. As an illustration of the scope of the book, attention is called to the following: The articles on arsanilic acid and its derivatives, page 35; on phenolphthalein, page 152, and on epinephrine, page 73, indicate the effort which the Council is making to have new remedies known by their correct names. The description of medicinal foods, page 120, should put physicians on their guard as to the small value of such products. Particular attention is called to the description of serums and vaccines, page 169. Since our knowledge of the therapeutic value of new remedies is still largely in the experimental stage, the statements which appear under each proprietary article are based largely on the claims made by those interested. On the other hand, on page 56, under creosote carbonate, is a note on the claims of nontoxicity often made for certain remedies. A similar caution in reference to the claimed harmlessness of intestinal antiseptics appears on page 41 under beta-naphthol benzoate.

THE PHARMACEUTICAL SYLLABUS. Recommended by the National Committee representing Boards and Schools of Pharmacy of the United States for the first syllabus period August 1, 1910, to July 31, 1915. First edition. 8vo., 146 pages, cloth. Published by the New York State Board of Pharmacy, J. B. Lyon Company, printers.

This Syllabus has been prepared to indicate the general scope and character of the instruction to be given by teachers of the various branches in colleges of pharmacy and the work to be done by the student, the object of the compilers being to determine for the first syllabus period, noted above, the general policy of boards of pharmacy in framing their examinations and of the schools in fitting their students to meet them. Space is not at our command to describe the various steps in the evolution of this interesting work which furnishes the first definite scheme of lessons that covers the ground which the boards believe should be included in a pharmacist's education and which the colleges can accept as the minimum preparation of their students for examination by the boards.

The New York Board of Pharmacy has already adopted the syllabus subject to amendment on recommendation of its own syllabus committee and also recommended that other boards of pharmacy take similar action. That action of this kind will be taken by many, if not all of the boards, we have no reason to doubt, for while the scheme outlined can be modified to suit local or State conditions, it presents nothing but what the most liberal laws should demand of applicants in the way of qualifications for the practice of pharmacy.

OUTLINES OF BACTERIOLOGY, by David Ellis, [illegible]. 12mo. 262 pages. New York: Longmans, Green & Co.

The author, David Ellis, has intended this book to serve as an introduction to bacteriology, in all its branches. The text, although [illegible] is of greatest interest to students of technical and agricultural [illegible] in the arrangement and general [illegible] forms as sulphur-, iron- and nitrogen-bacteria, and the subjects of preservation of food products, nitrification and dentification are each enlarged upon. Perhaps the chapters of this book which will attract the interest of the reader who has had but small technical training in this branch of the sciences, and which are likely to prove of greatest immediate benefit to him, are those devoted to fermentation and its industrial applications, and to sewage and sewage disposal.

ESSENTIALS OF CHEMICAL PHYSIOLOGY, by W. D. Halliburton, M.D., LL.D., F.R.S., Fellow of the Royal College of Physicians, Professor of Physiology in King's College, London, Author of "Text-book of Chemical Physiology and Pathology." Seventh edition. 8mo. cloth. 289 pages. New York: Longmans, Green & Co.

This book, an elementary and advanced course in chemical physiology, with an appendix, is a new edition of a similar work by this well known author, in which he has brought the entire subject matter up to date. The volume is intended for use as a text-book in class work, but there is, nevertheless, much within its pages of interest to the progressive pharmacist. Separate chapters are devoted to the carbohydrates, fats and lipoids, proteins, foods, digestive juices, blood and respiration, urine, etc. Tests, both chemical and microscopical, chemical formulas, and seventy or more illustrations are presented relative to each subject discussed.

The advanced course treats of more practical work on the carbohydrates, proteins, milk, proteoses, digestion, haemoglobin, serum, blood, muscle and nervous tissue, etc., and the appendix contains a description of various instruments used in the physiological laboratory. It also includes descriptions of certain methods of research such as, for instance, the Kjeldahl method of estimating nitrogen. To the pharmacist who has been well grounded in organic and physiological chemistry and who is prepared to perform laboratory work of this sort as an adjunct to his regular dispensing, this book should serve as a valuable reference.

350 DOLLAR IDEAS FOR DRUGGISTS. A valuable compilation of dispensing, advertising, bookkeeping, window display and business-bringing methods devised by druggists. Edited by Harry B. Mason. Cloth boards. 186 pages. Detroit: E. G. Swift.

As indicated by its title, this book contains 350 ideas for druggists, selected in competition, each representing an original scheme for enticing trade. Harry B. Mason, the well-known pharmaceutical editor, has selected and arranged the "ideas" in chapters under general headings so that by reference to the table of contents or to the carefully prepared index, the book can be easily consulted. In scope the compilation is not restricted to any particular line but outlines novel plans for capturing trade, gives dispensing and compounding hints, and there are separate chapters on store and window displays, the soda fountain, the prescription department, bookkeeping and accounting suggestions, advertising schemes, etc., all live questions to the wide-awake druggist. The book is well worth the price asked for it.

HANDBOOK OF THERAPY. Narrow 12mo., 421 pages. Cloth, $1.50. Chicago: American Medical Association.

The Therapeutic Department in *The Journal of the American Medical Association* has been commented on so often and so favorably that the association decided to reprint, in book form, the articles which seemed to be of most practical value to the general practitioner. Conditions governing therapeutic requirements are stated as clearly and concisely as possible. Special care has been taken to avoid unusual drugs, and with rare exceptions the formulas given are combinations which can be easily compounded by any pharmacist.

Besides the articles on therapy, the book contains a list of the articles accepted by the Council on Pharmacy and Chemistry for inclusion in New and Non-official Remedies.

ANNUAL REPORT OF LEHN & FINK'S Analytical Department for 1909. Issued by Lehn & Fink, New York.
ANALYTICAL NOTES, 1909. Issued by the Laboratories of Evans Sons, Lescher & Webb, Ltd. Liverpool, England.

Reports of the character indicated above are valuable contributions to pharmaceutical literature in that they show at first hand the conditions with which manufacturers and jobbers have to cope and they put into circulation authentic information about certain products which would be difficult to [illegible] servicable to the Revision Committee of the Pharmacopoeia [illegible]

Human Nature and the Mails.

By Emma Gary Wallace.

HUMAN nature enjoys the element of mystery and suspense. There is a certain pleasurable anticipation about what the prize-package may contain, the side-show reveal, or the daily mail bring. There *may* be a check from an all but forgotten delinquent, a sample copy of some unfamiliar magazine full of quaint thoughts, or even a letter announcing the death of an unknown but opulent relative. The grief in such a case is not prostrating.

Even a few brief documents bearing the legend "Please remit" or "Doubtless this account has been overlooked and we trust you will give it your immediate attention," do not wholly cloud the aboriginal joy of the momentary importance of being handed a bunch of mail by the gray-coated carrier.

Women frankly acknowledge their delight in receiving letters. Men are equally tickled but they will not acknowledge it. It was the knowledge of this truth that doubtless first led some enterprising man, probably a fakir, to embark in the mail-order business. He could sit in his dusty, back, tenth-story room and write a glowing account of his vast emporium, even show pretentious pictures his imagination drew, and specialize on some few articles, preferably those dear to the feminine heart.

He could see the consultation around the living-room table in the distant home, and the inditing of the momentous order. Of course the money accompanied the order and with it, he could hie him out and purchase the goods and send them along. Again, he could see the eager delight with which the city package was received by the entire family and its contents examined and discussed. If they were not pleased they were too far away to make it a matter of much moment, but if they were satisfied the chances were they might order again. It paid to please, so some tried to give honest values. To be sure they might be no better, nor perhaps as good as the local merchant could furnish, but they came from "away somewhere" and they had the charm of being "different."

Enterprising men began to see that by means of sufficient advertising and various cheap inducements they could obtain a patronage which was National instead of local. People sent for catalogues just for the sake of sending for and receiving something, and then seeing the most marvelous bargains advertised were tempted to buy. Some women who live in remote places freely acknowledge that this is their method of keeping in touch with the new and up-to-date household devices and other merchandise of the city stores.

The enormous growth of many of these mail-order businesses made the passage of a Parcels Post Bill a matter of supreme importance to them. If Uncle Sam could be persuaded to deliver their goods at a very low rate it would give them a great added advantage. They would receive larger orders and make possible greater percentage profits. It would cost less also to distribute their bulky advertising. It would assuredly be a great thing for the mail-order house man. His opposition to such a measure would come most naturally from the express companies and the retail dealers, while the great mass of buyers would never bother their heads to analyze the situation at all.

Evidence of this is seen by the increasing number of mail order houses which cater for distant trade, and the advertisements with which the magazines and newspapers teem, wherein unknown people will, for a mere song, instruct the would-be seeker after wealth, in the fine art of conducting a mail-order business. Fifty thousand dollars in a few years from a five dollar beginning and other illustrious examples are quoted as samples of what may be done by taking speedy advantage of the offered courses of instruction.

From the persistent repetition of these ads and their generous use of space, it would appear that they must receive many paying clients.

Now there is small doubt that unless some restraining legislation is enacted that this kind of business is destined to cut a more or less important figure in the commercial world in the next few years, and it may not be amiss to give the matter some attention. A casual inquiry brings a chain of well-written and carefully executed follow-ups.

The first letter tells, perhaps, of the great fortunes already amassed and the near-prospects of many more in the future. It is enthusiastic and hopeful and invites you to join the inner circle by becoming acquainted with the conduct of such businesses.

No reply.

Another letter speedily follows with patient reiterations of former statements and a bunch of praiseful testimonials, bearing abundant but unknown witness to the unprecedented value of the course offered.

Still no reply.

Another letter in which the parties writing and generously offering their services, all but weep upon your neck—absent treatment—and beseech you not to stand in the light of your own advancement, and to smooth out the minor difficulties of decision from your path, enclose a fully made out enrollment blank, all ready for the signature. It only takes a moment to affix that unimportant completion of the contract.

It is confidentially prophesied that the demand for persons skilled in conducting the mail-order businesses of the future will be simply immense. The fact is rehearsed that the trial stage of the business is past and with the last barrier removed in the passage of a Parcels Post measure, the successes of the pioneer houses may be repeated indefinitely. You are assured that the spirit of business by mail is in the air.

Still no reply.

Another letter and another made-out enrollment blank for fear the last one was lost or mislaid, and the additional guaranteed assurance that every penny will be refunded if within a given time the course is pronounced unsatisfactory.

And still they come, logical, convincing, excellently prepared and under two-cent postage.

There are some lessons to be learned from the experience. One is, that if the retail dealer went after business as persistently and took as shrewdly into consideration the weaknesses of human nature, he could win many customers at a much smaller expense. Another is, that great as is the present menace of the mail-order house to the local retail dealer, it will be multiplied many times the instant a Parcels Post is established.

This line of business has its regular publications and within a short space of time the tone and make-up of these has improved perceptibly. Firms doing business by mail are urged to conduct every transaction as if the customer were a next-door neighbor, and in every instance the fakir methods of earlier days are decried.

At first glance it would seem that such a business builded upon a foundation of honest service and fair goods is a perfectly legitimate one. That is the way it generally strikes the superficial thinker. But is it RIGHT?

Is it ever right to work harm to the great majority that the small minority may profit enormously? Already the mail-order house has cut cruelly into the trade of the smaller places and is beginning to prey upon the clientele of the city store. Far fields look green and distant gilt glitters mysteriously.

With the recent postal deficit which we are assured will be greatly enlarged by increasing the work of the Department without adding in nearly the same ratio its revenue, we are confronted by the comforting thought that we as a whole must help bear the burden and cheerfully assist in defraying—indirectly but nevertheless surely—the expense of delivering the goods of our competitors.

These people pay no taxes in the many neighborhoods in which they sell; they contribute nothing to the local prosperity of these places, neither in the way of supporting their institutions nor helping carry any part of their responsibilities. It would seem but fair, even under existing conditions, that some sort of a system be devised, by which some revenue from these ambitious houses revert to the distant towns which patronize them, either in the way of a stamp tax or license fee.

There would be a loud wail, of course. It makes a difference whose pocket is touched. However, large sums are yearly diverted from the normal channels of the home market, making local money conditions difficult. What right have these people, solely for their own aggrandizement, to draw from local prosperity everywhere and to return nothing toward that prosperity? It places even the itinerant vender who is compelled to pay a license fee, at a disadvantage.

It is seldom outside of the trade publications that we see this side of the case presented. Before me lie three magazines of influence which speak hopefully of the passage of a Parcels Post.

How many people in your own residential or business sec-

tion realize the effect such a measure would have upon the volume of home trade? Few, surprisingly few!

Are we doing our duty in educating the people as we ought to the perils which may lie before us? We talk freely among ourselves, but that is not especially to the point. What about our Club sisters and brothers? Why would not the allied trade associations do well to set aside a sum of money to finance a systematic campaign to air the other side of this subject?

What is everybody's business is no one's. It should be made some one's. The retailer cannot remain passive and obtain results to his liking.

It is claimed that several hundred large firms stand ready to embark in the mail-order business within twenty-four hours after the passage of a favorable measure. What will become of our healthy little country town with its active, wholesome community life? The cheerful prospect of a thread and needle shop and a motley collection of left-overs and forgottens, doubtless, such as has followed in the trail of a like system in other countries!

The mail-order man laments that the home retailer has the advantage of personal contact and friendship. Make the most of them. Many do not. All things being equal, it ought to be as easy to make the merchandise itself look as attractive as the pictures in a big catalogue, but too often the home retailer forgets to reckon with that phase of human nature which dearly loves to see the mail man or the express man stop at the door.

Women are the home buyers. They are logical, reasonable and self-sacrificing and once the spirit of loyalty to home institutions is aroused, they will not shirk from what they see to be their duty. It is a question, then, of helping them to see it.

MRS. LEE AGAIN HEADS PHILA. CHAPTER.

Birthday Celebration of No. 6 Proves Most Enjoyable Event—Officers Nominated for the Year.

PHILADELPHIA, March 20.—With an attendance of approximately 200 persons, the recent celebration of the third "birthday" of Chapter No. 6, W.O.N.A.R.D., at the Philadelphia College of Pharmacy was quite a social event. As the members and guests entered the museum of the college they were greeted by the president, Mrs. William E. Lee, and by the chairmen of the various committees. Mrs. Lee and Mrs. W. T. Burke, recording secretary, made a short address.

The entertainment programme included soprano solos by Mrs. H. A. Nolte, contralto solos by Miss Augusta M. Kohnle, recitations by Mr. and Mrs. William M. Montgomery, violin solos by Miss Elizabeth Doer and selections on the piano by Mme. Mabel LeFavor Angeloty. Dancing followed until a late hour.

One of the principal items of business at the March meeting of the chapter was the report of the nominating committee. It was made by Mrs. N. D. Streeter and was as follows: President, Mrs. William E. Lee; first vice-president, Mrs. H. C. Clapham; second vice-president, Mrs. H. G. Comp; third vice-president, Mrs. L. R. Hoffecker; recording secretary, Mrs. Wm. T. Burke; corresponding secretary, Mrs. N. D. Streeter; treasurer, Miss Anna M. Kessler.

Mrs. Lee, who in addition to being president of the local chapter is also chief executive of the National organization, in vain attempt to have the committee withdraw her name as a candidate for re-election. There was general opposition in which the entire meeting joined. This ticket will in all likelihood be elected at the annual meeting in April. Reports of committees indicated a most flattering condition of affairs and there was prolonged appplause when it was announced that the active membership was 312.

Big Success of Ladies' Auxiliary's Social Event.

PITTSBURG, March 18.—With more than 500 in attendance the [illegible] party and dance given last evening by the Ladies' Auxiliary of the Drug Club was as successful financially as it was socially. The street car strike may have kept some away, but it seemed as though every section of the city and every interest in the trade was represented in the brilliant assemblage. Every retail druggist and every salesman supplying him seemed to marshal a little coterie of friends, and it was [illegible] that the pharmacists of Pittsburgh, [illegible], are prominent. The success was almost solely due to the efforts of the following ladies: Mrs. Otto Kraus, Mrs. David J. Reese, Mrs. William A. Carpenter, Mrs. S. B. Davis, Mrs. Frank W. Smith, Mrs. John McCullough, Mrs. Charles Rehfuss and Mrs. Lewis H. Davis.

CLUB WOMEN ARE GUESTS OF BOSTON CHAPTER.

Delightful Event at the Vendome in Which Storm Outside Was Forgotten by the Participants.

BOSTON, March 20.—February meeting of Boston Chapter No. 1, W.O.N.A.R.D., took the form of a reception and musicale, at which the special guests were the presidents and secretaries of the Federated Clubs in and about Boston. It was held recently at the Vendome, and the chill and depression of the storm which raged outside was effectually overcome by the decorations within of lights, flowers and colors. In the receiving line at the reception were all the officers of the chapter, consisting of Mrs. Roxa K. Stover, the president; Mrs. Adelaide M. Godding, Mrs. Annie E. Griffin, Mrs. Josephine L. Christie, Mrs. Martha Morey, Mrs. Annie Kidder, Mrs. Gertrude K. Ernst and Mrs. Nellie Connolly.

Mrs. M. J. McIntire, chairman of the hospitality committee, had charge of the tea room where refreshments were served. The tea table, which was adorned with a basket of pink roses and ferns and candelabra with pink shades, was in charge of Mrs. F. J. Connolly, Mrs. W. H. Henderson, Mrs. J. A. Bean and Mrs. F. W. White. At the frappe table were Mrs. J. F. Waterhouse, Mrs. F. A. Hubbard, and assisting them were Mrs. Frank Arrington, Mrs. M. A. Hinckley, Mrs. J. M. O'Brien and Mrs. E. G. Connor.

Readings and instrumental and vocal music of a delightful order were on the programme.

At the March meeting the attendance was large. Mrs. Stover presided. Reports by delegates to recent conferences and meetings of women's clubs and federations were presented by Mrs. John Lowe, Mrs. Frank F. Ernst, Mrs. J. H. Green and Mrs. Stover. Mrs. Adelaide M. Godding was elected a delegate to the conference at Chicopee Falls, March 24. The following nominating committee was elected. Mrs. Lowe, Mrs. Green, Mrs. Gammon, Dr. Farrington and Mrs. W. A. Corner.

The literary and social part of the afternoon programme was in charge of Mrs. William D. Wheeler. While presented as a subsidiary feature, the singing of a double quartet of members proved to be one of the happiest incidents of the meeting. Those taking part were: Mrs. Charles A. Stover and Mrs. John B. O'Hara, first sopranos; Mrs. William D. Corner and Mrs. F. J. Connolly, second sopranos; Mrs. J. A. F. Woodrow and Mrs. J. W. Moore, first altos; Mrs. Abbot C. Morey and Mrs. William H. Henderson, second altos.

Miss Frances Stern was the speaker for the afternoon, and her topic was, "The Cost of Living—Some Means to Control It." Tea was served as usual in charge of Mrs. J. A. McIntire.

April meeting will be held at the Vendome in the evening, when a drama will be given by the club members, followed by dancing.

Chicago W.O.N.A.R.D. Joins Federation Women's Clubs

CHICAGO, March 20.—At the recent meeting of Chicago Chapter, W.O.N.A.R.D., it was unanimously decided to join the General Federation of Women's Clubs. This action followed the interesting and convincing talk of Mrs. George Vosbrink, first district vice-president of the Illinois State Federation, who was introduced by Mrs. Thomas V. Wooten, president of the chapter. Mrs. Vosbrink outlined the work she contemplates in her district, making a brief plea to the women present to use their influence in securing shorter working hours for women and children, to keep in touch with homes for the aged and infirm, etc. The aims of the W.O.N.A.R.D. were highly approved by Mrs. Vosbrink and she expressed the wish that the wives and daughters of men engaged in other callings could band together as have the women members of druggists' families.

Druggist's Wife Causes Burglar's Capture.

ST. LOUIS, March 20.—Mrs. Herman F. Helwig, wife of a druggist at 22d street and Chouteau avenue, had an exciting brush with a negro burglar at her home at 2320 Whittemore Place. She grappled with the negro but he broke loose. He was captured later after she raised an alarm.

Getting Even.

By Joel Blanc.

I HOPE that I am in error, but it seems to me that there have been developments within the drug world during the last twelve months which have offered unusual opportunities for the self-immolation of those who allow the twin imps of anger and spite to control them for even a passing moment. In organized drugdom new party and policy lines have been drawn. The line of demarcation between professional and commercial practice and between the physicians and manufacturers has become clearer. A multiplicity of issues has tended to the formation of groups which are almost caste-like in their radicalism and under such a condition of division and subdivision, personality has found greater play and tended to foster individual likes and dislikes.

"I'll get even with him if it takes me ten years!" How often we hear those words spoken or some similar expression. Fortunately, in the majority of cases, the words are uttered in the excitement of a momentary passion, while the injuries which brought them forth are soon forgotten, or still better, forgiven.

Sometimes, however, the spirit of revenge lives until it grows into an enslaving fiend. Gradually it saps mental vigor until finally the body sinks beneath its consuming fire. In our world men frequently build a funeral pyre of commercial wreckage, upon which the incineration of the mental and material self takes place.

The spirit of revenge may be born of any one of a number of parents. Whether it be propagated by injustice, envy, jealousy, ignorance, conceit or any other of the many causes which produce it, the victim invariably says, and what is more, absolutely believes, that he or she has suffered a great wrong. This being so, and for the sake of securing an hypothesis, let us concede that the individual who determines to "get even," always has a base of real injustice upon which to build the lurid altar of revenge.

The soul of one whose thought is given to a desire for revenge at once becomes seared and awry. Passion in itself is a fever. The pulse rapidly responds to the heat of anger, the brain answers with throbs of agony, and resentment brings stagnation and premature decay to the digestive system. These ailments breed fever, fever leads to delirium, and so, although perhaps in unmeasurable part, the man who is "getting even" is irresponsible.

The person who is absorbed in one line of thought and effort is a monomaniac. This is no less true of the one whose thoughts are largely unspoken than it is of the insane chatterer. That the revengeful man or woman becomes, in a measure, insane, is proved by his or her actions. Surely, one must be under the influence of a mania who would attempt to wreck a business, organization, or government merely to get even with one who is but an unimportant fraction of the directing force of such institutions.

In what I am saying I am giving no consideration to the damage the revengeful man does to others. In the fall of the temples I am considering only the blind Samsons who pull the edifice down upon themselves and the self-inflicted injuries which follow.

Nearly every one can recall some man or woman among his acquaintances whose character and career offers a sad proof of the terrible results of vengeance upon the avenger. You may take a broad, evenly balanced and highly intelligent man, and if you will watch him as hate enters and grows within him, you will note how the sands of character commence to run from him. At first an occasional grain escapes, but gradually the flow grows steady and strong, ending in an outpour. You will notice that his previously truthful lips commence to drip exaggerations. At first he begins to magnify the faults of the man he is getting even with. Ere long, as he reaches the stage of outright lies about his enemy, he commences to exaggerate about friends as well as foes. Falsehood flows on in an increasing volume and becomes characteristic of his language generally. So the revengeful man becomes a liar.

At first the determination to get even is expressed in smiling words. As the flame of hatred burns higher, hotter and farther within the man's being, the smiles give place to sneers, the wrinkles of laughter deepen into scowls, invective gives place to sarcasm which in turn breeds a sullen silence, and then, melancholia opens the way for mental ruin.

The one who is absorbed in thoughts of "getting even" draws from his business or profession that upon which it depends for success. His planning for the welfare of his family and himself through furtherance of business interests, decreases. Instead, he gives his most ingenious thought to the construction of weapons with which to vanquish his enemy. He not only takes from his business the mental strength which the continuance of his business demands, but what he takes away becomes so distorted that it can never be restored to its original noble uses.

How truly it may be said of many men and women that they have been "damned with faint praise." A little passing honor, a fleeting office, a few unexpected dollars, a little flattery, and then the ego grows so rapidly that the victim, wherever the mental gaze may turn, sees but the reflection of self. Thinking, talking and living for self alone distorts every generous impulse and the unfortunate one expects the world to think, talk and live for nothing but to push forward his own personal and selfish ends. To such a one, "He who does not praise me curses me." So the bitterness creeps into the self-made Eden. The deluded one, through self-idolatry, becomes a brazen serpent, and his tongue drips its venom upon all who do not laud the serpent. It is thus that conceit as well as injustice breeds the spirit of revenge and leads to financial, mental or physical breakdown.

To the man who is trying to get even, none are his friends unless they are enemies of his enemies. He expects his friends to espouse his cause and to sunder life-long friendships for his sake. To his distorted mind servility becomes the only proof of friendship. For the sake of "getting even" he will plunge blindly into some cult, ism, or party just because his enemy has espoused the other side—and he expects his friends to throw judgment, self-control and material salvation to the winds and to follow him. When his friends refuse to blindly follow, he forsakes them and imagines that they have forsaken him. So he multiplies his hatreds by multiplying his enemies, and keeps up this system of multiplication until he has himself become a zero in the calculations of mankind.

Spite! There is something snappish and cowardly in the very appearance and sound of the word. Yet men and women of mental breadth and erstwhile strong characters will allow petty spite to fret and force them into mind-wrecking fevers. An insult which should have branded the insulter deeper than it could have branded the insulted, will sometimes bring the insulted one to the level of a creature whom he should have kept beneath his mental gaze and beyond his mental hearing.

Anger is a degrader; those who are drunken with it shame their blood and birth, forget all the lessons of their breeding, stain their hands with the mud they stoop to grasp, and to "get even," wreck their high estate and sink into degradation!

And though the plotted revenge be accomplished, what then? He who for vengeance's sake has dragged another down, has but dragged that other down upon himself. For all the remaining days of his life, the avenger feels his victim's weight pressing upon his conscience. Though he may hear the plaudits of the brutal few, he sees the look of abhorence upon the faces of the manly many when they hear his boast, "I got even." When too late, he finds that he has grasped a hiltless sword which has given him deeper wounds than those he has inflicted with it.

So let us understand that there is nothing manly, nothing commendable in getting even through revenge. There is just one way in this life in which the injured one may truly get even, just one way through which a victory over an enemy becomes a permanent and honorable victory. Vengeance has no part in it. Envy, spite, conceit, jealousy, greed have no part in it. You have heard about heaping coals of fire upon an enemy's head. If you will just study along lines suggested by what I have written and study yourself, you will realize that the only way to keep coals of fire *out* of your own head is to heap them *upon* your enemy's head.

Prof. Lloyd Will Write Fiction.

CINCINNATI, March 20.—Prof. John Uri Lloyd, scientist and author, will devote his spare time from now on to writing fiction. He has not written any fiction for the past five years, as he has confined himself to writing on scientific subjects, cataloguing the poisons of the world and doing much other work in chemistry and botany. He says he feels he is entitled to some recreation and he expects to get it by writing fiction.

JOSEPH BILL MEETS UNEXPECTED OPPOSITION.

Druggists Abuse and Doctors Are Prey on Public Says Representative Medical Company at Hearing.

ALBANY, March 23.—At the hearing of the Senate Joseph Bill before the New York State Assembly committee on codes, the most opposition offered came from an unexpected source. A representative of the Brooklyn Medical Service Co., a 10c. per week subscription society, stated that the company had on its books in the Borough of Brooklyn, 12,000 subscribers, about 100,000 cases were treated per year and 29 physicians were retained to do this work. Moreover, he said, the company actually does charitable work. The treatment given is largely preventive. As soon as the subscriber becomes sick he or she calls in the company physician. It is up to the physician to get the patient well as soon as possible, whereas the regular physician endeavors to keep the patient sick as long as possible. If the company is permitted to live, he argued, it will eliminate four-fifths of the private physicians who are only a prey on the public. It will also eliminate the druggists who are unnecessary and abuse the public. More or less unsatisfactory replies were obtained when the speaker endeavored to answer such questions put to him by the physicians and pharmacists present, as "How much of a drug store do the company's physicians carry in their grips?" and "What kind of a reputation have they?" The representative asserted that the company employed the best talent.

In advocacy of the bill, a representative of the Italian Medical Association and Italian Immigration Society made a very strong and dignified plea. The discussion was opened by Peter Diamond, of New York City, who represented the joint conference of physicians, dentists and pharmacists held there recently. He read the amended bill and then said he would speak for the pharmacists, allowing the representatives present of the other two professions interested to speak for themselves. He said that the main ground upon which the pharmacist was entitled to protective legislation was that the public demanded that full responsibility be placed on the shoulders of the druggists. Pharmacy, through the prerequisite and college requirements, is on the same plane as medicine. That being true, pharmacists require the same protection as do physicians. Of course, there are exceptions, the proposed law needn't necessarily apply to those selling patent medicines, toilet articles, etc., things anyone can carry.

Dr. William Muir and John L. Goldwater also spoke on behalf of the bill, the latter representing the Bronx Medical Association. Dr. H. L. Shaw, of Albany, representing the State Medical Association and the Society of Medical Jurisprudence, and a member of the Italian Medical Association, also an ex-member of the Assembly, although not directly representing any organization, spoke strongly in favor of the bill. Assemblyman Aaron Levi, member of the committee on codes, expressed the opinion that pharmacy was more important than medicine, inasmuch as the physician might make a mistake in his diagnosis not necessarily dangerous, whereas the pharmacist, if he should make a mistake in his dispensing, might at all times bring about disastrous results.

Those present at the hearing think that the bill will be reported out in some form.

JOSEPH BILL ACTED ON AT JOINT MEETING.

Proposed Legislation Not at all Ideal, but Will be Improved by Amending it Subsequently.

Upon invitation of the New York Retail Druggists' Association a number of more physicians, dentists and pharmacists attended a mass meeting held recently at the New York College of Pharmacy for the purpose of discussing a bill to prevent the practice of the three professions by corporations, introduced by Assemblyman Joseph of Albany.

Peter Diamond, chairman of the legislative committee of the N.Y.R.D.A., presided, and Louis Back, D.D.S., acted as secretary. After the appointment of a committee to draft resolutions to present at the meeting of the joint committee, Dr. Charles Conrad Miller, Dr. William Carr, chairman New York State Dental Society, and John L. Goldwater, a retail druggist, was appointed to revise the bill.

At a subsequent meeting of the joint committee, which was held at the New York College of Pharmacy, at which Mr. Diamond presided, the resolutions passed by the meeting, a new form of bill was presented as drawn by the committee. This classes as a misdemeanor and makes liable to a fine of $5000 all corporations that shall practice pharmacy, dentistry or medicine as a business; any corporation that shall advertise as conducting such a business; any pharmacist, druggist or dentist who shall engage in such business, etc., etc., these provisions excepting hospitals, benevolent and charitable organizations, infirmaries and dispensaries.

Dr. Elmer, Dr. Stark, H. B. Thayer, Dr. William Carr and others spoke, after which the bill as read was unanimously endorsed.

Dr. Frank Van Fleet was elected treasurer to collect funds to cover the introduction of the bill. As a committee to represent the combined professions at the hearing before the committee of codes, in Albany, the following were appointed: H. S. Carter, M.D., Dr. Chas. C. Linton, 12 West 40th street, dentist, and J. L. Goldwater, pharmacist.

MANHATTAN PH.A. ENDORSES JOSEPH BILL.

Dr. Green, Only Dentist Opposed to It, is Sharply Rebuked by Peter Diamond and Other Members.

The March meeting of the Manhattan Pharmaceutical Association, held at the New York College of Pharmacy and presided over by President Charles H. Lowe, was the occasion of a general discussion of the Joseph Bill. On the motion of G. H. Hitchcock, $25 was unanimously voted for legislative work in connection with this bill.

Peter Diamond said the legislators would refuse to favor the bill unless fines collected through successful prosecutions of violations should go to charitable institutions or the State and not to the societies doing the prosecuting.

Dr. Henry Green inquired why it was that the doctors and dentists were included in the bill. "At any rate, leave out the dentists; the bill won't do them any good. Ninety-five per cent of the dentists advertise," he said, "and are not corporations. The bill is doing dentistry a damage; it will put it back twenty years."

Mr. Diamond, when he could get the floor, asserted that Dr. Green had bunched together a lot of things of which he was very ignorant. "At the joint meeting Dr. Green said that 'Dr. Carr was a fine gentleman,' and tonight he says that 'Dr. Carr has six delegates in his pocket.' He has evidently had no experience in legislative work."

Dr. Weinstein said that 25 or 30 dentists with whom he had held conversation had commended the bill and he would like to know why they didn't agree with Dr. Green. The latter's objections, he thought, were individual.

The Joseph Bill was unanimously endorsed and President Lowe, G. H. Hitchcock, Thomas Latham and Hugo Kantrowitz were chosen as a committee to be present at the hearing in Albany. Dr. Ed. L. Spitzer, 35 West 113th street, was made treasurer to collect funds for legislative expenses.

Through Courtesy N.Y.R.D.A. Doesn't Oppose Hill Bill.

At a recent meeting of the New York Retail Druggists' Association the Joseph Bill received the unanimous approval of the members. The Hill Pharmacy Bill, which was one of the principal subjects of discussion, has occasioned much hard feeling among the members. In fact, it has been only through courtesy to the State Ph.A. that the organization has not had its representatives appear against the bill at Albany. The opposition is to the concessions made to the jobbers, the wood alcohol clause, the allowing of foreign clerks to practice in this State on the payment of $25 and giving the enforcing of the Pharmacy Law to the Attorney-General. The latter, the members think, savors too much of the magistrate's court.

Pharmacy Bill Amended—Expected to Pass.

ALBANY, March 24.—The Hill Pharmacy Bill has been amended in some minor details, eliminating several ambiguities and providing that prosecutions of law violators in progress when the bill becomes a law shall be continued by the new board. [illegible] a delegation of [illegible] who have been urging the passage of the bill with the hope that the cases against them would lapse with the abolishment of the old board. Assemblyman Conklin has introduced two pharmacy bills, one abolishing the present board and the other investing the State Board of Health with the enforcement of the pharmacy laws. It is expected, however, that the Hill Bill will be passed.

John B. Cobb Tells the Era Aims and Purposes of Riker Corporation.

Only Six New Stores a Year, Field Limited, No Big "Chain" Desired and a Simple "Mind One's Own Business" the Policy—Will Fight Liggett to the End.

That the Riker corporation has any intention of driving the other retail druggists out of business or constructing a gigantic "chain" of drug stores throughout the country was emphatically denied recently by John B. Cobb, of this city, who is at the head of the William B. Riker & Son Co., in an interview with a representative of the Era. Mr. Cobb read the dispatch from Baltimore printed on page 237 of the March Era, in which it was stated that he was interested in a combination of tobacco interests which was planning to secure a complete monopoly of the retail drug trade of the country. Commenting upon it, Mr. Cobb said:

"Those statements are nonsensical, so far as they affect me. It would be a waste of time to discuss them. It is simply a newspaper sensation, and I do not think anybody believes such statements."

It was explained to Mr. Cobb that some people do believe sensational stories, whether true or not; that many retail druggists were alarmed concerning the newspaper reports and that publication of the truth was desirable for the purpose of clearing the atmosphere.

"If it will do any good to anyone," said Mr. Cobb, "you may say as flatly and as plainly as you can that I am not a stockholder in the United Cigar Stores Company and never was; that is not my proposition and never has been. The American Tobacco Company is not engaged in the retail drug business through me; nor is the United Cigar Stores Company so engaged. Any reports of that nature are untrue."

"I presume you have noticed the reports that conferences have been held within the last two months between the heads of William B. Riker & Son Co. and the Hegeman & Co. corporation looking toward a cessation of rivalry and the consolidation of the two interests? Is that true?"

No Negotiations for Riker-Hegeman Consolidation.

"It is not so," replied Mr. Cobb. "I have not seen Mr. Ramsey, of Hegeman & Co., or any of the others in more than a year and there have been no such negotiations. The last time I saw Mr. Ramsey was, I think, at a dinner of the North Carolina Society and that was a purely social meeting."

"Nor have I seen any of the Hegeman people in more than a year," added A. H. Cosden, general manager of the Riker stores, who was present at the interview.

"Many people have an idea that your purpose is to wipe out the small retail druggists and form great chains of drug stores," said the Era representative. "Can you give me some idea of your purposes in that respect, Mr. Cobb?"

"Our purposes seem to be misunderstood," said Mr. Cobb. "We have simply been engaged in extending our business in a conservative manner in the interest of consumers who desire our products and the public generally and in the territory in which we undertake to serve them. We are not fighting anybody and we are not seeking to create a monopoly. We are simply decently covering the territory so that people who appreciate our service can come in and buy goods of us."

Only Six New Stores a Year Established.

"But are you not constantly invading new territory with branch stores?"

"The contrary is the case. We have been in operation for three years and in that time have only established three new branches outside of New York City and Boston, all of them being in the immediate vicinity of those cities. One of these is the Riker store in Newark, N. J., near New York. The other two are at Lowell and Lawrence, Mass., near Boston. We are not trying to expand beyond the cities in which we are located, which of course includes the suburbs. During the three years we have established 18 stores—at the rate of six a year. As we now have a total of 30 stores, at that rate of growth we might go on organizing new drug stores and at the end of 300 years we would not have anything approaching a monopoly of the drug trade of the country."

Asked about the big "chain" of stores planned by the American Druggists' Syndicate, Mr. Cobb said that he was not sufficiently informed regarding the details to express an opinion, but in any event he did not care to discuss the plans of other enterprises.

"I can only look at the subject of chain stores from the Riker point of view," said Mr. Cobb. "We would not want any chain of drug stores with a membership of 12,000 or 15,000. It would not be feasible, nor would it conform to the Riker idea of practicability. As I have just said, our own policy of expansion is limited to the conservative development of our own territory. If the other fellows let us alone we will not bother them. All we care about is to increase the business of the Riker stores along legitimate lines."

Regarding general business conditions, Mr. Cobb said that the trade being done by the Riker stores was very satisfactory and that quite some sale had developed in a jobbing way outside of the Riker stores for products manufactured by the corporation. Mr. Cobb was thoroughly optimistic and indifferent to anything except the promotion of trade in Riker goods on the principle of attending strictly to one's own business and letting other people do the same.

Controversy Over Liggett Sale Taken to Court.

Regarding his controversy with President Liggett, of the United Drug Company, over the sale by that company of its control of 21 drug stores to the Louis K. Liggett Company, Mr. Cobb said that following the Jersey City meeting of stockholders he had instituted an action in the Massachusetts courts, through Attorney Whipple, with a view to restoring the control of the stores to the United Drug Company. Mr. Cobb said that the price given for the property was not an adequate sum and he proposed to fight the sale until the courts came to a final conclusion, one way or the other, although he hoped and expected that his contention would be sustained.

Regarding the ownership by Manager Cosden of ten shares of stock in the American Druggists' Syndicate, Mr. Cosden said: "The amount is small and the ownership has no especial significance. I have never received any cash dividends; I believe once or twice I received notices about drawing merchandise as dividends. Compared with the total A.D.S. stock my ten shares do not amount to anything."

At the time of this conversation the injunction suit of William B. Riker & Son Co. against the United Drug Company, to preserve the Rexall agency in Boston and New York for the Riker stores, had not reached a hearing in the New Jersey Chancery Court, although it had been pending more than two months. It is on the calendar for April 7.

"The delays have all come from the other side," said Mr. Cosden. "We have been ready to go on with the suit."

MR. LIGGETT TESTIFIES IN REXALL STORE SUIT.

Refuses to Answer Many Questions Propounded by Mr. Cobb's Counsel—Some Details of the Big Transfer.

Boston, March 24.—Counsel in the suit of John B. Cobb vs. the United Drug Co., Louis K. Liggett and the directors of the United Drug Co., which has been entered in the Supreme Court of Massachusetts, asking for an injunction to restrain Louis K. Liggett and the Louis K. Liggett Co. from disposing of certificates of common stock in the latter company, have filed a list of 39 interrogatories in the court seeking to learn from the defendant the basis for the statements alleged to have been made by Mr. Liggett in a circular explaining "Why the Louis K. Liggett Co. was formed."

The questions also seek to ascertain the officers of the new company, whether they are employees of the United Drug Co., just what stocks were turned over by the United Drug Co. to Mr. Liggett, and what consideration was given therefor, and whether in the opinion of the defendant the consideration was a fair equivalent for the property received. Some very plain questions are asked which might appear to impugn the integrity of the defendant, or at least to impugn the honesty of his motive in making certain statements in the alleged circular, and in a subsequent address made at Chicago when the purpose of the Louis K. Liggett Co. was outlined.

A considerable number of the questions seek to learn the exact condition of the various subsidiary drug companies which were controlled by the United Drug Co., and which were subsequently transferred to the Louis K. Liggett Co. These companies include the Hall & Lyon Co., Cahoon-Lyon Drug Co., Gray & Worcester Co., Dwight-Nye Drug Co. To most of

the questions or that portion is appended the following answer:

"I am advised that I am not required to answer [illegible] questions not pertinent to the question of the reasonableness of the charges made, and for other reasons also I am not required to comply with this request, and therefore I decline to do so. I leave the matter to the court to enforce."

Q. Please state your name, residence and occupation. A. Louis K. Liggett, 234 Chestnut Hill Avenue, Boston. I am president and general manager of the United Drug Co., chairman of the board of directors of the National Cigar Stands Co. of New York, president of the Louis K. Liggett Co., president of the Gray & Worcester Co., president and general manager of the Cahoon-Lyon Drug Co., chairman of the board of directors of the Hall & Lyon Co. of Rhode Island, president of the United Drug Manufacturing Co., and president of the Richland Vale Springs Water Co.

Q. Is it a fact that you prepared or caused to be prepared and circulated a pamphlet to secure subscriptions to the notes of the Louis K. Liggett Co.? A. Yes, but not for that purpose only.

Q. In what sense did you mean to say that "on September 1, 1909, the assets of the stores controlled by the Louis K. Liggett Co. were $1,056,124.83? A. To the stores of the Cahoon-Lyon Drug Co., Hall & Lyon Co., Cranston Drug Co., Gray & Worcester, Dwight-Nye Drug Co., and Williamson & Watts.

Q. At the time the pamphlet was issued did you have any figures showing sales and expenses of the said five companies for the first nine months of the year 1909? A. No, not for nine months.

In answer to the interrogatories asking him to make a statement of the gross sales and gross expenses of each of the five companies during 1909, showing the net profit or net loss, and a monthly statement of the gross sales, and the gross and net profits of each company, which the pamphlet sets forth, the defendant replied that he was not required to answer such questions.

Q. At the time the pamphlet was prepared, did you believe the following statement to be true: "The figures above are not estimated figures. They are the figures taken from the balance sheets of the businesses which have been under the direction of Mr. Liggett since January 1, 1909, many of them from one to two years longer, during which these businesses have shown a very rapid advancement in gross sales and a still more rapid and increasing return in net profits." A. The question is made misleading by separating the language quoted from the context. The language quoted was preceded by the statement that: "It is a conservative estimate that for the year 1910 the 21 stores mentioned above will show," etc., and by other statements that the Liggett company "will own outright 30 stores," "will have assets," and "will have cash in bank." The whole taken together obviously means and can mean only that the conservative estimate for the year 1910 is based not on estimated figures but on the figures of business actually done. This statement I did then and do now believe to be true.

Q. Is there any statement contained in the quoted circular which you believe to be inaccurate or untrue? A. No, except that I had exact figures for eight months, and the ninth month was estimated on the basis of the eighth.

Q. Did you convey or cause to be conveyed to the Louis K. Liggett Co. the shares of stock of any corporations which you had acquired from the United Drug Co.? If yes, please state fully to exactly what consideration in stocks and notes of the Louis K. Liggett Co. you received therefore. A. Stocks turned over to the Louis K. Liggett Co. which were purchased by me from the United Drug Co.:

[illegible] of the Dwight Nye Co.	$[illegible]
[illegible] of the Cranston Drug Co.	[illegible]
2004 shares of the Hall & Lyon Co.	200,400
1575 shares of Gray & Worcester	15,750

Received in payment $383,180 collateral notes of the Louis K. Liggett Co. and 4693 shares of common capital stock of the Louis K. Liggett Co.; I delivered the stock as above and agreed [illegible] notes of the Louis K. Liggett Co. and did endorse a large proportion of them; 205 shares of the common stock of Williams & Watts to be turned over as soon as I purchased certain stock in this company which is contracted for, which will give me a majority of the common stock in this company.

Q. What consideration did you give the Louis K. Liggett Co. other than the securities which you purchased from the United Drug Co.? A. I endorsed the notes of the Louis K. Liggett Co. to an amount of $400,000, and agreed to endorse notes of a total [illegible] in good faith of $1,200,000.

Q. Did you, in good faith, believe that the consideration which you gave to the Louis K. Liggett Co. in exchange for the stock and notes given you equivalent in value to the total of the par value of the stock, plus the face of the notes? A. No, not the par value of the stock. The stock was not worth its par value. Whether it had any value whatever was a matter of speculation.

Q. Did you in good faith believe that the consideration that [illegible] Louis K. Liggett Co. in exchange for the notes and stocks issued to you equalled in value the par of the stock [illegible] A. No.

The directors of the Louis K. Liggett Co. are named as follows: Louis K. Liggett, president; Walter Jones Wilson, vice-president; [illegible] A. W. Campbell, secretary; [illegible] and Edward B. Hussey, John S. Barry and E. W. Davis, directors. Messrs. Wilson and Davis are the only officers named in the connection of the United Drug Co.

CULLOM BILL "RED TAPE" AND LEGAL STATUS REVISED N.F. DISCUSSED BY N.Y. BRANCH.

T. P. Cook and Dr. Muir Object to Annual Cocaine Tax as Placing Retailer Under Federal Control and Creating Unneccessary Expense—Committee Decides Against Scientific Section.

At the March meeting of the New York Branch of the American Pharmaceutical Association held in the College of Pharmacy, legislation and the revision of the National Formulary were the principal subjects of discussion.

Thomas P. Cook, chairman of the committee on education and legislation, reported that the Pharmacy Bill had been amended and put up for third reading. He opined that the A. E. Smith cocaine bill would probably become a law, and that the Donovan cocaine bill would not pass.

Hearings were likely on the Cullom Bill at Washington, he said. This bill, which requires $1 annual tax of retailers and $10 annually of wholesalers who handle cocaine, opium, morphine, etc., was strenuously opposed by Dr. William Muir as a burden, not so much on account of the money expenditure but because of the red tape connected with paying the same. A bondsman would be necessary and probably a bond of $5 or more; much valuable time would be wasted in not only filling out blanks but in traveling to and from the proper Federal office to make payment. He didn't see what the tax controlled, for it didn't stop sales. In fact, it was only a means of making the pharmacists pay the expense of gathering cocaine statistics. Mr. Cook also protested against this bill.

The legal aspect of the National Formulary was discussed by A. M. Roehrig, he asking how the dropping of N.F. formulas would be regarded legally. These formulas, he contended, were now a part of the National standard and there was no provision in the law for a revision. He said that manufacturers of U.S.P. VIII and N.F. III preparations would claim them as standard when these books are revised, on the ground that: "Why this is according to the law when the standards were adopted." He thought that the legal situation should be given careful consideration before formulas are changed. Hugh Craig thought that the Food and Drugs Act would have to be amended to accept new standards. Dr. Muir said that the law was based on intention, any improvement becoming law even if such additions are not mentioned. He also expressed the opinion that the U.S.P. and N.F. should be revised at the same time and not five years apart.

The admission of too many formulas into the N.F., Dr. William C. Anderson said, was a cause of suffering to the pharmacist since it caused a great accumulation of official preparations which he must keep on hand to meet demands and involved holding a large amount of capital in stock. It also gave the physicians so voluminous a book that many would ignore it altogether. He suggested that under each head be placed one good preparation which can be made by every pharmacist without too much detail and loss of time.

Anent counter-prescribing, he said that it was mostly due to the inadequate teaching of the colleges of medicine.

On the work of the N.F. Committee of Revision, President Raubenheimer reported that Prof. James H. Beal, chairman of the committee, had divided the work so that the book would be published within one year after proper report had been made to the mother association. It will probably be divided into two parts, one to be devoted to the formulary proper and the other will contain symbols, drugs used in the preparations, standards, etc. If the latter were not included, cases based on the N.F. as a standard might be thrown out of court.

As chairman of the special committee having in charge the proposed joint meeting of the members of the branch and the physicians of the New York County Medical Society, Mr. Hitchcock reported that the same might be held next month if the executive committee of the latter organization has the power to call it. For this occasion Dr. Weinstein favored the use of the lecture room in the college in preference to securing a suitable room in the Academy of Medicine. Such a move would not only save $30 but might serve to impress those visiting physicians who did not know the college had a fine building of its own.

To solicit dues from delinquent A.Ph.A. members Caswell Mayo, Hugh Craig and Otto Raubenheimer were made a committee. An exhibit of sample N.F. preparations was discussed. It was decided not to form a scientific section.

New Charter for the A.D.S., American Drug Stores Incorporated.

Stockholders Vote Against "Chains", but Favor Helping Stores Threatened by Big Rivals Owned by Corporations—Prominent Men Discuss Present Conditions.

The American Druggists' Syndicate, at its recent stockholders' meeting, voted to increase the capitalization to not more than $25,000,000, at a rate of not more than $2,500,000 a year. A majority of the stockholders opposed the proposed big chain of 12,000 stores, but favored treasury aid to members threatened by chain stores. Manager Goddard will run a sample store in New York, until the next annual meeting, to show the effects and results of A.D.S. supervision of drug stores. The directors were given power to act as they decided wise in the matter of aiding or protecting members of the organization. Up to the time of going to press the directors had taken no action either way in the matter of establishing the "chain."

The Rhode Island charter of the A.D.S. has been abandoned and a new incorporation secured under the laws of New York State. The amount named in the papers is $250,000. The incorporators are Mr. Goddard, Dr. Anderson and George W. Hackenberger. Under the new charter the officers elected at the last annual meeting were re-elected.

To take care of anything that may be done by the directors in the chain matter the American Drug Stores has been incorporated with a nominal capitalization of $1000.

The ERA has obtained the opinions of numerous qualified druggists regarding "chain" stores, some of which are given in the following pages, with more to be printed in future issues of the ERA. John B. Cobb, head of the big Riker chain, is quoted on page 341 as to his views on this phase of drug trade conditions.

Pharmacology committee of Chicago Medical Society has passed a resolution calling on the N.A.R.D. to make the A.D.S. stop selling patents made of doctors' prescriptions.

At the March 22 stockholders' meeting of the American Druggists' Syndicate, at which possibly 400 members were present, some of them traveling long distances to attend, President Charles Huhn presided. The meeting was held in the A.D.S. factory at Long Island City, New York. A resolution was adopted authorizing the increase in capitalization from the present $200,000 to not more than $25.000,000, this increase, however, not to be made at once but at the rate of about $2,500,000 per year.

As to the establishment of a chain store system as was discussed at a previous meeting in Manhattan, the out-of-town members, with the possible exception of one from Perth Amboy, N. J., where the competition of the Lauer Drug Company is beginning to be felt, strenuously opposed the idea. Manhattan members did not like the chain store idea, either, some arguing that between chains already established and an A.D.S. chain the independent A.D.S. proprietor would be crushed. They thought the A.D.S. should lend its protection and support to members in order that they might meet competition, rather than actively enter the field itself.

Some complained that the A.D.S. did not sell the staples needed in the ordinary transaction of a drug business and it was the ability to secure these at low prices that would enable members to stand up against competition. However, as it was obvious that there was no other way to fight drug store chains already established, the Manhattan members favored fighting them with their own weapons.

Several plans for the establishment of an A.D.S. chain were outlined by C. H. Goddard, the secretary and manager. One of these was the forming of a subsidiary corporation to be known as "American Drug Stores," which name has already been incorporated at a capitalization of $1000. This corporation would take over a controlling interest, say 51 per cent, in the stores of A.D.S. members hardest hit by chain store competition.

The proprietor, holding the remaining stock in his own store, would be left in charge. The store would be renovated. The proprietor would have the services of A.D.S. window dressers, A.D.S. advertising, etc., all of which he would pay for in proportion as used; he would have the benefits of A.D.S. goods and prices, etc. The store would bear the name of the proprietor as formerly, but in one corner of the windows would be placed a placard bearing the legend, "American Drug Stores," and beneath that, "Anti-Trust." The latter, as was explained, would attract the sympathy of the public, which is always ready to get back at the "trusts."

In connection with this exposition of the advantages of the drug store chain it was announced that on a certain day in March the Wm. B. Riker & Son Co. had opened six new drug stores, that the Hegeman corporation had acquired the Hudnut Pharmacy, 925 Broadway, and that the latter corporation was making most strenuous efforts to secure the five Jungmann drug stores. Also, that besides the several chain store schemes outlined, there were at least ten others which had been worked out but could not be divulged at this meeting.

Many of the absent members were represented by proxies, over 5000 being made out to Mr. Goddard, Dr. W. C. Anderson 42, and various others present represented two, three and four absentees, respectively. Most of the proxies contained the answer "No" to the question asking if the stockholder approved the purchase by the A.D.S. of drug stores threatened by the chain systems, but answered "Yes" to the question asking: "Would yon confine the activities of the treasury to aiding members who are threatened by such competition?"

The question of establishing an A.D.S. chain of drug stores was finally left to the executive committee of the board of directors for action.

To prove what A.D.S. goods, prices, methods, etc., can do with a drug store which at present is practically a failure and unable to meet the competition of a nearby chain store, Mr. Goddard and several others have become interested in a drug store at 70th street and Broadway. This store will be photographed as it is at present and when renovated will be again photographed. Daily accounts will be kept on separate sheets of paper and at the next annual meeting, photographs and accounts will be shown to the stockholders and it is anticipated by Mr. Goddard that the store will show net earnings on capitalization after renovation of 25 per cent.

A lengthy pamphlet, the purpose of which is to interest druggists, doctors and nurses in A.D.S. goods and A.D.S. stock, was read. This pamphlet speaks of the advantages of the A.D.S. "pharmacopœia," "which can be revised at any time." It will be mailed to doctors throughout the country.

Several Philadelphia members who essayed to hold the floor at various times were somewhat "squelched," Mr. Goddard asserting that when the secession of the P.A.R.D. was yet an open question, the A. D. S. didn't have a single member in Philadelphia who would champion its cause. It developed that one member had his shares in his wife's name and owed the A.D.S. $58. When these facts were divulged, he was hooted off the floor.

JOBBERS AND AVERAGE RETAILERS AFFECTED.

If Square Dealing Prevailed There Would Be No Need to Safeguard Either—Believes in Prevention.

By Samuel C. Davis, Ph.G.,
analytical chemist and expert prescriptionist, Nashville, Tenn.

In a very few words I believe I can sum up the subject from the retailer's side by two quotations:

(1) "An ounce of prevention is worth a pound of cure," and if the progressive retailer wishes to be absolutely on the safe side he should take advantage of all safeguards and helps that are offered him to place himself in an independent buying or selling position. It is certainly to the retailer's advantage "to build the stable, place in the horse and lock the door" before too late.

(2) This is an age of combination, and the retail druggist must sooner or later face the inevitable question of competition through combined capital, as is being done every day by other lines of trade, viz.: the dry goods, department, and 5 and 10 cent stores.

Personally I do not believe the average manufacturer of National reputation and who is a consistent general advertiser is to any large extent interested in this question. It is the jobber and the average retailer who is being affected; the chain of store firms handle the well known goods to a large

[illegible] buy direct from the manufacturer and [illegible] the jobber so with the [illegible]

I am sure [illegible] that at this date [illegible] ers of the wholesalers organization are considering the [illegible] same proposition as is the case. Though if the [illegible] agents" to the retailer an chain of stores or [illegible] of retailers' combination will be needed to safeguard either side.

BLAMES MANUFACTURERS AND WHOLESALERS.

Prominent Pacific Coast Druggist Attributes Present Conditions to Failure to Protect Prices.

By EDWARD L. BALDWIN
of the Edward L. Baldwin Co., San Francisco, Cal.

Before giving my opinion in regard to the American Druggists' Syndicate plan of forming a co-operative chain of twelve thousand stores, I would like to review the causes which I believe have led up to present conditions in the drug trade. A chain is no stronger than its weakest link. When the retailer, wholesaler and manufacturer were getting their just proportion of profits, everything went along smoothly.

The first link of the chain was broken when the manufacturer and wholesale druggist failed to protect the retailer's profit.

Several years ago I had the honor of addressing the members of the wholesale drug trade, assembled in convention at Del Monte, Cal. At that time the cut-rate problem was at its acute stage, and I stated my belief that the wholesaler and the manufacturer would be the losers in the end, if they failed to protect the retail selling price of proprietary goods.

I believe I can show that this has come to pass. Millions of dollars' worth of new proprietary remedies were sold last year without the aid of the jobber, and all this cut down the sale of the well known proprietaries.

The manufacturers of these were first appealed to by the drug trade of the United States, to protect the selling price of their goods. Their answer usually was, "We cannot protect the selling price of our remedies." If a druggist had the audacity to urge the matter, he was sometimes told that as long as the goods were advertised, he (the druggist) would be obliged to sell them, cut-rate or no cut-rate. The manufacturers would not, and the wholesale druggists said they could not protect the selling price for the retailer.

The large cut-rate druggist was a jolly good fellow with the proprietary remedy manufacturer and the wholesaler as long as the game was new, and the cut was not too deep, but when a great many druggists became cut-rate druggists, the original cutters were obliged to look for new channels of revenue, and began to manufacture their own remedies, or joined the Rexall company. As this was practically a close corporation, the balance of the retail trade were forced to devise some way of competing with the cut-rate stores, or go into bankruptcy.

About this time the American Druggists' Syndicate was formed and in a short time twelve thousand retailers became members.

You may think I am a long time getting to the question, but my opinion is founded on the history of the causes that have led up to the present movement.

Do I believe in a chain of drug stores under one management? No; I do not believe it is to the best interest of the individual druggist, or of the general public.

I do not believe the American Druggists' Syndicate should go into the wholesale jobbing trade, as I believe the wholesale druggists now established can serve the retail trade better than the A.D.S. can.

I do believe that the proprietary remedies that are sold at cut rates will in time be forced from the market, if not in this [illegible] that the best protection to the [illegible] of [illegible]

I believe that the established wholesale druggists in the United States should be the distributers of the products of the A.D.S., but not until they will co-operate in protecting the retailer's interest, and stop selling at cut-rates, and in single [illegible] to [illegible] the drug trade.

The present conditions in the drug trade are deplorable, and I blame the indifference of the proprietors and wholesalers to the interests of the druggist, and so I believe that the A.D.S. movement is a protest against this indifference and will in the end result in better conditions for the drug trade all along the line.

A PROBLEM IN PROFITS FOR A.D.S. TO SOLVE.

How Can It Satisfactorily Operate a Going Concern on Profits Less Than Wholesalers Do Business On?

By CHARLES B. SHERMAN.
president Sherman & McConnell Drug Co., Omaha, Neb.

The American Druggists' Syndicate plan of co-operative manufacturing and distribution of proprietary medicines seems to me entirely practicable, and from the retailer's standpoint, such a movement is entirely justified as an offensive and defensive measure.

It is true, at the present time, there are many manufacturers of proprietary medicines who are really trying to do something to protect the retail dealer in a profit on his sales of their preparations. Such manufacturers may possibly find some reason for characterizing the retailer as an ingrate, but in doing so, they must remember that the retailer has been a long-suffering "beast of burden," as the buffer between the manufacturer and the consumer, and that, in most instances, what help he has received in restoring profit-bearing prices has come as a death-bed concession from the proprietor.

The wholesale or distributing end of the work of the A.D.S. should be equally attractive to the retailer, but just how A.D.S. promoters can hope to distribute to A.D.S. members standard goods, as usually handled through jobbing houses, on a basis of 3 per cent advance over net lowest costs to wholesalers, is something the writer cannot understand.

It would seem that in this, the regularly organized wholesalers have a most just grievance against manufacturers, and that the wholesalers are not wrong in applying the same rule to this, that old line insurance men did some years ago to fraternal insurance, namely, that "it could not last, since the cost charged for said insurance was less than the mortality tables showed it could be furnished for."

It is generally conceded that the jobbing drug trade of the country have not made any too much money, as a whole, on their investment during the last few years, and just how the A.D.S. distributer can hope to carry on this same class of business, cater satisfactorily to his A.D.S. individual clients, and at the same time make enough profit to keep a going concern in existence on profits so much less than the wholesaler has been able to do business on, these are problems that are still to be solved and it would seem, can only be settled by doing business long enough to gain results, based on the "law of averages and experience."

CHAIN FEATURE HAS NOT REACHED WISCONSIN.

Some Retail Druggists Lump Their Orders to the Detriment of the Local Jobbers, Who Protect Them.

By T. H. SPENCE.
of the Spence-McCord Drug Co., La Crosse, Wis.

The "chain store" feature has not yet reached us in Wisconsin. There are many instances of retailers owning two or more stores in the same town or city, but I know of none covering more than one town or city. There is a tendency with retail buyers to purchase lots of patents and obtain discounts or free goods and then divide the purchase with other druggists, usually buying from out-of-town jobbers, thus taking business from the local jobbers who certainly are entitled to this business, especially as they protect the retailer in doing no retailing. The writer at one time ran two retail stores in La Crosse, besides the wholesale, which was handled in separate quarters. One of these stores did the largest retail drug business ever done in La Crosse before or since I owned it, the business reaching at its best over $30,000 sales annually.

LARGE CHAIN OF SMALL STORES NOT PRACTICAL

Retailers Need Protection From the Evil of Concentration of Capital in the Drug Business.

By W. S. RICHARDSON
of Washington, Chairman Committee on Legislation, N.A.R.D.

Your letter is at hand, asking my opinion as to the practicability of the Chain Store System, which is now agitating the entire drug trade of this country. This plan is not altogether new, for some corporations have been working along this line for the past few years to promote just such schemes.

The plan to have a large number of small retail drug stores

Junior Class University of Illinois School of Pharmacy, Chicago C.P.

which are scattered all over this entire country, put under one management seems to me to be impractical, as a small store hardly pays any profit to the owner himself who often is willing to make all kinds of sacrifices in order to make ends meet. I do not think that a man working as superintendent of one of these stores would be satisfied with the probable profit of it nor could the organization itself pay as large a salary as a person should get in conducting a store. I believe that if the system were once in vogue, the organization would have a large number of unprofitable stores on hand.

On the other hand, I believe a few large stores under one management, which could be called a small chain of stores, could be conducted on a much more economical basis than that on which a large number of small stores could be operated. A large store is more attractive to the public than a small store, and the people are now educated to go to stores having a large assortment of goods from which to select their purchases. A large store can be maintained at its highest efficiency at a much smaller cost in proportion to its volume of business than a large number of small stores doing the same aggregate amount of business can be run for.

As this is the burning question of the hour, every retail druggist should give a great deal of thought to it and study out for himself what is the best solution of this question. If we are to maintain individual stores as at present, it will be necessary to have a strong National organization that will be able to stretch out its strong arms to the retail druggists and protect them from the evil of concentration of business.

TWO VIEWS OF WHAT IS BEST FOR RETAILERS.

Mr. Rogers Believes in Independence So Long as It is Possible for the Druggist to Run His Own Store.

By Fred S. Rogers.

ex-president of New York State Ph.A., of McMonagle & Rogers, three stores, Middletown.

In regard to chain drug stores: The growing importance of this idea throughout the United States is one which deserves the careful consideration of every pharmacist and, in fact, of all who have capital invested in the drug business.

So much of the proper conduct of the drug business depends upon the personality of the man behind the counter, that it is almost axiomatic to say that the same rule applies to chain stores as to the old-fashioned recipe for rabbit stew: "First catch your rabbit." First find a competent manager, then open, if you find an opening in a live town where there is need for a properly conducted store.

To a certain extent, and within reasonable limit, provided proper organization, system and capital are available, it should be possible for a druggist to profitably conduct a chain of stores. He must, however, be of such calibre as to share liberally in the profits, and to exercise considerable breadth of mind in allowing each local manager to use his own discretion in many of the questions constantly arising.

As to the obverse of this proposition, that is, whether or not a proprietor should turn his business over to the chain store company, or syndicate, I should say most emphatically, No, so long as he himself expects to be active in the business. The drug business is peculiarly one where personality counts, and while a proprietor, in many instances, could no doubt learn, through contact with others, how to improve his own business methods, I believe he is not warranted in selling a profit-paying business on any plan by which his services would be continued on a salary or part profit basis. Corporations are avowedly conscienceless, and what might seem satisfactory returns to an individual, if worked out on his own energies, might to the corporation appear inadequate and consequently unsatisfactory, with the inevitable result. By all means every retailer should conduct his own business so long as he can do so successfully.

In the large cities keen competition with the larger organizations, with their unlimited capital and better buying facilities, might make it impossible for a retailer in a small way to conduct a profitable business. Then it would be time enough to consider the question of enrolling himself with the chain store men, but not until then. In other words, unless this competition is too severe for profitable conduct of his business, a retailer should maintain his own individuality, make his own work count for himself and work out his own salvation, from the very fact that no one else is going to look after him as well as he will look after himself.

CHAIN SYSTEM THE LOGICAL OUTCOME OF A.D.S.

Drug Retailer Must be Man or Mouse, Says Mr. Frailey, Who Denies Syndicate Control of the N.A.R.D.

By W. O. Frailey, Ph.G.,

ex-president of the Pennsylvania Ph.A., Lancaster, Pa.

In answer to your request for my opinion on the co-operative chain of stores, I feel at sea on the question at present as I do not know the plan or policy of the proposed undertaking.

The A.D.S. is now operating as a chain store system, the only difference being that the ownership has not changed, but the buying advantages are practically the same as those enjoyed by a chain of stores and in some lines very much better. The plan of organizing chains of stores has been to buy the stocks of existing stands, pay for them in stock of the company and to employ the old proprietor as manager, supplying stock from headquarters.

The one fatal objection to this plan is that the average proprietor is unfit to manage a store in accordance with modern business-getting ideas, is unambitious and generally speaking, is too much of a fossil to accord harmoniously with the general scheme of co-operation.

The best proof of this statement is that many of the druggists who today own membership in the A.D.S. allow themselves to be persuaded by the traveling salesman into giving him their orders, and to ignore a source from which they might save 20 to 40 per cent on the buying end of their merchandising. Nowadays, a man should be a man or a mouse, whether the doubt comes in business, the home or the church. He must

have fixed and definite lines and policies in conducting his business and he should follow out his policies until they are a [illegible] failure and need changing.

Personally I am so well satisfied with the A.D.S. and its present policies that I would be ready to meet any and all competition from chains or single links of stores. Should the chain system be organized, one of the first necessities will be starting a school for the education of managers along modern business lines.

The tendency of the times is toward concentration and centralization of interests, and capital and the retailer will have but little chance for success against the large and more powerful interests. The A.D.S. is already organized and can now rest secure on its achievements which have been phenomenal. With its large membership and equipment in plant and laboratory, its excellent force of executive officers and managers and its now smoothly working system of supply it could logically institute a chain of stores.

Furthermore, the A.D.S. owns certain assets which money could scarcely buy, but which any new corporation would miss very much. All A.D.S. members know what these assets are and are jubilant in the possession of them. All those members who have been taking advantage of the saving secured through the A.D.S. are really enthusiastic and enthusiasm is not purchasable with coin of the realm.

Another feature of the drug world I would like to touch upon at this time is the charge that the A.D.S. is trying to control the N.A.R.D. This is such a silly charge that for those who know it needs no denial. But to those who have been closely following the trend of events, it seems that there is a powerful clique of rule or ruin manipulators who are getting desperate in their failure to own the retailer body and soul. In fact, a long-headed and friendly critic of the N.A.R.D. told me several years ago that the members of the N.W.D.A. controlled the N.A.R.D. and that when they had no more use for it they would break it up and wipe it out of existence. In the light of recent events, that opinion now seems like a prophecy and the defection of the P.A.R.D. like an entering wedge in the attempted breaking up of the N.A.R.D.

I believe that the A.D.S. membership will stand by the N.A.R.D. because through the organization of the N.A.R.D. the retail trade were taught to work together and that work made it more easy to organize such a grand retailer's auxiliary as the A.D.S. It started the retailer to thinking and taught him to grasp the true meaning of the word co-operation. The efforts of the N.A.R.D. prior to the introduction of the U.S.P. and N.F. propaganda work were largely educational and depended upon moral suasion for practical results.

CO-OPERATIVE SAVINGS SMALL IN AGGREGATE.

Distribution Must Be Paid For, Like Death and Taxes There is No Escape From the Obligation.

By CLAYTON F. SHOEMAKER.

of Shoemaker & Busch, importers and wholesale druggists, Philadelphia.

In my opinion, the establishment of huge chains of stores in the retail drug business would not be in the interest of participants, or conducive to better service for the public.

There is nothing new about the idea, and it has been tried on various scales many times, with varying degrees of success. In cases where the plan has succeeded, it has been because bright-minded, able and reliable men of executive capacity were at the helm, and were so deeply interested as to control the manifold details which necessarily exist in this business.

Many of us have seen firms or individuals control groups of stores, from two to six in number. A few have succeeded— [illegible] have failed.

Combination, of themselves, do not insure success. Witness, for example, the large number of "combinations" or "trusts" which have "gone to the wall" because the central control was not as effective as the former individual control of their constituent parts.

Personally, I cannot see why any self-respecting retail druggist should wish to surrender his individuality, and the control of his own business, unless he gets an exorbitant price for it. Of course, if he gets an unusual price, so much the worse for the chain.

Some retail druggists have an unreasonable idea of the savings to be made [illegible] buying. They are really very small in the aggregate. The service of Distribution has to be paid for in some way or other, and cannot be escaped. It is like Death and Taxes.

WOULD ELIMINATE THE PROFESSIONAL SIDE.

But Mr. Kline Believes the Typical Successful Pharmacist in Residential Districts Will Hold His Own.

By C. MAHLON KLINE.

of Smith, Kline & French Co., Philadelphia, Pa.

It seems to me that the effect of the chain stores will be to largely eliminate the professional side of pharmacy, and to increase the handling of sealed packages by clerks who know little or nothing of their contents. It would seem that side lines would have to play an important part in business of this character, in order to earn an adequate return on the money invested.

With regard to the confining of chain stores to certain localities, leaving the great body of retailers to conduct individual enterprises, it seems to me that this condition will always prevail, because chain stores would have to do a large business in order to pay dividends sufficiently large to attract capital.

Not many businesses in the strictly residential districts pay more than a comfortable rate to the owner. When it is considered that such a store would have to pay, in addition to the salary of the manager, interest on the capital invested, it would certainly be doubtful whether many localities would bear so heavy a charge.

I think that the personality of the typical, highly educated, successful pharmacist of today will enable him to "hold his own" in the residential neighborhoods where such qualities play an important part. It is therefore probable that chain stores will be confined to the central parts of certain of the larger cities.

The protection of the professional side of pharmacy is very dear to a large number of pharmacists, and the tendency of chain stores to operate against the professional side would certainly be considered as opposed to the best interests of the drug trade. The best men in the profession, however, will probably prefer to continue independent, and I think that their advice and skill will continue to draw to them a large proportion of the retail drug business.

NOT LIKELY TO AFFECT SMALLER COMMUNITIES

Mr. Voegeli Thinks Chains Will be Confined to the Large Trade Centers of the Country.

By THOMAS VOEGELI.

former president of the N.A.R.D. and president Voegeli Bros. Drug Co., Minneapolis, Minn.

Concerning the prospective organization of chains of drug stores throughout the country: Personally I do not believe that these chain drug stores will affect materially the retail drug stores of the smaller communities and that they will be in evidence only in the large trade centers of the country where the operation of such stores is more likely to be successful than in the smaller communities.

Personally I have given but very little thought to these stores as it is of little material consequence to us, believing as we do, that we shall continue to do business as successfully as we have in the past, even though these chain stores might extend their operations into this Western country.

MRS. DOW PREFERS WATCHING DEVELOPMENTS

Operates Ten Stores Herself, but Merely a Spectator Where Other Chains are Subject of Comment.

By MRS. M. CORA DOW.

Cincinnati, Ohio.

We are not sure that we have an opinion on the chain store matter. What we do want is to find a good seat in the grand stand and witness the fight, procession, love feast, or whatever the show is going to be. In our opinion the drug business will contain very little monotony during the next few years. We hope we see as much and feel as little of the battle, as may be.

(Additional views will be printed in future issues.

New Officers of Two Pennsylvania Branches of the American Ph. A.

JOHN C. WALLACE,
elected president of Pittsburg Branch
American Pharm. Association.

LOUIS SAALBACH, Pharm.D.,
new vice-president of Pittsburg Branch
American Pharm. Association.

FRANK E. MORGAN,
elected president Philadelphia Branch
American Pharm. Association.

SHOULDN'T DELETE N.F. PRELIMINARY NOTES.

J. C. Wallace New President Pittsburg A.Ph.A. Branch. Prof. J. H. Beal Recommends Joint Meetings.

Pittsburg, March 20.—At the February meeting of the local branch of the American Pharmaceutical Association the following recommendations were made by Prof. James H. Beal: That the branch should meet jointly at an early date with the Allegheny County Medical Society on which occasion a special programme should be provided; that a ladies' night be arranged for, and that a dosage card of the official alkaloids and their salts be published and distributed suitable for posting at the prescription desk, the same to contain announcement of the dates of meetings of the branch and an invitation to druggists to attend these meetings in company with their physician friends.

The regular programme of the evening consisted of a comprehensive paper on "Window Display," read by J. H. Wurdack; report of committee on N.F. recommendations, by Chairman Louis Saalbach, and a debate: "Resolved, That the U. S. Government should revise and publish the U.S. Pharmacopœia." The affirmative in the latter was taken by George W. Kutscher, negative by Louis Saalbach. In his report relative to the N.F. committee, Mr. Saalbach introduced resolutions to the effect that this branch not only disapproved of dropping from the N.F. the preliminary notes prefacing various classes of preparations, such as emulsions, fluid-extracts, pills, etc., but that it favored the introduction of more preliminary notes rather than their deletion. Also, that it further recommended the deletion of the formula for elixir pepsin and bismuth in subsequent revisions.

Considerable discussion followed the motion of Dr. Beal to adopt this report, Dr. A. F. Judd contending that if elixir pepsin and bismuth was objectionable, why not on the same grounds recommend that rennin be deleted from essence pepsin, N.F.? Dr. Beal and Dr. Saalbach agreed to the propriety of this, but were of the opinion that the question could not be decided at the present time. Louis Saalbach, F. J. Blumenschien and J. H. Wurdach were named as a committee of investigation of all N.F. formulas containing the digestive ferments. The first two recommendations were adopted.

The following officers were elected for the ensuing year: President, John C. Wallace, New Castle; first vice-president, Louis Saalbach, Pittsburg; second vice-president, Richard Mierzwa, Pittsburg; secretary, B. E. Pritchard, Pittsburg; treasurer, P. Henry Utech, Meadville; committee chairmen: Membership, Charles E. Willetts, Mars; practice, Louis Emanuel, Pittsburg; medical relations, George W. Kutscher, Braddock; education and legislation, James H. Beal, Scio, Ohio; publicity, William R. Bell, Pittsburg. In his inaugural address, the new president informed the members that although compelled to travel fifty miles each way to attend the meetings, he had missed only two during the past year, once due to sickness and once due to being stalled en route.

Secretary Pritchard reported that a check for $33 had been forwarded to the branch to cover amount due from the National body for securing 33 new A.Ph.A. members. As a committee to take up questions of membership dues, J. A. Koch, A. F. Judd and Andrew Campbell were named. The programme committee for the March meeting consisted of George O. Stech, W. R. Bell and P. P. Knapp.

DOCTORS SEND INVITATION TO PHILA. BRANCH.

Interesting Developments in Getting Two Professions Together—Prof. Remington Criticises the N.F.

Philadelphia, March 20.—In the opinion of those who favored the withdrawal of the P.A.R.D. from the N.A.R.D., an invitation extended recently by the Philadelphia County Medical Society to the members of the Philadelphia Branch of the American Pharmaceutical Association and pharmacists generally to attend and participate in the meeting, April 27, of the society, was regarded as strong evidence of the closer relations between the representatives of the two professions that has followed the severing of relations between the P.A.R.D. and the parent organization.

At the next meeting of the medical society, it is believed, official recognition will be given this decisive move on the part of the druggists, which, it is admitted, was hastened by a letter from the society to the P.A.R.D. asking it in view of the charges made by the *Journal of the American Medical Association*, to define its position.

This invitation, which was promptly accepted, was issued at the March meeting of the Philadelphia Branch of the A.Ph.A., at the College of Physicians, by Dr. M. C. Thrush. When the latter explained that the discussion would be a symposium upon suggestions for the next Pharmacopœia and that pharmacy should be represented among the speakers, Prof. Joseph P. Remington and George M. Beringer were appointed to be pharmacy's representatives.

Doctors' Interest in National Formulary.

A general but interesting discussion followed an address by Dr. Thrush. In speaking of the subject, "Changes in the U.S.P. and N.F. From the Doctor's Standpoint," he declared that there were plenty of physicians who never see the Na-

physicians, claiming that its popularity with the profession would be greatly increased thereby. In most interesting manner, Dr. Thrush referred to various formulæ and discussed their therapeutic values.

The speaker's straightforward declarations brought replies from members all over the room, some of whom agreed with the speaker, while others expressed the belief that the conditions to which Dr. Thrush referred were exceptions rather than the rule.

Dr. Lyman F. Kebler, of the Bureau of Chemistry, mentioned [illegible] in the N.F. and U.S.P. He admitted that in some of its uses the department used [illegible] standards were not existent. He also referred to the [illegible] pursued by some [illegible] who applied to drugs certain names of their own coining in their efforts to evade the law.

Declares Nostrum Formulae Are in N.F.

Professor Remington declared that the greatest fault of the National Formulary today was that it had copied a lot of formulæ for nostrums. He also declared in reply to Dr. Thrush that there were plenty of handbooks and epitomes on the N.F. in circulation and that this fact removed the excuse for the physician's lack of familiarity with this book.

Owing to the lateness of the hour, it was found impossible to take up a series of suggestions on the National Formulary which had been read at a previous meeting by Joseph W. England. They had been introduced in the form of a resolution for adoption by the branch and then to be forwarded to the N.F. Revision Committee as expressing the sentiment of the Philadelphia Branch toward the changes to be made in the Formulary.

The suggestions over the character and scope of the subject matter, the shifting of the appendix to the body of the book, the time and frequency of issue, lapse of time between issue and becoming effective, supplements, numbering copies, make-up and subdivision of the Revision Committee, the method of selling, frequency and defraying expenses of meetings, employment of experts and the disposition of the profits from the sale of the book; they will be acted upon finally, it is expected, at the April meeting of the branch.

Officers Chosen for the Ensuing Year.

The principal feature of the business session was the election of officers, as this was the annual meeting. Prof. Henry Kraemer, for the committee on nominations, reported as follows: President, Frank E. Morgan; first vice-president, R. W. Cuthbert; second vice-president, Dr. F. E. Stewart; secretary and treasurer, Franklin M. Apple; committee on practical pharmacy, George M. Beringer, chairman; Otto W. Osterlund and E. Fullerton Cook; committee on professional relations, Dr. H. C. Wood, Jr., chairman; Christopher Koch and John K. Thum; committee on membership, William McIntyre, chairman; Henry C. Blair and Otto Kraus; committee on programme, the officers and the chairmen of the other three

With the exception of Mr. Apple, who declared it impossible for him to serve, owing to the press of other work, this ticket was elected. Ambrose Hunsberger, the present incumbent, agreed to fill the respective offices temporarily.

HYDROGEN DIOXIDE UNDER SEVERE SCRUTINY.

U.S.P. Melting Points, Colorless Liquids and Several Other Subjects Discussed by Washington Branch.

[illegible] Washington Branch of the A.Ph.A., held at the National Col- [illegible] the [illegible] of the U.S.P.

"U.S.P. Melting Points" were discussed by Dr. G. A. Menge, [illegible] spoke on melting all the [illegible] from 112 to 115 C., made [illegible] from 109° to 119 C. [illegible] for which a definite melting point is required by the Pharmacopœia.

Dr. Menge suggested that in place of determining the melting "point" the Pharmacopœia indicate the range of melting, as it is practicably impossible to accurately define any one point on which all observers would agree. This suggestion was acquiesced in by Dr. Kebler, who also agreed with Dr. Menge in the statement that accurate thermometers were not common.

No Such Thing as a "Colorless Liquid."

The U.S.P. definition for a "Colorless Liquid" was discussed by Dr. Norman Roberts, who declared that despite the fact that the U.S.P. requires some 54 of the official liquids to be "colorless," it is well known that such a thing as a "colorless liquid" does not exist in fact. He suggested restricting the use of the adjective and outlined a systematic method of comparing comparatively small quantities of liquids with certain arbitrarily selected standards for determining the desirable limitation of color.

On "U.S.P. Requirements for Hydrogen Dioxide," Dr. Lyman F. Kebler asserted that the points discussed by the previous speakers were important only from a theoretic point of view. The troubles that had been encountered by him were real, as the subject of hydrogen dioxide was one of immediate interest to every dispensing pharmacist. He discussed the subject in a practical way. He thought that the investigation had progressed sufficiently far to warrant the suggestion that hydrogen dioxide should be dated and should not be dispensed six months or at most one year after being made.

In the subsequent discussion it was suggested that light and agitation were the most potent factors in the decomposition of hydrogen dioxide.

Otto Raubenheimer submitted a communication reviewing some of the recommendations made by the branch committee on the National Formulary and expressed his personal views on a number of questions not endorsed at the February meeting.

GOOD PROPAGANDA WORK IN PHILADELPHIA.

Prof. LaWall Talks on March Specialty Before the Local Association—Get-together Meetings.

PHILADELPHIA, March 20.—The Philadelphia Association of Retail Druggists, at its March meeting, arranged to remit the dues of its members during 1910 to the extent of $4, or the amount they would have paid for membership in the N.A.R.D.

This action and the formation of preliminary plans for the holding of get-together meetings with physicians in the interest of the propaganda for the popularizing of U.S.P. and N.F. preparations, were the features of the business session.

An innovation which proved most popular was an address by Prof. Charles H. LaWall on cod liver oil and its emulsions. This feature had been arranged by Chairman F. M. Apple, of the ethical preparations committee, and as the booklet to be sent to the physicians during March is written on the same subject, it was for the purpose of acquainting the members with the pharmaceutical problems to be met with in the preparations of these emulsions that Professor LaWall's address was made a special order of business.

The report of the ethical preparations committee resulted in considerable discussion. The withdrawal of the P.A.R.D. from the N.A.R.D. was brought up again when Mr. Apple announced that during the past few days a folder had been sent out to the physicians which contained a copy of the letter sent by the Philadelphia County Medical Society, asking it to define its position in the light of the charges made in the [illegible] of the American Medical Association issue of January 8 last, and the reply to that letter, comprised in the resolution passed at the special meeting of the P.A.R.D., in which the determination to withdraw from the N.A.R.D. was stated.

When Mr. Apple declared that it was most necessary that the literature being sent to the physicians of the city by his committee be followed up with joint meetings between the doctors and the druggists, a motion to give this committee power to arrange such meetings in the various districts was passed unanimously. An appropriation of $150 was placed in the hands of this committee.

? QUESTION BOX ?

THE OBJECT of this department is to furnish our subscribers and their clerks with reliable and tried formulas, and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc. Requests for information are not answered by mail, and ANONYMOUS COMMUNICATIONS WILL RECEIVE NO ATTENTION; neither do we answer questions in this department from non-subscribers.

In this department frequent reference is necessarily made to information published in previous issues of The Era, copies of which, if not out of print, may be obtained for 25 cents each.

Infusorial Earth Metal Polish.

(J. P. G.)—Try one of the following formulas:

(1)

Infusorial earth	10 pounds.
Kerosene	5 gallons.
Oleic acid	2 gallons.
Stearic acid	2 pounds.

(2)

Infusorial earth	1 pound.
Oleic acid	1 pint.
Benzole	2 pints.

Liquid Soap for Surgeons' Use.

(H. V. S.)—Various formulas for liquid soap for surgeons' use have been suggested. Here are:

(1)

White soap	1000 parts
Soft soap	1000 parts.
Poppy oil	500 parts.
Water	3000 parts.

The white soap is scraped, mixed with the other ingredients, and the whole heated to form a paste, to which is added:

Glycerin	50 parts.
Beta naphthol	50 parts.
Alcohol, 90 per cent	500 parts.
Oil of lemon	50 parts.
Water, enough to make	15,000 parts.

Recommended to replace the ordinary white soap used for washing the hands of surgeons and said to produce a saponaceous fluid which is very frothy and penetrable.

(2)

Oleic acid	36 cc.
Caustic potash solution (1 in 1) a sufficiency, about	7 cc.
Alcohol (90 per cent)	16 cc.
Methylated ether (0.720), to make	100 cc.

Mix the oleic acid with the alcohol in a flask, and drop in the potash solution until neutral to phenolphthalein; then add 1 cc. of potash solution, set aside to cool, and finally add the ether.

(3)

Another formula taken from St. Thomas' Hospital Pharmacopœia by "Pharmaceutical Formulas" is this one: Dissolve 7 ounces of oleic acid in 3 ounces of rectified spirit, add potash solution (1 in 1) to neutralize (about 1½ ounces), using phenolphthalein as indicator; cool and add 20 minims of lavender oil and enough methylated ether to make 20 ounces. This is known as "ether soap."

Sir Morell Mackenzie's Guaiac Lozenges.

(X. Y. Z.)—The following formula for "Trochisci Guaiaci," taken from the "Pharmacopœia of the Hospital for Diseases of the Throat," London, 1881, edited by Morell Mackenzie, M.D., is no doubt the one you are seeking:

Guaiacum resin, in powder	700 grains.
Tragacanth, in powder	70 grains.
Refined sugar, in powder	280 grains.
Black currant paste, as much as is sufficient.	

Mix the dry ingredients, then add the black currant paste until the whole mass weighs 1 pound; divide into 350 lozenges of 20 grains each, and dry them in a hot-air chamber at a moderate heat. Each lozenge contains 2 grains of guaiacum, and is marked "G." Dose, one lozenge every 2 hours in acute inflammation; 3 times a day in chronic affections. The Pharmacopœia states that the lozenges are "a specific for arresting crescent inflammation of the tonsils, and useful both in acute and sub-acute inflammation of the pharynx, and in acute follicular diseases of the tonsils.

Hand Paste for Mechanics.

(J. D. B.)—A "paste soap" recommended for the removal of grease, oil, dyes, etc., from the hands is the following:

(1)

Extract of quillaya	1 ounce.
Borax	½ ounce.
Fuller's earth	½ ounce.
Soft soap	½ ounce.
Perfume, q. s.	

Triturate the borax with the extract of quillaya and afterward with the fuller's earth; then incorporate with the soft soap, sufficient water to form a paste. Lastly perfume as desired.

(2)

Silica powder	60 parts.
Dried carbonate of soda	15 parts.
Oleic acid	13 parts.

Mix and add, all at once, the following solution:

Caustic soda	2 parts.
Water	22 parts.

Stir well until a granular powder is formed. Set on one side in shallow trays in a warm room, and reduce to about a 40 hole powder.

PUMICE SOAP.

Domestic soap, dried and rasped	750 parts.
Sodium carbonate, crystallized	20 parts.
Hot water	120 parts.

Heat upon the water-bath until soft; thoroughly mix. Then add:

Pulverized pumice stone	200 parts.
Pulverized talc	30 parts.
Perfume	q. s.

"After Shave."

(E. G. S.)—Try one of the following:

(1)

Bay rum	3 pints
Glycerin	½ pint.
Extract of violet	½ ounce.
Rose water	½ pint.

Mix and filter, if necessary.

(2)

Glycerin	6 fl. ounces.
Quince seed	½ dram.
Alcohol	5 fl. ounces.
Oil of rose	16 minims.
Hot water	21 fl. ounces.

Pour eight fluidounces of the water upon the quince seed, agitate well until a mucilage is formed, and strain through muslin. Pour the remainder of the hot water into a bottle, add the oil of rose, and shake well. Finally, add the alcohol. If desired the preparation may be tinted by the use of a little aniline.

(3)

The Era Formulary gives the following as a lotion to be applied after shaving: Stir 7 parts tragacanth in 700 parts of warm water, allow to stand two or three days with occasional stirring until completely dissolved, when 5 parts of menthol dissolved in 30 parts alcohol and 21 parts of glycerin are added.

Elixir of Gentian.

(S. E. M.)—"Please state through your columns if you know of a less troublesome process for making elixir of gentian than that given by the N.F."

Various modified formulas have been suggested to take the place of that now given in the National Formulary. The formula suggested by Professor Hallberg seems to be satis-

factory. [illegible] that the preparation is very readily darkened by ferric [illegible] or [illegible]. The color is made by dissolving 10 grains of extract of [illegible] in 50 cc. of boiling water and then adding enough aromatic elixir to make 1000 cc. Professor Hilton says that some other flavor can be used, if desired, although personally he prefers tincture of orange, U.S.P.

In the first issue of the National Formulary (1888) extract of gentian was also employed for the preparation of this elixir, the formula being as follows:

Extract of gentian, U.S.P.	70 grains.
Aromatic spirit	180 minims.
Tincture of vanilla	120 minims.
Syrup	[illegible]
Aromatic elixir, enough to make	16 fl. ounces.

Dissolve the extract of gentian in about 2 fl. ounces of aromatic elixir, next add the syrup, aromatic syrup and tincture of vanilla, and lastly, enough aromatic elixir to make 16 fl. ounces. Filter, if necessary. Each fluidram represents about 2 grains of gentian or the same strength as that of the present N.F. formula.

Hair Tonic.

(O. K.)—We cannot give the formula for the proprietary article. We do give, however, several formulas for preparations which have been recommended as "hair tonics":

(1)

Fluidextract of jaborandi	0.30
Tincture of cantharides	30.00
Quinine sulphate	4.00
Glycerin	60.00
Bay rum, enough to make	500.00

Rub into the scalp each night.

(2)

Ammonium carbonate	8.00
Tincture of cantharides	15.00
Castor oil	16.00
Alcohol	250.00
Bay rum	500.00

(3)

Quinine sulphate	1.33
Powdered borax	2.00
Aqua ammonia	8.00
Compound tincture of cinchona	16.00
Bay rum, enough to make	128.00

Antiseptic Oil Liniment.

(S. D. Co.)—A typical formula of the class indicated by the above title is "carbolized oil" of the N.F., which is made by mixing 5 parts of carbolic acid, previously melted with a gentle heat, with 95 parts of cottonseed oil. The so-called "carbolized oil" of the German Pharmacopœia is made by mixing 1 part of phenol with 49 parts of olive oil. A general household liniment, made in part with oil, is the following from "Pharmaceutical Formulas":

Oil of turpentine	1½ ounces.
Camphorated oil	2 ounces.
Acetic acid	1 ounce.
Yolk of one egg	
Water	6 ounces.

To the yolk of egg add the mixed oils gradually, so that a thorough emulsion may be made; then add 4 ounces of water carefully with constant stirring, and finally the acid diluted with 2 ounces of water. Other formulas may be found in previous volumes of the ERA.

Elixir of Chromium Sulphate.

(A. M.)—So far as we know no formula has been published under the above title. It was proposed to a committee of the Council of the American Medical Association, and said that most authorities do not mention the chromium salts or else state that they are not used in medicine. We quote: "Experimental evidence regarding the pharmacologic action appears to be lacking. [illegible] Hall, Syracuse, N.Y., to a patient taking the preparation, stated that the drug was discontinued by order of the physician in charge of the case because it caused nausea and vomiting and does no good in doses of small grains three times a day. He had discovered no therapeutic effects. He [illegible] affections, and makes the remarkable statement that locomotor ataxia is curable by the drug. In view of the actively poisonous character of the chromates it is advisable to use even chromium sulphate with caution."

Balsam of Peru in an Ointment.

(E. R. C.)—"Will you please state in the next issue of the ERA how the following formula should be compounded to produce a smooth ointment?"

Ointment of ammoniated mercury	½ ounce.
Oil of cade	2½ drams.
Balsam of peru	3 drams.
Powdered acetanilide	2 drams.
Ointment of zinc oxide, enough to make	2 ounces.

The difficulty here seems to be due to the balsam of peru and the oil of cade, both of which separate from the combined ointment bases, which are present in insufficient amount to produce a good ointment. This difficulty may be overcome by increasing the volume of the ointment by the incorporation of 5 or 6 drams of wool-fat, although no such addition should be made without the consent of the prescriber.

Compound Tincture of Gentian Incompatibles.

(J. P.)—Compound tincture of gentian is incompatible with iron preparations, tannin being present in the drugs combined with the gentian in the preparation of the tincture. Gentian is said to contain no tannin. For a very exhaustive report on the chemistry of gentian you should consult the paper read by Prof. E. L. Patch at the Kansas City, Mo., meeting of the A.Ph.A. in 1881 and which appears in the annual volume of Proceedings for that year. Of course, all other substances incompatible with alcohol, tannin, etc., would be, within certain limitations, incompatible with compound tincture of gentian. A list of these will be found in almost any of the works on dispensing pharmacy.

Potassium Citrate and Spirit of Nitrous Ether.

(R. L. T.)—Sends the following prescription:

Potassium citrate	½ ounce.
Spirit of nitrous ether	1½ ounces.
Water to make	8 ounces.

He asks how it should be compounded.

It makes but little difference what order of procedure may be followed for the result in every case is the same. Upon compounding the mixture almost immediately separates into two layers, the potassium citrate forming a solution with the water which is not miscible with the alcohol spirit. Potassium citrate is hygroscopic and nearly insoluble in alcohol.

Compound Elixir of Saw Palmetto.

(A. M.)—The formula for compound elixir of saw palmetto printed in the last issue of the ERA directs the use of various fluidextracts, although there is nothing to prohibit you from using the crude drugs instead of the extracts. A typical formula of this class was published in the April 26, 1906, ERA, page 391, which see.

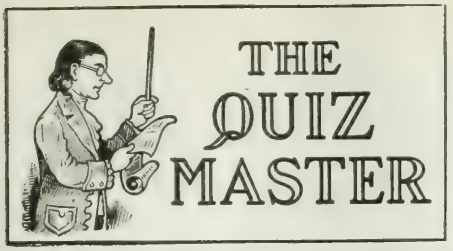
Origin and Significance of Show Globes.

(O. J. V. R.)—See May, 19, 1904, ERA, page 483. The question as to the origin of the use of show globes as druggists' signs cannot be definitely answered, but a resumé of the various facts bearing on the subject is given in the reference cited.

St. Louis Alumni's Ball a Success.

The Alumni Association of the St. Louis College of Pharmacy gave its annual entertainment and ball at Lemp Park Hall, March 5, and the committees were jubilant over the big crowd and the success of the affair. The men who made it go this year were:

[illegible]



A MONTHLY SERIES OF PRACTICAL AND EDUCATIONAL QUESTIONS FOR DRUG CLERKS AND STUDENTS, WITH THREE CASH PRIZES EACH MONTH FOR THE MOST CORRECT ANSWERS.

THREE PRIZES of $5.00, $3.00 and $2.00 respectively, will be paid each month to the three persons submitting the largest number of correct answers to each monthly series of questions. In the event of a tie for any one of the prizes offered, such prize will be equally divided among the successful contestants. This competition is open to all who may desire to compete.

ANSWER BY NUMBERS and write your answers upon letter size paper (8x10 in.), one side only, with your Name and Address at the top of each sheet. Also number your sheets.

ALL ANSWERS for each month's series of questions must be sent at one time, and must be with us not later than the 15th of the following month.

CORRECT ANSWERS to each series of questions and the names of the three contestants who have been awarded the prizes will be published in the Era, after the close of the respective contests.

WE INVITE our readers to send us their questions for publication in this department, particularly questions related to the practical work of drug clerks.

ALL COMMUNICATIONS relating to this department should be kept separate from other correspondence, and addressed to

The Quiz Master
Care The Pharmaceutical Era 90 William St., New York

QUESTIONS, APRIL SERIES, 1910.

1—What are four liquids used in pharmacy which on account of their volatile and penetrating properties should not be inhaled directly from the bottles?

2—Why should "hyd." be not used as an abbreviation to designate the name or part of the name of an ingredient employed in a prescription?

3—What is meant by the term "pipe" as applied to a pill mass?

4—What is an official drug which is a capsular fruit; a pith?

5—In the process of percolation, why is it advisable before putting the drug in the percolator to moisten with menstruum the pledget of cotton which is inserted into the neck of the percolator?

6—In physiology, what is meant by sensory nerves?

7—In fluidextract of senega, what change is prevented by potassium hydroxide?

8—How many grams of potassium permanganate in 100 grams of an aqueous saturated solution of potassium permanganate? Show work.

9—If iron wire is dissolved in sulphuric acid, what gas is generated and what chemical salt is formed?

10—Should ground colocynth contain more than a trace of the seeds?

11—What would be your method for sticking a label upon a tin box?

12—What are sialagogues?

13—What is the official average dose of oil of bitter almond; compound solution of sodium phosphate; elixir of ammonium bromide; mixture of sassafras and opium?

14—What U.S.P. preparations contain asafoetida?

15—Why is a small amount of water necessary in the menstruum used in making tincture of capsicum?

16—What root is sometimes mistaken for, or used as an adulterant for belladonna root?

17—The acidity of normal urine is due chiefly to the presence of what substance?

Nebraska Still in the Lead.

CHRIS HANSEN,
Minden, Nebraska.

In the December Contest of the Quiz Master's Department, Nebraska furnished the winner of the first prize, and now in the January Contest another Nebraskan, Chris Hansen, receives the highest honors.

Mr. Hansen graduated from the high school of Minden, Neb., in the spring of 1907, and, after teaching for one year, began the study of pharmacy in Creighton University at Omaha.

Last August he graduated from the institution and returned to Minden where he now holds a position in a drug store. Mr. Hansen had no drug store experience before entering college, but during the last two years has so closely applied himself to his studies that he has acquired an extended knowledge of the various branches of pharmacy, and that in a manner which speaks well for his ability as a student.

18—What are the three principal kinds of foods stored in seeds?

19—What would you do if you accidentally spilled concentrated sulphuric acid upon your hands?

20—What is the nature of the precipitate which collects on the inner sides of a lime water bottle?

21—How would you remove the precipitate which forms upon the inside of lime water containers?

22—What objection is sometimes made to putting drugs into capsules in the form of a soft mass?

23—What are four common names for spearmint?

24—In most cases, what simple tests will distinguish resins from gums?

25—What are two important classes of compounds which are carbohydrates?

26—How is potassium chlorate manufactured?

27—What is the objection to making infusions from fluidextracts?

28—Seven and one-half grams of bismuth subnitrate are divided into fifteen powders; what volume of water expressed in cubic centimeters will equal the weight of one of these powders?

29—What are the ingredients used in preparing compound solution of cresol?

30—What is meant by an alternate branching stem?

31—Why should buckthorn bark be collected at least one year before it is used?

32—What is the difference between a sulphate, a sulphite and a sulphide?

33—How would you detect the presence of free iodine in thymol iodide?

34—In selecting a cork for a bottle, why is it preferable to obtain one which is slightly larger than the mouth of the bottle?

35—Why is it advisable to seal a package containing a prescription before giving it to the customer?

36—What change in appearance does aromatic spirit of ammonia undergo after it has been prepared for some time?

37—How does sapo differ chemically from sapo mollis?

38—What is a retort?

39—What is meant by acute poisoning?

40—What is the objection to dispensing small quantities of hydrogen dioxide water from large containers?

41—How many fluidounces of infusion of digitalis can be made from one ounce (avoir.) of digitalis?

42—Why should care be exercised in opening a bottle of stronger ammonia water?

43—What change does phenyl salicylate undergo in the small intestines?

44—At what hours of the day should medicines be administered which are directed to be given "three times a day"?

45—What substance added to iodine will increase its solubility in water?

46—What is the principal pharmaceutical use for liquid petrolatum?

47—In preparing a pill mass in a mortar, should the mass be triturated or kneaded with the pestle?

48—What is the difficulty frequently encountered in preparing the official syrups which are made by simply mixing fluidextracts with syrups?

49—What is a good method for conducting the distillation of volatile liquids?

50—In physiological action the salts of gold closely resemble those of what other metal?

Competitors, Please Notice.

The above list of question is the complete series for April, and all who desire to compete for the prizes should see that their answers are received by the Quiz Master not later than May 15. Do not send your answers in parts, but mail them all at one time, and be sure to follow the instructions given at the head of this department.

The judges of the February contest of the Quiz Master's Department have awarded the prizes as follows:

First prize, $5, Cora Miller, Pana, Ill.

Second prize, $3, C. M. Morse, Lawrence, Mass.

Third prize, $2, Fred V. Alter, San Antonio, Texas.

Contestants wishing to know the grades which they have made in the February contest may obtain this information on request by sending two cents for postage to the Quiz Master.

THE QUIZ MASTER.

Questions and Answers, February Series, 1910.

1—What three fatty acids are commonly found in fixed oils?

Oleic, palmitic and stearic acids.

2—Why are jars made of china or queen's-ware not good containers for ointments?

The glazing of a china or queen's-ware jar frequently becomes filled with fissures through which the ointment will penetrate into the sides and bottom of the jar from which it is removed with great difficulty or not at all. If not removed, the fatty base may become rancid and contaminate other ointments which may be put into such containers.

3—Why do resinous tinctures precipitate upon the addition of water?

Resinous tinctures are precipitated upon the addition of water because resins are insoluble in water.

4—What are three U.S.P. drugs which are adapted for use as poultices?

Elm bark, flaxseed and black mustard.

5—Why should the measuring of potent medicines with spoons, glasses or cups be discouraged?

Such measures frequently vary in size, and therefore are not adapted for accurately measuring potent medicines.

6—What four elements are most usually found in organic matter?

Carbon, hydrogen, oxygen and nitrogen.

7—What advantages are claimed for formaldehyde as a disinfectant over chlorine or sulphur?

The advantages claimed for formaldehyde as a disinfectant over chlorine or sulphur are that it is more efficient and rapid in its action, is less injurious in its effects on household goods and is less toxic to the higher forms of animal life.

8—If benzoin costs 70 cents per pound (avoir.), what is the cost of the benzoin used in making one gallon of tincture of benzoin? Show work.

$1.1089+. Two hundred grams of benzoin are required to 1000 cubic centimeters of the official tincture of benzoin, and therefore 0.2 gm. would be necessary for 1 cc. of the tincture (200 ÷ 1000 = 0.2). Then one gallon or 3785.432 cc. would require 757.0864+ gm. of benzoin (0.2 × 3785.432 = 757.0864), which is equivalent to 1.66889+ lb. avoir. (757.0864 grams ÷ 453.592 [grams in 1 lb. avoir.] = 1.66889+), and at 70 cents a pound, would cost $1.1689 (1.70 × 1.66889 = 1.1689).

9—What is the physiological action of sarsaparilla?

The therapy of sarsaparilla is not well understood, and some good authorities state that it has no physiological action, while others equally competent ascribe to it alterative properties.

10—When [illegible] are prescribed in the same prescription and more of the latter is ordered than will dissolve in the quantity of water specified, why should heat not be used to increase the insolubility of the salt in water?

Heat [illegible] solubility of salts in water, but any additional amount of salt, so dissolved, will be precipitated, when such solutions again assume normal temperatures, carrying with it some salt which would have remained in solution, if heat had not been employed.

11—What precautions should be observed in protecting perfumes from deterioration?

Perfumes should be kept in tightly stoppered containers, protected from light and in a cool place. Bottles which have contained perfumes should be thoroughly washed and aired before they are again used for a similar purpose.

12—Why should silver nitrate be protected from light?

Because light easily decomposes silver nitrate, causing it to assume a grayish or black color, and forming silver oxide or metallic silver.

13—What occurs when soap is added to hard water?

Insoluble compounds are formed, due to a reaction between the fatty acids of the soap and the bases of the salts present in the water.

14—What acid is frequently employed in the manufacture of imitation vinegar?

Acetic acid.

15—What does the anatomist mean by the "permanent teeth"?

The permanent teeth are those which replace the first or temporary teeth. Under normal conditions there are sixteen of such teeth in each jaw, each side having two incisors, one canine, two bicuspids and three molars.

16—What is the chief objection to the use of iodoform?

The disagreeable odor of this drug.

17—What official drug does the Pharmacopœia specify shall be preserved in hermetically sealed glass tubes?

Ethyl chloride.

18—Sweet root is a common name for what two official drugs?

Calamus and glycyrrhiza.

19—What is meant by a corrosive poison?

A corrosive poison is one which exerts a direct chemical action upon contact with the tissues of the body.

20—What U.S.P. infusions are made by the cold process?

Infusion of wild cherry.

21—Aconite is sometimes mistaken for what common root?

Horseradish.

22—What is the difference between two samples of alum, one of which is marked "alum, dried and powdered," and the other "exsiccated alum"?

There is no difference, if properly prepared, but recently samples marked "alum, dried and powdered," have been found on the market, which contain more than the amount of moisture permissible in exsiccated alum.

23—What is the strength of (a) camphor liniment; (b) spirit of chloroform; (c) emulsion of cod liver oil; (d) syrup of hydriodic acid?

Camphor liniment contains 20 per cent of camphor; spirit of chloroform, 6 per cent by volume of chloroform; emulsion of cod liver oil, 50 per cent by volume of cod liver oil; syrup of hydriodic acid, 1 per cent of hydriodic acid.

24—What occurs when copaiba is mixed with about 1-16th of its weight of magnesium oxide?

The mixture gradually solidifies.

25—What are the two classes of manufactured emulsions?

First those in which the emulsifying agent is already present in the drug, and second, those in which it is necessary to add an emulsifying agent.

26—What is meant by pulverization by intervention?

Pulverization by intervention is the process whereby substances not easily powdered alone may be reduced to a powder by the addition of some foreign substance which is subsequently removed.

27—What are four U.S.P. barks which are obtained from native trees of the United States?

Elm, sassafras, wild cherry and xanthoxylum.

28—What agent would you employ to cover up the odor of phenol in an antiseptic solution?

A good agent is eucalyptol water which has been exposed to the air for about fifteen hours.

29—What is the official average dose of infusion of digitalis, syrup of ferrous iodide, sublimed sulphur, and colocynth?

Infusion of digitalis, 2 fluidrams; syrup of ferrous iodide, 15 minims; sublimed sulphur, 60 grains; colocynth, 1 grain.

30—What is the botanical name of the plant from which prunes are obtained? What part of the plant is official?

Prunus domestica. The partly dried ripe fruit.

Some of the Recent Successful Contestants in the Quiz Master's Competitions.

WELDON E. TIBBETTS, Calais (Milltown Sta.), Me.

E. M. HOLT, Pharm., Quarantine, La.

ELSWORTH W. LYNN, Philadelphia.

EDWIN R. MOHLER, P.D., Philadelphia.

31—What occurs when a steel spatula is dipped into a strong solution of copper sulphate?

Copper is precipitated upon the spatula, forming a plating, an equivalent amount of iron passing into solution. $CuSO_4 + Fe = FeSO_4 + Cu$.

32—What means would you employ to retard oils of orange and lemon from acquiring a terebinthinate odor and flavor?

They should be kept in small amber colored bottles, tightly stoppered, and should be stored in a cool place, protected from light. Alcohol and glycerin are sometimes added as preservatives, and are removed before the oils are dispensed. If not removed, under the terms of the Federal Food and Drugs Act, such additions would constitute adulterations, unless the oils are properly labeled.

33—What are two drugs commonly called wormseed, neither of which is a seed?

Chenopodium, which is a fruit, and santonica, which consists of dried unexpanded flower-heads.

34—What are three methods for mixing powders?

By trituration in a mortar, by stirring with a spatula on paper, and by sifting.

35—How many avoir. ounces of morphine would be contained in 1000 gms. of opium which just meets the U.S.P. requirements? Show work.

3.1746+ oz. (avoir.). Opium which meets the requirements of the Pharmacopœia must contain at least 9 per cent of morphine, and therefore in 1000 gms. of this opium there would be 90 gms. of morphine ($1000 \times .09 = 90$), which is equivalent to 3.1746+ oz. avoir. [$90 \div 28.35$ (grams in 1 oz. avoir.) $= 3.1746+$].

36—What effect does ammonia water have upon an aqueous solution of ferric citrate?

Ammonia water darkens an aqueous solution of ferric citrate, but does not cause precipitation.

37—What are the stomata of a leaf?

Stomata are small openings or pores in the epidermis of leaves, which intervene between the contiguous concave surfaces of pairs of crescent shaped cells called guard cells. Through these openings carbon dioxide enters the leaf and through them, also, the excess of moisture and oxygen is allowed to escape.

38—What are emollients?

Emollients are substances which soothe and protect tissues.

39—What are syrups as used to designate a class of official preparations?

Syrups are concentrated aqueous solutions of sugar, with or without the addition of flavoring or medicating ingredients.

40—What have been two important difficulties which have interfered with the successful commercial cultivation of opium in the United States?

The high price of labor and climatic conditions.

41—What U.S.P. pills contain soap?

Pills of aloes, pills of asafœtida, and pills of opium.

42—What incompatibility exists between syrup of garlic and ammonium carbonate?

The acetic acid contained in the syrup of garlic reacts with the ammonium carbonate and produces a copious liberation of carbon dioxide.

43—What are four elements, salts of which, are normal constituents of urine?

Potassium, sodium, calcium and magnesium.

44—What is meant by "breaking" of an emulsion?

The oils, resins or other insoluble matter contained in an emulsion are sometimes not properly suspended by the emulsifying agent, and therefore separate from the water; this phenomenon is known as the "breaking" of an emulsion.

45—What is the appearance of resin of jalap?

Resin of jalap occurs in two forms, either as yellow to brown masses or fragments which break with a resinous glossy fracture or as a yellow-gray to yellowish brown powder.

46—What is the weight of a piece of wood which, dropped into a graduated flask containing 50 cc. of water, causes the water to rise to the 55 cc. mark? Briefly explain answer.

Five grams. According to a rule in physics, a floating body displaces a volume of liquid which has a weight equivalent to that of the floating body. Since the water rose from the 50 cc. to the 55 cc. mark, the amount of water displaced is 5 cc. The weight of 5 cc. of water is 5 grams, therefore the weight of the piece of wood is 5 grams.

47—When poisons in the solid form are dispensed, other than on prescriptions, what is your method for marking and wrapping the package you hand to the customer?

Some State laws specify the methods for dispensing poisons, but when such information is not given, the poison should be carefully wrapped and labeled, and the package so obtained again wrapped and labeled. In addition to bearing the name of the poison, the label used should have the word "poison" printed upon it in prominent letters, and it is also well to state one or two antidotes. In many States the statutes require that the label shall be printed in red ink.

48—What are two metals which occur in nature chiefly in the form of sulphides?

Lead and mercury.

49—What are the ingredients in essence of pepsin, N.F.?

Pepsin, rennin, lactic acid, tincture of sweet orange peel, glycerin, alcohol, syrup, white wine and water. Purified talc is used as an aid to filtration.

50—What is meant in botany by plant organs?

They are cells or groups of cells which carry on the functions necessary to the life of the plant.

The Era Course in Pharmacy.

The ERA COURSE IN PHARMACY is a home study course in pharmacy which is divided into ten parts with recitations and examinations by mail. Thorough instruction is given in General Chemistry, Theoretical and Practical Pharmacy, Botany and Materia Medica. New classes are organized each month, and now is an excellent time for students to enroll. The cost of the Course is ten dollars, and each student, upon matriculation, is given gratis a year's subscription to the Monthly ERA. A Prospectus will be sent by the publishers of THE PHARMACEUTICAL ERA to any one who applies.

The druggist who knows nothing except what he has learned by experience has generally forgotten most of his experiences.

COURT UPHOLDS NEW YORK STATE BOARD OF PHARMACY AS A CONSTITUTIONAL BODY.

Every Question Raised by Assemblyman Robert Conklin Decided Adversely—Precedents for Alleged Illegal Election of Members and Misappropriation of Surplus Moneys Not Established.

A decidedly interesting opinion was rendered recently by Judge Sprague here in the New York City Municipal Court in an action brought by the New York State Board of Pharmacy, through its attorneys, Steiner & Petersen, against Charles K. Benjamin to recover a penalty of $25 incurred by the defendant in selling tincture of nux vomica of standard strength. All the questions raised by Assemblyman Robert Conklin, attorney for Mr. Benjamin, were decided adversely to him. The opinion is as follows:

The court found upon the trial that the defendant had committed the violation complained of, but reserved its decision on the question raised by defendant's counsel, attacking the constitutionality of the Act creating the State Board of Pharmacy, the pertinent parts of which is now contained in Article XI of the Public Health Law.

The Pharmacy Law has been on our statute books for many years, and innumerable cases have been brought by the plaintiff by virtue of the power conferred upon it by law, and only once, so far as I was able to find, has the constitutionality of the law been drawn into question. This was done in the recent case of the State Board of Pharmacy vs. Matthews, 197 N. Y. 353.

The court there held that the restrictions of the sale of not only poisons but of domestic remedies or perfectly harmless medicinal preparations were constitutional, as a proper exercise of the police power vested in the State.

The court also declared that the provisions of Section 237 of the Act, permitting merchants and traders in unincorporated villages, or villages of the fourth class, provided their place of business be more than three miles from a drug store, to sell poisons and domestic remedies, were neither arbitrary nor unreasonable.

Although the Court of Appeals did not pass upon any other provisions of the Act, in respect to their constitutionality, it would be improper, especially in a court of inferior jurisdiction, to declare a statute void and of no effect where such statute has remained unquestioned by the courts for many years, unless cogent reasons are adduced, compelling the court to the conviction of the unconstitutionality of the law.

I am, however, of the opinion that, notwithstanding certain extraordinary and astonishing features of the Act in question, the provisions thereof are not in violation of the constitution of the State. Having reached this conclusion, I do not deem it necessary to enter into any extended remarks, but will briefly advert to some of the objections raised by the defendant.

The principal point of attack is directed toward an alleged violation of Article X of the Constitution by the provisions of Section 230 of the Public Health Law. The pertinent portion of Article X, Section 2, of the Constitution, reads:

> "All other officers whose election or appointment is not provided for by this Constitution, and all officers whose offices may be hereafter created by law, shall be elected by the people, or appointed, as the Legislature may direct."

In constituting the State Board of Pharmacy, by Section 230 of the Public Health Law, the Legislature makes use of the term "election," and the various forms thereof, but the qualifications of the persons entitled to vote for the members of the State Board of Pharmacy are not in accordance with Article II of the Constitution. I think it is quite clear that it was not intended that the State Board of Pharmacy should be elected in the ordinary sense of the word, but that the mode of their tenure of office prescribed falls within the power of appointment vested in the Legislature. A similar question was presented in the case of Sturges vs. Spofford, 45 N. Y. 446. There an attack was made upon the constitutionality of Chapter 467 of the Laws of 1853, the first section of which reads:

> "There shall be in the City of New York a Board entitled 'The Board of Commissioners of Pilots,' consisting of five persons, to be elected as soon as convenient after the passage of this Act, and to hold their offices, respectively, for two years from the time of their election, and until others shall be elected."

The succeeding sections provide for the election of three of the commissioners by the Chamber of Commerce of the City of New York and of two by the Marine Insurance Companies of said city. The court held:

> "Although the word 'election' is used in the statute it should be supposed that the Legislature intended it in any such sense as that word is used in the Constitution, or as the result of a choice by the ordinary mode of voting by the people. The mode prescribed by the statute for selecting these officers, is in legal effect an appointment, and comes within the meaning of that word as used in the Constitution, and the misnomer of the Legislature cannot change the real character of the Act provided for."

In People ex rel Hilliard vs. Sturges, 27 App. Div. 387, an Act which provided that the Board of Trustees of a village shall elect the president thereof, was under consideration. Landon, J., writing for the court, said:

> "The officer in question is one whose election or appointment is not provided for by this (the Constitution,' and, therefore, he may be elected by the electors of the village or appointed by such authorities thereof as the Legislature shall designate for the purpose (Const. Art. X, Sec. 2). The appellant urges that Section 4 of the Act of 1895, in providing that the Board of Trustees 'shall proceed to elect' such officers, violates this section of the Constitution, conferring the power of election upon the electors of the village; but it is evident that in this case, as in Sturges vs. Spofford (45 N. Y. 446), the word 'elect' was used by the Legislature in the sense of 'appoint.'"

That case was affirmed in 156 N. Y. 580, and at page 585 the Court of Appeals adopted Judge Landon's views concerning the matter now under consideration. The case of Fox vs. Mohawk & Hudson River Humane Society, 165 N. Y. 517, has no application, for the reason that the Humane Society was a purely private corporation.

The learned counsel for the defendant strenuously attacks the validity of the Act, for the reason that Subdivision 5 of Section 239 prescribes that after the payment of expenses "any surplus remaining thereafter in the Eastern section, three-fifths shall be used for the benefit of the College of the City of New York, situated in the Borough of Manhattan, and two-fifths, for the benefit of the Brooklyn College of Pharmacy, situated in the Borough of Brooklyn." It would appear as if the turning over of moneys to these private associations comes perilously near a violation of Article VII of the Constitution; but following the reasoning of the Court of Appeals in People vs. Brooklyn Cooperage Co., 187 N. Y. 142, at page 157 et seq, I am of the opinion that the disposition of the surplus moneys above provided is not in violation of the Constitution.

The contention that this action is improperly brought in the name of the plaintiff instead of the names of the individual members composing the board, is not well taken, for the reason that Section 231, Subdivision 1, specifically provides that the plaintiff shall have power to "bring actions in the name of the State Board of Pharmacy." I fail to see how the objection, even if well taken, that the plaintiff herein appears by private counsel instead of by the Attorney-General of the State of New York, can be raised as a defense to this action. Assuming that the plaintiff had no right to employ private counsel, application should be made by the defendant or any citizen to the Attorney-General, or appropriate proceedings should be brought to prevent the board from employing private counsel.

The contention that the Consolidated Laws failed to provide for a continuance of the State Board of Pharmacy is disposed of by the decision of the Appellate Term in the recent case of State Board of Pharmacy vs. Mishking, reported in 120 N. Y. Supp. 753. The learned counsel for the defendant raises several other objections to the validity of the Act; but they do not seem to be of sufficient merit to require further comment.

Judgment is directed for the plaintiff for the sum of twenty-five dollars.

Courts Sustain the New York Prerequisite Law.

New York State Board of Pharmacy, upon advice of its attorneys, Steiner & Petersen, recently refused to examine for registration Dionisio Magaldi, Pasquale Principe, Salvatore Giorgianni, Francesco Trapani, Guiseppe Manssealco and Fredrico Siarcusa. The applicants, in accordance with the State Pharmacy Law as it read in 1904, have had four years of practical experience, one of which was secured in this State, but contrary to the present law do not possess the necessary regents' certificates. They applied to the Supreme Court for a writ of mandamus and upon this being denied, appealed to the Appellate Division, which has affirmed the decision of the lower judge.

ERA COURSE IN PHARMACY.

Graduates, February, 1910.

Matriculation Number.		*Examination Grade, P. Ct.*
5945.	Albert Fenne, Gilman, Iowa	96
6018.	Ernest E. Beauvais, Holyoke, Mass.	98
6024.	John Noah Rainville, Montreal, Canada	96
6090.	Jeremiah Trnka, New York City	98
6144.	Clarence M. Taylor, Grand Rock, Neb.	92
6176.	Clair E. Bell, Stamford, Conn.	98

Graduates, March 1 to 20, 1910.

6108.	Charles Wm. McNay, Boardstown, Ill.	98
6123.	H. B. Visscher, Rochelle, Ga.	98
6157.	Edwin Neale, Joplin, Mo.	98
6197.	Holice Estell, Gorin, Mo.	96
6223.	Wm. H. Aycock, M. D., Macon, Ga.	95
6254.	Earle C. White, Annapolis, Md.	92
6362.	Charles E. O'Donnell, Laconia, N. H.	98

The above graduates will receive diplomas within a short time. A large and very handsomely engraved diploma, printed on artificial parchment, with the graduate's name engrossed, especially suited for framing, will be furnished to all those who request it for $2. Those who desire the latter should forward the necessary fee to THE PHARMACEUTICAL ERA.

BOARD EXAMINATIONS

Ohio.

COLUMBUS, March 20.—The Ohio State Board of Pharmacy has made public the following list of successful applicants at the examination held January 11 to 13:

Pharmacists—Chester W. McClintock, Columbus; Robert V. Johnson, Columbus; Ray J. Barthlow, Columbus; Arthur W. Kispert, Cincinnati; Fred P. Weber, Cincinnati; Walter E. Segan, Toledo; Francis B. Drolet, Toledo; Leon R. Cooley, Toledo; C. R. Seyfert, Cleveland; Raymond R. Horn, Wapakoneta; Anthony Schrimp, Wapakoneta; Le Roy Cox, Dayton; John S. Rutledge; Akron; Ammon O. Unangst, Akron; John B. Sawtelle, Ottawa; Roland T. Newcomer, Gibsonburg; William R. Drury, Glouster; Glen A. Biglow, Continental; Harry L. Hoffman, Leipsic; Carl Jones, Springfield; Henry G. Metzger, Shelby; G. Q. Morgan, Hicksville; Perry Baker, Celina; Albert H. Hart, Vermillion; Gomer J. Morgan, Canal Dover; Herman A. Welker, Fremont; Ross H. Snyder, London; John A. Powell, Bowling Green; Oka P. Town, Allegan, Mich.

Assistant Pharmacists—Charles W. Anderson, Columbus; Mrs. E. W. Gaertner, Toledo; Virgil B. Lewis, Toledo; Leonard E. Liles, Bellefontaine; Homer C. Vorhies, Cambridge; C. S. Simpson, Arcanum; Etta F. Dew, Summerfield; George H. Kuhn, Shelby.

May accept certificates as assistants on their pharmacist's examination if they desire: Harold P. Barnes, Columbus; Nelson Martin, Cincinnati; Robert A. Woestmann, Cincinnati; Salvatore Belli, Cleveland; R. S. Lundgren, McKeesport, Pa.; C. C. Bechtel, Orrville; Grover D. Hart, Newark; Henry H. Reineke, Defiance; Otto M. Welsh, Parkman; John E. Stout, Bethel; Fred W. Galt, Verone, Pa.

A. W. Kiler, of Columbus, has been elected president of the board for the ensuing year. F. H. King, of Delphos, is vice-president, and Dr. Frank H. Frost secretary.

The board recommends that the Legislature amend the law so that only applicants for certificates who have been graduated from recognized pharmacy schools be eligible for examination. The Legislature is to be asked for $5000 for the prosecution of cocaine cases.

Missouri.

ST. LOUIS, March 20.—At the January meeting of the Missouri State Board of Pharmacy the matter of exchange of certificates was turned over to Mr. Mittlebach for a report which he was assured will become the rule of the board. It is expected that the resignation of H. W. Servant, of Sedalia, will soon be acted upon by Governor Hadley. Next examination at Kansas City, April 11. Thirty-two applicants of a class of 64 passed in January. The successful ones were:

Pharmacists—Duncan H. Christie, Louis J. Chamberlain, Wm. H. Hill, Edward Rosenbaner, all of St. Louis; Orin J. Bressie, Felix W. Church, Wayne C. Friday, Henry Fulkerson, Albert H. Herold, Godfrey Klentz, Clue Carr Payne, S. T. Fedroja, James Clark Walker, W. G. Zimmerman, Jacob Miller Strickler, Lawrence Walter Taylor, all of Kansas City; Henry W. Boward, Brookfield; C. C. Bush, New Hampson; James B. Clay Butler; Edward T. Dunkerson, Odessa; Heydon H. Dunkerson, Glasgow; Ned Golay, Warrensburg; Elston Gentry, Liberty; D. H. Galldy, Higginsville; H. E. Hamilton, St. Joseph; R. E. Jeffries, Salem; Fred Kerr, Eldorado Springs; Horace L. Mann, Brunswick; G. G. Murray, Gallatin; George McAdam, Maryville; M. R. Shotwell, Oak Grove; A. C. Werner, Edina.

Assistant Pharmacists—Samuel R. Osborn, Seligman; Emil H. Riske, Kansas City.

Massachusetts.

BOSTON, March 20.—Of the 72 applicants for registration in pharmacy during January and February, certificates were granted to the following 15 persons:

Pharmacists—Walter G. Collagan, West Newton; Frank C. Curley, Holyoke; Solomon J. Feldman, Worcester; Maurice Brody, Boston; Edwin B. Curtis, Boston; Hubert S. Kelleher, New Bedford; Andrew J. McIntyre, Jr., Fall River; Jeremiah M. Nash, Norwood; Walter Kruzyna, Adams; Henry Barone, Boston; Frederick T. Eubanks, Lowell; Edward J. Roxbury, Boston; John B. Sawtelle, Blackston.

Assistant Pharmacists—Alfred L. Ballard, Boston; Charles Brown, Boston; John J. Gilbride, Lowell; Martin M. Leibel, Boston; William G. Mack, Salem; Arthur L. Marcoux, New Bedford; Patrick Reardon, Jr., North Andover; Philander Robbins, Somerville; Michael P. Clancy, Holliston; Joseph F. McEvoy, Cambridge; Robert C. Peterson, Jamaica Plain; Robert O. Rockwell, Jr., Everett; Joseph O. Routhier, Lawrence; William C. Blois, Marlboro; Robert J. Carley, Holyoke; Emile L. Deslauriers, Newburyport; Frederick Lamb, Cambridge; William B. Stine, Williamsport, Pa.; James J. Crowley, Holliston; Fred T. Doerpholz, Dorchester; John R. Kinnler, East Boston; Harold E. Mills, Attleboro; James B. Young, Natick.

Wisconsin.

MADISON, March 20.—At the January examination of the Wisconsin State Board of Pharmacy of 51 applicants the following 13 were successful:

Registered Pharmacists—Elmer L. Hotvedt, Eau Claire; Ervin T. Bittner, Watertown; Otto Naffz, Madison; Louis F. Albrecht, Sheboygan; Albert J. Christi, Appleton, and Armand Rohr, Milwaukee.

Assistant Pharmacists—Nordahl Samdahl, Black River Falls; William C. Helb, Milwaukee; L. E. Martin, Lone Rock; Fred Knobloch, Milwaukee; John V. Collins, Lancaster; Joseph J. Winkel, Menominee, Mich., and Herman Roettgers, Milwaukee.

Pennsylvania.

WILLIAMSPORT, March 20.—At the February examinations of applicants for registration by the State Pharmaceutical Examining Board given in Harrisburg the following passed the examinations:

Registered Pharmacists—Miss Mollie Nichols and Robert F. Harper, Philadelphia; Frederick Riegner, Oliver F. Adams and

[illegible] Meyer, Reading; S. A. Deibler, Greenville; Charles C. [illegible], New Castle; Miss Lucy M. Magee, Sunbury; Edward A. May, Connellsville; Z. E. Rollin, Tyrone; Walter E. Stone, Bellefonte; Lewis Lee Mussetter, [illegible]; [illegible] Chamberlain, Harry A. Dewalt, Pittsburg, and C. E. Wagner, Ligonier.

Assistant Pharmacists—Harry C. Minton, Albert H. Fahey, [illegible] A. Schumacher, [illegible] H. Stock, W. H. Lutz, Asa M. Haines, Doug M. K. Noe, Nathan N. Sauser, A. A. [illegible], Lloyd B. Mease, Chas. L. Mohr, Samuel Lesher and M. W. Lessig, all of Hollidaysburg; A. A. Sayler, Altoona; C. Hershberger, Meyers[illegible], [illegible] Wilbur H. Leslie, Perkasie; C. R. Heyer, Hilltown; Wm. Wagner, Perkasie; [illegible], Lancaster; R. E. Bender, Mt. Wolf; Wm. Wagner, J. D. Thompson, Thomas Cooper, Solomon Thompson, Walter S. Kay, Gardner, Charles E. Lippert, Carpenter, Morris A. Stauffer, Berwyn; Thomas P. Hughes, and John H. Sperry, Downtown; Edward L. Dewitt, Brownsville; F. W. Dewitt, East Downtown; S. C. Stauffer, Lincoln; Ralph Rapp, Fairfax; Lemuel F. Carter, Pottsville; John McDowell and W. R. Kay, Sharpsburg; Harry E. Wagner, Albert W. Mehring and Lee A. Nungesser, Hollidaysburg; Geo. A. Wilhelm, Scott; A. S. Stauffer, Shenandoah; John H. Meehan and Joseph D. Morgan, Mahanoy City; Isaac E. Kauffman, N. E. Krueger and James S. Wentzel, Lancaster, and Lloyd M. Fisher, Reading.

Oklahoma.

STILLWATER, March 20.—At the January meeting of the Oklahoma State Board of Pharmacy a class of 14 was present for [illegible] examination. The following were successful:

Registered Pharmacists—C. E. Blythe, Amarillo, Texas; L. E. Bitner, Oilton; Jas. E. Bostwick, Frederick; J. E. Bullard, Lone Wood; H. W. Crews, Longtown; Secretary Dorsey Boatman; O. G. Hampton, Alva; Wilford Harrison, Fort Worth, Texas; J. E. Kennelly, Newkirk; T. P. Parks, Hugo; C. E. Smith, Hugo; A. E. Swan, Enid; Wm. H. Street, Norman. Registered Pharmacists, Class 2 (Pharmacists Recognized by the Board)—A. C. Bond, Lone Jack, Mo.; John H. Eggers, St. Louis, A. Earl Douglas, New Castle, Pa.; David J. Gemmell, Oak Park, Ill.; R. F. Gilbert, Pocahontas, Ia.; M. M. Johnson, Ardmore; Freeman Malone, Jr., Heavener; Albert R. Prince, Clovis, N. M.; Jeremiah Riordan, Cimarron, Iowa; T. W. Scott, Alva; R. E. Swan, Enid; Benj. H. Vorse, Lenox, Iowa; Lloyd E. Wilkins, Nowata; Joseph C. Wolf, Oklahoma City; Edgar Cunningham, [illegible] examination.

Registered on Reciprocal Exchange—I. H. Gunning, Knobel, Ark.; John T. Carlton, Sulphur, Okla.; Hollis G. Watson, Pikeview, Iowa.

The next meeting will be held in Oklahoma City, April 12-13. Applications for registration should be filed with the secretary at least ten days before the date of meeting. Application blanks with all necessary information will be furnished on request by J. C. Burton, secretary, Stroud, Okla.

Virginia.

RICHMOND, March 20.—The Virginia State Board of Pharmacy has announced the following list of applicants who successfully passed the January examination:

Registered Pharmacists—J. F. Ewald, Richmond; S. L. Eversole, Richmond; L. L. Dickson, Newport News; E. B. Allen, Norfolk; W. W. Ashby, Remington; G. A. Montgomery, Richmond; S. D. Hope, Jr., Norfolk; J. A. Florence, Manassas; A. J. Borden, Norfolk; C. L. McDonald, Belair, Md.; Allen M. Bowles (colored), Richmond; H. J. Moseley (colored), Roanoke.

Registered Assistant Pharmacists—J. W. Smith, Belle Haven; Dr. J. P. Rex, Richmond; Frank A. Robey, Herndon; Peyton S. Lewis, Richmond; C. S. Bruce, Culpeper; W. Lawrence Grimes, Richmond; J. Felix Smith, Richmond; Joseph W. Smith, Richmond; Lewis H. Ivy (colored), Danville.

South Dakota.

ABERDEEN, March 20.—The result of the recent examination by the Board of Pharmacy, held at Redfield, is as follows:

Pharmacists—Frank Jones, Big Stone; Simon W. Smith, M.D., Henry; Miss Magdeline Gernon, Westport; Guy Loupe, Lead; Arthur J. Christinson, Clark; C. M. Cochrane, Mitchell; W. I. Appel, Minneapolis; J. W. Mahoney, Tyndall; C. F. Hage, Toronto; A. R. Davies, Stickney; J. M. Ruhe, Woonsocket; N. T. Lund, Huron; F. N. Smith, Raymond; W. J. Rowland, Gary; J. [illegible], Sanborn.

Assistant Pharmacists—L. K. Vick, Bryant; Walter Ramsburg, Mobridge; L. L. Larson, Webster; William Tollefson, Webster; A. L. Rauwaldt, Northville; P. H. Zanke, Spencer; Robert H. Brand, Capa; M. P. Even, Humboldt.

Kansas.

[illegible] Meeting March 8—W. T. Smith, secretary of the Kansas State Board of Pharmacy, announces the following list of successful candidates at the recent examination held in this city:

[illegible]

The Soda Fountain and Candy Counter

Druggist Prefers Opposition Selling Good Soda, for He Believes it Increases Demand.

The accompanying illustration shows a portion of the handsome pharmacy of William A. Chamberlin, Phar.D., at Haddon and Irwin avenues, Collingswood, N. J. The picture was taken with a view to showing the location of the fine new iceless soda fountain which was installed in the pharmacy a few months ago. The young man at the dispenser's post of duty is Harry Erny, a qualified assistant. Next, in the center, is Dr. Chamberlin, while opposite to him, standing outside of the show case, is Dr. F. W. Allin. In the far corner is W. W. Miller, registered pharmacist.

"Our soda water trade has greatly increased since the installation of the iceless fountain," said Dr. Chamberlin recently to a representative of the Era. "I would much prefer to have opposition that sold good cold soda water, rather than be the only place at which the best quality can be obtained, for instead of hurting the trade I am sure it would further increase our sales. Poor soda water tends to prevent people from repeating, unless they are very thirsty, while good soda invariably means 'more' and fountains that are known to dispense the best always get the benefit of the greater demand."

Dr. Chamberlin, who has built up a nice business during the ten years almost that he has been in Collingswood, is a graduate of the Philadelphia College of Pharmacy, having also taken a three-year course in Hanover College, Indiana. He is a partner in the Philadelphia Wholesale Drug Company, director in the Collingswood National Bank, member of the Collingswood Board of Trade, is an elder in the Presbyterian Church and a teacher in the Sunday School.

Sunday observance is a feature of Dr. Chamberlin's creed, for his pharmacy remains open only during restricted hours on that day and sales are confined to actual necessities. He took an active part in securing the passage of an ordinance prohibiting the sale of soda water, candies, etc., on the Sabbath. He firmly believes in the principle of letting workers enjoy a day of rest and his clerks are given one day in the seven every week to rest.

Dr. Chamberlin features soda water on a page of attractive announcements of goods dealt in at his pharmacy. This page is headed in imitation newspaper style: *The Chamberlin Drug Store Bulletin.* This miniature store journal is issued frequently and is varied in contents. Cuts are used of an appropriate nature and artistic design. Under one of them appears the following legend:

DELICIOUSNESS RUN RIOT.

That just about describes our soda fountain service. Deliciousness fairly flows from it.

Our soda is designed to satisfy in every sense, as our beverages are far more than mere thirst quenchers. No one who knows our flavors ever admits there is anything quite so good in Philadelphia or Camden.

TRY OUR SPECIALS.

Another announcement declares that no other kind of ice cream soda except "the best you ever tasted" is to be had at Chamberlin's. This is reinforced by the assertion: "We use only Pure Fruit Syrups and use no preservatives, such as Benzoate, etc. It is not necessary when cleanliness is carried to such an extreme as it is at Chamberlin's Soda Fountain.

"We serve two sizes of Ice Cream Soda. One at 10 cents contains three times as much ice cream as regular size, larger than served at any Philadelphia fountain. The 5 cents size is equal in quantity and superior in quality to any served anywhere at the price."

Well selected specials are featured in each *Bulletin.*

Said Dr. Chamberlin: "I certainly enjoy reading your monthly journal, *The Soda Fountain,* and always look forward to its arrival with a great deal of pleasure."

FORMULAS

In this department will be found each month a number of [illegible] in addition to the [illegible] ; [illegible] These formulas will [illegible] such other information of [illegible] [illegible] confectionery.—Editor Era.

Oriental Sundae.

Place one large dessertful of strawberry and vanilla ice cream on a small platter and add some fresh strawberries. Slice up a banana in small pieces and place on the platter around the cream. Add whipped cream and top off with a whole maraschino cherry. Use crushed strawberries when whole ones are not in season. An appetizing dish and a winner at the fountain.

Sliced Fruit Sundae.

Into a sherbet glass place ½ ounce of cream and a spoonful of sliced bananas. Then place a cone of ice cream in the dish and over the cream put a ladleful of sliced peaches. Top off with whipped cream and a maraschino cherry.

Mint Sherbet.

Into a 12-ounce glass pour ½ ounce of raspberry and lemon syrups and 1 ounce of green mint syrup; add a dash of lime juice, some cracked ice and fill the glass with carbonated water, coarse stream.

Mintine.

Fill a 12-ounce glass one-third full of cracked ice, then place three mint leaves on the ice, bruising them with a bar spoon; add 1½ ounces of simple syrup and 3 dashes of solution of acid phosphate; fill the glass with carbonated water and top off with a slice of pineapple and a cherry. Serve with straws and a spoon. Price, 10 cents.

Pepsin Mint.

First make a syrup as follows: Glycerite of pepsin, 4 ounces; lemon juice, 4 ounces, spirit of peppermint, 4 drams; solution of citric acid, 1 dram; simple syrup, enough to make 32 fluidounces. Add foam, if desired, and color green. To dispense, place 1½ ounces of the syrup in an 8-ounce thin glass containing shaved ice and fill the glass with carbonated water.

Mint Syrup.

First prepare a syrup as follows: Strained honey, ½ pint; maple sugar, ½ pint; extract of vanilla, 2 drams; essence of peppermint, 5 drams; simple syrup, 2 quarts. Color green. To dispense, place 1½ ounces of the syrup in an 8-ounce thin glass containing shaved ice and fill the glass with carbonated water. Serve with straws and a spoon. Price, 10 cents.

Fosfertone.

Make the following syrup: Solution acid phosphates, N.F., ½ ounce; essence of sarsaparilla, 1 dram; essence of wintergreen, 1 dram; tincture of iron, 2 drams; burnt sugar coloring, 2 drams; simple syrup, enough to make 1 gallon. Dispense in a thin 12-ounce glass, using 1½ ounces of the syrup. Fill the glass with carbonated water, fine stream.

Coffee Cabinet.

Into a 14-ounce glass put 2 ounces coffee syrup, 2 ounces plain stream; break an egg into the glass, add a No. 16 scoopful of ice cream and a sufficient quantity of shaved ice. Shake well, fill the glass with carbonated water, fine stream, adding a little nutmeg on top.

White Velvet.

Into a mixing glass put ¾ ounce vanilla syrup, ½ ounce lemon syrup, ½ ounce sweet cream, a dash of solution of acid phosphate, 1 cone of ice cream, the white of 2 eggs and some cracked ice. Shake well and throw from shaker to glass. Serve in a 12-ounce glass, filling with carbonated water. The yolk of the eggs may be used for other drinks.

Vevay's Favorite (Chocolate Syrup).

Take 4 ounces of any good cocoa or powdered chocolate and form into a paste with 8 ounces of cold water. Add 32 ounces of water and bring to a boil, stirring almost constantly in the meanwhile. When the boiling point has been reached add 3 pounds of granulated sugar, stir well and again bring to a boil. Cool and use about 1½ ounces of the syrup to a 12-ounce glass. Makes a trade drawing ice cream soda.

Coffe a Blaz-za.

Into a 12-ounce glass put 7 ounces of cold infusion of coffee, 2 ounces of simple syrup and a small [illegible] of vanilla syrup. Then add a small disherful of ice cream on top to fill the glass. A cool and refreshing drink for the summer.

Don't Care Sundae.

Into a small dish put one scoopful of ice cream, chocolate preferred, in the shape of a cone with a hole in the center. Into the hole put crushed walnuts, topping off with a maraschino cherry. Around the side of the dish place three Nabisco wafers dipped in grape juice and over all pour some chocolate syrup.

Persian Pate.

Chopped dates, 4 ounces; chopped figs, 2 ounces; grape syrup, 2 ounces; rose syrup, 2 ounces. Mix. Into a warm cream puff casing place a ladleful of this mixture; on top put three cubes of Turkish rose paste and cover with a little whipped cream.

Sliced Orange Nut Sundae.

Place a cone of ice cream in a sherbet glass and pour over the cream ½ ounce of orange syrup. Place on each side of the cream slices of orange and over all pour a large spoonful of crushed walnuts. Top off with whipped cream and a maraschino cherry.

Cherry Lime.

Lime juice, ½ ounce; Allen's tame cherry, 1½ ounces; grape juice, 2 ounces; cracked ice, enough; put into a 12-ounce glass and fill with carbonated water; add 2 cherries. Price, 10 cents.

Lemon High Ball.

Into a 12-ounce glass place 1 egg, 2 ounces of ice cream and 1 ounce simple syrup. Shake well together, add the juice of 1 lemon and fill the glass with carbonated water. Serve with two straws.

Grape Juice Sherbet.

Sweeten to taste 1 quart of grape juice; add ½ pound sugar to the juice of 6 oranges and stir until the sugar dissolves; mix this with the sweetened grape juice, transfer to a freezer and slowly freeze. Beat the white of an egg, adding a tablespoonful of powdered sugar and stir into the sherbet; repack the mixture and set aside for two hours. Serve in sherbet cups.

Fruited Eclair.

Fill an eclair shell with ice cream, place in an oblong dish and pour over it any crushed fruit desired; top with whipped cream.

Boston Special.

Into a 12-ounce glass put 1½ ounces of chocolate syrup, 2 ounces of grape juice, 1 ounce sweet cream and a portion of malted milk; into the mixture break an egg and add a small quantity of fine ice; shake thoroughly, fill glass with carbonated water and strain.

Claret Cream.

Into a 12-ounce glass half full of cracked ice draw 1 ounce lemon syrup, 1 ounce claret syrup and 2 ounces of cream. Shake, strain and fill glass with carbonated water; toss, and serve with two straws stuck through a slice of lemon in the glass.

Frost Queen.

Raspberry syrup, 1 ounce; orange syrup, 1 ounce; pineapple syrup, 1 ounce; claret syrup, 1 ounce; place in a 12-ounce glass containing shaved ice, add the juice of half an orange and fill the glass with carbonated water.

Marshmallow Shake.

Marshmallow syrup, 1½ ounces (vanilla, catawba, almond or any desired flavor may be used); cream, 1 ounce; 1 egg, 1 dipperful of ice cream; shake, fill glass with carbonated water and strain.

Cream Cordial.

Rose syrup, ½ ounce; pineapple syrup, ½ ounce; vanilla syrup, ½ ounce; orange syrup, ½ ounce; plain cream, 1 ounce, shaved ice, ¾ glass. Fill the glass with carbonated water, shake, strain, toss and serve.

Guilty in Celery Cola Case.

Judge Charged That Ignorance of Presence of Cocaine or Caffeine Was No Defense.

Birmingham, Ala., March 20.—That caffeine in cola drinks is deleterious to health and that it is particularly dangerous to women and children was the sworn testimony of several experts in addition to well known and reputable physicians from Birmingham and Atlanta, given in the case before Judge Grubb here against the Celery Cola Company.

One physician, Dr. J. Ross Snyder, swore that two drinks containing the mixture of cocaine and caffeine shown to be in this drink might kill a child of five years of age.

Several physicians swore that caffeine should not be taken unless under the direction of a physician or trained nurse. They pointed out that when it was possible for people to indiscriminately buy this drug in a drink at soda fountains and consume it great injury to health is liable. It was stated under oath that the drinking of caffeine indiscriminately in cola drinks was liable to produce serious results on people afflicted with organic diseases for which caffeine was absolutely injurious. In other words, people having diseases needing drugs entirely different from caffeine, were liable to great injury by consuming this drug in cola drinks at soda fountains.

This feature of the trial came as a distinct surprise and produced a sensation.

That it was taken seriously by the Coca-Cola officials of Atlanta was shown by the fact that they sent a lawyer to the trial. He consulted with the attorney for the Celery Cola people and it was noticed that the defense here used part of the answer made by the Coca-Cola people to the Government libel against Coca-Cola in Chattanooga.

Judge Grubb charged the jury that ignorance on the part of the defendants of the presence in their drink of cocaine and caffeine was no excuse. After being out several hours the jury brought in a verdict of guilty.

Dr. H. C. Fuller, one of the pure food experts here from Washington, swore that there were over 100 drinks on the market which contained caffeine and that there were about 50 which contained cocaine.

The defense offered no evidence, expert or otherwise, to show that the effects of cocaine or caffeine were other than declared by the Government's witnesses.

Arkansas Merchants Buying Good Fountains.

St. Louis, March 20.—The Southwest is preparing for a big soda business this summer. This is evident from the number of fountains which have recently gone, say, into Kansas alone. While St. Louis stores, as a rule, are putting in fountains ranging around $1000, the Arkansas merchants find it profitable to go $2500 or stronger. Three recent sales by J. S. Merrell Drug Company illustrate. R. E. Hayes, for the company, has just placed a $2800 fountain with R. E. V. Bordeaux at Monticello, Ark.; a $2500 fountain with Dr. W. E. Hamil at Pocahontas, and a $2000 outfit with Dr. H. E. States at Mammoth Springs.

Illinois to Have Ice Cream Standards.

Chicago, March 20.—Among other things which have come before the State Food Commission of Illinois ice cream has at last found a place and the commission is sending out circulars to the ice cream dealers and makers all over the State notifying them that an opportunity will be given them to give their reasons either for or against the suggested standards. It is requested that all those opposed to or in favor of any provisions of any suggested standards submit briefs. Briefs submitted prior to April 1 will be considered and a public hearing will be given at the Great Northern Hotel in Chicago at 10 a. m. Wednesday, April 6, 1910, to all desiring to be heard.

New Fountain in New Indianapolis Pharmacy.

The latest retail drug store in Indianapolis is the one opened recently at 123 East 16th street in a fine residence district in which it will have a field of its own. The proprietor is Claude Wyttenbach, a wide-awake, enterprising young man who has good manners and winning ways. The building is entirely new, the fixtures, which are birch-mahogany, are new, in fact, everything in the store is new, including a new soda fountain. The store will be a favorite waiting place for street car passengers.

Druggists to Make Ice Cream.

High Prices in Cincinnati Start Talk of Establishing a Co-operative Plant.

Cincinnati, March 20.—Retail druggists here are preparing to organize a company for the manufacture of ice cream for use at the soda fountains and for the regular drug store trade in ice cream, which represents a majority of the trade in that commodity.

It is said that the action is taken on account of the receipt by these druggists within the last few days of a new rate card from the French Bros.-Bauer Co., the new combination of wholesalers which was effected recently. The new card raises the price of ice cream to 90 cents a gallon, at which it sold when the French Brothers had no competitor of any importance. When the Bauer company entered the field the price of ice cream was reduced to 75 cents a gallon to the druggists or those who used it in any quantity. Both companies sold their product at this figure.

Notification that the price had been put up again was accompanied by a rebate card, showing how much of a drawback would be allowed the different dealers. Those who used 300 gallons in a year would be given a rebate of $5 in cash at the end of the year. Those who used 1000 gallons a year would be allowed a rebate of $75. This meant a discount of less than 2 per cent for the small dealer and a discount of more than 8 per cent for the large dealer. The little dealer gets a rebate of a little over 1½ cents a gallon, while the large dealer gets a rebate of 7½ cents a gallon.

The small retailers declare that the discrimination is unfair, and while none of them will talk about the proposed independent ice cream company that is said to be forming to supply the ice cream at cost, each of them admits that he is not satisfied with the new ice cream prices.

Soda Fountain Notes.

—Three new fountains have been installed in New Bedford, Mass. Henry T. Corson, one of the best known druggists in Bristol County, has installed a nine-foot fountain at 639 County street. William Higham, who owns two drug stores in New Bedford, has put in a new 10-foot counter service fountain at 212 Cross street. S. A. Lamoureau, of 1598 Acushnet avenue, New Bedford, has just completed remodelling his store in which he installed a nine-foot apparatus.

—R. B. Golden, formerly clerk with F. P. Porter, druggist, at 1 Main street, Leominster, Mass., has started in business for himself, and is opening a new store at 38 Main street, in the same town. He has ordered an Innovation fountain. His former employer quite simultaneously has ordered a handsome fountain of all onyx with a 12-foot counter.

—Old Jackson Drug Store, Beatrice, Neb., under the new management of O. F. Harlan, who has gone there from Auburn, will have new fixtures and a new fountain. The owners of the building are going to put in new floors, ceilings and a more modern front.

—Minot Drug Company, Minot, N. D., has installed a 20-foot iceless fountain, one of the finest in the State. The store has been enlarged and otherwise improved. The company has made rapid increases in business under the management of Oscar Veach.

—Herbert N. Henckell, of Commercial avenue, Cairo, Ill., has replaced his old apparatus, which was a fine-looking one, with a new style counter soda fountain and otherwise is preparing for a heavy increase in business.

—M. D. Hendon, formerly with Crabtree's Pharmacy, and who lately acquired the North Durham Drug Store, in Mangum street, Durham, N. C., has purchased a neat and conveniently arranged soda fountain.

—Lowenthal & Dyer, owners of the Illinois Central Drug Store, at Kankakee, contemplate changes which will cause considerable expense. There may be a new fountain.

—B. F. Tripp & Co., druggists, of Middleboro, Mass., have changed over their entire store, and have installed a larger fountain.

—Martin & Moore drug store, Kankakee, Ill., is being enlarged and an iceless soda fountain, costing $2000, installed.

—Alfred J. H. Paquette has installed an iceless fountain in his drug store at 1 Federal street, Lynn, Mass.

Fountain Advertising.

Some Seasonable Hints in the Use of Brush and Paper to Attract New Patrons.

With Brush and Paper.

WINDOW [illegible] any particular idea, they fail to excite any interest. We all know that fountain patrons are divided into classes. There are those who consume only sweet beverages and others who invariably choose acid drinks, egg drinks, or dished delicacies. [illegible] unusually sweet tooth merely because the patron has called for it by taking a fancy to the name, is risky business.

A number of very progressive dispensers make it a rule to add a descriptive line to the name, when placed upon window strips, thus:

ORIENTAL SUNDAE

It's a Chocolate and Malted Milk dish.
Try it for a dime.

As a general thing an adequate description may be given in even a less number of words than the above, as—

CUBAN NECTAR

A Pineapple and Strawberry blend.

By a little study and the use of a few words one may turn an otherwise bald announcement into a reason-why-you-should-buy advertisement. As suggestions the following phrases may be helpful to those who would make their strips descriptive: "For lovers of chocolate and egg. A fruit sour without phosphate. A sweet and solid drink. A fizz and phosphate beverage. A solid egg and syrup phosphate. A fancy ice cream soda. A chocolate and fruit syrup mix. Served on a dish like a sundae. Fruit, syrup and ice cream—any flavor. Nuts, cream and chocolate. A snow-ice sherbet. A very cold fruit frappe. A semi-sundae—eaten from a glass with a spoon. Much like a mint julep. Chocolate, ice cream and solid fruit. A nourishing food drink. A sweet drink of several syrups—fizzy. A harmless appetizer. A mild and harmless bracer. Vanilla with a piece of pineapple—not very cold."

Don't Get Gay.

Do not misunderstand art, as applied to window strips. Whether you use brush, pastel or shading pen, do not indulge in whirligigs and flourishes—and, above all, do not use half the colors of the rainbow. Window strips should be on the read-as-you-run order. Plain block or simple script is best. Leave plenty of space between the letters and make them large enough to show the white or colored background within the angles and curves. On a white field, black, violet, green or cardinal colors are best. Use paper of such quality that the colors will not run nor show saturation stains at the letter edges. Do not paste strips to glass but fasten with small gum tags, as few as possible, and make them as nearly invisible as you can.

Don't Be Cross-eyed.

As near as may be possible, [illegible] your strips on the level of the vision of the ordinary observer, and adjust them horizontally. Do not form the strips into wheels, circles and squares. The passer-by will not stand on his head or rubber his neck out of joint to read them.

Listing Known Drinks.

Window strips are not, and should not be confined to announcing novelties. The sight of the name of a favorite beverage or sundae will oftentimes create a desire for it and effect a sale. At the same time a little addition to the mere name may multiply the advertising value by hundreds. Though the announcement itself may not be a novelty, the method of announcing it may be made novel. A good method of adding novelty is by connecting the name with some strong phrase of the day, with some comment upon a bit of news of the period, or even a terse reference to the drink itself. As a suggestion, one may announce chocolate ice cream soda in this way:

[illegible] away with a Chocolate Ice Cream Soda—ours is the right sort.

Don't be afraid of the comet. It's as harmless as our Walnut Sundae—but the sundae looks prettier and has THE taste.

[illegible]
Come in and initiate yourself with a Frozen Fruit Sherbet.

For a heap-much thirst there is nothing like our solid liquid, ice-cold Lemon Phosphate—real lemon in it, too.

No cold-storage eggs used in our Egg Phosphate. We are acquainted with the hens that lay our eggs.

For the conservation of National resources you'd better conserve your natural resources with one of our appetite satisfying Fruit Sundaes.

Don't swear at "the good old summer time." Cool your temper and yourself with one of our Mint Juleps—non-alcoholic.

Straws to show which way the wind blows: Five hundred paper "straws" are used at our fountain every day. Blow in and get a Cherry Bounce.

If you don't feel gay let us fit your hat with a Lemon-Seltzer Flip—no dope in it.

A good thing that is the same in all languages—our Chocolate, Egg and Malted Milk.

Don't Be Sloppy.

This line of advice does not refer to direct fountain service. It has reference to sloppy methods of displaying fountain announcements within the store. Suspending fine cards with rough hempen strings, sticking strips to the fountain mirror with "gobs" of yellow paste or dirty dextrin, fastening strips to canopy pillars as though they were bandages and fastening signs so that they warp into bow-knots or swing their faces to the wall, are a few of the things we refer to as "sloppy."

The beauty of any fountain is marred when it is plastered with strips of cheap white paper lettered with barn paint. Have a few long, narrow, light frames with removable backs and use them for fountain announcements. Hang them at the sides of the fountain or suspend them from the ceiling or place upon easels on the fountain. Cards that are to be placed against the fountain mirror should be fastened with suction hooks or tiny bits of gummed paper. When unframed cards are to be suspended cleats of card or thin pieces of wood should be glued to the backs, to keep the cards from curling. Have at least one metal sign standard for the end of the soda slab. Into this slip cards upon which are made your most important announcements. Do not restrict soda announcements to the fountain and its immediate surroundings. A sign holder placed upon the rubber goods show case will be the means of selling more ginger flips than one placed on the fountain.

In the February SODA FOUNTAIN (page 120) was printed an article upon "Bulletin and Other Menus." Some of the ideas given therein are readily adaptable to the display of special announcements. Do not be a mere copyist. Strive to improve upon every idea you receive. "Adapt! Adapt!" is the slogan of the successful advertiser in every field.

No Changes in Tea Standards Expected.

The Board of Tea Experts which fixes the tea standards under the pure tea law recently began its annual meeting. The different grades of tea are all being examined, but it is not likely that any changes in the standards will be made. The present standards, which have been in effect for some years, have been satisfactory, it is said, to the Treasury Department and to most of the importers.

MOSTLY PERSONAL

William S. Flint, of Massachusetts.

William S. Flint, of Worcester, who was recently appointed a member of the Massachusetts State Board of Registration in Pharmacy, was unanimously confirmed by the executive council and has assumed his place on the board in succession to Lucian A. Lamson, of Hopedale. Mr. Flint is one of the best known men in pharmacy in central Massachusetts. He was born in Canaan, N. Y., October 2, 1859, on a farm of several hundred acres, his grandfather having kept a tavern on the old stage line between Pittsfield and Albany before the Western Railroad was built, an uncle being conductor on the railroad mentioned. The farm was left to two brothers, one being his father. He went to school winters in the little red school house until ten years of age. His father having died when William was four years old, at ten he was sent to Pittsfield to live with an aunt and attended the public schools five years. The youth entered the store of M. S. Manning & Son, 51 North street, in July, 1874, and remained four years as apprentice and clerk in charge, at a salary ranging from $3 to $8 a week. The son of this firm was John H. Manning, who was at one time president of the Massachusetts State Pharmaceutical Association and State highway commissioner at the time of his death last year.

WILLIAM S. FLINT, Ph.G.,
Worcester, Mass.

Mr. Flint went to Boston in October, 1879, with $100 in his inside pocket to attend the College of Pharmacy. In matriculating at the college, he met Thomas Doliber, of the firm of Theodore Metcalf & Co., now president of the Mellin's Food Company, who offered him a position at $8 per week, which he accepted, with the privilege of sleeping in the store to answer night calls of emergency, and time to attend the college evenings, at that time in the Old Franklin School Building, the professors being Drs. Bolles, Davenport, Patch and Markoe, Henry Canning being president. He was graduated with the class of 1883 and was registered as a pharmacist by the State board on December 2, 1885, H. M. Whitney being president of the board.

Mr. Flint remained with the Metcalf company eight years, having charge of the prescription department, then the largest in New England, the last three years. In January, 1888, he resigned his position on account of ill-health and located in Worcester, forming a partnership with David L. Bradt under the firm name of Bradt & Flint, with two stores, one located in Main street, at the corner of Foster, known as the Shattuck Pharmacy; the other at the corner of Park and Portland streets, known as the George Dinsmore store. The Main street store was sold in 1890 to Sadler, of Springfield, and the interest of Mr. Bradt at Park street was purchased in 1898. The present store was established in 1870 by Tilton Brothers in the Thomas H. Dodge block.

J. Arthur Bean, the new president of the Boston Druggists' Association, whose picture was printed on page 243, March Era, is one of the youngest men that has ever filled that office in this now venerable organization. He was born in 1872 in Panacook, N. H., and entered the drug business twenty years ago. He attended the Massachusetts College of Pharmacy for two years and has been in business for himself for fourteen years. Six years ago he opened a second drug store in Somerville, which he still conducts. He is the treasurer and manager of a co-operative association of twenty Somerville druggists which has been maintained with a singularly high degree of success. In the U.S.P. and N.F. propaganda work, under the auspices of the Boston A.R.D. he has been one of the most active workers. He is a vice-president both of the Boston Association of Retail Druggists and of the Massachusetts State Pharmaceutical Association and for six years he has been the president of the Somerville division of the B.A.R.D. Last year he was one of Boston's delegates to the Louisville convention of the N.A.R.D. Mr. Bean has been quite as active in the civic affairs of Somerville as in the professional and trade matters of pharmacy. He is a director of the Somerville Board of Trade and a member of several fraternal organizations, including the Masons, in which he has attained the 32d degree, as well as having entered the Mystic Shrine.

Frank F. Ernst, the new president of the B.A.R.D., whose picture was printed in the March Era, page 243, is one of the most active men in the Boston association. Ever since the association was organized, seven years ago, he had been chairman of the executive committee, and when the N.A.R.D. met in Boston in 1904, he was chairman of the local committee which had charge of all of the arrangements for the convention, and which made such a magnificent success of the event. Mr. Ernst is also active in the Massachusetts State Pharmaceutical Association, in the Alumni Association of the Massachusetts College of Pharmacy, and in the Boston Druggists' Association. For two years he was a member of the executive committee of the N.A.R.D.

He was born in Davenport, Iowa, 40 years ago, went to work in a drug store at the age of 15, graduated from the Massachusetts College of Pharmacy in 1890, and started in business for himself in Jamaica Plain 12 years ago. In the meantime he had worked in some of the best drug stores in Boston, including those of William F. Sawyer in Roxbury, and Kelley & Durkee in the Back Bay, while other experience was gained in college. When Mr. Ernst decided to engage in business for himself he selected one of the best and most rapidly growing suburbs of Boston. His success was so great that a few years later he opened another store at Boylston Station, and he maintains both stores now. Mr. Ernst is a man of much executive ability, a great worker, an enthusiast in whatever he undertakes, and he also possesses that other very desirable trait of perseverance, so that when the hard rubs come he is able to successfully overcome them.

Albert Bond Lambert has been elected president of the Aero Club of St. Louis. Mr. Lambert is an enthusiastic leader in aviation in St. Louis and has gained a National fame among the followers of flying and balloon sailing by his stand which united the various aero clubs of the country in a demand that the Aero Club of America, in New York, abandon its pretensions to being master of the sky. Mr. Lambert is giving much of his time to making the coming season the greatest yet known in America in heavier-than-air flying. He has been asked to take the captaincy of the new balloon squad of the signal corps of the First Regiment of Missouri.

—Miss Kitty W. Harbord, of Salem, Ore., is spending some time with friends and relatives in Philadelphia and vicinity in the course of a prolonged vacation trip which also includes a visit to Europe. Miss Harbord, who is an alumnus of the Philadelphia College of Pharmacy, class of '01, has the distinction of being a member of Oregon State Board of Pharmacy and is probably the only woman in the country to occupy such an important position. She is the manager of the busy pharmacy of her brother-in-law, Daniel J. Fry, at Salem, Ore.

—Franklin M. Apple, the new chairman of the ethical preparations committee of the Philadelphia Association of Retail Druggists, has taken hold of the duties of that office with an enthusiasm which is already producing results in the way of increasing the popularity with physicians of the preparations of the Pharmacopœia and National Formulary. His fellow-members of this committee, who are Frank W. Fluck, Paul L. McConomy, William L. Cliffe and William H. Ricker, are displaying the same interest.

—Judge W. T. Bland, vice-president of the McPike Drug

Company, wholesale druggists, Kansas City, Mo., is a busy man these days. In addition to his regular duties he has been actively engaged as president of the Commercial Club of Kansas City in a campaign which has for its object the raising of $3,000,000 to establish a line of modern boats to ply on the Missouri River between Kansas City and St. Louis. During the month Judge Bland has delivered a large number of addresses on this subject.

—S. S. ELLIOTT, who has resigned as manager of the Harle-Hess Drug Company, Council Bluffs, Iowa, and gone to Los Angeles for his health, has been succeeded in that position by F. H. Garrett, for 13 years salesman for the company and president of the Western Travelers' Accident Association. T. J. Leary was elected secretary and A. J. Faul treasurer. The employees presented Mr. Elliott with a splendid gold watch.

—GEORGE K. MERRELL, vice-president of the J. S. Merrell Drug Company, St. Louis, has moved into his new home in Park View, an exclusive residence district, near Forest Park, the Washington University, and near enough and not too near the several summer theaters at Delmar Garden. Mr. Merrell is delighted with the change, although his former location was in one of the most exclusive residence sections of St. Louis.

—E. J. HAINES, president and treasurer of the Duroy & Haines Co., manufacturers of wines, soda specialties, etc., Sandusky, Ohio, who has been a great sufferer from locomotor ataxia for nearly 20 years, is now on the road to recovery and expects soon to be around again. Mr. Haines has many friends in the trade who will be glad to learn of his return to health.

—JOHN J. TOBIN, of South Boston, former secretary of the B.A.R.D., and who as a member of the entertainment committee of the local committee during the N.A.R.D. convention in Boston a few years ago came to be known to druggists from all over the country, has been elected vice-commodore of the South Boston Yacht Club.

—WILLIAM B. STRONG, vice-president and treasurer of the Milwaukee Drug Company, has been re-elected vice-president of the Milwaukee Merchants' and Manufacturers' Association, the leading public and commercial organization of that city. Mr. Strong is one of Milwaukee's best known and most enterprising public men.

—HAVING just celebrated his 88th birthday, Dr. Enno Sander, honorary president of the A.Ph.A. and emeritus professor of the St. Louis College of Pharmacy, is attending board and faculty meetings of the college regularly and, in fact, is usually the first at the board meetings and the last to leave.

—C. P. WALBRIDGE, president of the J. S. Merrell Drug Company, St. Louis, is taking a rest of several weeks at Hot Springs, Ark. He writes that the rest is doing him good. He is expected to return from his trip ready for a vigorous spring go in the free-for-all race for business.

—FRED A. HUBBARD, of Newton, former secretary of the Massachusetts Board of Registration in Pharmacy, was the victim of burglars on March 11. During his absence his fine residence in Hollis street was entered and valuables to the amount of several hundred dollars removed.

—ALBERT W. FISCHER, formerly with Schulz Drug Store at Vandeventer and Laclede streets, St. Louis, is now to be the drug store man at Kingshighway and Page street. After eight years of clerking in the Laclede store his friends predict success in his new venture as proprietor.

—F. F. INGHAM, Jr., senior at University of Michigan School of Pharmacy, recently represented Alpha Chapter of the Phi Delta Chi fraternity at the annual meeting of the Grand Council, which took place this year in New York City. Mr. Ingram, Jr., is W.C.C. of his chapter.

—G. H. BOYSON, ex-'07, with his wife and little daughter, were callers at the College of Pharmacy of the University of Iowa recently. Mr. Boyson was president of the Iowa Ph.A. for 1908-1909 and is owner of a prosperous pharmacy at Cedar Rapids.

—DR. H. W. WILEY was recently elected president of the Cosmos Club, the membership of which is composed of scientists and literary men of the National capital. Herbert Putnam, the librarian of Congress, was chosen vice-president.

—DR. G. C. KILGORE is now doing detail work for the Henry C. Blair Company, of Philadelphia. He succeeds Dr. W. S. Bell, who has returned to his former position as a member of the sales force of Seabury & Johnson.

—W. D. STEARNS, who has had supervision for more than 20 years of the manufacturing end of Frederick Stearns & Co., Detroit, has been promoted to be general manager. W. G. Rucker succeeds him as superintendent.

—MRS. CORNELIA MERCK, wife of the New York wholesale druggist, was recently elected member of the board of education of West Orange, N. J., after a spirited campaign. Mrs. Merck was on three of the four tickets.

—WILLIAM E. LEE and wife, of Philadelphia, spent a few days in mid-March in Washington, D. C. The object of the trip was primarily to aid Mr. Lee in recovering from his recent severe illness.

—W. A. CHERRY, manager of the traveling service of Eli Lilly & Co., has returned to his desk after a visit to Lilly salesmen and the jobbing trade of Ohio and Michigan.

—DR. E. R. LARNED, head of the department of experimental medicine of Parke, Davis & Co., Detroit, recently visited the New York office for a day or so on business.

—R. A. KUEVER, assistant in pharmacy at the College of Pharmacy, University of Iowa, has been appointed consulting chemist of the Boerner-Fry Company at Iowa City.

—DEAN WILBER J. TEETERS, of the College of Pharmacy of the University of Iowa, has been chosen to represent that institution at the U.S.P. Convention next month.

—HARRY B. MASON, of Detroit, will deliver an address in behalf of the faculty of the St. Louis College of Pharmacy at the commencement April 27 in Memorial Hall.

—I. A. ANDERSON, '09, University of Iowa, and who has been traveling for the Boerner-Fry Company, Iowa City, has purchased a store at Dow City, Iowa.

—D. KOGAN, who conducts a drug store at 1 First avenue, this city, contemplates moving from his present location to First avenue and Houston street.

—S. A. ECKSTEIN, head of the Wright Drug Company, of Milwaukee, has been re-elected collector of the Royal Arcanum for the 27th time.

—EDWIN L. WAGNER, secretary of the Alumni of the St. Louis College of Pharmacy, is now with H. O. A. Huegel at Park and Grand.

—HARRY HACKBARTH of Wausau, Wis., a registered pharmacist, is now associated with the Jewett Drug Company at Rice Lake, Wis.

—JOHN F. A. C. WARTMAN, president of the Wartman Drug Company, of Milwaukee, is recovering from a serious attack of typhoid fever.

—G. A. LARSON, formerly engaged in the drug business in Michigan, is now a traveling salesman for Olney & Jerman, of Chicago.

—HARRY T. CARVER, of Farrand, Williams & Clark, Detroit, was a recent visitor at the New York Drug and Chemical Club.

—CHARLES J. LYNN, secretary and general manager of Eli Lilly & Co., recently spent a few days at the New York office.

—A. F. MENGES, druggist, of Madison, Wis., has been re-elected president of the Commercial National Bank of Madison.

—CHARLES HOFFMAN has returned from New Mexico to Missouri and will open a drug store in St. Louis.

—A. PETRAGLIA will open a new drug store at 116th street and First avenue, New York City.

KAMPORI & CO are about to open a new drug store in Westchester avenue, this city.

Pharmacist's Wedding Romance Began in College.

ST. LOUIS, March 20.—Earl Ellis, who conducts the Belt Avenue Pharmacy in St. Louis, and Miss Aida Blackburn, daughter of E. J. Blackburn, were married recently by Rev. Dr. M. H. Lichliter and departed for Chicago on their honeymoon. They will make their home at 5508 Cabanne avenue. The romance began during Ellis' senior year at the St. Louis College of Pharmacy in 1904, from which he was graduated with high honors. The bride is first violinist in the orchestra in the Kingshighway Presbyterian Church.

Marriage Mentions.

—DR. GEORGE H. KRUG, of Spetzler & Krug, Baltimore, is engaged to marry Miss Mary A. Frederick, daughter of M. J. Frederick, 613 West Franklin street. The date has not been fixed.

A. F. LONGWELL, '02, State University of Iowa, was married recently to Miss Sophia Baker, of Iowa City. They will live in Wellman, where Mr. Longwell and his father, ex-'87, are engaged in the drug business.

Professor Chandler Reminiscent at Annual Meeting of New York C.P.

Would Not Permit His Remarks to be Called a Farewell Address Although He Retires From Active Duties—Recalls Forty-four Years of Service as a Teacher.

The election of officers was the first act on the programme at the annual meeting of the New York College of Pharmacy held on March 15, the entire ticket presented by the nominating committee at the previous meeting being elected, as follows: President, Nicholas Murray Butler; first vice-president, Charles F. Chandler; second vice-president, Herbert D. Robbins; third vice-president, William Jay Schieffelin; treasurer, Clarence O. Bigelow; secretary, Thomas F. Main; assistant secretary, Edward W. Runyon; trustees to serve three years, Otto P. Amend, Adolph Henning, Caswell A. Mayo, Reuben R. Smith and Dr. Henry C. Lovis.

Following the election, Prof. Charles F. Chandler, who had recently resigned from active work as a member of the faculty, gave some very interesting reminiscences of his 44 years' service on the teaching staff of the college. He began by saying that he would not consider his remarks in the nature of a farewell address, for he wanted the privilege of "browsing around the college as long as he was able to get about," a sentiment that was roundly applauded by all present.

Professor Chandler referred to the progress that the college had made from its establishment in 1829, particularly commenting upon the advantages that had been gained by its affiliation with Columbia University. He used the word "apothecary" to designate the modern compounder of medicines which, he said, he liked a great deal better than the term "pharmacist." All of the early chemists were apothecaries, Paracelsus, Liebig, Sir Humphry Davy and others.

Professor Chandler said he well remembered his first introduction to the college in 1865. Prof. P. W. Bedford went to him and asked him to deliver a course of

CHARLES FREDERIC CHANDLER, of New York City.

lectures to the students. The college was then located in a room of a building on Washington Square. He was asked to lecture three times a week and to furnish his own apparatus and to provide such other assistance as he might need. He was told that the college had no money, but after thinking the proposition over he decided to accept the invitation and he had never regretted his action.

There were but 32 students in attendance the first winter in both junior and senior classes, and five graduates in 1866. In 1878 the college moved its quarters from Washington Square to a church which it had purchased in East 23d street. In 1893 the college acquired its present building in 68th street.

Of the members of the faculty who had been connected with the college, Professor Chandler spoke of Prof. F. F. Mayer, the discoverer of the reagent which bears his name; Prof. P. W. Bedford, Dr. E. R. Squibb, Prof. Walter Day and other famous names on the roll of early lecturers. He particularly referred to the late Dr. Charles Rice, who was chairman of the committee of Pharmacopœial Revision for many years and who was identified with the college from 1873 until his death in 1901.

During Professor Chandler's connection with the college he was appointed president of the Metropolitan Board of Health by Mayor Havemeyer, a position he held until 1884. In 1873 the cholera was raging in the South and was making its way northward. In the "scare" which developed, it devolved upon him to start the machinery for cleaning up the city. In this work Professor Day was his associate and Professor Chandler told of some interesting experiences they had in "cleaning" up Washington Market. In 1874 a smallpox epidemic visited New York, which also caused the authorities considerable trouble, but its ravages were quelled by the establishment of hospital facilities under able and competent management.

Professor Chandler's remarks were interspersed with frequent cries of "go on," but they were finally brought to a close by the statement that he would not consider his talk as a "farewell" for he wanted to hang around as long as he could "creep out of the house."

MANY TESTIMONIALS FOR PROF. CHANDLER.

Pharmacists in Manhattan and Brooklyn Vie in Doing Honor to Distinguished Chemist and Teacher.

Vying with each other in doing honor to Prof. Charles F. Chandler on his retirement from the active duties of teaching, various pharmaceutical and scientific bodies have under way a number of testimonials, dinners, etc. Among those which have been announced is the decision of the trustees of the Brooklyn College of Pharmacy to present Dr. Chandler with a set of engrossed resolutions in recognition of his work for pharmacy; a testimonial dinner on March 28 by the officers, trustees, faculty and members of the New York College of Pharmacy and its Alumni Association at the Hotel Astor, and a banquet at the Waldorf-Astoria on April 30, to be given by the Chemists' Club, Society of Chemical Industry, American Chemical Society, American Electrochemical Society, Institute of Chemical Engineers, and the Verein Deutscher Chemiker. At this banquet arrangements have been made to present the honored guest with a bronze bust of himself in heroic size by the sculptor J. Scott Hartley and a replica of the same to Mrs. Chandler. Subscriptions are also being solicited by the same organizations for the creation of a Chandler Testimonial Fund with which to purchase books for the library of the Chemists' Club. The chairman of the committee of arrangements for the testimonial of the united societies is L. F. Stone, 100 William street; contributions for the same should be sent to Dr. Morris Loeb, treasurer, 273 Madison avenue, New York. Thos. P. Cook is chairman of the committee in charge of the College of Pharmacy banquet at the Hotel Astor.

J. ARTHUR BEAN HEADS PIONEER ASSOCIATION.

Prominent Druggists and Statesmen Attend Annual Meeting of Boston's Oldest Drug Society.

Boston, March 20.—The Boston Druggists' Association, the oldest drug association in this part of the country, held its annual meeting and dinner at Young's Hotel. The election of officers resulted as follows: J. Arthur Bean, of Somerville, president; George H. Ingraham, of Newton, treasurer; Harry C. Wiggin, of Boston, secretary; Chas. F. Ripley (chairman), James F. Finneran, Fred A. Hubbard, Fred L. Carter, R. A. Newton, P. C. Klein, H. A. Estabrook, executive committee; C. E. Harrington (chairman), J. A. Gilman, P. J. McCormick, Henry Thornton, Elie H. LaPierre, membership committee.

The reports were encouraging, the association's reserve fund showing a satisfactory growth during the year. Charles F. Ripley, of Taunton, the retiring president, presided at the dinner. The special guests were Hon. Allen T. Treadway, president of the State Senate, and Representative Thomas W. White, of Newton, a registered pharmacist. An orchestra furnished music.

A wide variety of topics was discussed. President Treadway spoke of commercial questions confronting the State which the present Legislature would be required to attempt to solve, and he called for the hearty co-operation of just such men as composed the Boston Druggists' Association. Representative White discussed the legislation relating to pharmacy which is pending, laws relating to the conduct of pharmacies, the sale of liquor, the license fee, the powers of the State Board of

Pharmacy and the [illegible] John A. Gr[illegible] spoke for the [illegible] Prof. C. E. Nyce for the Massachusetts College of Pharmacy, Joseph L. Lascoff for the Massachusetts State Pharmaceutical Association, and Frank J. Ernst for the B.A.R.D.

A [illegible] of the new president will be found on page 377 of this issue of the ERA. His portrait is printed on page 243 of the March ERA.

CHICAGO VETERANS ELECT NEW MEMBERS.

No February 29 This Year, But Jamieson's Birthday is Celebrated With the Usual Ceremonies.

CHICAGO, March 20.—At the recent quarterly meeting of the Chicago Veteran Druggists' Association there were present: C. W. Grassly, president; John Blocki, W. K. Forsyth, C. H. Sempill, W. F. Baxter, T. N. Jamieson, T. H. Potts, Charles A. Storer, E. H. Woltersdorf, A. Scherer, F. J. Schroetter, W. [illegible].

Mr. Jamieson's birthday being on February 29, it was resolved to celebrate it on this occasion, and the usual ceremonies were put into operation. Prof. C. Lewis Diehl, of Louisville, and H. S. Wellcome, of London, Eng., were elected associate members. Louis Lehmann, E. von Hermann and Charles E. Matthews were elected active members.

Biographies of C. E. Dohme and Dr. Murray Galt Motter were read. Charles A. Storer was appointed a committee of one on C.V.D.A. medal or button to report at next quarterly meeting.

A telegram was read from ex-President O. F. Fuller, who was at Atlantic City, and on motion of T. H. Potts, the secretary was deputized to promulgate a "round robin" letter to be sent to Mr. Fuller, honorary president, during his sojourn at Atlantic City. John Blocki was appointed a committee of one to explore Aurora, Ill., as the next place for the Jamieson day anniversary.

B.A.R.D. Inspects Stamp-Selling Machine.

BOSTON, March 20.—The feature of the March meeting of the B.A.R.D. was again the committee on commercial interests which presented two interesting topics. The Automatic Service Company, of Albany, through its representative, exhibited a postage stamp vending machine, and demonstrated its workings. For a nickel two 2-cent stamps are given, allowing a margin of 20 per cent on the transaction for a profit to be divided between the lessor and the lessee of the machine, as well as avoiding what has often proved to be more than a mere labor of love in the matter of handling postage stamps. Dr. Blandford, of the Sheldon School of Salesmanship, of Chicago, gave a talk on the science of salesmanship.

Three new members were elected: I. Alexander, who recently succeeded to the Vargas Pharmacy at 809 Beacon street; Staples & Towse, of Brighton, and the Sherbert Drug Company, of Allston.

Ladies Attend Druggists' Banquet for First Time.

KANSAS CITY, Mo., March 20.—The members of the Retail Druggists' Association of this city held their seventh annual banquet recently at the Coates House. This occasion was the first of its kind which the ladies of members have attended, but the opinion was unanimous that the precedent thus established was a good one. D. V. Whitney acted as toastmaster and among those who responded to toasts were: Virginius W. Gayle, "Revision of the Pharmacopœia"; C. E. Corcoran, "Reminiscences"; J. T. Marshall, "Selections"; Emmet O'Malley, "Young Old-Timers."

Druggists and Doctors of Atlanta to Meet Jointly.

ATLANTA, Ga., March 20.—At the recent meeting of the local Retail Druggists' Association, W. S. Elkin, Jr., was appointed chairman of a committee which will confer with the officers of the Fulton County Medical Society and arrange for a joint meeting to be held in the near future. The following officers were elected: President, E. H. Cone; vice-president, R. G. Dunwoody, and secretary-treasurer, Albert Greenberg.

Grady County Pharmacists Get Together at Banquet.

[illegible], March 20.—[illegible] druggists [illegible] the county attended the banquet given by the Grady County Druggists' Association [illegible] at the Grady County Drug Co. The meeting was presided over by Mr. C. W. [illegible], president of the association.

ADVERTISING JOINTLY TO FIGHT COMPETITORS.

Co-operation Resorted to by Washington Druggists to Offset What They Call Unfair Opposition.

WASHINGTON, March 20.—The continuance of aggressive advertising by several of the centrally located druggists has prompted the owners of nine outlying stores to enter into an active campaign for co-operative advertising. Under the caption of "The Nine Best Drug Stores," Walter H. Hill, Augustus C. Taylor, Taylor & Lamb, W. S. Richardson (two stores), Hutton & Hilton, George W. Hurlebaus, Alfred T. Bronaugh and Richard L. Quigley, have been using half pages in the Washington *Evening Times*. It is understood that they have made a contract for this or more space for a long time ahead.

The advertisement features bargains, such as: Ivory soap, 3 cakes for 10 cents; bromo seltzer at half regular price; Packer's tar soap, 15 cents, and so on. Cut prices in stationery, candy, rubber goods and other staples are announced.

The druggists named are prominently connected with the D.C.R.D.A., A.Ph.A., Board of Pharmacy and College of Pharmacy. They claim to have been forced to this action by unfair competition and express the intention of carrying the war into the enemy's country until somebody shouts "enough!" Thus far the arrangement does not go beyond the sharing in the cost of advertising. Future developments will be interesting.

N. J. Druggists Won't Have Names on Patent Ads.

PLAINFIELD, N. J., March 20.—The recent meeting of the Union County Retail Druggists' Association was attended by 35 or more druggists. It was unanimously decided that no member should place his name on a patent medicine advertisement as recommending its use. An able report of the N.A.R.D. meeting at Louisville was presented by T. S. Armstrong. The officers of the association are: President, Joseph G. Smith, Rahway; vice-president, H. O. Schreiner, Plainfield; secretary, William R. Richart, Elizabeth; treasurer, L. P. Langheinz, Elizabeth. The following committee was appointed to solicit members and secure the co-operation of all druggists in the county: G. H. Horning, Roselle Park; T. S. Armstrong, Plainfield; George W. Frutchey, Westfield; L. P. Langheinz, Elizabeth; Joseph G. Smith, Rahway.

Michigan Pharmacists Organize New Association.

BAY CITY, March 20.—Local pharmacists have organized as an association and agreed to close their stores every Sunday evening at 9, and to strictly enforce the law relative to the sale of liquor and poison. Officers were elected as follows: President, E. T. Boden; secretary, D. B. Perry.

MARQUETTE, March 20.—At the annual meeting of the Marquette County Druggists' Association the following officers were elected: President, S. B. Jones; vice-president, Louis Pendill; secretary and treasurer, J. H. O'Donohue.

Collin County (Texas) Druggists Organize R.D.A.

MCKINNEY, March 20.—Druggists of Collin County recently organized as the Retail Druggists' Association. Officers elected are: President, J. H. Webb, Plano; vice-president, J. Wesley Young, Allen; secretary-treasurer, W. B. Mitchell, McKinney; committee on resolutions and by-laws, E. C. Allen, Plano; J. Wesley Young, W. B. Mitchell. E. G. Eberle, of Dallas, president-elect of the A.Ph.A., was present at the initial meeting.

Adams County (Ind.) R.D.A. Elects New Officers.

DECATUR, March 20.—At the recent semi-annual meeting of the Adams County Retail Druggists' Association, which was well attended by the druggists of this city and Berne, the following officers were elected: President, Andrew Gottschalk, Berne; vice-president, Louis Falk, Decatur; secretary, Louis Rice, Decatur; treasurer, Horace Callow, Decatur. The next meeting will be held in Berne in October.

Three Honorary Members for St. Louis R.D.A.

ST. LOUIS, March 20.—At the monthly meeting of the St. Louis Retail Druggists' Association three honorary members were elected: Dr. Lyman Hauser, W. C. Bobbs and I. A. Simonson. The meeting was preceded by a dinner at the Southern Hotel. The [illegible] of the association made a considerable [illegible]

Druggists Honor Dead Senator, Who Aided Them in Getting Legislation.

Thomas C. Platt, Himself Originally an Active Pharmacist, Paved Way for Repeal of War Stamp Tax After Practically Last Hope of Success Had Vanished.

THOS. C. PLATT, former U. S. Senator, who died last month in New York, and who was a conspicuous figure for years in National and State affairs, was a druggist in early life and during his public career was a staunch friend of pharmacy and pharmacists. Throughout his life he lent a willing ear to the demands of the drug trade in the Empire State and used his influence to secure better pharmaceutical legislation. That his work in this direction was duly appreciated and not forgotten is attested by the fact that at the March meeting of the Kings County Pharmaceutical Society, a telegram signed by the officers and expressing the sympathy of that body was ordered sent to Frank H. Platt, one of his sons.

DRUG STORE KEPT BY SENATOR PLATT IN THE '60S.

This action was proposed by Dr. William Muir and brought to the minds of several of the members reminiscences of occasions upon which Senator Platt had aided them in securing much-needed legislation. Dr. Muir himself quoted the ex-Senator as saying at one time, when pharmaceutical legislation was in an extremely critical condition, that he "had a great love for his old profession and always wished to advance it."

When the old cities of New York and Brooklyn were consolidated as the present city of New York the charter for the larger city failed to provide representation for Brooklyn on the new Board of Pharmacy. Previous to granting this charter there had been four boards, the Kings County, the New York County, the Erie County and the New York State, the former being the city of Brooklyn, Erie County including Buffalo and the State board covering the State outside of the three counties mentioned. At the time of consolidating New York and Brooklyn cities, two new boards were created, one for the new New York City and the other for the remainder of the State.

The omission to provide for Brooklyn representation in the city board caused much of the legislative agitation of the Kings County Ph.S. at that time. Nothing was accomplished, however, until Dr. Muir enlisted the good offices of Senator Platt. The latter wrote Dr. Muir a letter, one line of which ran, "You shall have relief." It was signed "T. C. P." Armed with this, Dr. Muir and others just as vitally interested in the needed legislation were enabled to secure the amendment. This, of course, all occurred prior to the passage of the All-State Pharmacy Law now in action.

Dr. William C. Anderson recounted how another letter signed by Senator Platt had secured him a 15 minute interview in which to present arguments in behalf of druggists to Senator Aldrich in Washington at the time Congress was reconsidering the removal of the stamp tax on proprietary medicines which had been in operation during the Spanish-American war. Dr. Anderson was thus enabled to tell that the measure was an injustice to pharmacists and that the tax should be removed. In the latter case, the committee having the measure in charge, headed by Senator Aldrich as chairman, had not only refused to remove the tax but refused even to give a hearing.

Dr. Anderson, after having been turned down by the committee, went to Senator Platt and as a pharmacist himself the latter freely offered his aid. He gave Dr. Anderson a letter, personally requesting that Senator Aldrich grant a hearing. Out of senatorial courtesy, the latter said to Dr. Anderson: "I will give you just 15 minutes." Dr. Anderson made the most of this meager opportunity to present his arguments, and, time up, started to go. Senator Aldrich stopped him: "Go on, go on, this is interesting. You're presenting a side of the question I never heard before." Following this lead others joined the discussion and the matter was thoroughly threshed out, resulting in the removal of the tax.

Adrian Paradis, who ably supported Dr. Muir's suggestion made at the meeting above mentioned, also touched on the late Senator's work in obtaining required legislation. He spoke in particular of Senator's Platt's connection with the Raines Law legislation and the manner in which he aided in alleviating the provisions regulating the sale of liquor by pharmacists in New York State.

Mr. Platt died of acute Bright's disease. He was 77. During the latter 50s and until 1872 he was engaged in the retail drug business at Owego, N. Y., under the firm name of Platt & Hull. In these twenty years, besides assisting in conducting the business, he wrote the firm's advertisements and it is said he mixed politics with the Pharmacopœia in an amazing fashion. On November 18, 1872, the business was sold to Ely & Co., of Owego, and Mr. Platt turned his attention to other affairs, becoming head of the United States Express Co. Walter B. Partridge, who now owns and manages the old Platt pharmacy, furnished the Era with the accompanying illustration of the store.

AUGUSTUS KIEFER, PIONEER DRUGGIST, DEAD.

President of Prominent Jobbing Firm and a Founder of National Wholesale Druggists' Association.

INDIANAPOLIS, March 20.—Augustus Kiefer, president of the A. Kiefer Drug Company, died March 5. He was 82 years old and while virtually an invalid for several years he was apparently in better physical condition during the past winter than for some time. He is survived by one daughter, Josephine Kiefer Mayer, wife of Charles Mayer; a sister, Phoebe Kiefer, and three grandsons, Charles Mayer, Jr., Augustus Kiefer Mayer and Edward Mayer.

The late AUGUSTUS KIEFER, pioneer of Indianapolis.

In the death of Mr. Kiefer, Indianapolis loses one of its best known and most honored pioneer citizens, the wholesale and retail drug trade one of its most respected members, and the officers and employees of the A. Kiefer Drug Company one of their most loyal and faithful friends, a wise counselor, a considerate, thoughtful and sympathetic employer. No one with whom he was associated felt any hesitancy in going to him for either counsel or advice and by his patience, courtesy and kindly feeling he endeared himself to those who were associated with him in his business. Next to his devotion to his family came his loyalty to his employees and his removal from their midst has created a void which cannot be filled.

He attributed his success in business very largely to his close application and his careful attention thereto. From a

very modest beginning in a retail way, he grew and expanded, building always upon a solid foundation, until he became one of the largest drug jobbers in the Central West. He had no outside financial interests, confining his entire efforts and capital to his jobbing drug business.

Mr. Kiefer foresaw years ago the coming of the time when he would be obliged to retire from active service and with characteristic foresight he prepared for the perpetuation of his extensive business by surrounding himself with a corps of efficient officers and employees who, through their long years of business association with him and being imbued with his progressive spirit, gave him the assurance this his business would be continued without interruption. The obligation which he felt to his employees can best be illustrated by his determination to resume business the day after his entire stock and building had been destroyed by fire, in February, 1905. He, least of all, considered discontinuing business, but stating "that he owed it to his boys and girls to stay in business," he immediately gave word to find a new location and purchase a new stock of goods.

Presented an Example of High Idealism.

Mr. Kiefer considered the profession of the druggist as one of high honor and he ever sought to inject into its conduct that spirit of honesty and high ideals, the emulation of which ever makes for that which is highest and best in the life of business. He was a friend not only to the successful merchant but as well to any who were struggling to gain a foothold in the commercial world and there are many successful druggists today who owe their success very largely to the fact that Mr. Kiefer befriended them when their only capital and basis for credit consisted of a good character and the ability to make a success of their business, and it was always a source of much gratification to him to give consideration to those whom he had befriended and to whom he had given a start on the highway to success. Nothwithstanding Mr. Kiefer's success in a business and financial way, he was in all things without ostentation and whenever he was confined to his home on account of illness no one was more at liberty to visit him than his most humble employee. When his death was announced the unanimous expression of all who had been associated with him in any capacity whatever was: "We have lost one of our very best friends."

Augustus Kiefer was born at Muenchweiler, Rheinpfolz, Bavaria, Germany, February 21, 1828, the son of Jacob Kiefer, who was engaged for years as a school teacher at Muenchweiler. Mr. Keifer attended his father's school at that place, and later a public school at Miamisburg, Ohio, finishing there at the age of about sixteen.

Began as Clerk—Helped Start the N.W.D.A.

After leaving Miamisburg, he clerked for a year in Dr. Koerner's drug store at Dayton, Ohio; from thence he went to Cincinnati, where he clerked in a confectionery for several months, returning to Miamisburg, and migrating in 1849 to Indiana, locating in Edinburg. Subsequently he purchased one-half interest in a small drug store owned by Dr. W. P. Rush, which he managed until 1863, moving then to Indianapolis, and organizing the wholesale drug firm of Dalley, Kiefer & Rush. This partnership continued for about three years, when Mr. Kiefer sold his interest to the other partners and retired from the firm. In 1866 he and Almos P. Vinton organized the firm of Kiefer & Vinton, locating their business in a storeroom situated on the space now occupied by the Commercial Club Building. Mr. Vinton died in 1872 and Mr. Kiefer bought the Vinton interest. From 1883 to 1893 he continued business under the style of A. Kiefer & Co., during which time William H. Schmidt was partner. In 1894 Mr. Schmidt retired from the firm, the business then being incorporated under the name of A. Kiefer Drug Company, with Mr. Kiefer as president, in which capacity he continued since that time.

Mr. Kiefer was one of the founders of the National Wholesale Druggists' Association. Mr. Kiefer discussed the matter with J. & C. Reakirt, with James S. Burdsall, with Allen & Co., Wm. S. Merrell & Co., Mr. Merriam and Mr. Potts and found them all ready to join in a conference looking toward the formation of such an organization. At this conference, which was held the following day, a call was issued for all the jobbing druggists west of the Alleghenies to meet at Indianapolis. Over 100 representatives of the jobbing drug trade attended the Indianapolis meeting, at which time the N.W.D.A. was perfected.

OBITUARY.

P. C. Candidus, Ex-Honorary President A.Ph.A.

Philip C. Candidus, a former honorary president of the American Pharmaceutical Association and one of its oldest members, died at his home in Mobile, Ala., on March 6. He was born in Germany and came to this country with his parents when a child, settling in Philadelphia. About 1856 he went to Aberdeen, Miss., where he established himself in the drug business and where he remained until the outbreak of the Civil War. During the war he served as medical purveyor for the Confederate Army under Gen. Albert Sydney Johnston, later enlisting and serving with the army under Forrest. In 1867 he established a pharmacy in Mobile, which he conducted until his death. Mr. Candidus was one of the organizers of the Alabama Pharmaceutical Association and president of the board of pharmacy from the date of its organization. He was a man of positive character and cultivated the highest ideals. Probably no pharmacist ever devoted so great a part of a long life to upbuilding the practice of pharmacy and the work that he did in connection with legislation in Alabama will long stand as a monument to his effort.

Albert H. Caulkins, of Chicago.

CHICAGO, March 20.—Albert H. Caulkins, manager of the Chicago branch of Eli Lilly & Co., died at the Columbus Hospital recently in his 39th year, of tuberculosis of the kidneys. He was reared in Lafayette and received his college education in Purdue. He had wide experience in the retail, wholesale and manufacturing drug trade and for about 11 years had been associated with Eli Lilly & Co. in the sales department. For seven years he represented his house as traveling salesman in Indiana, the latter part of the time having charge of the northern portion of the State. In 1908 he was promoted to the managership of the Chicago branch, which position he filled with characteristic ability. He is survived by a widow, who was also his college classmate, and two children.

Obituary Notes.

—GEORGE T. JACK, veteran salesman for the Michigan Drug Co., Detroit, Mich., is dead of apoplexy. Mr. Jack has been on the road for almost 50 years and enjoyed a very extensive acquaintance in southern Michigan, northern Ohio and Indiana. During the Civil War he served in the famous Loomis Battery and engaged in some hard-fought battles. He spent eight months in Chickamauga prison, having been taken prisoner by the enemy after his own comrades had left him on the field of battle as dead.

—WALTER RIMSNIDER, a graduate of the department of pharmacy of the University of Wisconsin and formerly a well known druggist of Madison, Wis., died recently at Roswell, N. M., where he had gone for his health. He is survived by a mother and a young bride.

—DEXTER I. WILLSON, president and general manager of the Willson Monarch Remedies Company, Edgerton, Wis., is dead, aged 45, following an operation for gall stones. He is survived by a wife, two daughters, a mother and two brothers.

—HEBMAN HEINEITZ, for 25 years a druggist in Holyoke, is dead, aged 48, leaving a widow and three children; he was a member of the Massachusetts Ph.A., a trustee of the Massachusetts College of Pharmacy and a Mystic Shriner.

—BENJAMIN LILLARD, until recently identified with various pharmaceutical publications, died last month in New York, aged 63. At one time he was professor of pharmacy in the Tennessee College of Pharmacy.

—WM. P. RODEMICH, druggist, of 2738 Chouteau avenue, St. Louis, who a short time ago refused to follow the lead of the other druggists and throw out the "free lunch" telephones, is dead at the age of 39.

—JOHN J. STRASSER, of Trenton, died recently in Philadelphia after an operation. He was 46 and leaves a widow and son. Mercer County R.D.A. passed appropriate resolutions.

—HENRY LAUTENSCHLAGER, of 100 Second avenue, Manhattan, in the employ of Schieffelin & Co., New York, since 1884, is dead. He was noted for his faithfulness to duty.

—EMILE J. LAROQUE, for 30 years a druggist at Pratt and Chester streets, Baltimore, is dead, aged 53. He left a widow and four children. He was a Knight of Columbus.

—CHAS. H. GALLAGHER, head of Tobias Liniment Co., New York, is dead at his home in Brooklyn; a daughter survives.

—EMMETT A. MAYNARD, 71, South Butler, N. Y.; was for

years a well-known traveler; a widow and three children, including Dr. H. A. Maynard, of Medina, survive.

—WM. GOODWIN, 68, for 45 years druggist in Washington street, Marblehead, Mass.; charter member Massachusetts State Ph.A.; a widow and three sons survive.

—JOHN M. ROHBOCK, 73, Civil War veteran, drug and sundries salesman for the Parker-Blake Co., New Orleans, is dead; a widow and three children survive.

—ALFRED BELEY, 66, veteran New York druggist, died recently in the German Hospital. He retired from business eight years ago after the death of his wife.

—JOHN M. BOGERT, with Schieffelin & Co., New York, since 1872, having charge of the proprietary goods department, died March 8 at his home in Jersey City.

—ROWLAND K. GORDON, Roxbury, Mass., dropped dead at his home in Dorchester, March 15, aged 66. He had been in the drug business for 35 years.

—FRANK H. EGGLESTON, of Laramie, secretary of the Wyoming State Pharmacy Board, died in Denver recently as the result of a surgical operation.

—DR. F. T. COOK, Taylor, Tex., pioneer citizen; druggist and physician for 33 years; leaves widow and two children.

—ARTHUR TESSIER, 54, Brookline, Mass.; member Boston A.R.D.; wife, daughter and brother, his partner, survive.

—GRANT P. ROBERTSON, 68, for 28 years with Doty & Humphrey, Poughkeepsie, N. Y. A son survives him.

—J. J. CLEMENS, former druggist, Chicago and Pottsville, died recently in Pennsylvania; he leaves a widow.

—GEO. K. WILSON, Stratford, Conn.; leaves a widow and three sons, one having been in business with him.

—CHAS F. MCDERMOTT, formerly of Chicago, died recently in Albuquerque, N. M. He was 26 years of age.

—WM. HARRISON, pioneer eastern Ohio druggist, died at St. Clairsville after celebrating his 69th birthday.

—DR. A. HARSCHER, proprietor of the Marine Avenue Pharmacy in South Broadway, St. Louis, is dead.

—MARTIN MCDERMOTT, 51, Cohoes, N. Y., was a prominent business man; he leaves a widow and son.

—LOUIS P. DUDLEY, 34, traveler for Loewy Drug Co., Baltimore, Md.; leaves a widow and son.

—PETER P. SUTTON, 79, oldest druggist in Louisville, Ky.; widow and two daughters survive.

—ANDREW F. GATLIN, Topeka, Kan., 47, is dead of cancer. A widow and six children survive.

—EMIL RHEINLANDER, Dallas, Tex.; widow, two children.

—VICTOR E. SILVERBURG, 41, Muncie, Ind.; widow and son.

—C. M. REINHARDT, 41, Baltimore; wife and three children.

—GEORGE H. BOONE, Avoca, Pa.; brother Charles survives.

—EDW. STENGER, Fairmount, Cincinnati, has passed away.

—LEONARD A. KURZ, 30, Kalk & Kurz, Oconomowoc, Wis.

—WM. F. DUNN, 49, Smyrna, Del.; a daughter survives.

—ALBERT F. HENDERSHOT, 65, retired, Washington, D. C.

—JAS. S. BLOCKSOM, 43, retired druggist, Zanesville, O.

—DR. HARRY J. BOYD, of Boyd & Fulford, Belair, Md.

—C. E. KING, 60, C. E. King & Sons, Durham, N. C.

—OSCAR EBBESEN, 49, Rockford, Ill., died recently.

—HENRY C. WELLS, 50, Elkton, Md.; left a widow.

—ROBT. SCHORSE, 73, Milwaukee pioneer, is dead.

—WM. HURLEY, Dedham, Mass., 57 years of age.

—D. H. NORTON, 88, retired, South Bend, Ind.

Filipinos Guests of Washington Drug People.

WASHINGTON, March 20.—In addition to the Philippine Commissioners to Congress, Messrs. Legarda and Quezon, there are a number of Filipino students attending the George Washington University. These young men, representing the best families of the islands, have made a number of friends in drug trade circles. Mr. and Mrs. Charles J. Fuhrmann, Mr. and Mrs. W. H. Bradbury, Dr. and Mrs. L. F. Kebler and Mr. and Mrs. J. Leyden White have frequently entertained the gentlemen from the antipodes. The residences of Mrs. Fuhrmann and Mrs. Bradbury were recently given over to receptions in honor of Commissioners Legarda and Quezon. As a mark of appreciation of courtesies extended, the students will entertain their Washington friends with a "Filipino Night" on April 6.

Charles Hackett New President Huntington Co. R.D.A.

HUNTINGTON, Ind., March 20.—At a recent meeting of the Huntington County Retail Druggists' Association the following officers were elected: President, Charles Hackett, of Roanoke; secretary, O. E. Bradley; treasurer, Jacob Heaston.

Wholesale Druggists Win.

New York Court of Appeals Decides Against Firm of John D. Park & Sons, of Cincinnati.

By a decision handed down recently by the Court of Appeals of New York the case of Park against Hubbard and others, which has, in its various phases, been before the courts of the State for thirteen years, was practically finished. The decision is regarded as of the utmost importance in its definition of the law, both to the drug trade, in which both plaintiffs and defendants are interested, particularly, and to the public generally.

It forbids the plaintiffs, John D. Park & Sons, to file a supplemental or amended complaint, wherein damages originally claimed by them at $500,000, may be increased to $3,500,000.

The original suit, which the Court of Appeals' decision does not affect, was commenced in 1897. John D. Park & Sons, of Cincinnati, druggists, instituted two suits in New York County, one in equity against the National Wholesale Druggists' Association, for injunctive relief from the selling system of the manufacturers, which was declared to be an alleged conspiracy in restraint of trade, and the other against the New York State jobbing houses, members of the association, for damages which were alleged to have been sustained by reason of the exclusion of John D. Park & Sons from the sale of proprietary goods sold on a rebate or contract basis.

Whether or not John D. Park & Sons will continue the prosecution of the original suit is not known, or whether the firm will commence other new actions, but it was generally believed that in view of the scope of the adverse decision by the Court of Appeals in the amended complaint, it was unlikely that the fight would be continued further.

CANADIAN PROPRIETORS HONOR BRENT GOOD.

Made Honorary President at Toronto Meeting When New Dominion Medicine Act is Reported Approved.

TORONTO, March 20.—At the recent annual meeting of the Proprietary Articles Association of Canada, advertising, distribution and transportation discounts to the wholesale trade and price cutting were the principal topics of discussion. The new Dominion Proprietary Medicine Act was reported as having received the approbation of Canadian, English and American manufacturing companies.

The following officers were elected: Honorary presidents, Henry Miles, Montreal and Brent Good, New York; president, David Watson, Montreal; vice-president, J. A. MacKenzie, Brockville; secretary-treasurer, L. S. Levee, Toronto; board of control, chairman, J. H. McKinnon, Toronto; W. G. Harson, Montreal; Thomas Brady, Montreal; W. J. Edmanson, Toronto; T. E. Milburn, Toronto, and J. A. McKee, Toronto. L. S. Levee, secretary for the past fourteen years, was presented with a diamond ring.

Ball of St. Louis Druggists a Success.

ST. LOUIS, March 20.—Recent annual ball of the Retail Druggists' Association at the handsome Union Club rooms was one of the best attended of the series and the entertainment feature was very successful. A number of professional singers varied the usual amateur programme, but the popularity of the amateurs was well demonstrated by the applause and flowers. Charles Wagner, the popular comedian, was the usual success with his recitations. Other amateurs were Miss Lucille Ludwig, Miss Estella Claus, Miss Marie Schneeweis, Miss A. Ruschaupt, Max Guenther, William Busch, Jr., Miss Elizabeth Arendes and Lorraine and Anita Rodemich. J. C. Thumser was stage manager and L. A. Seitz chairman of the entertainment committee. A dance followed the entertainment.

Drug Clerks' Organization to Hold Bazar and Ball.

The National Pharmaceutical Society will hold its first annual bazar, pure food and drug exhibition at Palm Garden, 150 East 58th street, New York City, May 9 to 11. Demonstrations in the manufacture of pills, capsules and other pharmaceutical preparations, and a glass-blowing exhibition will be features of the event. The proceeds will be used in establishing club rooms and a fund for the benefit of unemployed drug clerks. A ball occurs on the evening of the 11th.

NOTE—*A, advanced; D, declined; C, correction; N, new.*

See page 396 for Price List Changes and page 398 and following pages for Prices Current.

NEW YORK, March 21.—Market conditions have continued uniformly satisfactory since our last report and at this writing the tone of the general market is steady. The demand for drugs and chemicals, while mainly of a seasonable character, has been chiefly for jobbing parcels, the aggregate volume of business reaching satisfactory proportions. Opium and quinine are unchanged and quotations on Haarlem oil have been advanced, owing to scarcity of stock available for prompt delivery. Cubebs, cod liver oil and buchu leaves are reported quiet but firm in sympathy with stronger advices from primary sources of supply. Glycerin is higher, due to an active demand, and prices on mercurials have been revised to conform with manufacturers' quotations. Oil of cubebs has suffered a slight advance and jobbers have marked up the quotations on oil of wintergreen leaf.

OILS.—Notwithstanding the newspaper reports that the market is dull and easy, regular dealers continue firm in their ideas regarding values, having received many inquiries from different sources. Primary markets are reported fairly active, and while the Smyrna market is fairly well stocked with low grade material, the higher grades are difficult to obtain and held at full figures. The arrivals in Smyrna to February 25 amount to 1918 cases, against 2023 cases last year. Jobbers continue to ask $5.75@$6.00 for natural, $6.75@$7.00 for granulated and $6.75@$7.00 for powdered, U.S.P.

QUININE SULPHATE—Continues to find a moderate routine consuming outlet, with the tone of the market steady. The sale of Amsterdam brand held in Amsterdam on March 14 went off at a slight decline. The quantity offered was 50,000 ounces, which realized 10.55 florins, against 11 florins at the previous sale. The slight decline, however, has not affected the market quotations of standard brands. The next bark sale in Amsterdam will be held on March 24. It is reported from London that the Dutch Government has refused to renew the contract for the supply of bark to the Bandong factory in Java, and that the factory will not hold any more auction sales of Java quinine. The full significance of the report is not yet apparent. However, manufacturers' prices are well sustained on the old basis of 14c. for bulk in 100-ounce tins.

COD LIVER OIL—The market here has quieted down somewhat since our last report, but cablegrams from Norway show a stronger position. The fishing in that country to some extent has been interfered with by storms, and although the catch has been large, the production of oil shows a leanness of livers. Cable reports give the result of the catch to March 14 as follows: In Lofoten, 7,500,000 fish, producing 6410 barrels of oil. For the previous year (1909), 6,000,000 fish produced 6720 barrels of oil. In 1910 all other districts reported a catch of 18,750,000 fish, yielding 14,350 barrels of oil, the production for the previous year (1909) being 16,500,000 fish, yielding 16,850 barrels of oil. The season in Norway closes earlier this year and the consensus of opinion seems to indicate that even with good fishing the production cannot possibly equal that of last year. Quotations remain unchanged at $28@$30 per barrel; per gallon, $1.00@$1.10.

GLYCERIN—The demand has been very active and the tendency is toward higher prices. Jobbers have advanced their quotations to 25@30c. per pound for the usual quantities, although barrel lots can be bought for 21c. Price's glycerin has also been advanced to 48c. per pound in cases of 50 1-lb. bottles.

OIL OF GAULTHERIA—The market is almost bare of stock and present quotations of $5.00@$5.25 per pound may be higher, as new oil cannot be made before May, as it is impossible to collect the leaves for distilling until the snow disappears from the woods.

CANADA BALSAM—Is easier owing to small demand, but no changes have been made in jobbing quotations. Oregon is slightly higher owing to the depleted stock in this market at the present time.

RHATANY ROOT—This article has been very scarce in this market, a sharp advance in price having taken place at the beginning of the month. Recent arrivals, however, have eased the situation somewhat and jobbers are quoting 45@50c. per pound for whole root and 50@55c. for powdered.

VALERIAN ROOT—A shipment of true English root has been received in this market which is held at 30c. per pound in bales of 112 pounds. Smaller quantities are quoted at a slight advance. Belgian valerin has advanced very sharply in primary markets and dealers have marked up their prices accordingly.

PRICKLY ASH BERRIES—Are higher and quotations have been advanced to $1.50@$1.75 per pound. Only small stocks are reported and the supplies in this market are well concentrated.

COPAIBA—The demand is still of fair proportions and some descriptions are moving better because of lower prices. Dealers are quoting 65@75c. per pound for Para.

MERCURIALS—A revision in the prices and terms of sales for hard mercurials was announced by manufacturers during the early part of the month and jobbers have altered their prices accordingly. The following are the quotations: Ammoniated (white precipitate), $1.34@$1.41 per pound; bichloride (corrosive sublimate), 92@98c.; chloride (calomel), 98c. @$1.06; oxide (red precipitate), $1.11@$1.31; with chalk, 51@54c.

HAARLEM OIL—Available supplies have been materially reduced since the limitation placed upon importation and quotations have been advanced owing to scarcity of stock available for prompt delivery. Present quotations are $3.50@$4.00 per gross, as to brand and seller.

Dealers In Diamond Dyes Protect Your Customers

Every dye imitation that is sold spoils a possible dye customer and undermines the confidence of women in the possibilities of home-dyeing.

Recommend Diamond Dyes to your customers. Explain the reason for the separate dyes for Wool and Cotton. See that they get the right dye for the fabric they intend to dye.

That's the only possible way to protect your customers and to build up a steady, good-paying dye trade.

And keep a complete assortment always on hand, so you don't have to turn customers away.

HERE IS THE TRUTH ABOUT DIAMOND DYES

It is a chemical impossibility to color Silk and Wool (animal material) and Cotton and Linen (vegetable material) equally as well with the same dye.

Any DYE Chemist will tell you this fact. Of course it sounds easier to trust to luck and use one dye for both. But remember, an economy is not real economy unless it is successful. Do not be misled by imitations of Diamond Dyes.

Recommend Diamond Dyes to Your Customers
They Will Thank You for It

Serve this one week

at your soda fountain, and watch results.

Grape Juice with Whipped Cream

Have the grape juice thoroughly chilled by placing bottle on ice. Pour out into a dainty stem glass. Place a generous spoonful of sweetened whipped cream on the top. A sprinkling of chopped nuts will add to its richness. In serving, set the glass on a small linen or paper doily, and serve with spoon.

This is but one of the many attractive specialties described in our book of grape juice recipes for the soda fountain now in preparation. Write for a copy to be sent you as soon as off the press. It is filled with new ideas.

The Grape Juice that Everybody Likes—

Ask them to just *try* Walker's. It is clear, free from that "puckery" after-taste caused by sediment in other brands of grape juice.

No sediment in Walker's—no "pucker." It's clear and rich, and very wholesome.

Walker's GRAPE JUICE

"It's Clear Because It's Pure"

Made in the largest grape juice plant in the world. Made only from the very finest Concord grapes, by an improved process which makes it clear, pure and sweet to the taste.

The Physician's Guarantee of Pure Olive Oil

Behind the physician's prescription for olive oil should be a definite knowledge of the purity and cleanliness of the oil to be used— for many so-called "pure" olive oils are produced in unsanitary surroundings, and are frequently lacking in the very properties the case demands.

Heinz Olive Oil is widely chosen by the medical profession as a really dependable, high-grade oil—one whose purity and therapeutic efficiency are beyond question.

HEINZ Pure Olive Oil

is produced in Seville, Spain. Here the finest olives in the world are grown. We select certain varieties of fruit noted for their high-grade oil content. They are picked by hand, carefully washed and pressed in our establishment, where cleanliness and purity are the first consideration. We bottle only the first pressing, for this is the finest flavored—the very essence of the olive.

Heinz Olive Oil has the rich, golden color and the exquisite flavor that at once proclaim its purity. It is widely used as a table oil, but unusual quality has also proved its rare value for physicians' and druggists' use.

$50 A SHARE PROFIT IN CO-OPERATIVE CONCERN

300 Retailers in Philadelphia Treated to Agreeable Surprise in Reorganization of Wholesale Company.

PHILADELPHIA, March 19.—The 300 retail druggists who were members of the Philadelphia Wholesale Drug Company, Limited, which on December 20 ceased to be a partnership and is now a corporation under the name of the Philadelphia Wholesale Drug Company, were the surprised recipients of a windfall this week in the shape of an announcement that they were entitled to share in a surplus of $21,450, or $50 for every share in the former partnership that is entitled to participate in the distribution of profits.

This surplus was the undivided profit which was arrived at by the taking of the inventory of the stock at the termination of the partnership and covered the business for the last few years. It was due to the excellent management of the concern's affairs by Frank R. Rohrman, president and general manager. Other officers, who have had no small part in this success, are Henry C. Blair, vice-president; Otto Kraus, secretary; Harry Z. Krupp, treasurer.

The directors have decided to extend the privilege of taking additional stock, par value $100, each member so deciding paying $50 in addition to his bonus of a like amount, for every additional share that he may desire, in proportion to the present number he holds. These additional shares will entitle the holder to receive a bonus of 6 per cent. dating from January 1, 1910, payable semi-annually thereafter. Those who do not wish to take additional shares will receive cash without interest July 1 next. Acceptance of the stock offer must be made on or before April 1. It is expected that the majority of the members will take additional stock.

Base Ball: New York vs. Philadelphia.

PHILADELPHIA, March 20.—Extensive preparations are under way for the meeting of the representative base ball teams of the Philadelphia College of Pharmacy and the New York College of Pharmacy in this city on April 14. A big turnout of the local alumni is anticipated. Judging from reports, the interest in New York is equally strong. The game will take place on the grounds at 44th street and Parkside avenue, where the candidates for the local team are already at work.

No American Fair in Berlin This Year.

American Exposition, which was to have been held in Berlin this coming summer, has been postponed. The executive committee recently decided that in view of the apparent opposition that has developed in Germany and this country it was best to postpone the project for another year at least and then to endeavor to make the affair German-American in character. The honorary commission appointed by President Taft, and which includes J. P. Morgan, John Wanamaker and David H. Francis, will be continued.

Ray Chemical Company's Unique Calendar.

The Ray Chemical Company, Detroit, Mich., is sending out a calendar which is, in a way, quite original. It is decorated with a reproduction of one of a group of figures found painted on the walls of the House of Vettii and discovered within recent years in Pompeii, the city destroyed by Vesuvius in 79 A.D. The figures in this group are represented as compounding drugs in a primitive pharmacy. The subject is decidedly interesting to the student of historical pharmacy and medicine.

Proclamation for the Thirteenth Federal Census.

President Taft has issued a proclamation relating to the Thirteenth United States Census, work on which begins April 15. All persons are advised to answer the enumerators' questions fully and accurately. Only the total statistics gathered will be disclosed, all information given by individuals being protected from publicity by heavy penalties. The census has nothing to do with taxation, jury duty or similar matters.

New Quarters for the George Batten Company.

The George Batten Company, advertising experts, have moved into new and larger offices in the French Avenue Building, [illegible] and 27th street, Manhattan, New York City.

Eureka Chemical Co., Newark, N. J. Manufacturing insecticides, disinfectants, etc. Capital, $100,000. Incorporators: A. C. Piper, E. Q. Keasbey and C. M. Keasbey.

MARCHAND'S
MEDICINAL PREPARATIONS

If you, Mr. Pharmacist, had devoted over *a quarter of a century* to the manufacture of five high grade preparations with only one standard of purity and uniformity, wouldn't you feel they were better than those made by a newcomer?

Then, is it any wonder we are proud of *our* preparations?

We were the first to manufacture Peroxide of Hydrogen (Marchand's) for medicinal purposes—that was thirty-one years ago—we are the PIONEERS.

PHYSICIANS KNOW

That MARCHAND'S PEROXIDE OF HYDROGEN (medicinal, 15 Vol.) is superior, because it is 50% *stronger* than the ordinary U.S.P., 10 Vol., and because it contains *NO ACETANILID,* and is absolutely free from any impurities.

That HYDROZONE (30 Vol.) is *THREE TIMES AS STRONG* as the ordinary preparations, and that it is the *most powerful of all germicidal agents,* yet is *absolutely non-poisonous.*

That GLYCOZONE ($C_3H_6O_4+C_8H_8O_3$), because of its remarkable properties is of signal value when applied to inflamed mucous membranes or other tissues. It is especially serviceable in acute and chronic forms of gastritis, intestinal catarrh, gastric ulcer, etc.

HYDROZONE AND MARCHAND'S PEROXIDE OF HYDROGEN (Medicinal) are put up in the best quality of flint glass bottles, for the reason that flint glass is not so brittle as amber glass. This, in connection with Marchand's improved process of manufacture, reduces the risk of breakage to a minimum.

When a prescription or a request comes to you for MARCHAND'S PEROXIDE OF HYDROGEN (Medicinal), HYDROZONE, GLYCOZONE, MARCHAND'S EYE BALSAM or the DREVET MFG. CO.'S U.S.P. H_2O_2 Official, see that it is dispensed and no attempt made to urge anything else upon the customer.

Your profit is LARGER than it would be if you urged the sale of an inferior article.

London NEW YORK Paris

Luyties Must Pay $722,060.

Ruthlessly Scuttled Sanitol's Assets and Sold Worthless Formulas. Company Solvent—Two Receivers Named.

ST. LOUIS, March 25.—Judge George Williams, of the Circuit Court, has handed down a decree ordering Herman C. G. Luyties to pay back to the stockholders of the Sanitol Chemical Laboratory Co. the sum of $722,060 and accusing him of "the ruthless scuttling of the assets of the corporation," of which he was former president.

By the same decree former Circuit Judge Jesse A. McDonald and Frank V. Dubrouillet, treasurer of the St. Louis Union Trust Co., are appointed receivers for the Sanitol company with a joint bond of $100,000.

The receivers are instructed to conduct the affairs of the company, which is declared to be solvent, for the benefit of the stockholders, who were represented in the suit by 28 plaintiffs, most of them being out-of-town druggists. They hold 1396 shares of Sanitol stock.

By the decree H. C. G. Luyties, Robert E. Desmond, former secretary, and George A. Bowman, former treasurer of the company, are prohibited from acting as directors under the receivership.

Among the allegations in the case was one that Luyties had caused $200,000 of the capital stock "to be issued to himself as fully paid" in payment for five formulas owned by him. The court holds that these five formulas "were of no value" and that "such transfer of stock to himself was fraudulent." Luyties is quoted as declaring that he expects to appeal from Judge Williams' decision and "fight the case to a bitter finish."

GOVERNMENT WINS THE COD LIVER OIL SUIT.

In Test Case the Court Decides That the Product Was Misbranded—An Appeal Likely to be Filed.

WASHINGTON, March 25.—The suit of the United States against the Waterbury Chemical Co., of Des Moines, Iowa, under the allegation of misbranding of "Waterbury's Metabolized Cod Liver Oil" was decided yesterday in favor of the prosecution.

Justice Stafford, in the District Criminal Court, ruled that the product was misbranded within the meaning of the Act. Upon several contentions of the Government the justice did not rule. The defense has 30 days in which to file an appeal, which will undoubtedly be taken, as this was started as a test case to restrain the Government officials from an alleged arbitrary enforcement of the Pure Food and Drugs Law.

Jungmann Creditors Expect Settlement in Near Future.

An offer of settlement is expected by the creditors from Julius Jungmann, president of the J. Jungmann Corporation, druggists, New York City, by April 1. Although the receivership has been vacated because the petitioning creditors refused to increase their bond from $250 to $100,000, bankruptcy proceedings have not been discontinued. Mr. Jungmann has been conducting his stores as previously. The creditors' committee has been holding meetings every other day at the offices of the Carnegie Trust Co. The committee consists of: H. S. Pattison, of Schieffelin & Co.; Wilber Titus, McKesson & Robbins; Robert L. Smith, Carnegie Trust Co.; Joseph Plaut, Lehn & Fink; H. T. Jarrett, Mallinckrodt Chemical Works, and Secretary C. A. Kalish, 60 Wall street, this city.

Rumors to the effect that the Hegeman Corporation are making extensive efforts to acquire the Jungmann chain of drug stores are declared unfounded by representatives of the creditors. It is understood, however, that attempts were made by the Hegeman people before the bankruptcy proceedings to absorb the five Jungmann stores.

Perfumers to Educate the Public.

The Manufacturing Perfumers' Association will hold its sixteenth annual meeting at the Drug Club, New York City, April 19-21. The keynotes of this convention will be the opportunity now offered to plan the serious work of educating the American people in the use of domestic perfumes.

MORE THAN 900 AT CHICAGO JOINT MEETING.

Doctors, Dentists and Druggists Have a Real Harmony Feast, at Which Prominent Men are Speakers.

CHICAGO, March 20.—One of the largest affairs of its kind ever held in Chicago was the 1910 "get-together" banquet and smoker of physicians, dentists and druggists, given under the auspices of the Chicago Retail Druggists' Association, the Chicago Medical Society and the Chicago Odontographic Society, on the evening of March 10, in the beautiful "gold room" of the Congress Hotel. The great propaganda was well attended there being over 900 present and the immense banquet hall proved inadequate.

President Larsen, of the C.R.D.A., as chairman of the evening, spoke highly of the position and influence of the National and Chicago associations as factors in drug reform and professional upbuilding, and also made reference in glowing terms to the active campaign of propaganda of U.S.P. and N.F. by the Chicago association.

Mr. Larsen complimented the doctors' and dentists' societies and referred to the "get-together" spirit and idea of harmony their presence typified as promising much good, not only to the three professions, but to humanity. After an able address, he introduced Dr. John A. Robinson, president of the Chicago Medical Society, as the toastmaster of the evening, a position he filled ideally.

Dr. Robinson said that the influence of the three organizations should be blended into a great educational and political power, which would not only secure what was right for these professions in a law-making way, but would confer inestimable blessings upon the people.

Among the speakers of the evening were E. H. Ladish, of the N.A.R.D. executive committee; O. L. Prohaska, chairman of the C.R.D.A.'s standard preparations committee; Dr. G. Frank Lydston, pioneer propaganda fighter and worker; Dr. W. H. G. Logan, president Chicago Odontographic Society; Dr. A. B. Black, and National Secretary Potts, who, in a short speech, delivered right from the shoulder, a red-hot exhortation for the three D's to stay together and continue the good work so auspiciously begun.

Dr. Lydston attacked the fake proprietaries, and declared that many of the medical schools in the country were inefficient in teaching. He also denounced the *Journal of the A.M.A.* as inconsistent and unfair.

A.D.S. "Practices" Condemned by Chicago Med. Society.

CHICAGO, March 20.—Committee on pharmacology of the Chicago Medical Society, in accusing the American Druggists' Syndicate of "securing the prescriptions of a large number of physicians and putting them up as patent medicine and selling them through retail druggists," has adopted the following resolution:

Resolved, That the Chicago Medical Society, in council assembled, condemns these practices of the American Druggists' Syndicate, and that it calls upon the National Association of Retail Druggists to secure their discontinuance in order that the Chicago Medical Society may, with self respect be able to continue to co-operate with the Chicago Retail Druggists' Association in the get-together" movement.

New York Drug Club Elects Governors and Officers.

The following new members of the board of governors of the New York Drug and Chemical Club were recently elected: Charles A. Loring, Edmund D. Congdon, Albert R. Hosford, James B. Bouck, Jr., William N. McIlravy, William S. Haskell and Harry Hall. The board elected as officers of the club: President, Christian B. Zabriskie, of Pacific Coast Borax Company; vice-president, Herbert B. Harding, of Humphries Homeopathic Medicine Company; treasurer, Edmund D. Congdon, Harshaw, Fuller & Goodwin Co., and secretary, Ernest Stauffen, Jr. The club now has 455 resident and 225 non-resident members.

Buying Club Made Party to Director's Suit.

The Brooklyn Consolidated Drug Company has been joined as a party defendant in the suit recently brought by C. F. Schoenherr, director in the buying club, against J. C. Wiscberth, former manager and treasurer. The court held that if the suit of one director was to be maintained the fourteen remaining directors might start similar actions. As claimed by one of the directors, Mr. Wiscberth owes the company about $20,000 and an accounting has not yet been rendered.

YOUR LEGACY

—bequeathed by fifteen generations—is opportunity. To neglect it is to fritter away your inheritance. Why not start—modestly—to build up a perfume business of your own—under your own name—for yourself. Certainly the "non secrets" have been successful. We make finished perfume bases with which you can make extracts, toilet waters, creams, etc., equal to the best and on account of which you can earn a wide reputation. Try one—say Rose Petals @ $3.50 per oz., and our suggestions. Then "knock" if you *want* to—for others. Our success is built on reorders—and cheery acknowledgements of excellence.

THE ERA FORMULARY

CONTAINS OVER 5000 FORMULAS

Formulas for hundreds of articles which the druggist's customers want, and which the druggist can manufacture with profit. The book is the foundation for that profitable manufacturing department which should be a part of every drug store.

Enough formulas to supply every possible demand of the public for Medical, Toilet, Veterinary, Household, Domestic and Technical preparations and articles.

The Drug Store Laboratory is the best paying department of a retail Pharmacy, and increased profits are made on goods of your own manufacture.

Sample sheets will be sent on application, showing the scope and character of the book.

Sent anywhere in the United States, postpaid, on receipt of $5.00

D. O. HAYNES & CO., Publishers, 90 William Street, New York

TELEPHONES AGITATE KINGS COUNTY PH.S.

Cullom Bill is Denounced. Propaganda Continued and Other Timely Topics Discussed at Meeting.

Legislation was the principal topic of discussion at the March meeting of the Kings County Pharmaceutical Society, held at the Brooklyn College of Pharmacy. Dr. William Muir, chairman of the legislative committee, reported that the section relative to coal tar products and the word "therefrom" in that part referring to the Board of Pharmacy appropriation had been eliminated from the Hill Pharmacy Bill.

The Cullom Bill to impose an annual Federal tax of $10 on importers, exporters, producers, jobbers and manufacturers, and a similar tax of $1 on retailers or distributers at retail of opium, morphine, coca leaves, cocaine, eucaine, chloral, cannabis, etc., was strongly opposed by several of the members as "unnecessary taxation." Those who spoke against the bill characterized it as an attempt to make the pharmacist defray the expense of collecting statistics regarding the drugs named. It was unanimously decided that the chairman of the legislative committee should be present in Washington when the bill was brought up and should protest against the same. It was also agreed that the wholesalers be invited to join this opposition.

To Confer About Telephone Commissions.

Charles Heimerzheim, chairman of the trade matters committee, announced that, despite the difficulty of assembling representatives of the various pharmaceutical societies for the purpose of discussing the telephone question, a joint conference would be held within a week or so.

Relative to telephone commissions, a member said that the druggists of Philadelphia realized 33 1-3 per cent of their total receipts and no guarantee was required. In that city there are two companies, however, which fact accounted for the high commission. Notwithstanding the lack of competition in Chicago, where there is only one company, the druggists are allowed from 35 to 40 per cent.

Otto Raubenheimer brought up one of the humorous but irritating and costly phases of the 'phone question. He asked the members what they would do if the same girl came into the store night after night and used the 'phone from 7 until 8.30 o'clock, and meanwhile a half dozen or more prospective patrons, seeing the booth occupied, left the store dissatisfied. President Rehfuss said that on such an occasion he just inserted a key in the switch, thus creating a short-circuit and cutting off the 'phone.

Good Results From Propaganda Work.

From the general discussion it developed that various of the members were obtaining good results from the propaganda work, one writing for the society to "keep up the good work," another showing by figures that in January, 1906, 10 per cent of his prescriptions called for patent medicines, and in the same month this year 6 per cent were for patents.

To carry on the propaganda work for another month, $50 was voted. Mr. Heimerzheim reported that since the last meeting he had disbursed $80 in salaries, and now had on hand $33.85.

Dr. Joseph Kahn presented a very interesting and instructive lecture on "Solutions." He enlarged upon the effect of agitation, temperature and other physical forces on solution and asserted that from the chemical standpoint solution consisted in molecular change. He defined a saturated solution as that state in which the liquid and matter are balanced.

Dr. Kahn made several laboratory demonstrations with colored solutions. In comment on the U.S.P., he said he thought than more extemporaneous preparations should be required in order to obtain the full effect of the drugs used.

Otto Raubenheimer, chairman of the society's delegates to the U.S.P. Convention, solicited suggestions from the members so that he and his colleagues could go to Washington fully instructed and ready to accomplish something.

Charles F. Schleussner, retired pharmacist and one of the founders of the society, was elected an honorary member, and the resignation of Henry A. Muller was accepted. Applications for membership were received from [illegible] Avenues 642 Lorimer street; Louis Borker, 240 Court street, and Oscar John Ruzicka, 202 Smith street. A number of names of members [illegible] Committee [illegible] $200.76 and [illegible]

BANQUET GIVEN VETERAN BUFFALO TRAVELER

Friends and Associates of Burr Spencer Testify to Their Pleasure Over His Recovery of Health.

BUFFALO, N. Y., March 20.—The firm and employees of Pierpont, Corban & Co. enjoyed a very pleasant evening Saturday, March 5, on the occasion of tendering a banquet in honor of their representative, Burr Spencer, who was able, only a few weeks previous, to resume his work on the road, owing to a severe sickness which caused his confinement for several weeks. Only the wonderful skill of a local surgeon and his own nerve, brought him through three critical operations. The many expressions of concern of his friends whom Mr. Spencer has made in the drug trade of western New York and northern Pennsylvania, as to his welfare, showed the high esteem in which he is held in this territory, which he has traveled for many years.

BURR SPENCER.

His associates in business celebrated the occasion to show their joy on his recovery and restoration to health. Songs and speeches of a jovial nature and expressions of esteem for Mr Spencer made the occasion one long to be remembered by all those in attendance.

GERMAN APOTHECARIES TO CELEBRATE IN 1911.

Asked to Join Kings County Ph.S. in Acting Upon Grievances Against the Telephone Company.

Already the members of the German Apothecaries' Society are looking forward to the celebration of the organization's 60th anniversary next year and at the March meeting of the society, Chairman Gilbert of the entertainment committee proposed that the exercises should take the form of a banquet and ball to be held in Terrace Garden and to be followed two weeks later by a kommers in the hall of the society. The details remain to be worked out and to clear the way for further action it was decided to omit the annual ball customarily held early in the year. After President Kleinau had called the meeting to order Mr. Gilbert reported on the success of the annual ball held on February 24.

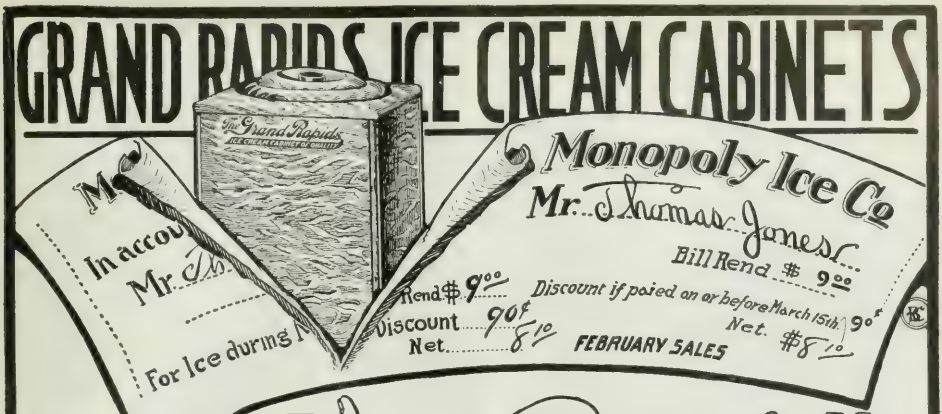
A communication from Charles Heimerzheim referred to a meeting of the Kings County Pharmaceutical Society at which grievances against the telephone company were aired and told of the effort being made to organize a joint committee composed of representatives of the various pharmaceutical societies. The writer asked for the co-operation of the G.A.S. The subject was referred to the trade committee after Emil P. Wendler had told of his experiences with one of the representatives of the telephone company who had offered to install in his store coin collection boxes for 10 and 25 cent messages on the basis of a rebate of 10 per cent. The representative also hinted at reducing the 20 per cent now received on local calls to 10 per cent. Mr. Wendler advised against any such arrangement.

Emil Roller, chairman of the scientific committee, introduced Fred. Fr. Angelo Haase, of Newark, N. J., one of the members of the society, who read a paper in German, translated by himself from the Danish, on "A Pure Culture System as Related to the Art of Brewing," written by Dr. Emil Chr. Hansen.

S. V. B. Swann, of the legislative committee, reported on the progress of the pharmacy bill now before the Legislature, and Charles F. Schleussner informed the members that the New York Consolidated Drug Company had formed the New York Consolidated Realty Company for the purpose of buying its own home in the [illegible] and that already a large [illegible] had been secured for this purpose.

E. C. Goetting reported as a delegate to the United German Societies and told of the effort that body was making to have a building erected. Mr. Roller announced that Dr. E. W. Dittrich, Pharm.G., would favor the society with an illustrated [illegible] at the meeting of the May meeting.

GRAND RAPIDS ICE CREAM CABINETS



SAVE 2 CTS. OF YOUR ICE BILL

THROUGH THEIR SUPERIOR INSULATION QUALITIES

An Ice Cream Cabinet is no better than its **INSULATION**. Grand Rapids Ice Cream Cabinets are well made in every particular, but Insulation comes first.

We use the **BEST QUALITY** of Waterproof Cork Board, Granulated Cork and Wool Felt for insulations, and wood being a **NON-CONDUCTOR** of heat affords even refrigeration, which cannot exist in Metal Cabinets, as steel is a conductor of heat, and hence a great impediment to perfect Insulation.

Grand Rapids Ice Cream Cabinets being made of wood, are **NOT** susceptible to the Corrosions of salt and Rusting as are Metal Cabinets, and therefore will **LAST** much longer.

They are Guaranteed not to Leak or Sweat, hence there will be no unsanitary surroundings.

Made in Porcelain, Wood and Galvanized Iron Linings, in 8 different styles, comprising 60 different sizes to answer every man's taste and requirements.

Our wood-lined Cabinets are coated with a waterproof asphaltum paint, which preserves the lining indefinitely and prevents water-logging.

Our galvanized lined Cabinets are so constructed that the linings can be easily removed when they are worn out, and replaced at a very small cost. Not so with others.

Another feature of importance is **FINISH**. We use a specially prepared varnish, which we have evolved after months of experimenting, which we guarantee is impervious to the attacks of salt water and lengthens the life of the Cabinet.

Our Cabinets are equipped with Self-Locking Hinges and Brass Faucets for drawing off water, which do not clog, and are up-to-date and dependable in every way.

Experience has demonstrated their **SUPERIORITY** over all others. Your Jobber knows, ask him.

Write us for prices and detailed information on our different styles, or ask your Jobber.

CHOCOLATE COOLER COMPANY

75 Alabama Street **Grand Rapids, Mich.**

BUSINESS NOTICES

McCalla-Ross Co.'s New Quarters.

As most of the ERA readers know the building occupied by the McCalla-Ross Co., 340 West Ohio street, Chicago, Ill., was badly damaged by a spectacular fire which destroyed the

adjoining building on January 13, and as a result the McCalla Company found it advisable to secure new quarters immediately in order to avoid delays in shipment. This they did, the building shown in the accompanying illustration being selected. This structure, which has been taken on a long term lease, is 80 x 100 feet and located on the Chicago & Northwestern Railway tracks and on one of the slips of the Chicago River with private dock for water shipments. With their improved facilities they now anticipate being able to offer more prompt and efficient service than ever before.

In addition to the line of Soda Fountain Fruits and Syrups which the McCalla-Ross Co. have been marketing for several years, they have within the last two years gone into the manufacture of Maraschino Cherries and are now among the largest producers of these goods in the world, turning them out in all of the packages used by the grocery, bar and soda fountain lines and also in barrels and bulk packages for confectioners and others.

New-Skin Instead of Court Plaster.

New-Skin Company, Dept. N, 66 Poplar street, Brooklyn, N. Y., state that New-Skin is the first and original court plaster in liquid form. It is well and favorably known in the trade and the advertising campaign which the manufacturers have just inaugurated will surely cause an increased demand for it. In their advertisement in this issue of the ERA they have something to say about window displays which you should read, then send for their plans for increasing your sales of New Skin.

Western Drug Company Adds More Stores to Its Chain.

PLACER, UTAH, March 20.—The Hedquist Drug Company has taken over the drug stores of the Smoot, Moore and Palace drug companies in this city, and the Pleasant Grove Drug Company's store in Pleasant Grove. The capital of the absorbing concern is $30,000, divided into shares of $10 each. The controlling interest in the business is owned by President Alexander Hedquist, Vice-President Charles A. Hedquist and Secretary-Treasurer Francis J. Hedquist, also directors. The other directors are Joseph Kirkwood and Fred J. Moore. Arthur Hall will be placed in charge of the Pleasant Grove store.

American Can Company's Earnings Increase.

The American Can Company's report for 1909 shows net earnings of $3,301,678, a gain of $189,780 over those of 1908. During the year in the purchase of factory sites and construction of new properties and the installation of new and additional equipment the sum of $747,945 was expended. This covers the cost of a new factory at San Francisco to replace the one destroyed by fire in the fall of 1907, the value of which had been previously written off; important extensions of plants at Montreal, Canada; Newcastle, Pa.; New Orleans, Savannah and many minor ones, and other factories, and the installation of sprinkling systems in a number of factories which had not previously been thus protected from fire loss.

Caloris Co. Asks for Pennsylvania Charter.

PHILADELPHIA, March 20.—Preliminary notice has been given that an application will be made on April 11 for a Pennsylvania charter for "The Caloris Company," the stated objects of which are "the manufacture of vacuum bottles and containers, surgical, chemical and scientific apparatus and supplies, from glass and other substances, and the sale of such articles when manufactured by it." The list of incorporators is: S. Wilson Heaton, William E. Chapman, Gustav A. Bisler, Louis S. Amonson, Milton Campbell, Lionel H. Wood, Ralston C. Ware, H. K. Mulford and Thomas K. Ober, Jr.

Paris Medicine Co.'s Successful Year.

The Paris Medicine Company, of St. Louis, Mo., which recently held its annual stockholders' meeting in Paris, Tenn., declared a quarterly dividend of 62½ per cent, the business for the year showing sales amounting to $123,000 more than the preceding year and the largest year's business in the history of the company. The gross business for the year 1909 was $1,223,045, and the net earnings $365,000. All of the officers of the company were re-elected as follows: E. W. Grove, president; A. H. Lankford and O. C. Barton, vice-presidents; F. L. Seeley, secretary and treasurer.

Missouri Pharmacists and Physicians Get Together.

ST. JOSEPH, March 20.—Physicians and pharmacists to the number of 150, attended a luncheon recently tendered the Buchanan County Medical Association by the St. Joseph R.D.A. at the Hotel Robidoux. Dr. C. R. Woodson, president of the former organization, responded to the address of welcome delivered by President W. C. Bender, of the R.D.A., and an address was also made by Thomas H. Potts, secretary of the N.A.R.D. Mr. Potts spoke of the relations which should exist between the two professions and deprecated the prescribing of proprietary remedies.

Sulpho-Napthol Co.'s Free Goods Offer.

In a new advertisement in this issue of the ERA the Sulpho-Napthol Company, 14 Medford street, Boston, Mass., announce a Free Goods Offer which they say should yield the druggist who takes advantage of it 45 per cent profit on his investment. The offer relates to a special assorted case of Cabot's Sulpho-Napthol which is highly recommended as an antiseptic, detergent, germicide, insecticide, and disinfectant. The advertisement gives full particulars. Order through your jobber.

Warning Against Drug Trade Swindlers.

Parke, Davis & Co. have issued a circular warning printers and stamp makers against making themselves the victims of swindlers. The circular gives two cases as illustrations, one in which a "Dr. Wood" ordered a quantity of cartons bearing the name of the company, and another in which Louis L. Potts ordered a stamp of manufacturers in St. Louis, the same to bear his name and the legend, "District Manager Parke-Davis Drug Co." Neither had any authority to use the company's name.

Bought Drug Store as It Was Being Evicted.

The Grand-Finney Pharmacy Company, at the avenues in the firm name, St. Louis, was ordered evicted a few days ago for the non-payment of $300 rent. W. C. Markham, assistant manager of the Odeon Building, across the street from the room in which the store was located, and R. T. Lewis, a clerk in the store, pooled interests and bought the store as it was being put out of the building and moved it to the Odeon.

You Make More on Zymole Tooth Paste

Why not make a better profit—and sell a better tooth paste?

Here is Zymole Tooth Paste—one of the famous Zymole line—at $1.50 the dozen with expeller key, quite the daintiest, most attractive tooth paste package you ever saw. And the paste itself you will agree is superior to the rest in flavor and cleansing qualities, when you try it once.

This is another money-doubling proposition like SHAC-- sell it for twice what you pay.

Seems as if every druggist would push Zymole Tooth Paste, in view of this. We predict that you will when you get acquainted with it.

Pabst Extract Co.'s Advertising Campaign.

The Pabst Extract Company have issued their advertising calendar for 1910. Beginning this month and continuing through the year advertisements for Pabst Extract, The "Best" Tonic, will appear in a long list of popular magazines of National circulation, the most important local journals and the large outdoor advertising signs in all parts of the country. The entire country will be thoroughly covered and practically all the buying public in the United States will be told of the merits of this malt tonic. The policy of the Pabst people this year is concentrated upon the co-operative plan—the public is not only advised to "buy from their local druggist" but is told to buy in large quantities, in dozen bottle lots. This policy, it is thought, will not only create a greater demand, instilling the idea of buying in larger quantities, but will assure people taking a proper ten day or two weeks' treatment, which is necessary to get proper results from any such preparation.

The above campaign, which involves the expenditure of a vast sum, should be exceptionally interesting to the retail trade, meaning, as it does, increased sales for every druggist handling Pabst Extract, The "Best" Tonic. But a further matter of interest to many in the trade is the fact that the United States Government recognizes these goods as a medicinal preparation, payment of special tax not being demanded by the Internal Revenue Department for the sale of the same.

Benger's Food for Dietetic Difficulties.

Benger's Food is being actively and intelligently brought before the medical profession in this country and is proving here, as it has done for many years abroad, a happy solution to the many dietetic difficulties so continually met with, and in the treatment (dietetic) of marasmus, malnutrition, colitis, gastric ulcer, gastritis, catarrhal and other troubles of the intestinal tract. It contains the active proteolytic and amylolytic ferments or enzymes of the pancreas—Amylopsin and Trypsin, and is expressly designed to be used in conjunction with pure fresh milk or varying proportions of milk and water as may be ordered by the physician.

Benger's Food is well known in the United Kingdom and Abroad being used in the British Army and recommended by the members of many Societies. It has also recently been officially recommended for use in the U. S. Army hospital equipment. The manufacturers have an interesting proposition of co-operative advertising and will be pleased to hear from those interested. Write to Benger's Food, Ltd., 78 Hudson street, New York, for particulars.

Richmond & Backus Co.'s Time Saving System.

A time saving system of bookkeeping is exemplified in the combined Detachable Leaf Journal, Ledger and Monthly Statement Book, advertised by the Richmond & Backus Co., of Detroit, Mich. This system is already used by hundreds of druggists, and has the merit of simplicity and comprehensiveness. See the advertisement on another page for an illustration of the book and then write to the publishers for sample forms and general catalogue.

Security Remedy Co.'s Offer.

Security Remedy Company, Minneapolis, Minn., have a proposition by which they offer the exclusive sale of Security Gall Cure to only one dealer in a town and on terms which they say should pay him 110 per cent on the investment. See the Security Company's advertisement on page 413 for terms and full particulars.

Ray Brand of Digestive Ferments.

A new advertisement in this issue is that of the Ray Chemical Company, Detroit, Mich., which calls attention to the Ray Brand of Digestive Ferments, Pepsin, Pancreatin, Diastase, Rennet, Ox Gall and Thyroids. All of these products are favorably known to the medical profession and answer all requirements. Ask your jobber for prices.

BUSINESS NOTICES

Auction Sales of Rex Bitters.

The sale of Rex Bitters by auction is an original scheme adopted by the Rex Bitters Company, of Chicago, some time ago to introduce their remedy. It has proven successful, and in this issue of the ERA they again call attention to their weekly cash auction sales of 100 cases of Rex Bitters, the whole to go to the twenty highest bidders. The bidding is open to all druggists and none but druggists. The auction idea has created much favorable comment and the opportunity is given to druggists to secure a well advertised and good selling article at their own price. Rex Bitters are recognized by the U. S. Government as a medicine and no tax is required to sell them. Druggists should carefully note the advertisement of the Rex Bitters Company on page 327 and then send in their bids, using the coupon which forms part of the ad. or writing the same on a postal card.

Eureka Prescription Pads and Other Specialties.

The J. B. Burr Company, Hartford, Conn., have made a specialty of druggists' printing for more than half a century, and in a new advertisement in this issue of the ERA they call attention to the Eureka Prescription Pads, manufactured by them, which are sure to please the physicians. Among their other specialties are Prescription Blanks in every style, Prescription Checks, an article which no druggist should be without, and a full line of Powder Papers, put up neatly in boxes of 1000 each. The advertisement gives further particulars.

Little Giant Ice Crushers.

Schmidt Bros. Co., manufacturers of "Little Giant ice Crushers," Davenport, Iowa, say that you need this machine in your business and so sure are they that you will own one after you have tried it that they are making you an offer of ten days' free trial. If you are not then satisfied to the machine you do not have to pay for it. These machines are made on correct mechanical principles and are claimed to outlast two of any other make. In their advertisement they ask you to write right now for their complete catalogue and particulars regarding their trial offer. In writing please mention the ERA.

Prescription Products Co.'s Unique Plan.

The Prescription Products Company, Dayton, Ohio, in their advertisement in this issue, call the attention of live druggists to their special advertising feature which they say will greatly increase the prestige and sales of any druggist. Their products are Comp. Essence Cardiol, Comp. Fluid Balmwort, Tincture Cadomene Compound, Plain Yellow Minyol and Sulpherb Tablets, the demand for which, it is claimed, is steadily growing and you should be able to supply it. First read the Prescription Products Company's advertisement and then drop them a line.

I.X.L. Poison Fly Paper.

During the past year or so the country has been aroused as never before to the danger of permitting house flies to breed unchecked and to carry filth and disease through communities. There will be an increased demand for remedies to deal with this pest and for this purpose I.X.L. Poison Fly Paper is especially recommended by the manufacturers, the I.X.L. Fly Paper Company, of Rochester N. Y., whose advertisement appears on another page. Order through your jobber.

Corrugated Waterproof Fibre Boxes.

The Hinde & Dauch Paper Co., Sandusky, Ohio, and 165 Duane street, New York City, are manufacturers of Corrugated Waterproof Fibre Boxes which they state are suitable for every packing purpose. They offer to send an illustrated catalogue "How to Pack It," and a sample box for the asking.

Druggists find ERA's Price List to be invaluable.

DRUG LABELS BOXES PRINTED LITHOGRAPHED

BUSINESS NOTICES

Dr. Paul Runge Visits P. D & Co.'s Laboratories.

Dr. Paul Runge, a chemist of Hamburg, contributes to a recent issue of the *Pharmaceutische Zeitung* (Berlin) a readable description of a visit to American detroiting largely to two objects of interest—the famous Falls of Niagara and "the great laboratories of Parke, Davis & Co." Dr. Runge appears to have been much impressed by what he saw at Detroit, several columns of his contribution being utilized in a description of manufacturing processes at the laboratories referred to. The closing paragraphs of his article, a summing up of his impressions of the great plant and its activities, are not without interest in this connection:

"Were one large volume of business which is done by this vast institution to be taken into consideration, it will not prove surprising when I state that the model-school, packing-glass works, printing office, book-binding department, machine-shop, paper-box factory and carpet shop. Most of these industries are to be found in separate buildings and occupy a large force of men and women. In the printing office there are several large cylinder presses and a dozen smaller ones all fully occupied. In addition to other necessary printed matter, 100,000 price lists were printed in this office during the past year. Those who are familiar with the catalogues of the firm will understand that this is an achievement. The machine-shop is really a model manufactory, since the various machines that are employed in the establishment are designed and completed here. Parke, Davis & Co. confine themselves almost exclusively to machinery of their own construction. Possibly this partly accounts for the importance and productivity of this factory.

In an establishment like this, which is conducted smoothly on account of its excellent organization, it is scarcely necessary to say that every precaution is taken against mistakes and defects. Crude drugs are not only examined from a botanical and pharmacological point of view, but also chemically, if possible, or physiologically, in regard to their active principles, and only such lots are purchased as conform to standard requirements.

I would advise every colleague who goes to America not to omit the short journey from New York to Detroit, especially as Niagara Falls may be visited en route. He will be able to see much that is new and interesting in the City of the Straits and be hospitably received and will carry away with him many new ideas."

Dr Miracle Products Now Sold Through Jobbers.

The Dr Miracle Chemical Company, New York, announce in a new advertisement in this issue that their products are now offered to the trade through jobbers. This arrangement has become very popular with customers in the retail trade who in the past has not felt warranted in purchasing large quantities direct from the manufacturers. The Dr Miracle Chemical Company have also reduced their wholesale prices to conform more with the prices at which articles of like character are sold. All of the products manufactured by this company are extensively advertised over the name of one dealer in each city and are pushed only through the retail trade. See their advertisement for new price list and then write to the De Miracle Chemical Company, New York, concerning their advertising proposition.

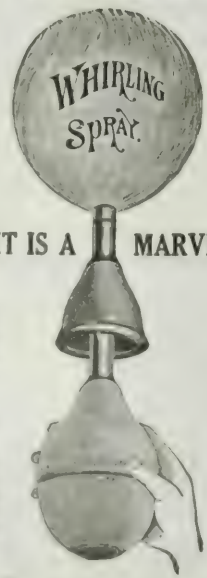
Hansen's Junket Ice Cream Tablets.

Junket Ice Cream Tablets, for the manufacture of "junket ice cream," a product which is claimed to be easier to make and more healthful and nutritious than ordinary ice cream, are manufactured by Chr. Hansen's Laboratory, Little Falls, N. Y. The process is simple and inexpensive, costing but $2 for 100 tablets, a quantity sufficient for many gallons of material. If you are not acquainted with these tablets, send for a free sample and a copy of the manufacturer's book, "How It Is Made." Read Chr. Hansen's advertisement and try Junket Ice Cream Tablets before the busy season opens.

Nailene Nail Shine Pleases Customers.

The state of the finger nails may be said to indicate either refinement or its absence, and any means which will contribute to the natural beauty of the hand is sure to be in demand. In this connection The Margo Company, Los Angeles, Cal., call attention to "Nailene" Nail Shine which, they explain, "comes in small book form on an attractive display card and sells on sight." Read their advertisement for prices, and order through your wholesale druggist.

THE MARVEL "WHIRLING SPRAY" SYRINGE



IT IS A MARVEL

WAS AWARDED THE GOLD MEDAL, DIPLOMA, AND CERTIFICATE OF APPROBATION, BY THE SOCIETE D'HYGIENE OF FRANCE, OCTOBER, 9, 1902,

as the latest and best improvement in Vaginal Syringes. Particular attention is called to the fact that by reason of the peculiar construction the Marvel Syringe allows and makes the vaginal walls assume a natural position, which prevents the fluid used from coming in contact with the cervix uteri, thereby avoiding irritation and tearing of the parts. Many other advantages

Drug Athletes to Resume This Month.

PHILADELPHIA, March 20.—The Drug Athletic Association has elected the following officers: President, Edward T. Hahn; vice-president, William A. Johnson; secretary, John J. Kelley; treasurer, Dr. A. T. Pollard. It has been decided to again lease the beautiful grounds of the Stenton Athletic Association and to start the outdoor season early in April.

Prescribing Druggist From Detroit Jailed in Canada.

TORONTO, March 20.—W. Costello, claiming to be a Detroit druggist, has been sent to jail for three months in London, Ont., for representing himself as a physician and writing a prescription whereby B. A. Mitchell got a drink of liquor contrary to London's laws. Mitchell was fined $100.

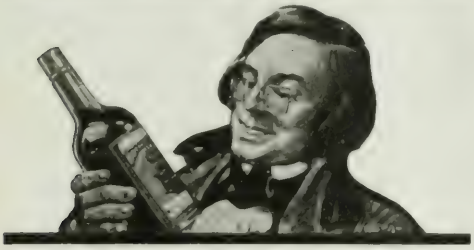
Chicago Sporting Goods Manufacturing Co.

The above illustration represents an attractive window display panorama which the Chicago Sporting Goods Manufacturing Company is supplying to its customers. The original is lithographed in 8 colors, and is 40 inches long, 30 inches high, and 12 inches deep. It makes a most attractive window, particularly for druggists who handle athletic and sporting goods.

This window display is supplied with 2 or 3 assortment orders, details of which will be furnished on application to the Chicago Sporting Goods Manufacturing Company, Fulton and May streets, Chicago, Ill. Please mention the ERA.

Druggist and Wife Have Narrow Escape.

MADISON, Wis., March 20.—H. R. Bird, Jr., druggist, of Bird & Quan, 1320 University avenue, recently had a narrow escape from death when a cutter in which he and his wife were riding was struck by a swiftly moving street car. Both Mr. and Mrs. Bird were cut and bruised when they were thrown out, but they miraculously escaped serious injury. Mr. Bird received deep scalp wounds.



Proven Chemically Pure

Liquor, when prescribed for the sick-room, should be ABSOLUTELY PURE and the best obtainable.

For this and other good reasons, druggists should dispense

Old Jas. E. Pepper Whisky

It costs no more than other whisky; is full 7 years old—Bottled in Bond—and there is no good reason why it should not be dispensed in preference to cheap and uncertain commodities.

Send any jobber an order for a trial case. The difference will be apparent in the satisfaction it gives your trade.

"Quick Loader"

INSECT POWDER GUN

LEADS THEM ALL

It Leads in Quick Sales
It Leads in Durability
It Leads in Construction
It Leads in Applying the Powder
It Leads in Price

There is as much profit and much more satisfaction in selling the "Quick Loader" than any other gun made.

If you buy in lots of 25 gross or more we will place your name on the top plate in place of ours, and in addition will furnish you with a reasonable quantity of attractive powder gun circulars, with your imprint.

Advise us the probable quantity of guns you will wish this coming season and we will make you an attractive price and help you to sell them.

American Can Company

New York Chicago San Francisco

Every Druggist in America

Should write at once for our most liberal offer ever made. We desire to introduce STAR rubber sundry goods immediately and we are ready to submit them a proposition wherein

We Take All the Risk

We do not ask you to take any responsibility. We have a new common sense selling plan that enables you to handle this line, and all **AT OUR RISK.** You show them, we'll sell them.

Star Seamless Water Bottles

are creating the greatest sale ever made on such goods, and dealers all over the land are praising the line thereon. THEY ARE THE ONLY POSITIVELY SEAMLESS BOTTLES EVER MADE and we are ready to prove it in every point of fact. They are moulded smooth, uniform, and even like a glove. We hold the exclusive patents and are the only makers. Write us for a sample bottle and prove it for yourself.

"VENO-STAR," "MARCO-STAR," "LUNA-STAR," "NEPTO-STAR"

Because they will wear 100% longer, sterilize 100% oftener, fit perfectly, and yield a delicate life-like touch. Write for our new catalog and our Special Offer.

The Star Rubber Co.
265 Switzer Av., Akron, O.

Here's the Point:

You proclaim yourself a discriminating buyer—establish your business upon the highest level of professional confidence—by dispensing **'Roche' chemicals** and **alkaloids.** Why? Because physicians have learned, through their acquaintance with Digalen, Thiocol, and other widely used 'Roche' products, to **put their trust in anything bearing the 'Roche' symbol.** The other day one of New York's leading ophthalmologists said to us—**"Your Homatropine is the best I have ever used."** The fact is, we specialize in the production of **chemicals, alkaloids, and specialties of rare quality.**

Specify 'ROCHE' when ordering the following:

Aconitine	**Atropine**	**Eserine**	**Hyoscine**
Arecoline	**Colchicine**	**Homatropine**	**Pilocarpine**

(in vials of 1, 2, 5, 10, and 15 grains, and upward.)

Benzo-Naphthol	**Hexamethylenetetramine**
Benzoic Acid	**Iodides**
Bismuth Salts	**Kresapol**
Bromides	**Morphine**
Brucine	**Phenolphthalein**
Caffeine	**Salicylic Acid**
Carbolic Acid, U. S. P.	**Salol**
Cocaine	**Saponin**
Codeine	**Sodium Benzoate**
Creosote (Beechwood)	**Sparteine**
Cumarin	**Strychnine**
Guaiacol (Carbonate)	**Theobromine**
Guaiacol (Liquid)	**Veratrine**

NEW-SKIN

INSTEAD OF COURT PLASTER

New-Skin is the first and original liquid plaster in liquid form. It is the best known, outsold its kind and a host of imitating companies which have come and imitated and broke it still leaves it the leader.

We have reduced the price of New-Skin to 25c. per bottle, and we are now ready to supply the trade at the old price. Let us show you our figures for increasing your sales of New-Skin.

10c. pkg. for those who want something for immediate use or for emergency.

25c. pkg. for the household and medicine chest. 50c. pkg. for surgeons and nurses.

NEW-SKIN COMPANY, Dept. N.

98 Grand Ave., BROOKLYN, N. Y.

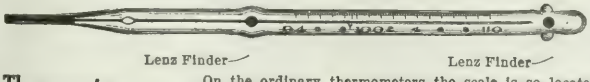
ASK YOUR JOBBER FOR THE

ADVANCE FEVER THERMOMETER

(Patented October 6th, 1908)



Perfectly Aseptic, equipped with Lenz Finders and anti-rolling devices, provided with means to limit the extent to which it should be inserted into the body.

The Advance is actually the only improvement in Fever Thermometers which has been demanded by the profession for many years.

STANDARD PRICES for Advance Thermometers

½ Min. Registration, with Certificate, in Rubber Case.....$6.50 per dozen
1 Min. Registration, with Certificate, in Rubber Case.....$6.25 per dozen
3 Min. Registration, with Certificate, in Rubber Case.....$6.00 per dozen

RED OR BLUE BULB FOR RECTAL USE.

1 Min. Registration, with Certificate, in Rubber Case.....$6.25 per dozen

Every Instrument tested by the Certified Government Standard and fully guaranteed.

On the ordinary thermometers the scale is so located that a portion thereof is inserted into the mouth or other organs of the body when making a test of the bodily temperature, and by reason of this fact that portion of the scale which is inserted into the body is worn off, and, in addition to this, the coloring material of the scale gets into the body, and this is one great objection which THE ADVANCE THERMOMETER obviates. Any manufacturer pretending to sell THE ADVANCE is making fraudulent claims and will be brought to justice through the intervention of the U. S. Patent Courts. Manufactured by

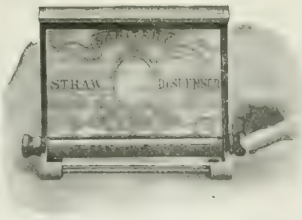
Jewel Sanitary Straw Dispenser



Price $1.50

Saves time and money. Protects straws from microbes and serves from either side. Positively dispenses One Straw at a time.

If your Jobber can't supply you order from

Haidee Vending Mach. Co., 4243 N. Lincoln St., Chicago

$5.50 PROFIT
on a
$6.00 ORDER

Would you spend 50c. to make $5.50 and at the same time insure the future regular patronage of twenty-five people? You can do it if you co-operate with us in the sale of

KRANK'S
PINK BLUSH
MASSAGE CREAM

A quality article, a toilet necessity so near perfection that in the short time it has been on the market the sales are wonderful.

Thousands of Dollars for Advertising

To tell the people of its merits and direct them to the druggists.

To make our plan a complete success, we wish your co-operation in selling an article of merit, under the *protected price selling plan*, which pays you a profit of 50 per cent. You have the same opportunity as your competitor, you buy and sell at just as low a price as he can.

If you are interested in our proposition send for our booklet which explains all about our advertising campaign. How Pink Blush is marketed, and how to make $5.50 profit on a $6.00 order. Write us today.

ALFRED J. KRANK Laboratories
153 SIXTH STREET ST. PAUL, MINN.

A Chance to Make Money

Don't take our word for it—
Investigate
If you don't—
We both lose.
If you are "up to the minute"
You must sell
Chi-ches-ters Diamond Brand Pills
For they are and have been
Standard and Reliable for twenty-five years.

What We Offer

With every $16.00 order for Chi-ches-ters Pills, single or assorted sizes, we give you 200 Fine Imported Post Cards, of which 125 are Birthday and Best Wishes. These cards are carefully selected; are up-to-date designs; are fresh new goods—no old stock or discarded designs. **NO ADVERTISING ON THEM.** Sell anywhere at from 3 to 10 cents each.

Do You Want That $6.00?

Order today from your jobber. We send Premium direct.

LEARN TO SWIM

BY ONE TRIAL

Over half a million sold annually through dealers. Now is the time to place in stock this popular device for swimming

PRICE TO TRADE

No. 1. $2 per doz., retails at 25c. each.
No. 2. $3 per doz., retails at 35c. each.

Sold by jobbers throughout the United States, Great Britain and Australia.

These goods are extensively advertised in leading publications such as Ladies' Home Journal, Collier's, Saturday Evening Post, Youth's Companion, etc.

Department stores, toy stores, druggists, stationers, seashore houses, sporting goods dealers and general merchandise retailers make big sales by displaying the WATER WINGS in their stores and windows. Three color show cards for exhibition, and circulars for distribution sent with every order.

Hawaiian Pineapple Growers Assn. 1136 Tribune Bldg., New York City

¶Ask your Jobber for samples and prices, and stock now.

¶Crushed and Grated Hawaiian Pineapple are put up in large and small cans for convenience of the soda fountain trade.

Intimate Relationship Commands Honest and Fair Treatment

The average Retail Druggist is limited to secure his trade from one class—his immediate neighbors. One customer improperly treated may be the cause of business ruin.

As the average Retail Druggist depends upon one class, so does The American Druggists' Fire Insurance Company depend upon one class. You are practically forced to treat every customer with fairness and honesty, even if otherwise inclined,—*so are we.* One neighbor carries the news of improper treatment to another. Through the Drug Journals matters concerning those allied to the drug trade are carried from one druggist to another.

Think this over, Mr. Druggist, and follow the conclusion to which it must naturally lead you.

With our widely scattered risks and surplus of over a quarter million dollars as to policyholders, we are undoubtedly the Strongest Insurance Company in existence. *Last year we saved the drug trade premiums equal to the value of eight (8) average drug stores.*

If in a fire protected town write for information to

Do You Like Dry Cigars—

The kind you bite off the end and blow the insides out in a cloud of dust.

Dry cigars never made new customers nor held old ones, and there is only one way to prevent dry cigars.

The Andrae Electric Moistener

with its automatic humidity controller is the best little business builder that has ever been offered to the man who sells cigars.

The largest retail cigar firm in the world is buying them in quantities because they increase trade.

If you want to make REAL MONEY out of your cigars install the Andrae Moistener.

ROOT JUICE PROPOSITION
A BIG WINNER

Exclusive newspaper and other advertising. The plan which gets results. Many druggists have sold six dozen bottles of Root Juice (dollar size) in one day. The L. H. Ott Drug Co., of Harrisonburg, Va., sold 77 bottles in one day, and a few days later sold 110 bottles. They sold over 700 bottles since the 12th of last February. W. A. Gutelius, of Bluffton, Ind., sold over 2000 bottles in less than a year. J. W. O'Harrow, Bloomington, Ind., did even better, and hundreds of druggists throughout fifteen States, are doing a wonderful business with Root Juice, as it has the merit, and our advertising is the most catchy and convincing.

Our proposition is open to one live druggist in every town and city. Get it quick, or some one will beat you to it.

PRESIDENT TAFT IN ANTI-NARCOTIC FIGHT.

Important results, of Nation wide effect, seem likely to follow the valiant work of Vice-President Christopher Koch, of the Pennsylvania State Board of Pharmaceutical Examiners, his associates and supporters, in attacking the cocaine evil in that State, for through Professor Remington's personal visit to President Taft the head of the Federal Government has become interested in suppressing the curse and will give the weight of his influence toward the enactment of further legislation by Congress to supplement the restrictive laws now in force in many of the States. On page 456 will be found some account of the Pennsylvania crusade.

Druggists throughout the country should give their best efforts to aid in enacting and enforcing laws that will suppress the cocaine habit and the few who may be tempted by the enormous profits should remember the old proverb about ill-gotten gains, for very few, if any, persons ever enjoy riches at the expense of the health, well-being and moral ruin of their fellow-beings. Moreover, the moral derelicts who disregard their duty to humanity and to themselves by fostering the "dope" habit in others are often engulfed in their own physical infamy and mental obloquy.

PRESERVE THE INTEGRITY OF THE U.S.P.!

It is evident that all interests concerned in the revision of the United States Pharmacopœia are fully impressed with the vital importance of the convention which meets this month in Washington and doubtless the delegates will work towards those ends which they believe will be best for all, but it is quite possible that some earnest participants in the proceedings may be more zealous than practical in their conclusions. The interest of the present-day physicians in the U.S.P., for example, is largely of new acquirement and some of it flows in the form of dictating to other physicians what remedies of established purity they must use in their practice. This we believe to be a thoroughly impracticable position.

Dr. Rusby, president of the A.Ph.A., will have something to say on this subject at Richmond and again at Washington. Foreshadowed by recent public utterances his view will be that the number of items in the U.S.P. be increased, rather than diminished, if necessary to provide standards for all medicinal substances used in any sections of the country by physicians and pharmacists. His opposition to a supplementary set of Government standards is based upon good grounds. One standard is enough and that should be provided in the U.S.P. As an

officer of the Government his view that the Government is not now in a position to take up this work is a convincing argument against multiplying the sources of standardization of drugs. Nothing should be done which would tend to rob the U.S.P. of its rank as an authority, or of its integrity.

THE DOCTORS AND THE U.S.P. REVISION.

Recognizing the great interest of some leading physicians in the revision of the U.S.P. due consideration must be given to their wishes and suggestions. The idea that the number of items in the U.S.P. be reduced to 50, or even to 300, is impracticable for a variety of reasons, chief of which is that it would increase the danger of traffic in impure and adulterated drugs, for it would be utterly impossible to persuade or compel all of the physicians of the country to confine themselves to the use of the limited number of drugs which is contemplated. It is true, probably, that the Pharmacopœial resources of many physicians are limited to 50 drugs, more or less, but it is doubtful if any two doctors would agree upon every item of such a limited list, while it is probable that few would agree even upon a majority.

The best way to do is to accept the suggestions of the representatives of the American Medical Association in the form of printing a supplement containing their recommendations, with references to the main body of the volume and there giving the items in regular order, with the note "Approved by the A.M.A." In this way medical practitioners desiring to confine themselves to the set list of remedies of the A.M.A. could do so, while the U.S.P. standards in all other respects would be preserved in an official way.

MR. COUDREY'S NEW STANDARD BILL.

Congressman Coudrey, undaunted by the criticisms of his recent bill to change the parentage and method of preparation of the U.S.P., as well as to secure an arbitrary and inflexible system of standardization for drugs, has apparently abandoned that measure, if we may so judge by the fact that he has introduced the following bill to amend the Pure Food and Drugs Act of June 30, 1906:

> *Section 7.* That for the purposes of this Act an article shall be deemed to be adulterated:
>
> In case of drugs:
>
> *First.* If when a drug recognized by the United States Pharmacopœia or National Formulary, and is sold under or by any name, it differs from the standard of strength, quality, or purity, as prescribed by the United States Pharmacopœia or National Formulary official at the time of investigation.
>
> *Second.* If it fall below the professed standard of strength, quality or purity under which it is sold, or if it fall below the standard prescribed by the Secretary of Agriculture.
>
> *Third.* If it contain any methyl or wood alcohol.

In support of this bill the argument is presented that under the law at present the market is flooded with inferior preparations which escape Government attention because their lack of compliance with the Pharmacopœial standard is set forth on the label. We are inclined to believe that this view is overdrawn, if not greatly exaggerated, nor is it worth while at this time to consider that phase, for the proposition to have two sets of drug standards, one the U.S.P., or N.F.,—which are practically one for this purpose,—the other a standard prescribed by the Secretary of Agriculture, is altogether objectionable. It is not likely, however, that Congress will very soon open the doors of amendment to and alteration of the Pure Food and Drugs Act. There is no crying necessity for it at present in the direction proposed by Mr. Coudrey.

OF BIG IMPORTANCE TO REXALL DRUGGISTS.

In the court fight between the Riker-Bolton-Jaynes and Liggett companies both Rexall and chain druggists have something to consider, while those in co-operative companies may well ponder on the extent and scope of the co-operation to which they believe themselves entitled. On page 491 some extremely interesting news is given of a court hearing in Mr. Liggett's famous $250,000 guarantee demand. If the contentions of the Liggett lawyers prevail the co-operative by-law, which they point out is not authorized by the charter of the company, is not worth the paper it is written upon, except so far as they may be dependent upon the personal whims of the management. With the expansion of the Liggett chain stores and the activity in other directions in this way the court proceedings in New Jersey are of great interest.

At the same time the litigation furnishes an object lesson to druggists who are now interested in or who are studying co-operation. On general principles a charter is greater than a by-law which it does not authorize, but custom sometimes makes law and in this case Rexall druggists will await with interest a decision which will show them just where they stand legally in relation to the United Drug Company.

NEW YORK'S NEW ANTI-COCAINE LAW.

Governor Hughes has approved Assemblyman A. E. Smith's amendment to the New York State Anti-Cocaine Law and it is now a felony for an unauthorized person merely to have the drug in his or her possession, with a penalty of not more than one year in prison, or a fine of not more than $1000, or both. Section 1746, Penal Code, already provided for the safeguarding of the sale of cocaine and eucaine by wholesalers and retailers, but there seemed to be a necessity for something to enable the authorities to get at the "dope" peddlers and users. It is believed that the amendment, added to the other restrictions, will afford the means of wiping out the cocaine evil in this State. It says:

> Any person who sells, furnishes or disposes of alkaloid cocaine or its salts, or alpha or beta eucaine or their salts or any admixture of cocaine or eucaine, upon the written prescription of a duly registered physician, as authorized by this section, shall, at the time of dispensing the same, give to the person to whom the same is sold or furnished a certificate stating the name and address of the person selling or furnishing such drug or mixture, the name and address of the physician upon whose prescription the same is sold or furnished, the date of sale and the amount sold; and the possession by any person, other than a licensed pharmacist, licensed druggist, duly licensed practicing physician, licensed veterinarian, licensed dentist or a wholesale dealer or manufacturer of such drug or mixture, of any such drug or mixture in any quantity whatever without such a certificate

or more than ten days after the date of such a certificate, or the possession at any time by any person, other than above excepted, or a quantity of such drug or mixture in excess of the amount stated in such a certificate held by the person on whom such drug or mixture is discovered at the time of discovery, is presumptive evidence of an attempt to sell, furnish or dispose of the same in violation of this section.

NEW YORK BOARD AGAIN SUSTAINED.

Once more the courts have decided that the New York State Board of Pharmacy is constitutional, the Supreme Court Appellate Division having thrown out the appeal of Melvin E. Bellinger, of Brooklyn, except to construe two offenses committed at the same time as one offense, reducing the penalty accordingly. The following points are condensed from a long decision:

The contention that the board should sue as individuals is without merit.

There is neither reason nor authority to sustain the contention that the board must prove its title to office in suits to recover penalties. The board is a statutory body and is so recognized by the courts.

The board was created properly by statute; its manner of election, or selection, is not such as comes under constitutional prohibition, but it does come in line with powers of providing for election or appointment given to the legislature by the constitution. "The statute is not to be construed narrowly merely for the purpose of destroying it."

The present method of selection of the members of the board is legal. The court makes argument and quotes authorities to prove its conclusion.

The court decides minor points raised by Assemblyman Conklin against him. As to one, the decision asserts that the objection is "wholly without merit" and as to a citation of authority for another objection it is held that the authority does not apply. The victory for the board is complete and credit is due to its attorneys, Steiner & Petersen, for their logical presentation of the case and for promptness in pushing the proceedings to a conclusion.

LEGAL DECISIONS AS TO STANDARD STRENGTH.

An important decision has been handed down by the New York Supreme Court Appellate Division in the suit of the State Board of Pharmacy against Asa Malkin, of Brooklyn, in which the lower court decided against the board in an action to recover penalty for the sale of camphorated oil of 14.27 per cent strength, instead of 20 per cent. Mr. Justice Carr, who wrote the opinion, laid down the law clearly as to the sale of non-standard drugs. In part he said:

In [a previous case] the court held that, under this statute, where the pharmaceutical preparation in question is volatile in its nature, a penalty should not be imposed where it is shown that the preparation was actually compounded according to the standard of the Pharmacopœia, and a loss in the proportions of the mixture took place subsequently, in the partial evaporation of one or more of the volatile elements.

This is a reasonable rule, if it be kept within reasonable bounds. The plain object of the statute is to keep pharmaceutical preparations, *at the time of their sale*, up to a standard of "strength, quality and purity." * * * There may be some loss in their proportions even in a very short time. Where that loss is insubstantial, no just complaint can be made. At the same time the loss in one element may so increase the relative strength for which the preparation is intended to be used; in which case *it should not be enough to show* that a preparation, sold months or years after its original compounding, complied with the law *when compounded*, although it did not comply with the law *when sold.*

The statute looks rather to the time of sale, for it was framed for the protection of the public in the use of the article sold. A pharmaceutical preparation may be so stale as to be comparatively useless.

The court in deciding the appeal says:

According to the defendant's proof, the article in question was compounded correctly a few weeks before its sale, and, according to the plaintiff's proof, there could have been no appreciable loss by volatilization of the camphor in so short a time. If so, then either the analysis of the plaintiff was incorrect or the testimony of the defendant's witness was untrue, and there was a question of fact to be determined upon conflicting evidence. On the record before us, we feel that we should not interfere with the determination of this question made by the Trial Court.

WOULD CRIPPLE STATE PHARMACY BOARD.

A bill introduced by Assemblyman Conklin in the New York Legislature contains as transparent a "little joker" as ever appeared in a legislative measure at Albany. The bill seeks to amend the Pharmacy Law in relation to prosecutions by the board. The present law in relation to fines is re-enacted, but it is provided—

however, that in the City of New York no fines shall be paid to said board, but shall belong to the City of New York.

As the board depends for its means of carrying on its work upon the fines collected, it is clear that the effect of this would be to minimize, if not stop, prosecutions for violations of the pharmacy law in New York City, in two boroughs of which, Manhattan and Brooklyn, are domiciled clients whom Assemblyman Conklin has defended against charges made by the board. As a public official it is improbable that Mr. Conklin would try to secure immunity from legitimate prosecution for his friends in this way and no doubt when his attention is directed to the peculiar position in which the bill places him he will at once disavow its paternity and see that it is relegated to the capitol graveyard.

SUBSTITUTION A SENSELESS SUBTERFUGE.

Druggists and others who practice substitution seldom seem to realize that instead of benefiting themselves by doing so they are really injuring their trade and doing no good to anybody. If they would face the substitution question honestly and squarely, seeing themselves as others see them and as they look at others, there would be less of it.

When the druggist goes into a haberdashery and asks for a turn-down collar, size 15, how does he like to be forced to buy a stand-up collar, perhaps of different size? How many times is he going back to that store to buy collars or anything else?

If he goes into a restaurant with a roast beef appetite and is forced to eat mush and milk, how often is he going to call again at that restaurant?

If he goes into any store and the clerk tries to substitute something else for what he wants, is he going to keep on going there?

It is not necessary to answer the questions. The most persistent substituter in the drug trade would

probably be the most offended of the other substituters' patrons and would resent the affront with greater emphasis than others. Would *he* return to meet with a second experience? No, emphatically No. Then why does he treat his own customers in the way he will not permit others to treat him? Do not the same arguments that apply to his own case bear on the cases of purchasers in his own store?

The proposition is so simple, the perspective so easy of attainment, the reasoning so plain, the effects so often apparent even without convincing physical demonstration, that mere interest in attracting, rather than repelling customers, would seem to be sufficient to cure the habit. But that is not all of it.

SUBSTITUTERS LOSE GOOD ADVERTISING.

Substitution in the drug trade, whether of proprietary articles, or sundries, or at the soda fountain, is chiefly directed toward articles that are well advertised in the newspapers and periodicals and the customer's visit is due largely to the demand created by this publicity, perhaps entirely so. Laying aside the question of fairness to the concern whose money paid for the advertising that sent the patron to the store, is it fair to the druggist himself to lose the benefit of that advertising, when it is much easier to send away a satisfied patron and turn over the advertised line of goods speedily? Quick turn overs count in the drug trade and when somebody is spending money to hasten the turn over, it is up to the druggist to get all he can out of the advertising. He cannot do this by substituting, for he loses the one sale on this article and even if he sells his substitute he will simply drive the customer to some other store the next time the real article is wanted.

The larger of the successful retail stores are advertising extensively and they give their patrons what they call for, whether the goods are mentioned in their own announcements or in the advertisements of manufacturers or others. They consider it all grist for their mills, no matter who pays for the advertising. If this principle was observed more generally the substitution evil would die of inanition. If you are a substituter, just think it over.

LET EUROPE KEEP REJECTED DRUGS.

Much interest has been aroused by the statement of Dr. Rusby, the Government's crude drug expert at the Port of New York, to the effect that the drug warehouses of principal ports of Austria, Germany, Holland and other countries are taxed to their capacities with drugs that have been rejected as inferior or adulterated by the United States authorities and which are being held in the hope that the coming revision of the Pharmacopœia will lower the present standards and let down the bars for the entry of some if not all of these goods into the American drug markets.

Just how this is to be accomplished is not readily comprehensible, for no public movement is observable in favor of a reduction in standards and the interests which might be expected to further such an object are [illegible] if at all. Representing the real sentiment of American druggists the National Wholesale Druggists' Association has instructed its delegates to the Pharmacopœial Convention

> *"to pledge the members of the hearty support of all [illegible] to secure * * * a more perfect and reliable standard of excellence than has heretofore been attainable."*

At the same time the N.W.D.A. is on record as favoring a "standard for drugs of vegetable origin based upon fair average qualities," but that should offer no hope to any scavengers in Europe who may desire to unload their worthless stocks on the American market. Neither the drug trade nor the public will tolerate the importation into this country of drugs or other merchandise that Europe will not use on account of inferiority, or adulteration.

NEW QUARTERS FOR THE ERA.

With a gratifying growth in the business of THE PHARMACEUTICAL ERA and its allied publications there has come the necessity for larger quarters and increased facilities, to meet which demand the publishers have moved the business department, editorial rooms and mechanical department to the modern and commodious building at 82 Fulton street, corner of Gold street, Manhattan Borough, New York City. This location is in the center of the metropolitan drug district and will be even more convenient for most of our friends than was the location just vacated. Beginning with this issue THE ERA will be published in its new home.

Two notable social events of April were the entertainment given by the Philadelphia Association of Retail Druggists and the minstrel show of the Chicago Social Drug Club. The former included the presentation of a playette "The Obstinate Family," followed by a ball, both being great successes. In Chicago the burnt cork performance was of rare excellence and also proved a gratifying success. These two organizations deserve much credit for the splendid work they have done in promoting the social side.

Assemblyman Conklin, who is assiduous in tinkering with the New York Pharmacy Law, seems to have lost confidence in the public health committee of the Assembly, having secured reference of one of his latest measures to the committee on codes. The members of that committee will learn in due time that Mr. Conklin's efforts in behalf of pharmacy legislation are entirely unsought and gratuitious so far as the great body of organized pharmacists in the State are concerned.

Although the soda fountain industry now is an all-the-year-around feature in most drug stores there is always fresh impetus given to the trade with the coming of warm weather. Druggists who are interested in the fountain side line are behind the times if they do not read *The Soda Fountain*. This bright periodical is printed monthly at $1 a year and can be had by enclosing that amount to the publishers, D. O. Haynes & Co., 82 Fulton street, New York.

So much depends upon the point of view! Secretary Goddard's eloquent plea to physicians to join the A.D.S. and come in out of the cold could not fail to impress his friends and supporters as an able document, but here comes the *Journal of the American Medical Association* with the cruel criticism that "it is truly a bit of monumental impertinence" to ask doctors to subscribe to the A.D.S. stock.

News from Albany that the Joseph bill to prevent corporations from owning drug stores—intended to curb the establishment of chain stores—has been amended so as to apply only to doctors and dentists is not surprising in view of some of the statements made at recent meetings in this city.

The annual sales of the 300 wholesale druggists in the United States are estimated at $165,000,000.

A Matter of Diplomacy.

By Emma Gary Wallace.

"I AM engaging a woman clerk," the proprietor of the Hotaling Square Drug Store explained, "because it would seem that the time to do so is ripe. Naturally women prefer to deal with a woman in the purchase of many articles peculiar to a business of this kind, and while I have always been opposed to having women in my store in other than the capacity of cashier or bookkeeper—they'll do well enough there, if they don't get beau on the brain—yet so much is to be said in favor of having a woman attendant in a drug store, that I have decided to give the idea a fair trial, and I hope you will prove to me that I am not making a mistake in doing so."

The bright-eyed young woman in the trig tailor-made nodded understandingly.

"Your preparation and references are satisfactory and I am prepared to engage you upon the terms I mentioned in our previous interview. If this is agreeable to you, you may report for duty Monday morning."

"Very well, sir, we will consider that part settled," the young woman replied briskly but in a well-modulated tone which bespoke the refinement of good breeding. "And now, may I ask to what particular line of duties you wish me to attend and also whether you have any special business policy which you desire me to work to forward?"

Her new employer gave an impatient shrug of his well-shaped shoulders.

More Than One Kind of Success.

"My business policy may be summed up briefly," he returned, "in All-Around Success."

"All-Around legitimate Success?" the young woman interpolated quietly.

"Certainly, certainly," he continued a trifle impatiently, "and as to your own work, why, that is just where I expect your mother wit to help you out. If I could outline the where and the why of the feminine viewpoint of things generally, I probably should have no need of a woman clerk at all.

"The only suggestion I care to offer is that you use your best effort to gain and hold the trade of the women folks of our immediate public. The women are the buyers pretty largely and I reckon we can afford to cater to them to a certain extent."

The man stood as if to end the interview. The young woman arose also. "Do I understand, then, that I have practically a free hand in these matters?"

"A free hand, unless I think you are on the wrong road or skidding dangerously," he said with an inscrutible smile, "then for your good and our own, I'll apply the emergency brake. Good morning, Miss Strong."

The newly engaged clerk passed out of the small private office with its frosted panes and its out-look of the whole store. She had understood that Mr. Herily was peculiar and after this, the second interview with him, she was inclined to endorse the truth of the rumor.

From a Woman's Point of View.

As she walked down the middle aisle to the wide front doors, her lips set in a firm line of disapproval at the crowded, cluttery appearance of the soda fountain on one side and the demonstration of an article of questionable value on the other.

She reflected with the swiftness peculiar to her mental make-up, that her position here, even as a woman recently graduated with honors in this very line, was likely to be a difficult one, because of its very indefiniteness. She was, she feared, to be in much the same position as the man who was ordered to turn the waters of a certain river westward, but under no circumstances to mar the surface of the country by digging a new waterway.

If appreciable results could be gained without disturbing any of the existing traditions of precedent, she was likely to win tolerance for herself—otherwise she rather expected the jarring restraint of the emergency brake. Evidently her employer did not care to be troubled with details.

She stood for a moment outside, observing the arrangement of the windows and the frank character of the display. The openly expressed remarks of a couple of "newsies" concerning these goods caused her to turn away with a hot blush on her cheeks and an indignant flash in her eyes. The very delicacy of the difficult task ahead nerved her to a determination to succeed.

* * * * * * * * * *

During the following week the new clerk was busy and cheerfully helpful, but even her keenly observant and somewhat critical fellow workers could not charge her with either prudishness or aggressiveness. She accepted everything as it was, suggested no changes and offered no suggestions. Even her employer was expectantly curious and a trifle disappointed as the half days tripped past. Could he have made a mistake after all in what he had judged to be an unusually strong, capable personality? He would give her ample time to prove herself, he decided generously.

On Saturday morning when he entered his office and seated himself at his desk to open the morning mail, he stared in surprise at a letter, neatly written, addressed to himself and signed by the new woman clerk. Evidently she had something to say and took this way of saying it.

With considerable curiosity Mr. Herily began the epistle. There was no formal salutation. It began abruptly:

"After five days spent in the Hotaling Square Drug Store, in which short time I have studied the relation of this business to the feminine trade in this locality as much as circumstances permit, I respectfully submit the following observations and recommendations for your consideration:

"(1) The numerous slot machines occupying space in front of this building have, in the estimation of the writer, a distinctly cheapening effect—and are, frankly speaking, a nuisance and the cause of much dissension.

"With possibly the exception of one high-class weighing machine, the rest are frequently out of order or empty, causing disappointment and loss to customers. These are principally children to whom a penny is not an inconsequent sum of money. The fact that such losses have been reported inside the store and in some cases made up, has tempted other children to make false claims for lost money in the hope of reimbursement. This has sometimes been accomplished and hence a condition of distrust has arisen as to the justice of such complaints and undoubtedly some lose their money and receive no return.

"This antagonizes the small patron, who in time becomes a grown-up. Some of the mothers have openly charged that these vending machines were purposely arranged to defraud. The church people are agitating sentiment against these devices on the ground of there being a certain element of speculation often involved. In view of these circumstances I would recommend their discontinuance and that much local publicity be given to that fact.

"(2) The display in the main window for the past week has been offensive to many of your women customers, some of whom have expressed themselves plainly and declared their intention of directing the attention of their Club sisters to the evil resulting from such unnecessary displays; children of inquiring mind and impressionable age, youth and even older persons being harmed by this lack of proper modesty.

"As the jurisdiction of the work of window dressing rests with a particular employee, who is both conscientious and capable, it is but fair to believe that this view of the matter has not been presented to him. Therefore I would respectfully suggest that the gentleman responsible for this work should place in your hands a written description or outline plan of windows he proposes to put in weekly for at least two months in advance, thus giving ample opportunity for censorship when such is advisable.

"(3) In this store are many goods which while in frequent demand and absolutely necessary are seldom sold. This is because the women customers who naturally purchase these goods have formed the habit of obtaining them at some department store. No blame can be attached to these places because they are simply furnishing their patrons with what they call for. Even physicians have been forced at times to so direct their patients because of the incompleteness of many drug store stocks. To this class belong various absorbent materials and dressings used in surgical and accouchement cases.

"If these lines could be fully stocked and both physicians and customers notified of the superior quality of such goods carried, much custom and prestige would be sure to result.

"(4) Only an occasional woman customer comes in direct contact with the 'woman clerk' and then it is scarcely pos-

sible to announce each time that she is fully equipped with years of preparation to render expert service, and not merely a cheap hand engaged to perform unimportant duties.

"Specific publicity should be given to this addition to the store force and a strong point made of calling the attention of women to the comfort and convenience of having a well-qualified woman in attendance.

"(5) Demonstrations which do not introduce goods of real and lasting value should be strictly tabooed. Already complaints are numerous that the wonderful china cement shown last week will not hold water. This must result in lessened confidence in the store's goods.

"(6) From a feminine standpoint, a cluttered appearance anywhere is untidy and is suggestive of lack of proper cleanliness.

"(7) A single sale of a habit-forming drug, even made as an exception to a general rule, is a link of great weakness in an otherwise strong chain of legitimate transactions and 'a chain is no stronger than its weakest link.'

"An employee may work around the edges of most of these suggestions without accomplishing much of stable value. The sovereign power to reach out and touch the root of things in order to accomplish permanent results must come from the one in highest authority.

"Yours, very respectfully,

"Abeta Bracebridge Strong."

George Herily pursed his lips in a low whistle.

"Guess I wasn't mistaken after all," he mused, "but the minx puts the whole responsibility on my shoulders, and come to think of it, I reckon that is about where it belongs. I suppose she would get herself cordially disliked if she set herself up as a reformer generally. As for the seven suggestions, she takes the opportunity of making, they all seem based on pretty sound arguments. Cluttery, eh! Well, I hadn't thought of it in that light."

And the rather easy-going proprietor of the Hotaling Square Drug Store arose and gazed thoughtfully and observantly through the single unfrosted half-pane of the office look-out.

Side Lights on St. Louis 'Phone War.

RETAIL druggists of St. Louis have not abandoned their fight with the Kinloch Telephone Company. They lost the recent hard-fought battle, but are undaunted. The fight is to take another form. The St. Louis R.D.A. will not conduct the fight as an association. The matter will be left to the druggists as individuals. A suit for a public service telephone will probably be filed by some druggist. At present the druggists have Kinloch contracts which permit the public to use the telephones so long as the druggists do not charge for their use. The druggists hope through future action to obtain public service telephones. In the suit to be filed it will most likely be contended that the company is practicing discrimination against the druggists, as the company has public stations in hotels.

* * * * * * *

The losing fight developed that the St. Louis druggists can count upon some "wits" in their organization. When the druggists decided to throw out the Kinlochs, not a great number of telephones disappeared. On the South Side, where German druggists prevail, more Kinlochs disappeared than in any other section of the city. Several customers were in a South Side drug store one recent Sunday evening, when a customer, after lighting a cigar and finding fault with the match-box which gave out one match at a time, observed that the druggists' "trust" had lined up with the telephone trust, meaning the Bell Telephone Company, which has slot telephone boxes in the drug stores, and against the great independent home company, the Kinloch.

"You must be a trust buster," said the druggist.

"I am, you bet," replied the customer.

"Well, then, you belong in Oklahoma," said the druggist drily.

* * * * * * *

There's another Hoelscher store—this one in South St. Louis. Hoelscher in charge was trying his best to wait on the rush of [illegible] the new store. Two well-dressed young men came in while women and children lined the counters. They [illegible] of the Dux correspondent who was reading the magazines a la Kinloch. And this is what the correspondent heard.

Druggist—What'll you have, little miss?

L. M.—Penny's worth of gum.

Blonde—I'll take a nickel's worth of quinine.

Brunette—What are Move-'Em-Quick pills? Nineteen cents? Well, I'll take a box.

Elderly Woman, Twins, Man With Prescription, Others, as usual, as every druggist knows.

Druggist (to well-dressed young men)—You have something?

W. D. Y. M. (as dashing widow enters)—We'll wait.

Dashing One asks many questions and takes at least ten minutes to buy what she doesn't really know what she wants.

First W. D. Y. M. (to second)—Ain't it —— how long it takes to get waited on in here?

Send—We've been here an hour. Won't make it a go if he is this slow.

And so they fidget about and chafe until their words are too hot for Standard paper. Druggist finally reaches them again.

First W. D. Y. M.—Ah, I just wanted to buy a stamp.

Druggist produces a stamp, turns to Second.

Druggist—And what can I do for you?

Second W. D. Y. M.—I just came in with him to buy a stamp, but I would like to use your Kinloch.

Point is: Druggist had hurried through customers to wait upon the W. D. Y. M. and was in a perspiration when he reached them. He was strong for throwing out the Kinloch, but had only recently signed a contract. He had to welcome the W. D. Y. M. to free use of the telephone in addition to selling a stamp on which his profit—well, druggists know.

* * * * * * *

Another druggist not far away seems to be on the corner where all the coal wagons pass. He has a new store, too, and is always right out in front waiting to do or die to gain a customer. Sometimes as often as a dozen times a day he has this experience:

Coal wagon stops in front. Driver rushes into store, leaving door open. Crosses over to Druggist in a rush that makes the frail D. quail. D. inquires, with large eyes, what he wants. Coal Driver looks over the frail body with something of contempt and jerks down the telephone without asking if he may. Druggist grinds his molars. Coal Driver works and swears with the telephone a minute or so and then bangs the receiver onto the hook and rushes to the door, turning to address the Frail Druggist:

C. D.—W'at's de matter wit' yer gab box, huh?

F. D. (attempts to speak, doesn't get it out).

Finally—

F. D. (as C. D. bangs door)—Thank you!

And so it goes with the free telephone. Trust or no trust, the drug store seems to have a righteous kick.

A Simple and Useful Glass Etcher.

S. L. Hilton, of Washington, D. C., has been calling the attention of his fellow druggists to a simple, cheap and effective tool for etching upon glass. It is useful for graduating and lettering glass containers, and Mr. Hilton has used it for cutting glass scale-pans for his super-sensitive scales, to exact balancing weight. The device consists simply of an ordinary automatic pencil lead holder with a carborundum point in place of the graphite lead. The points are about an inch and a half long and of the diameter of an ordinary indelible lead. These points are what are known as "porte polishers," they are used by dentists and are procurable from dental supply houses for a trifling sum. With this contrivance one may write, letter, or rule upon glass as easily as upon paper with an ordinary lead pencil.

Mrs. Lee Leads Movement for a Sane July 4th.

PHILADELPHIA, April 20.—Petitions containing the names of 5000 persons have been presented to City Councils' Committee, protesting against the use of explosives on the Fourth of July. These petitions have been issued and circulated by Mrs. William E. Lee, president of the W.O.N.A.R.D., who was assisted by the Philadelphia Association of Retail Druggists. Prominent physicians and pharmacists urged that a "sane Fourth" be the rule in this city in the future.

Manhattan Ph.A. Members Had No Quorum.

Due to the lack of a quorum the members of the Manhattan Ph.A. were unable to hold their April meeting.

An Endless Chain.

By Joel Blanc.

THE following is copied without permission from the issue of November, 3365, of *The Tibetan Economist:*

"Lest we take too much credit to ourselves for the seeming perfection of our own time; lest we look upon our Final Inheritance and Zone Distributing laws as having legislated us into paradise through the abolishment of personal ownership; lest we conclude that we have reached the absolute, the end of progress, it may be well to inform ourselves of the customs of peoples of the past, peoples who also believed that they had reached the limit of human intelligence.

"From the most remote times there has come to us a legend of a captain named Joshua, who 'commanded the sun to stand still,' and, according to tradition, the sun obeyed. Now, as the sun is the center of the planetary system of which our earth is but a minor unit, that sun, to all human conception, always did stand still. Granting that the command of Joshua brought the claimed effect, it must have been that while Joshua commanded the sun, it was the earth which paused, for if the light of the sun ceased to move over the earth for a single moment, it must have been the earth which stood still.

"There have been Joshuas in all times, and one strange country, that ancient Usa so recently uncovered from its grave of more than a thousand years, seems to have been burdened with Joshuas.

"To make our lesson clear, we shall take for example a single and very eccentric class from among the ancient Usanese in our endeavor to show the inevitability and perpetuity of human progress. The data upon which our information is based have been gathered from records but recently unearthed from the ruined cities of New York, Washington, and other populous centers of the buried civilization.

"Although the class of which we shall treat is considered by us as having belonged to a caste of pretended seers who dealt in charms and fetiches which they called 'medicine,' yet there is no doubt but that they were among the most intelligent men of the period of which we speak. They were generally known as 'druggists.'

"All of the pretended healers originally sprung from the priesthood. In time they became divided into two classes, one known as 'doctors' and the other as 'druggists.' Primarily the duty of the druggists was to prepare the charms, while that of the doctors was to apply the charms. By the year 1890 each class had encroached so generally upon the field of the other that there was little to differentiate them except by use of the arbitrarily applied names. While the doctors and druggists claimed that they were practitioners of altruistic professions, the records prove that by 1920 both classes had become completely commercialized. As early as 1900 the establishments of many druggists had already become marts for the sale of general merchandise, the trend being in this direction so completely that by 1910, when the combinations of capitalists who did not claim to be professional men made a vigorous onslaught upon the assumed prerogatives of the druggists, professionalism made its final and futile stand.

"While we concede that the civilization of Usa held no more intelligent class than the individuals known as druggists, yet that class was itself burdened with many Joshuas. They were men who commanded the commercial sun to stand still and they believed that the orb of trade obeyed, when as a matter of fact only the individual Joshuas stood still.

"Many contributory causes, such as a seemingly insane desire of the people to herd themselves like cattle in the great cities, and the accompanying increase in urban transit facilities and improvements in productive methods, led the merchandising from mere bartering depots called 'country general stores' to great architectural piles filled with general merchandise and known as 'department stores.'

"Of course, we of the present know that these commercial changes were natural growths. We know that productive and distributive practices move along destined paths of progress just as invariably as animal and vegetable life pass through their cycles of change. We know that thought as well as so-called substance is atomic, and that every combination of atoms is an evolved improvement over the combination of atoms that immediately preceded it.

"With the approach of the end of the commercial cycle known as 'the department store era,' there came a rapidly maturing and radical revolution in merchandising methods. As the population of the cities increased and their urban and suburban area grew much more rapidly than the transportation facilities improved, merchants began to realize that the people could no longer gather at common centers to supply their daily needs. They became aware that the hub which had been the all-important part of the merchandising wheel had reversed its position and that in some way the spokes had begun to regain their former importance. For, instead of gathering the consumers to the department store hubs, the time was dawning when the merchants would be forced to carry their wares to the people by means of the many-store spokes. Thus the destiny of evolution brought to them what was known as 'the store chains system.'

"The walls dividing producers, jobbers and retailers had long been badly breached, and were now fast falling. Production was almost exclusively controlled by combinations of capital and the power of the individual was rapidly waning. Even the druggists in so great a number as had formed themselves into combinations for the purpose of *buying*, that none but a Joshua would have imagined that under the new regime each store on the spokes would be owned by an individual or firm, as the drug stores had thus far been owned. Indeed, so much of the druggists' trade had been absorbed by the department stores that when commercial evolution did turn the human tide from the hubs back to the spokes, the Druggist Joshuas expected *methods* to return because *locations* had been reoccupied. It was thus that the Joshuas not only commanded the mercantile sun to stand still, but they commanded it to reverse its course—and they believed that the sun obeyed them when, as we know, they were only retracing their own intellectual path.

"To show how ignorant these Usanese were of the predestined mutability of all things and all thought, we shall give examples of their contradictory actions and expressions.

"When chains of drug stores first confronted the druggists, chains of cigar, grocery and shoe stores had been long established. As the chains of cigar stores made great inroads upon the cigar business of the druggists, the latter vociferously decried such chains and refused to patronize them. As the chains of grocery stores interfered with the druggists only slightly in the sale of spices, they declaimed against yet patronized such stores. As the chains of shoe stores did not in any way compete with the drug stores, the druggists praised and patronized them. Yet the same druggists criticized and called labor unionists inconsistent because they both condemned and patronized the chain cigar stores. Druggists linked themselves into chains to produce and buy, while declaring that others should not, and that they themselves could not unite in chains for the purpose of *selling*. In brief, the weird mental attitude of the druggists may be thus expressed: 'Although we have taken 1 and 2 from you, you must not regain them by using number 4 to take 3 from us. As we do not desire to use 4 to keep you from taking our 3, 4 is therefore *impossible* for us. As desire makes 4 impossible for us it must also be impossible for you. We therefore declare that 4 does not exist, although we see it in use daily.'

"Why did not these men realize that the passing of individually owned stores was just as inevitable as the passing of the cross-roads barter shops of their forefathers? Why did not the study of history and human experience teach them that so far as mankind is concerned, every people, every tongue, every country, every system, every thing, shall pass away? Why was it that not one among them realized that the commercial innovation which faced them should itself soon pass and give place to systems yet unthought of? Why did they not realize that the seeming evils were created by their own denials of universal laws? Had they not even a vague understanding of the truth expressed in our saying, of that which we would adapt to ourselves we must first adapt ourselves to?

"Ah! Even today, two thousand years later than the time of which we write, man still denies the ever progressing, unconstrained destiny of the race. If we would be successful, if we would be happy, we must realize that we are but marchers in the grand army of humanity. We must cheerfully pitch our camps wherever the day's march ends. We must joyfully accept whatever forage the by-ways yield, moulding ourselves to fit the nature we cannot change and making the methods of the day our own.

"There was something almost divine in the fatalism of

like so that we might realize that revolution is evolution. It is true that many unfit must fall, but who are these unfit? Only those of unyielding prejudice who beat their bleeding hands against the walls of self-made cells, while the unbarred gates of progress stand open at their backs!

"Turn thy eyes to the stars and let thy soul soar through the calm of night into the immensity of the universe; know thy littleness. Then let thy soul return, filled with the divine love which hath created and governs all that ever has been, is, and ever shall be. Then shalt thou understand why and how 'whatever is, is best.' Then shall thy greatness come, [illegible] of thy day. Thou shalt grasp the new tools offered to thy hand and will continue to build wisely and well for thine self and for thine own."

President Taft Enlisted in Pennsylvania's Great Crusade Against the Cocaine Evil.

PHILADELPHIA, April 20.—Every [illegible] in the crusade which Vice-President Christopher Koch, of the Pennsylvania Pharmaceutical Examining Board, is waging against those who have been selling cocaine and morphine in this city under conditions which are in direct violation of the State laws. Arrests are being made almost daily, some of the offenders have already entered upon terms of imprisonment and through the examination of those addicted to the drug and others accused of selling it, new evidence is being secured by those conducting the investigation.

From Philadelphia, the investigators will continue their work throughout the State and it is likely that the crusade will become a national issue. This was indicated by a visit which Prof. Joseph P. Remington paid last week to President Taft at Washington. The sale of cocaine and morphine, particularly to school children and every other horrible detail which this investigation in this city has developed, was explained to the President and with the pledging of the latter's support, it is predicted that radical legislation of national scope will be the outcome. In fact a national law on the sale of these drugs is already in course of preparation and will be introduced at the present session of Congress.

National Law and Uniform Legislation Proposed.

Professor Remington favors the framing of a national law which will stop interstate shipments of cocaine and the arousing of the people of the respective States where no prohibitory laws now exist to such an extent that uniform laws will be passed in every commonwealth. With strict and similar State and Federal laws, governing the interstate sales of these habit-forming drugs, Professor Remington believes that this evil can be permanently controlled and yet the value of cocaine and morphine be saved to the physician for legitimate uses. It was this view among others which was endorsed by President Taft. Speaking of his visit to the President, Professor Remington said:

"My mission was an educational one. I wished to convince the President, Senator Penrose, Senator Cullom and others who are interested in measures to remedy the condition of the seriousness of the situation. And I think that I succeeded. Now if the newspapers and the trade journals will convince the people at large, the representatives at Washington will be forced to take action for that is what is needed. At present the Government can punish a man for sending cocaine through the mails but it cannot prevent it being sent from one State into another by express.

Could Keep Check on Every Grain of Cocaine.

"Given a law such as Senator Cullom has introduced in the Senate, making it obligatory for the shipper to register the amount sent and the name and the address of the receiver, and for this receiver to report the receipt and the amount procured, we could have a check on every grain of cocaine manufactured. Going further, Congressman Mann, also of Illinois, has introduced in the House a similar law but with the additional provision that each manufacturer and each retailer must obtain a Government license, such license to be forfeited for any irregularity in disposing of cocaine or other drugs of a similar character. Given such laws, I say, with [illegible] and I think the illicit traffic in cocaine would come to an abrupt end."

One of the recent developments of the crusade in this city [illegible] a druggist but at the time of his arrest, a United States in- [illegible] a hand since it has been shown that some of this drug was being shipped and supplied to victims through the United States mails.

Women Give Support to the Anti-Cocaine Crusaders.

PHILADELPHIA, April 20.—Members of many of the best known organizations of women in this city attended a meeting at the College of Pharmacy recently, under the auspices of Chapter No. 6, W.O.N.A.R.D., and listened to addresses on the crusade against the illegal sale of morphine and cocaine and the effects of the use of these drugs upon young men and women. The speakers were Vice-President Christopher Koch, of the Pennsylvania Pharmaceutical Examining Board, who is in charge of the investigation; one of his attorneys, Frank Rogers Donahue, and Special Policemen Lynch and Casey, who are making the arrests.

At the conclusion of the addresses, Mrs. W. E. Lee, president of the chapter, as well as of the National organization, thanked the speakers, and Mrs. William T. Burke, wife of the president of the P.A.R.D., offered a resolution, which was unanimously adopted, pledging hearty co-operation and support in furthering the efforts of Dr. Christopher Koch and Samuel M. Clement, Jr., and Frank Rogers Donahue, attorneys for the Pennsylvania Pharmaceutical Examining Board.

"Biggest and Best Ever," in West Virginia.

Fourth annual convention of the West Virginia State Pharmaceutical Association will be held at Huntington, W. Va., June 14-16. The druggists have adopted as their slogan, "Biggest and Best Ever," and expect to make this meeting the most beneficial as well as enjoyable one that the West Virginia members have ever attended. All are cordially invited to attend and partake of the good things that the Huntington druggists and the Huntington people in general are going to dispense to their guests.

Travelers to Entertain Michigan State Ph.A.

The dates for the 1910 convention of the Michigan State Ph.A. have been changed to June 7 to 9, at Detroit. As was the case last year, the Michigan Ph. Travelers' Association assumes full charge of the entertainment offered the members of the M.S.P.A. during the convention. W. S. Lawton, president of the M.P.T.A., has reappointed the finance committee of 1909: A. E. Kent, chairman; Harry G. Baker, Lewis W. Knapp, M.D.

Mrs. Lee Again President of Philadelphia Chapter 6.

PHILADELPHIA, April 20.—At the April meeting of Philadelphia Chapter 6, W.O.N.A.R.D., the following officers were chosen by the members for the coming year:

President, Mrs. William Estell Lee; first vice-president, Mrs. H. C. Cassidy, second vice-president, Mrs. Hazel G. Pomp; third vice-president, Mrs. L. E. [illegible], recording secretary, Mrs. William T. Burke; corresponding secretary, Mrs. N. D. [illegible]

Druggist's Daughter Wins High Honor at College.

CHICAGO, April 10.—Miss Alberta Van Schaack, who has [illegible] at Bryn Mawr College, is the daughter of Mr. and Mrs. Robert H. Van Schaack, 65 East Cedar street, Chicago. She is 20 years old and will complete her senior year in June. Miss Van Schaack specialized in history and economics during her college course, and her work in economics has been brilliant.

Pharmacists Will See the Latest in Airships.

[illegible] A. [illegible] June 13 to [illegible] during the [illegible] Manufacturers' Association, [illegible] certificates, have been obtained on the railroads. Secretary Schwartz predicts a large attendance and a good time.

Washington and N. Y. Branches Disagree in U.S.P. Recommendations.

Important Resolutions and Substitutes Debated in Both Bodies by Prominent Members—Strong Opposition to Reducing Number of Pharmacopoeial Standards.

WASHINGTON, April 20.—The recent April meeting of the Washington Branch of the American Pharmaceutical Association was devoted to the discussion of general principles to be followed in revising the United States Pharmacopœia. President S. L. Hilton introduced the subject by calling attention to the need for concerted efforts on the part of physicians and pharmacists to make the U.S.P. IX a reliable and generally accepted standard for the articles which it will contain. He laid special stress on the importance of selecting only the best available men for members of the revision committee and the board of trustees, and of giving publicity to the work as it progresses in order to detect errors not only of judgment but intentional acts of deception. Attempts have been made in the past to favor special interests and now that the U.S.P. is a National standard it is but fair to presume that such attempts will again be made. In conclusion, he presented the following resolutions, which were adopted:

Whereas, It has been recommended that the U.S.P. be recognized and used as the basis for medicinal prescribing; and

Whereas, It has been recommended that medical colleges use the Pharmacopoeia as a text-book, or book of reference for students; now, therefore, be it

Resolved, That the U.S.P. Convention, to be held in Washington, May 10, 1910, be requested seriously to consider the adoption of the following rules for general principles to govern admission to and deletions from the U.S.P.:

1. That drugs which possess no well recognized medicinal value be not included in the U.S.P.
2. That the duplication of drugs having essentially the same medicinal action be discouraged.
3. That drugs which are fully represented by an official active principle be omitted from future editions of the U.S.P.
4. That substances which are of but secondary importance as drugs and are used primarily as foods be not retained.
5. That whisky and alcoholic beverages be deleted from the U.S.P.
6. That substances which have no direct therapeutic value and are used as solvents or reagents be included in the appendix.
7. That the unnecessary duplication of pharmaceutical preparations, such as wines, vinegars, tinctures and fluidextracts of the same drugs, be discouraged.
8. That the continuing of fixed formulas for complex mixtures be discouraged.
9. That all formulas for preparations that can be made extemporaneously be recommended for admission to the N.F.
10. That all complex preparations not provided for by international treaties be transferred to the N.F.
11. That further efforts be made to establish and adopt international nomenclature and standards for drugs and preparations.
12. That compounds and mixtures permanently controlled either be secrecy or proprietary rights be not admitted to the U.S.P.

In the discussion of the resolutions, Burt E. Nelson, pharmacist of the State Hospital, Binghamton, N. Y., expressed the hope that all obsolete and inert materials would be eliminated from the Pharmacopœia in the next revision.

Prof. H. V. Arny, dean of the Cleveland College of Pharmacy, presented a very careful survey of the scope of the U.S.P. from a pharmaceutical point of view. To him, the only sane method of deciding what shall be official in the new Pharmacopœia is by statistics; that is, on lines already started by Prof. C. S. N. Hallberg, College of Pharmacy of University of Illinois, in his attempted compilation of one million prescriptions.

Dr. W. M. Barton, a delegate from Georgetown University Medical School, expressed the belief that, constituted as it is, the U.S.P. is neither desirable as a text-book for medical students nor useful as a book of reference for the medical practitioner. He favored the deletion of 65 per cent of the now official substances.

Prof. Joseph P. Remington, by letter, commended the efforts being made to adopt general principles for revising the U.S.P. He said that such action would prevent frittering away time in the convention in the discussion of minor details.

Dr. Henry G. Beyer, delegate to the U.S.P. Convention from the Bureau of Medicine and Surgery of the Navy Department, expressed the belief that the recommendations were self-evidently reasonable. He said that any departure from the old classical significance of the Pharmacopœia would amount to but one additional step into the therapeutic chaos in which we are already involved. Any deviation from the original ideal of the U.S.P., he believed, would result in the more or less complete surrender of future drug administration to irresponsible commercial agencies.

Dr. Reid Hunt, chairman of the U.S.P. committee of the American Medical Association, reported the consensus of opinions of professors of materia medica, therapeutics and pharmacology in the medical schools. As to the resolutions adopted, the majority were in favor of endorsing them.

Resolutions adopted at a joint meeting of the Detroit Association of Retail Druggists and the Wayne County (Mich.) Medical Society, forwarded by Leonard E. Seltzer, of Detroit, were read. They proved to cover essentially the same general principles as those adopted at this meeting.

Martin I. Wilbert, secretary of the branch, opined that the pharmacists appeared loath to part with their opinions, he having received less than 20 per cent of replies to his circular letters. The number of articles recommended for deletion was less than Dr. Reid reported. The vote on resolutions 3, 4 and 5 indicated non-compliance, but Mr. Wilbert thought this was due to misunderstanding of those questions.

DR. RUSBY FATHERS SUBSTITUTE RESOLUTIONS.

All Articles in the Medicinal Stock of a Pharmacist, Except Proprietaries, Should Appear in U.S.P.

The U.S.P. Convention resolutions adopted by the Washington Branch served as the principal subject of discussion at the April meeting of the New York Branch of the A.Ph.A., but the action taken in New York differed from the conclusions of the members of the Washington organization. Dr. Henry W. Rusby, dean of the New York College of Pharmacy, proposed the following as a substitute for numbers 1, 2 and 3 of the Washington resolutions, and adoption followed.

Substitute for Washington Resolution No. 1.

Whereas, The use in a prescription of an impure or adulterated drug or chemical is liable, through the resulting incompatibility, to destroy the physical, chemical or therapeutic properties of the mixture, and to involve the patient in danger; and

Whereas, It is the primary function of text-books, lecturers, periodicals and medical associations, and not of the Pharmacopoeia, to instruct the medical profession in therapeutics; and

Whereas, It has been the universal experience that the admission of an article into or its deletion from the Pharmacopoeia has had scarcely any appreciable influence in modifying the extent of its use; and

Whereas, The inclusion of articles not commonly used or the exclusion of those which are, would merely tend to create a false and unjustified belief concerning therapeutical practice; and

Whereas, The omission from the Pharmacopoeia of a commonly used medicinal drug imposes an unnecessary hardship and an unjust responsibility upon the pharmacist and involves the patient in danger; and

Whereas, Such omission confers no benefit whatever, other than satisfaction, upon the physician; therefore,

Resolved, That all articles commonly included in the medicinal stock of the pharmacist, and not of a proprietary nature, should be recognized in the Pharmacopoeia and definite standards and tests suitable for the use of the practicing pharmacist should be provided for them, in spite of the fact that their therapeutical properties may not commend them to the better informed practitioners of medicine.

Substitute for Washington Resolution No. 2.

Whereas, In the use of two drugs having essentially the same action, as aconite and veratrum, practitioners are likely to be divided in their preference; and

Whereas, In such cases the omission of one from the Pharmacopoeia will not materially decrease its use, but will deprive those who employ it of the benefits of the Pharmacopoeia in relation thereto; therefore,

Resolved, That in the case of such drugs, provided both are commonly used, both should be recognized in the Pharmacopoeia.

Substitute for Washington Resolution No. 3.

Whereas, In the case of drugs possessing active constituents which are claimed, whether correctly or incorrectly, to fully represent the therapeutic properties of such drugs, the omission from the Pharmacopoeia of the drug and its preparations would not appreciably lessen their employment, but would merely deprive those employing them of the benefits of pharmacopoeial protection; therefore,

Resolved, That if a drug or its preparations are in common use, they should be included in the Pharmacopoeia without regard to the fact that the active constituent of such drug is believed to fully represent its therapeutic properties.

The remaining resolutions adopted at Washington were disposed of by substitute resolutions as follows:

4. That substances which are in more extended use as foods

[illegible] as drugs be continued in official standing.

5. That whisky and other alcoholic liquors be continued in the list of pharmaceutical articles.

6. That the disposition of the list of reagents, solvents and the like be left to the revision committee.

7. That official composition be continued for different preparations of the same drug.

8 and 10. That the matter of fixed formulas for complex mixtures be left to the revision committee.

9. That formulas for extemporaneous preparations be retained.

11 and 12. Adopted as printed.

Additional resolutions adopted favored the introduction of a statement of maximum doses in the next revision of the Pharmacopœia, and the requirement that when any of these is exceeded by a prescriber he shall confirm his intention by some distinguishing mark; that powdered drugs be recognized in the next revision, that they be concisely described, certain of their elements being designated by italicization or otherwise identifying characteristics, and that the branch favors having some distinguishing mark or arrangement for the list of selected drugs compiled by the committee on the U.S.P. of the American Medical Association.

Dr. Hatcher, of A.M.A., Participates in Discussion.

The substitute resolutions created considerable discussion as each one was presented for adoption. R. A. Hatcher, M.D., member Council on Pharmacy and Chemistry of the American Medical Association, who was present, as he said, for his own interest rather than to represent any medical organization, suggested calendula as a drug which should be deleted from the U.S.P. Dr. Rusby, however, was of the opinion that if calendula entered into prescriptions in any section of the country, it should be included in the Pharmacopœia. Burdock, Dr. Rusby also thought, should remain in the U.S.P., since, although useless therapeutically, it is a good vehicle.

Dr. Joseph Weinstein, secretary of the New York State Board of Pharmacy, opposed the exclusion of proprietary articles in the coming revision. The best physical and chemical descriptions of such preparations, he said, should be included as a standard. Dr. Hatcher expressed it as his opinion that if a proprietary was the best preparation for the treatment of a disease it should be included in the Pharmacopœia. He gave as an example, atoxyl, which, he said, was the best of its class and should be official. Dr. Rusby strongly disagreed because proprietary formulas could be changed every day and it was impossible to standardize anything of which you didn't know the formula. Dr. Hatcher said that the formula of atoxyl was known.

Dr. Hatcher implored those present not to make the U.S.P. a hodge-podge of useless preparations. He said: "There is no beacon light in the U.S.P. The physicians have been asking for a selected list for a standard of excellence. We have been begging the physicians to limit themselves to the U.S.P. and N.F. Don't include a hodge-podge of useless formulas; the physician will be worse off than with his proprietaries. Give him a selected list or he will make his own selections. You can't standardize an enormous number of remedies in the U.S.P. For instance, the digitalis preparations in the U.S.P. have no real standard. Don't take in every single drug: every weed has its use." He was of the opinion that the Federal Government was perfectly capable of standardizing those drugs not included in the U.S.P. and said that, "no line of preparations is protected so well as the government protects the unofficial sera."

Federal Government Not Prepared for the Situation.

In reply, Dr. Rusby said that the Federal Government was incompetent to handle the situation and it was up to the U.S.P. Convention if a standard was to be maintained on those drugs which were used only in certain sections of the country. Furthermore, he considered the demand of the physicians for a limited number, say fifty, official preparations as an acknowledgement that it was impossible to educate them to use 300 drugs. Jacob Diner, at this juncture, complained that the demands of the medical profession were not uniform and that if the situation was to be left to the government it would mean government control, which is just what the pharmacists have been fighting shy of.

Thomas D. McElhenie thought that the U.S.P. should guide the ignorance of the little country cross roads as well as the college professor. He suggested that the American Medical Association select a list of preparations, each of which should be followed by a statement, "approved by the A.M.A."

The substitute resolution, relating to the continuance in the Pharmacopœia of such articles in use more as foods than drugs was passed with slight discussion, after Dr. Rusby called attention to the fact that olive oil and simple syrup came in this category.

The members voted to continue whisky and alcoholic liquors in the U.S.P., although Dr. Rusby advised them to exclude whisky, because at the present time it would be difficult to fix a standard. He styled the recent government whisky and benzoate of soda decisions as unintentional, open invitations to wholesale fraud. It was suggested, by Hugh Craig, that whisky be entered under a title characteristic of its chemical formation. Jacob Diner, however, did not think it dignified to cover up whisky, the alcohols, etc., under the names of ethers, etc., in order to cater to women's prohibition societies, if such liquors have medicinal value.

The discussion which almost attained the dignity of a debate included the presentation of a collection of miscellaneous opinions. Dr. Weinstein favored giving the physicians a variety of preparations in the U.S.P. and Otto Raubenheimer, president of the branch, thought that the pharmacists should not be curtailed too much. As to the fixed formulas for complex preparations, Jacob Diner thought they should be relegated to the N.F. which now occupies a different position than it formerly did. Dr. Rusby remarked that the N.F. must be published by the U.S.P. Convention in the future and said that he had made such recommendation in his presidential address to be delivered at the A.Ph.A. convention at Richmond. In comment on the U.S.P., Dr. Hatcher asserted that there should be but one standard for the book, that of excellence.

RECOMMENDATIONS BY KINGS COUNTY PH.S.

Strict Adherence to Action of Brussels Conference Among the Suggestions Made for Revisers.

At the April meeting of the Kings County Pharmaceutical Society, held at the Brooklyn College of Pharmacy, Otto Raubenheimer presented a number of recommendations regarding U.S.P. revision similar in purpose to those adopted at the meeting of the New York Branch. These resolutions provided for strict adherence to the resolutions relative to nomenclature and strength of potent drugs adopted at the International Conference at Brussels; that more attention be paid to the preservation and storing of chemicals, drugs, etc.; that the time limit in the U.S.P. for keeping drugs include additional drugs to be named at convention; that powdered drugs be considered with special reference to their chemical and microchemical description; that the atomic weights be based on oxygen as 16; that general type forms for the preparation of galenicals would save space in the U.S.P.; that a short physical description of galenicals be included in the Pharmacopœia; that chemical description and standard for quality, strength, etc., be also included; that more powdered extracts of potent drugs be added; that the alcoholic percentage of galenicals be given; that certain oils be used in galenicals; that a chapter on reagents used by physicians be introduced (for instance, as used in urinalysis); that a list of heroic medicaments, "poisonous" and "very poisonous," be adopted; that a table of maximum single and daily doses be given, such dose statements to be followed on prescription by an exclamation mark; that a list of synonyms and antidotes be included; that the members of the society disapprove of the physiological standardization of drugs and the deletion of brandy, whisky and wines, and that only practical, retail pharmacists be admitted to membership in the committee on galenicals at the U.S.P. Convention.

The recommendations were adopted with the exception of that relating to atomic weights, this being laid over.

Convention Not Open to Western Pennsylvania R.D.A.

The Western Pennsylvania Retail Druggists' Association has received a communication from Murray Galt Motter, M.D., secretary of the U.S.P. Convention, to the effect that such a change in the constitution and by-laws of the convention as would permit the admission of delegates from incorporated pharmaceutical societies similar to the Western Pennsylvania Druggists' R.D.A. would, in the opinion of the board of trustees, result in making the convention unwieldy. A motion to include such organizations was unanimously lost upon vote by the trustees.

In Germany They Elaborate Works of Art From Crude Drugs—Interesting Display.

Fig. 1—The Ape. Fig. 2—The Pilgrim. Fig. 3—Ballet Dancer. Fig. 4—Huckster Woman.

"Es bildet ein Talent sich in der Stille."

(A talent is developed in retirement.)

This well known expression of the poet (Goethe, Tasso, 1. 2) has been, in many ways, confirmed in the world of art, and artistic accomplishments sometimes may be found in circles where they are not suspected to be. So it is with the little exhibition of pictures on this page which was arranged in Berlin some time ago and whose authors belong to the mechanical trades or who live by the work of their hands.

Considered in another way, there may be also gained a sense of the beautiful to give serious and monotonous things of a scientific character artistic forms. The fine tablets on which Ernst Häckel has caught the words of the radiolarian world are an example of this combination of art and science. As a further example and one most certainly highly original we present to our readers on this page the representation of several figures which a student of pharmacy, Mr. S. Neustadt, of Stolpmunde, has formed exclusively from drugs. The artist, an excellent botanist and pharmacognosist, has principally used drugs which play a part in the practice of medicine, and by an artistic selection and combination of his ability in this direction has succeeded in making the figures here illustrated and, at the same time, showing a felicitous humor and a decided talent for respectable caricaturing. In regard to the work the chief of the young artists, Apothecary Simon, informs us that the illustrations are far from doing justice to the impression the originals themselves create. All colleagues who have seen the latter have not refrained from expressing their admiraton for them. The pharmacognostical analysis of the little works of art show the following constituents:

No. 1. The Ape.—The body: sassafras wood; the branch: rhatany root; arms and legs: Allerman's root (Bulb. victorialis longus); head: Cashew nut (Fruct. anacardiæ occident); eyes: fennel flower seed (Sem. Nigellæ); lips: saffron (crocus); hair of head and eyebrows: root fibers and root powder; nose: formed by boring holes.

No. 2. The Pilgrim.—Feet: Ceylon cardamom fruit; cloak: capsicum fruit; arms: Allerman's root; head: night blooming cereus flowers, reversed so that the cap forms a cone; mouth: saffron (crocus); eyes: fennel-flower seed; staff: ipecacuanha root.

No. 3. Ballet Dancer.—Arms and legs: white dittany root, in one piece; feet: Ceylon cardamom (fruit); coat: bitter apple fruit (colocynth), unpeeled and interior portion removed; breast: leaf basis of male fern and adorned with a wreath of buchu leaves; head: myrobalans (fruit); mouth: saffron (crocus); nose: ova formic; eyes: mustard seed and root fibers; hair: tamarind pulp kneaded and braided into one "pigtail."

No. 4. Huckster Woman.—Skirt: very much spotted, unpeeled colocynth fruit; bosom: made of same kind of fruit, but smoother; seat: storax; arms: Allerman's root; head: cashew nut; mouth: carved or cut out; nose: ova formic; eyes: mustard seed; hood: Alexandria senna leaves.

This new suggestion should arouse imitators. Just this kind of work is to be commended to students in pharmacognosy for it will show them that with the pursuit of this science many pleasant activities can be enjoyed.

**Pharmazeutische Zeitung.*

ERA COURSE IN PHARMACY.

Graduates, April, 1910.

Matriculation Number		*Examination Grade, P. Ct.*
5964.	L. M. Stover, Hartford, Ark.	98
5971.	John T. Petzold, Tarpon Springs, Fla....	95
6033.	John L. Hackenberger, Trenton, N. J....	95
6186.	William Middough, Long Beach, Cal.....	98
6255.	Joseph Cohen, Yonkers, N. Y.	92
6344.	Joseph W. Murray, Des Moines, Iowa.....	95

The above graduates will receive diplomas within a short time. A large and very handsomely engraved diploma, printed on artificial parchment, with the graduate's name engrossed, especially suited for framing, will be furnished to all those who request it for $2. Those who desire the latter should forward the necessary fee to THE PHARMACEUTICAL ERA.

Propaganda, N.F. and Other Subjects Discussed.

BOSTON, April 20.—The April meetings of the B.A.R.D. and the New England section of the A.Ph.A. were held on the same day this month. The former met at the Massachusetts College of Pharmacy, propaganda work being discussed, and reports made by the legislative committee on the status of bills now pending. Prof. Elie H. LaPierre delivered an address on making fluidextracts by repercolation. In the evening the members joined with the New England section at a dinner in the Hotel Plaza. Owing to a throat affection, President James F. Finneran yielded the chair to Professor O'Hare, of Providence, the vice-president. After dinner the section took up the first 25 articles in the National Formulary and discussed them. The discussion was very general, nearly all present participating.

Massachusetts Pharmacists to Meet at Seashore.

BOSTON, April 20.—The annual meeting of the Massachusetts State Ph.A. will be held again this year at the New Ocean House, Swampscott, the dates being June 21-24.

? QUESTION BOX ?

THE OBJECT of this department is to furnish our subscribers and their clerks with reliable and tried formulas, and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties etc. Requests for information are not answered by mail and ANONYMOUS COMMUNICATIONS WILL RECEIVE NO ATTENTION, neither do we answer questions in this department from non-subscribers.

In this department frequent reference is necessarily made to information published in previous issues of The Era, copies of which, if not out of print, may be obtained for 25 cents each.

Tannin Iron Ink.

(R. L. D.)—A gallic acid-iron ink becomes more slowly black than an ink made with tannic acid alone, and we are inclined to believe that your difficulty arises from the omission of gallic acid from the formula. As you give us no definite formula on which to base any experimenting, the best we can do is to give the following formulas which have been recommended for producing satisfactory tannin inks:

(1)

Tannin	3 ounces.
Water	3 ounces.
Solution of ferric chloride (10 per cent)	7 ounces.
Hydrochloric acid	2½ drams.

Heat in a large glass flask or bottle on a water-bath for five or six hours, then add

Hot water, to make	40 ounces.

Continue the heat for an hour longer, then set the ink aside for a fortnight in a cool place and filter. To the filtrate add a mixture of

Phenol blue 3F	2 drams.
Carbolic acid	40 grains.
Sugar	2½ drams.
Water, to make	60 ounces.

Dissolved by the aid of heat. Allow the ink to stand for a week in a cool, dark place before decanting.

(2)

Tannin	7½ ounces.
Gallic acid	2½ ounces.
Distilled water	90 ounces.
Sulphuric acid	3 drams.

Dissolve and add

Ferrous sulphate	10 ounces.

Boil gently in an enameled vessel for half an hour, then set aside for two days and strain, making up to 100 ounces if necessary. This is to be diluted (1 to 4) and colored as required.

In the first formula the conversion of the tannin into gallic acid is effected by heating with hydrochloric acid, and thus the ink becomes less prone to change than when made in the cold, and without preliminary hydrolysis. An excess of sulphuric acid, as found in many inks, tends, it is said, to delay the darkening of writing and also corrodes the pens, but up to a certain point its use is advantageous. We suggest you try a little experimenting along the line we have indicated.

Milk Chocolate.

(F. P.)—The term "milk chocolate" is rather elastic, being both employed to designate a soda fountain beverage and a confection. As you do not inform us specifically of your wants we can do no better than to publish a formula for both, the first being for the fountain syrup known as

MILK CHOCOLATE

Selected cocoa, 8 ounces; sugar, 5 pounds; milk, 3 pints; water, 2 pints; vanilla extract, 1 ounce. Pour the water into a kettle and add while cold the cocoa, thoroughly mixing. Place over a fire and bring to a boil, continuing the boiling [illegible] and the milk which has been previously brought to the boiling point. Again boil the mixture for five [illegible] from the fire and add the sugar. When [illegible] the vanilla extract and strain. This makes a very smooth and rich chocolate which is particularly recommended as a flavor for ice cream soda. In boiling the milk care should be taken to prevent its scorching.

MILK CHOCOLATE (A CONFECTION).

Crystal A sugar, 20 pounds; glucose, 1 pound; water, 5 pints; condensed milk, 1 quart; vanilla extract, 1 ounce; chocolate coating, 10 pounds.

Put the sugar, glucose and water into a copper pan over the fire and stir until the sugar is thoroughly dissolved; then wash down the sides of the pan, place a wooden cover on it, and leave to steam for five minutes. Now remove the cover and gradually add the condensed milk, stirring lightly at the same time, and cook to 238°. Pour out on a clean marble slab and leave till cool, then turn to a cream and leave to mellow. Knead the cream, place it in a steam bath, add the vanilla extract and stir until thin, then drop into impressions in trays of starch. When cool, remove the starch and dust well. Have the chocolate coating melted and turned out on a marble slab and cover the creams with the coating. Put in a cool place until ready for use.

Greaseless Massage Creams.

(C. M. R. and E. H. R.)—Here are several representative formulas:

(1)

Casein	3 ounces.
Boric acid	5 drams.
Cacao butter	2½ drams.
Carmine solution,	
Perfume, of each	q. s.

The casein is prepared by the magnesium sulphate and alum method, and is employed in the moist condition. The carmine solution, perfume and boric acid are incorporated and then the melted cacao butter.

(2)

Stearic acid	4 ounces.
Glycerin	4 ounces.
Water	16 ounces.
Potassium carbonate	1 dram.
Boric acid	½ ounce.
Casein, soluble	1 ounce.
Powdered tragacanth	15 grains.
China clay	3 ounces.
Carmine solution	q. s.
Perfume	q. s.

(3)

Stearic acid	3 ounces.
Sodium carbonate	2½ drams.
Anhydrous wool-fat	4 drams.
Glycerin	3 ounces.
Borax	1 dram.
Solution of hydrogen peroxide	4 drams.
Water	16 ounces.
Perfume	q. s.

The solution of hydrogen peroxide is added when the mass is setting.

We cannot give the formula for the proprietary article.

A Number of Queries.

(J. M. W.)—Carborundum is manufactured by a patented process by the Carborundum Co., Niagara Falls, N. Y. The process consists in fusing in the intense heat of the electric furnace a mixture of granulated coke, very pure glass sand, and sawdust. The two materials first mentioned are the purest obtainable. The coke is the carbonaceous residue from the distillation of petroleum; the sand used is the purest glass sand. The sawdust is added entirely for mechanical purposes, namely, to make the mixture porous and thus to avoid explosions of carbon monoxide produced during the course of the reaction. The fundamental reaction takes place between the sand (silica) and the coke (carbon), resulting in the production of a carbide of silicon or carborundum. The product is used as a general abrasive.

"What is the chemical formula of pearls?" Pearls are composed of membrane and carbonate of calcium, or, in other words, of substances similar to blackboard and chalk, in alternate layers. The production of pearls, as explained in the encyclopedias, is as follows: When any foreign body gains a permanent lodgment within the shell of any of the molluscs which are lined with the pearly matter or nacre, the pearly secre-

tion of the animal, instead of being spread in layers on the inside of its habitation, is accumulated around the offending particles in concentric films of extreme tenuity, and more or less spherical, forming a pearl.

The so-called "artificial pearls" are made by blowing very thin beads or bulbs of glass, and pouring into them a mixture of ammonia water and the white matter from the scales of various species of fish. This solution is injected into the glass beads, so as to thinly coat them on the inside, when white wax is poured in to fill the cavity. Sometimes mucilage of acacia is employed instead of wax on the ground that it is more translucent, gives greater weight, and is not liable to melt with the heat of the wearer's body—a defect to which those filled with wax are very liable. Some artificial pearls are also produced by applying a coating of pearly matter on the outside.

Mother of pearl is derived from various sea shells, etc. The structure of the pearl shell admits of it being split up into laminæ, and it can then be used for the handles of knives, inlaying, the manufacture of buttons and the like. Artificial mother-of-pearl buttons are usually made of horn and then treated with a chemical mixture to simulate the appearance of true mother-of-pearl.

The following are represenative chemical journals: *Journal of the American Chemical Society, Journal of Industrial and Engineering Chemistry,* and *Chemical Abstracts,* all three published by the American Chemical Society, Easton, Pa.; *American Chemical Journal,* published by Johns Hopkins University, Baltimore, Md.; *Journal of Physical Chemistry,* Ithaca, N. Y.; *Electrochemical and Metallurgical Industry,* New York. Foreign chemical journals in English are the *Journal of the Chemical Society, Journal of the Society of Chemical Industry* and *Chemical News,* all published in London.

For information relating to mineral specimens address Ward's Natural Science Establishment, 76 College avenue, Rochester, N. Y.

Photographs on Watch Dials.

(F. E. M.)—For the production of photographic pictures on watch dials, the following method of procedure is taken from the Scientific American Cyclopedia of Receipts:

Beat the white of an egg, with addition of a little ammonia, to a white foam; add 300 cc. of water and beat again. After the egg has settled, filter and let the liquid run over the dial, which has previously been thoroughly cleaned with ammonia. After the surplus has run off, coat once more and allow to dry. The sensitive collodion is now produced as follows: Dissolve 0.6 gram chloride of zinc in 20 cc. of alcohol; add 0.5 gram collodion cotton and 26 cc. of ether, and shake the whole forcibly. Then dissolve 1.5 grams of nitrate of silver in hot water, add 6 cc. of alcohol, and keep the whole in solution by heating. The silver solution is now added in small quantities at a time to the collodion, which must have well settled. This, of course, is done in the dark room.

After 24 hours the emulsion is filtered by passing it through cotton moistened with alcohol. This durable collodion emulsion is now flowed in the usual way thinly upon the prepared watch dial, which, after the collodion has coagulated, is moved up and down in distilled water until the fatty stripes have disappeared. The water is then changed once, and the dial is, after a short immersion, left to dry upon blotting paper. It is now ready for exposure. Expose under the original magnesium light and develop with a citrate oxalate developer, or in the following hydroquinone developer:

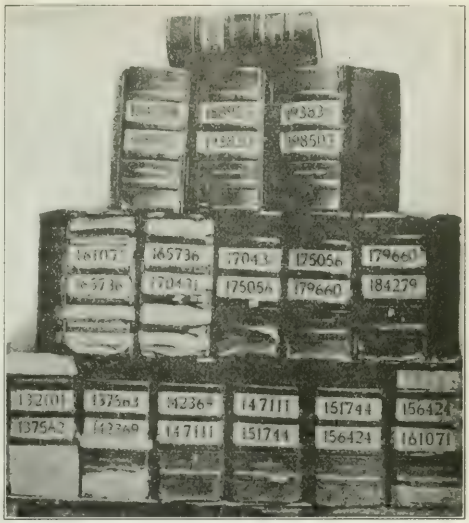
Hydroquinone	4 grams.
Potassium bromide	25 grams.
Sodium sulphite	48 grams.
Sodium carbonate	10 grams.
Water	450 cc.

After fixing and drying, coat with transparent positive varnish.

In place of the developing process, the printing out process with chloride of silver collodion can also be applied, with the advantage that the pictures can be toned. The collodion for this process is made in the following way:

Dissolve 8 grams collodion cotton in 100 cc. of ether and 100 cc. of alcohol; add 0.3 gram of chloride of strontium, and then 0.2 gram of chloride of lithium, which has previously been dissolved in 2 cc. of hot water. To this solution add also 1 gram citric acid which has been dissolved in alcohol slightly heated. The solution is left standing for 24 hours, and is then filtered through cotton. The prepared dial is then coated in the ordinary way with this emulsion, and printed, after which it is toned as usual.

Good Record of New England Store.



An exceedingly effective advertisement recently printed by Walsh & Cummings, of Manchester, N. H., covered five newspaper columns and had for a feature an illustration, of which the above is a reduced fac simile, with the following text, attractively displayed and filling the remainder of the space:

This **picture** and these **numbers** tell a story. It is a story of **public confidence.**

The photograph represents the 15 prescription books which have been **filled** since August 15, 1904, at the pharmacy of Walsh & Cummings, Manchester, N. H. They contain 65,489 original prescriptions. Our predecessor, the late Z. Foster Campbell, who had been on this corner for over a quarter of a century, turned over to us books containing 133,882 originals.

The number,

13,928

represents the original prescriptions filled by the **Walsh & Cummings pharmacy in the year 1909.**

There is little more to be said, except that this is the **largest number of prescriptions ever filled in a single year by a single drug store north of Boston in New England.** We don't want to claim too much, but we believe it has been excelled by but one or two pharmacies in Boston.

And what does this mean?

It means that ours is **THE** prescription drug store not only of Manchester but of New Hampshire. It means that **this drug store has the confidence of physicians, nurses and the general public.**

We are proud of this confidence. We shall keep right on endeavoring to deserve it.

Mange Remedy for Dogs.

(J. H. J.)—We cannot give the formula for the proprietary article and we do not recall any analysis that has been "recently published." However, if you want a good formula, try the following, which was contributed to the Era some years ago by Anthony Ertel, of Hempstead, L. I.:

Whale oil	2 parts.
Oil of tar	1 part.
Flowers of sulphur	1 part.

This is to be thoroughly mixed and applied to the parts affected, and allowed to remain for about 24 hours, when the dog should be washed and a fresh supply applied. Usually two or three applications will effect a cure. This remedy contains no poison, and cannot injure the dog should he lick it off.

CORRESPONDENCE

A Request From the A.Ph.A. President.

Editor The Pharmaceutical Era:

Will you be kind enough to publish in the next number of your respective journals, a request that all members attending the forthcoming meeting of the American Pharmaceutical Association at Richmond, will bring with them fresh or living specimens of medicinal plants growing in their vicinity. It is desired to have as large and complete exhibit of North American medicinal plants as is possible. The fact that the plants are not in bloom or in leaf should not prevent their being brought. A number of specimens of the same plant representing different sections of the country, collected at the same time, would in itself be highly educational as showing the different degrees of development in the different sections. The best way to bring these plants and have them keep well is to place them in air-tight tin cans or boxes, without any added moisture. In this way, they will keep perfect for a week or ten days, but they should, of course, be collected as at late a date preceding departure for the meeting as possible. It is quite likely that many persons who are not able to attend will be able to send such specimens by mail or express, addressing them to me at the association headquarters and having them arrive there on Saturday, April 30. Thanking you for your kind assistance in these matters, very truly, yours,

New York, April 2, 1910. H. H. RUSBY, M.D.

Would Stop Talk of N.A.R.D. and A.D.S. Compact.

Editor The Pharmaceutical Era:

Praise and criticism of N.A.R.D. in your columns last two years appears to show much in favor of criticism. The N.A.R.D. makes mistakes, so does the ERA. "To err is human," and so far as we can see both managements are human. I do not believe it can be shown where N.A.R.D. has made the same mistake twice.

Several drug journals, jobbers and manufacturers would have us believe N.A.R.D. did nearly everything wrong. Some journals use as a club the claim that N.A.R.D. and A.D.S. are one, or nearly so. Manufacturing 80 specialties, I am not and never have been as enthusiastic over A.D.S. preparations as many are. I am a member of A.D.S. and N.A.R.D. and not ashamed of it. I read six drug journals, attend N.A.R.D. conventions, where I am a good listener with my eyes open, if nothing more, and yet at the last convention, when the N.A.R.D. and A.D.S. are accused of practically having united, I failed to see just grounds for such complaint. I have always been opposed to any move in that direction as well as most N.A.R.D. members have been, yet I favored Charlie Hubn for president of the N.A.R.D. regardless of his being president of the A.D.S. He was an N.A.R.D. favorite and hard worker before the A.D.S. was born, and is hustler enough, square enough and big enough to serve his station in both in such a way that he can look any man in the face. The N.A.R.D. is not guilty, but will be injured, until persons swinging this club are shown up and their motives made clear. A.D.S. will not be injured. It has been said that a large majority of members of each fraternal order, Free Masons and Odd Fellows belong to the other—most of these men would be both Masons and Odd Fellows, but it cannot be said they are as one. Many of these things are easily understood even by us half-intelligent retailers when we bring together the arguments of some of the manufacturers, jobbers and journals. I say some. If N.A.R.D. and retailers generally do so many things wrong, and do not run our businesses and organization right, please tell us how. What would you do in our place?

Oak Harbor, O., March 21. L. Z. LANTZ, Ph.G..

[Our esteemed correspondent is mistaken in saying that criticism of the N.A.R.D. has been greater in these columns than praise, for there has been little of either. The ERA has printed the news, fairly and impartially. It would be unfriendliness to print only the good news and omit the unpleasant, but no doubt some of our readers would prefer to be in the position of the ostrich, with head buried in the sand and body protruding as a target for the enemy. Nor is it fair to fall into the error of mistaking a plain record of actual events for either praise or criticism.—ED.]

SCIENTIFIC SECTION ENDS SUCCESSFUL YEAR.

W A. Pearson Chosen President by Philadelphia Members of Adjunct of the American Ph.A. Branch.

PHILADELPHIA, April 20.—The rather mysterious subject "Enzymes" was discussed from various standpoints at the March meeting of the Scientific Section of the Philadelphia Branch of the A.Ph.A. It was held at the Philadelphia College of Pharmacy and was largely attended.

Dr. Henry Leffman presented a paper entitled "What Enzymes are Chemically." Joseph W. England, who has given the subject much study, told how ferments act physiologically. L. H. Bernegau, who has recently done some very interesting experimental work on the inhibitory action of mechanical agitation, made a preliminary report, and Dr. Arthur C. Morgan discussed "The Therapeutic Uses of Enzymes."

The meeting marked the close of the first year in the history of the section, which was first organized among the chemist members of the American Pharmaceutical Association. The year was a most auspicious one and the coming year promises to be even more so. The election of officers resulted in a choice of W. A. Pearson for chairman and Dr. Clement C. Brinton for secretary. During last year, Chairman Pearson was the efficient secretary of the section. He is identified with the laboratories of the Smith, Kline & French Co., and for several years has been prominently identified with movements pertaining to chemistry and its progress throughout the country. Dr. Brinton is in charge of the laboratory of the Federal Department of Agriculture in this city and, like Mr. Pearson, is known for his able writings and addresses upon scientific subjects.

N. Y. BRANCH TO MEET JOINTLY WITH DOCTORS.

Ewen McIntyre Is Recommended as Honorary President of Parent Body, to be Elected at Richmond.

At the April meeting of the New York Branch of the American Pharmaceutical Association, held at the New York College of Pharmacy, Thomas P. Cook reported that the Coudrey U.S.P. Bill had been laid away, "we hope for ever."

It was unanimously voted that a page of the proceedings be reserved as a memorial to Philip C. Candidus, the recently deceased honorary president of the A.Ph.A. Mr. Cook, who knew Mr. Candidus for many years, said that he had always had the greatest respect for him, and on Mr. Roehrig's suggestion the secretary was instructed to send a letter of condolence to the deceased's family.

A recommendation that Ewen McIntyre be made an honorary president of the A.Ph.A. at the coming annual meeting met with much applause.

Hiland Flowers, who was to have read a paper on "Enamel Ware," gave way in order that the U.S.P. resolutions, printed on page 457 might be discussed.

George H. Hitchcock announced that the next meeting of the branch would undoubtedly be held jointly with the New York County Medical Society, the date of which occasion was changed to May 23 because of the A.Ph.A. annual meeting and U.S.P. Convention, which occur just previously.

Chemists Honor Prof. Chandler at Banquet.

The banquet tendered to Prof. Charles F. Chandler April 30 by the Chemists' Club, Society of Chemical Industry, American Chemical Society, American Electrochemical Society, American Institute of Chemical Engineers and Verein Deutscher Chemiker, occurred after this issue of the ERA went to press. It was planned to present Professor Chandler with a bronze bust of himself in heroic size, executed by the famous sculptor, J. Scott Hartley. A replica of the bust is to be presented to Mrs. Chandler. As another testimonial to Professor Chandler, the Chandler Testimonial Fund for the purpose of purchasing books for the library of the Chemists' Club has been created. Professor Chandler has taken a special interest in the library.

Annual Banquet of Chi Chapter.

CHICAGO, April 20.—Chi Chapter, Kappa Psi Fraternity, located at the University of Illinois School of Pharmacy, held its annual banquet and installation April 9. About 60 of the members were present. J. Bryce Carpenter, past-regent; T. A. Nooner, newly installed vice-regent; Prof. C. M. Snow, for the faculty; Herbert E. Kraft, Clemence Zimmerman and H. August Langenhan were the speakers.

More Comments on Dr. Stewart's Ideal of the Future of Pharmacy.

Paper on Page 133 of February Era Causes Continued Discussion, the Trend Being Against Uniting Functions of Pharmacist and Physician in One Man.

WOULDN'T HAVE PHARMACISTS BE PHYSICIANS.

Present Examples of Doctor-Druggist Not Favorable to Dr Stewart's Plan for Pharmacy's Future.

By Prof. H. V. Arny, Ph.D., dean of Cleveland College of Pharmacy, member N.F. committee of A.Ph.A., Cleveland:

While the proposition to make pharmacy a specialty of medicine, like surgery, ophthalmology, etc., at first blush seems most reasonable and feasible; the more I have thought on the subject since first suggested to me years ago, the less it appealed to me, since I am radical enough to believe that the less the pharmacist knows about the practice of medicine, the better it will be for the professional side of his calling.

To my mind, the pharmacist should be a maker, tester and dispenser of medicines and not a prescriber of them, and that all he should know of therapeutics should be safe dosage and sane combinations. The pharmacist should be a specialist in chemistry and botany (the latter term including, of course, microscopy), and his functions should be not even to tell the doctor what to prescribe but to stand ready to prepare in the most skillful manner possible the combinations that the physician desires. I hope to see the day when on the physician's prescription will appear only the dose of each medicine desired, the number of doses and the form to be administered (pills, powders or liquid); the vehicle and flavor (if needed) being left to the dispenser.

The suggestion that the medical training be taken in order that the individual pharmacist may prescribe and dispense brings up at least two answers: In the first place, the two callings—medicine and pharmacy—if properly conducted, are so big that each will take the undivided attention of one man. Let us stop and think of those doctor-druggists who occur to us and figure out whether they—as an average—are a credit to either profession. There are, of course, some exceptions, nor does the class above intended include those former druggists now physicians, who possibly conduct their old drug stores under charge of a competent pharmacist. The kind I have in mind are a few men who run a drug store, have an "office" in the back room, make no calls, but prescribe over the counter, and are usually not one whit better than the average counter-prescribing druggist, without the M.D. degree. How the future will bring about the professional improvement in this class, outlined by Dr. Stewart, is more than I can see.

In the second place, as I read Dr. Stewart's paper, I cannot see that his plan contemplates anything other than the modern dispensing physician plus possibly the ability to prepare his own medicines instead of buying them of the manufacturer. Nor can I see that the average dispensing physician presents to pharmacy a professional example worthy of emulation.

What then is the professional future of pharmacy? Agitation along the ethical lines; appreciation of the fact by the pharmacist, the physician and the public; that the commonwealth in entrusting to the pharmacist the sole right to handle poisons, narcotic drugs and alcoholic liquors (in "dry" sections) gives him a responsibility that means the weal or the woe of the community. Every citizen should see that his right is so limited by more stringent requirements both educational and professional, that the few in each community who win the privilege can be enabled to make a living out of the professional side of pharmacy.

To be definite, in a city of a half million, 250 drug stores cannot possibly exist on professional pharmacy, but such a city could support one-tenth (or possibly one-fifth) that number of pharmacists who are highly equipped—morally and professionally. Let us work to entrust the dispensing of poisons and habit-forming drugs to such high grade men, and let us do this by the gradual raising of pharmaceutical standards, in education, preliminary and technical, and in board of pharmacy examinations. Of course, such change must come gradually, but on the other hand, it might be said that such change is now occurring, for it is clear that—at least east of the Mississippi—the slight annual increase in the number of pharmacists is far below the increase in population.

The day is approaching when there will be two classes of druggists in this country like the Drogen-Händler and the Apotheker of Germany, and that without resorting to the artifice of concessions in vogue in that country. Under the new order, the American drug handler can run chicken sandwich parlors, smoke shops or patent medicine bazaars to his heart's content, but the dispensing of prescriptions, of poisons and of narcotic drugs will be limited to those who show sufficient educational ability and professional interest to be worthy of the tremendous responsibility entrusted to them by the State.

FAVORS UNITY OF PHARMACY AND MEDICINE.

Dean Stanislaus Believes That the Two Professions Ought Never to Have Been Separated.

By I. V. Stanley Stanislaus, Ph.G., M.Sc., Phar.D., dean of the Medico-Chirurgical College of Philadelphia College of Pharmacy:

In regard to Dr. Stewart's paper, I would say that my opinion on this matter is, of course, very decidedly in one direction, which is this: I think it was a great error to have separated the practice of pharmacy from that of medicine in the first place. Second, whether Dr. Stewart's conclusions are final or not, the practice of pharmacy at the present time is in such a condition that something positive and decisive must be done in order to save it from entire commercialization and to prevent the ultimate result, i. e., the pharmacists being only venders and distributers of manufacturing houses. I think pharmacists equipped as advocated by Dr. Stewart would certainly stand a much better show for a realization of the altruistic ideals, the attainment of scientific and social position and the general good of humanity. I also consider that the pharmaceutic press should do all it can in the plan for just such a reorganization which will be for the best interests of the profession.

Much can be said on this subject and I hope much will be said in the very near future, for whatever can be advocated by those who believe that price protection is the final issue of the pharmacists and their only salvation, I will say to the contrary that if the pharmacists will not take the matter in hand and improve their professional attainments and social position, others will step in and do it for them—perhaps not to the pharmacists' best satisfaction.

I am certainly anxious to hear what the brethren have to say on this subject and hope there will be a liberal interchange of opinions, for in such manner only can we learn what the views and desires of the greatest number of pharmacists are.

TREND OF PROGRESS TOWARD SPECIALIZATION.

Dispensing by the Physician-Pharmacist, Like That by Physicians, Would be Liable to Grave Abuses.

By Prof. W. B. Day, Secretary Illinois State Pharmaceutical Association, Secretary Chicago Branch A.Ph.A. and Actuary of University of Illinois School of Pharmacy (Chicago College of Pharmacy):

I certainly do not agree with Dr. Stewart in his conclusions "that pharmacists should study medicine, obtain a license to practice, and then take advantage of their close contact with the people to educate them on the subject of medicine, etc." In my opinion it would be a decided step backward if pharmacists as a class were to accept his advice and qualify to practice medicine. The whole trend of modern progress is toward specialization. Surely there is need for the competent and conscientious pharmacist who will stand between the physician and his patient, serving them both with skill and integrity. Dispensing by physicians is open to grave abuse which an intelligent public will ultimately discern. Dispensing by the physician-pharmacist would be no less objectionable.

That the changes which pharmacy is now undergoing will eventually bring about closer relations between the pharmaceutical and the medical professions seems probable and is much to be desired. Very properly, the schools of pharmacy

are devoting greater attention to pharmacology, but this by no means indicates a desire or effort toward fitting their students for any such dual capacity as suggested.

FAVORS SPECIALIZATION—HIGHER EDUCATION.

Mr. Ladish Believes Pharmacists Should Pursue the Present Course in Which Progress is Being Made.

By F. H. Ladish, of Chicago, Ill., member executive committee National Association of Retail Druggists:

Dr. Stewart has created a great fund to work upon and his paper shows thorough and careful thought. His plan seems to me to be rather reactionary, however. It occupies premises of revolution rather than evolution. The evolution is toward specialization. The physicians' ranks contain many more specialists than formerly. In fact, the general practitioner is becoming fewer in numbers daily. The field is so great that it requires division of work to get the best results. The practice of pharmacy is in a similar position. I know of no pharmacist who is buying up old bathtubs to make zinc sulphate or bent and useless nails to make iron preparations. I'm not discounting universal information and education.

Let us pursue the course that we are now making progress on, namely, higher qualifications and higher education. Due to specializing we have finer chemicals, purer drugs and better galenicals than we had years ago. All around us we can see unmistakable signs of the physician asking the pharmacist to perform duties that were formerly done by the physician himself. Let us strive toward that end and make a specialty of being a real helpmeet to the practice of medicine. This is the direction in which we are now traveling and courage and, above all, honesty will win for us that which we are entitled to, but not until we qualify. *Vox populi, vox Dei.*

DIVORCE STOREKEEPING AND PHARMACY.

Years of Professional Study and Experience Are Not Needed to Qualify Any One for the Former.

By J. Leon Lascoff, prescription pharmacist, New York:

The very interesting article by Dr. F. E. Stewart, of Philadelphia, which appeared in the February number of THE PHARMACEUTICAL ERA entitled, "Shall We Have a Profession of Pharmacy?" has paved the way for a good deal of discussion. As I am particularly interested in views similar to those held by my esteemed colleague, I venture to make the following suggestions:

As a retail pharmacist in New York City with an active business, I can take but one view and that is, if we wish to reach the high standard of professional pharmacology in a more practical and less theoretical manner, many reforms must be instituted, not by educating the druggist in the healing art of "diagnosis and therapeutics," but by—

1. Raising the standard by admission to pharmacological schools.

2. By a better pharmacological equipment in the *schools of medicine.*

3. By separating the laboratory and dispensing department from the general store; and, lastly—

4. By converting the general store into an ideal drug and chemical establishment, as is practiced in foreign countries today.

By a careful review of the foregoing "Reformed Rules," we find that:

1. The average student who enters our schools of pharmacy is not sufficiently educated in the preliminary branches of science to enable him to take up the subjects in a manner to meet the views of Dr. Stewart.

2. The schools of medicine do not educate their students sufficiently in pharmacology other than what is found in ma-

3. A subject upon which I have dwelt at great length before the A.Ph.A. in a paper entitled, "The Professional and Com- Pharmacist" which appeared in THE PHARMACEUTICAL ERA [illegible] 29, 1908, page 5500 and which I may say [illegible]. The true pharmacist does not need a store to carry out the high ideals of pharmacology. He has [illegible] prescriptions and manufacture standard [illegible] without storekeeping. But unfortunately he is compelled to [illegible] a living and therefore depends upon the sale of various articles of merchandise to pay his expenses. There is not another profession existing in which the practitioner has a shop wherein to practice his art. Therefore we must keep our scientific department as far remote from the general store as possible.

4. Years of experience, study and research are not requisites of the common storekeeper, such as soda water dispenser, cigar saleman, candy distributer, post card vender or stationery dealer. These are the drawbacks to the higher altruistic ideals of pharmacology.

The pharmacist need not be a doctor no more than does the trained nurse. He is well able to serve the needs of humanity by adhering strictly to the technique of the *art*, close appliance of the knowledge obtained by him through study and experience, conscientious dispensing and disregarding of all nostrum panaceas and "cure alls," in which there is no profit to him and no benefit to the purchaser. By so doing he will find sufficient remuneration for his labor.

At best the average individual pharmacist is not able to compete with the department and cut-rate drug stores in the sale of proprietary and patent medicines and sundries. Therefore the elimination of these articles from the drug store would be of great advantage to the pharmacist and inspire the confidence of the public as to the pharmacist's ability in dispensing and selling standard preparations recognized by the U.S.P. and N.F., thereby raising the standard of the American pharmacists to the level of their colleagues in foreign countries, where a pharmacist is a professional man and a druggist is a tradesman.

In spite of the fact that the distinction just mentioned has been made in this city by several ethical pharmacists without success, yet I believe that with the united efforts of all of our professional brethren it would be possible to carry out the idea. Then the way would be paved for a realization of the high ideals of our esteemed Dr. Stewart, but without the remedy which he suggests, of educating the pharmacist in the art of medicine.

It is very true, as Dr. Stewart states, that the statistics show a large percentage of pharmacists studying medicine in our various schools, but has the doctor noted the ultimate outcome? I am afraid he has not. In New York City all pharmacists, who have obtained the degree of M.D. have deserted their pharmacies and become practitioners in various branches of medicine and surgery, a result that is a most natural one.

Why be a storekeeper with the degree of Ph.G. and M.D. and confine himself to his store from early morning till late at night, handing out medical advice for the price of a prescription and educate the public for the sake of humanity? Is this human nature? I dare say, in a few instances we may find the ideal physician-pharmacist, but to make this a general rule would seem almost a human impossibility.

Besides, far from bringing the two professions together by making physician-druggists, we are widening the breach. The M.D. depends for his living upon giving advice and prescribing, the pharmacist lives by dispensing. As soon as you make the druggist interfere with the physician, by advising the public on subjects appertaining to diagnosis and therapeutics, you will deprive the practicing physician from making a living, and thereby you will create a rupture in the relations and encourage the physicians to self-dispensing, which privilege is given to them by every right, with results that can only prove disastrous to both professions and incidentally to humanity in general.

The physicians is the better judge of diagnosis and therapeutics, the pharmacist is better qualified in the uses of his own individual art. The fault does not lie in the lack of sufficient therapeutic knowledge on the part of the pharmacist, but rather is to be attributed to a deficient professional spirit.

We are all professional pharmacologists outside of business hours; storekeepers and nostrum venders during business hours—there lies the fault.

In conclusion I would say that the wide field, opened for us by the most brilliant article as submitted by Dr. Stewart, should encourage all pharmacists to join in the united efforts for a much needed reform in our pharmacological profession.

Professional Proposals for Feminine Partners.

The Doctor—May I attend you in health as in sickness?

The Lawyer—May I argue all your cases for you alone with you?

The Politician—I sincerely desire your personal indorsement of my campaign for your hand.—*Judge.*

THE QUIZ MASTER

A MONTHLY SERIES OF PRACTICAL AND EDUCATIONAL QUESTIONS FOR DRUG CLERKS AND STUDENTS, WITH THREE CASH PRIZES EACH MONTH FOR THE MOST CORRECT ANSWERS.

THREE PRIZES of $5.00, $3.00 and $2.00 respectively, will be paid each month to the three persons submitting the largest number of correct answers to each monthly series of questions. In the event of a tie for any one of the prizes offered, such prize will be equally divided among the successful contestants. This competition is open to all who may desire to compete.

ANSWER BY NUMBERS and write your answers upon letter size paper (8x10 in.), one side only, with your Name and Address at the top of each sheet. Also number your sheets.

ALL ANSWERS for each month's series of questions must be sent at one time, and must be with us not later than the 15th of the following month.

CORRECT ANSWERS to each series of questions and the names of the three contestants who have been awarded the prizes will be published in the Era, after the close of the respective contests.

WE INVITE our readers to send us their questions for publication in this department, particularly questions related to the practical work of drug clerks.

ALL COMMUNICATIONS relating to this department should be kept separate from other correspondence, and addressed to

The Quiz Master

Care of Pharmaceutical Era 82 Fulton St., New York

QUESTIONS, MAY SERIES, 1910.

1—For what are moth balls chiefly used?

2—What is a microscope?

3—In the botanical name Papaver somniferum, which is the generic and which the specific name?

4—What are bacteria?

5—Why must heat be used with caution in the expression of castor oil from the seeds?

6—From what substances is magnesium sulphate chiefly obtained?

7—What is (a) emery; (b) butter of antimony; (c) galena; (d) king's yellow?

8—How many 15 minim doses are contained in 60 cc. of tincture of digitalis? Show work?

9—What incompatibility exists between many fluidextracts and carbonates?

10—How do you account for the deep red color of Basham's mixture, since none of the ingredients used in preparing it has this color?

11—What iodides are insoluble or almost insoluble in water?

12—What is meant by the term "breaking with a conchoidal fracture"?

13—In what four pharmacopœial definitions is the term "conchoidal" employed to describe the character of the fracture of a drug?

14—How may benzoic acid be obtained from benzoin?

15—How would you define ductility of metals?

16—What are four ductile metals?

17—How would you lessen bumping in a liquid?

18—What are the English equivalents for the following Latin contractions: (a) adst. febre; (b) div.; (c) hor. somn.; (d) sum.?

19—What is the difference in the appearance of the upper and under surfaces of cypripedium?

20—How would you prepare pills in which mercury is the only medicinal ingredient, and the choice of excipient is left to the judgment of the pharmacist?

Has Had Experience in Several States.

FRED V. ALTER,
San Antonio, Texas.

Fred. V. Alter, who has been awarded a first, second and third prize in three contests, respectively, of the Quiz Master's Department, is a pharmacist whose experience has been obtained in drug stores in several States. He received his early training in pharmacy in Grand Rapids, Wis., in the store of Johnson, Hill & Co., where he remained for five years. He then went to New Orleans, La., and soon thereafter accepted a position in Texas, clerking in drug stores in Houston, San Antonio and Waco.

Mr. Alter was married in 1907, and moved from Texas to Riverside, Cal., where he was also employed for about a year as a pharmacist. He decided he would like to see the great Northwest part of the United States, and accordingly traveled up the Pacific Coast by steamer to the State of Washington, locating in Tacoma, where he served as head clerk in several downtown drug stores. Last October he returned to San Antonio, Texas, where he opened the Alter Pharmacy. He has passed several board of pharmacy examinations, and before the Louisiana board made the highest average among sixteen applicants for licenses.

21—At what temperature does wool-fat melt, and what occurs if it is heated much above this temperature?

22—What are the ingredients in syrup of rhubarb?

23—What U.S.P. salts of zinc are very deliquescent?

24—If 900 gms. of sugar are dissolved in 450 cc. of water, what will be approximately the volume (expressed in cubic centimeters) of the finished solution?

25—What is the difference between precipitated manganese dioxide, black oxide of manganese, and binoxide of manganese?

26—What is meant by making an ointment by fusion?

27—Should white petrolatum which is perfumed, be dispensed for the official white petrolatum?

28—What are hypodermic tablets?

29—Why should iodides not be dispensed, which have assumed a dark color?

30—What are three substances obtained from animals, which are used as perfumes?

31—What is the limit of heat which can be attained upon a sand bath?

32—How can chenopodium be distinguished from santonica by rubbing the drugs respectively between the thumb and forefinger?

33—When dispensed in capsules, why should a mixture of quinine sulphate and sodium salicylate be placed in the capsules in a dry powder and not in the form of a moist mass?

34—What seed for sale in most drug stores, can be used to prepare an agent which is adapted for coloring many alcoholic liquids green?

35—What are the functions of the skin?

36—How would you calculate the percentage of metallic mercury in blue ointment? What is the percentage?

37—What is nutgall?

38—What are two official acids prepared from nutgalls?

39—What occurs when silver nitrate is added to a solution of sodium chloride?

40—What are some of the chief objections which have been made to the use of elixirs?

41—Why is sugar of milk preferable to cane sugar as a sweetening agent for infants' foods?

42—What is meant by a plant bud?

43—What change has frequently been noticed to occur in elixir of terpin hydrate which has been made according to the formula given in the National Formulary?

44—Powdered opium is used in making what U.S.P. preparations?

45—What is an easy test for detecting chalk as an adulterant of saffron?

46—What are some other ways, than that just given, in

which water can be used to test the purity of saffron?

47—What are four official substances, not liquids or compound mixtures, which are kept for sale in most drug stores?

48—What is [illegible]?

49—What is the appearance of syrup of hydriodic acid?

50—What simple chemical test will distinguish ammonium iodide from potassium iodide?

Competitors, Please Notice.

The above list of questions is the complete series for May, and all who desire to compete for the prizes should see that their answers are received by the Quiz Master not later than June 15. Do not send your answers in parts, but mail them all at one time, and be sure to follow the instructions given at the head of this department.

The judges of the March contest of the Quiz Master's Department have awarded the prizes as follows:

First prize, $5, to Charles K. Stollemeyer, Hancock, Md.

Second prize, $3, to Chris Hansen, Minden, Neb.

Third prize, $2, to Julius Weissenborn, Winthrop, Minn.

Contestants wishing to know the grades they have made in the May contest may obtain this information on request by sending two cents for postage to the Quiz Master.

THE QUIZ MASTER.

Questions and Answers, March Series, 1910.

1—What are some of the advantages of fluidextracts over tinctures?

Some of the advantages of fluidextracts over tinctures are, first, the uniform relation existing between the fluidextract and the drug, one cubic centimeter of the former representing one gram of the latter; second, they are concentrated preparations, thereby reducing both dose and bulk; third, they are permanent, as they are made with strongly alcoholic menstrua.

2—What is meant by the net weight of a substance?

Net weight is the weight of a substance obtained by deducting the weight of the container from the combined weight of the substance and container.

3—In chemistry, what is meant by a molecule?

A molecule is the smallest particle of matter that can exist in the free state.

4—Are molecules visible to the naked eye?

No, molecules are extremely small, and are not visible to the naked eye; they cannot even be seen with the most powerful microscope now in use.

5—How much of the official sulphur ointment would be necessary to make an ointment weighing 150 grams and containing five per cent of sulphur? Show work.

Fifty grams of sulphur ointment. In 150 grams of ointment, containing five per cent of sulphur, there are 7.5 grams of sulphur ($150 \times .05 = 7.5$). Since there are 15 grams of sulphur in 100 grams of the official sulphur ointment, then one gram of sulphur would be contained in 6⅔ grams of the official ointment ($100 \div 15 = 6\frac{2}{3}$), and therefore 50 grams of the official ointment would be necessary for an ointment containing five per cent of sulphur ($6\frac{2}{3} \times 7.5 = 50$).

6—What are four official volatile oils which contain cineol?

Oils of cajuput, eucalyptus, lavender flowers and rosemary.

7—In toxic doses, what is the action of strong acids?

They are severe gastro-intestinal irritants.

8—[illegible]

Caffeine is principally obtained from Thea sinensis and Coffea arabica.

9—What are the cotyledons of a seed?

The cotyledons of a seed are the leaves borne by the caulicle or radicle of an embryo.

10—Do all seeds have the same number of cotyledons?

No, they may contain one, two or more cotyledons, most seeds, however, have either one or two cotyledons.

11—What are the fundamental structural elements which make up all tissues and organs of the body?

They are cells and intercellular substance.

12—What effect does exposure to air have upon monohydrated sodium carbonate?

When exposed to the air under ordinary conditions, monohydrated sodium carbonate absorbs only a slight percentage of [illegible]

13—What are the ingredients in cochineal color, N.F.?

[illegible] glycerin, alcohol and water.

14—When a drug is percolated, is the absence of color from the percolate always an indication that the active constituents have all been removed?

No, in some cases active constituents still remain in the drug, after the percolate passes from the percolator free from color.

15—What are four official liquid solvents which have a lower boiling point than water?

Acetone, alcohol, chloroform, and ether.

16—In what class of preparations is acetanilide frequently an important ingredient?

In headache remedies.

17—If the pharmacy laws of your State require the registration of poisons when sold, what are four poisons which must be so recorded?

The object of this question is to bring to your attention the pharmacy laws of your State, and particularly those sections relating to the sale of poisons. Since an answer to this question, as given by the Quiz Master, would have to apply to all the States, it is impracticable to give such an extensive answer, but in most cases specific information upon this subject can be obtained by consulting the pharmacy laws of the respective States. Four poisons commonly required to be registered are arsenic, mercuric chloride, strychnine and its salts, and potassium cyanide.

18—What is the difference in the color of a solution of iodine in alcohol and of a solution of iodine in chloroform?

A solution of iodine in alcohol has a reddish color, while a solution of iodine in chloroform has a violet color.

19—Of what U.S.P. spirits is ammonia water a constituent?

Ammonia water is a constituent of aromatic spirit of ammonia, and stronger ammonia water of spirit of ammonia.

20—What free acid is formed when glycerin, borax and water are mixed?

Boric acid. Glycerin reacting with the borax forms glycerol borate and sodium metaborate. The water decomposes the glycerol borate, forming boric acid and glycerin.

21—Which is easier to dissolve in water, powdered acacia or granulated acacia?

Granulated acacia is more easily dissolved in water.

22—What change does chalk mixture undergo soon after it is prepared?

Soon after preparation, chalk mixture will begin to ferment; an acid is formed and carbon dioxide is evolved.

23—The following names are synonyms for what preparations: (a) Turlington's balsam; (b) elixir corrigens; (c) laxative elixir; (d) Javelle water?

(a) Traumatic balsam; (b) aromatic elixir of eriodictyon; (c) compound elixir of cascara sagrada; (d) solution of chlorinated potassa.

24—What are four distilled spirituous liquors which contain not less than 30 per cent by volume of alcohol?

Gin, brandy, rum and whisky.

25—What is the average dose for Sun cholera mixture, compound powder of pepsin, fluidextract of hyoscyamus, and tincture of myrrh?

Sun cholera mixture, 30 minims; compound powder of pepsin, 15 grains; fluidextract of hyoscyamus, 3 minims; tincture of myrrh, 15 minims.

26—What is the nature of the small transparent dots which finely mark jaborandi, and which are visible when the leaflet is held up to the light?

These dots indicate the presence of oil cells.

27—Which will usually evaporate more rapidly, a thin mobile liquid or a dense and viscid liquid? Briefly explain your answer.

A thin mobile liquid. A thin mobile liquid evaporates more rapidly than does a dense and viscid one, because in the former liquid there is little cohesion between the molecules, and they therefore freely separate from one another, thus [illegible] In dense and viscid liquids, like syrup or mucilage of acacia, greater cohesive force is exerted and the molecules do not freely separate one from another, thereby retarding the expulsion of the vaporized portion.

28—In a drug store, what is meant by stock solutions?

Stock solutions are concentrated solutions of salts, designed [illegible] by means of such a solution usually contains a specific weight of the salt, and, if necessary, these solutions may be easily diluted when dispensed to meet the requirements of the prescription or order.

29—What is the reaction of a solution of potassium hydroxide to litmus paper?

Solution of potassium hydroxide has an alkaline reaction, and turns red litmus paper blue.

30—What is grindelia, and what is the botanical name of the plant from which it is obtained?

The dried leaves and flowering tops of Grindelia robusta or Grindelia squarrosa.

31—Why should crude drugs always be thoroughly dried before storing?

If insufficiently dried, crude drugs will become heated and mouldy.

32—What are at least four common names for taraxacum?

Dandelion, blow-ball, cankerwort, and lion's tooth.

33—What occurs when oil of rose is stored in a moderately cool place?

When stored in a moderately cool place, oil of rose tends to congeal, and small crystals begin to separate.

34—What is a good method for dissolving a powder of light weight in water?

First make a thick paste by the addition of a small amount of water to the salt, then gradually add the remainder of the water, stirring the mixture constantly until the powder is dissolved.

35—When an aqueous liquid is to be mixed with an alcoholic liquid, should the former be added to the latter, or should the alcoholic liquid be added to the aqueous liquid?

It is better to add the alcoholic liquid to the aqueous liquid, because any precipitate which may be formed is usually more finely divided than it would be if the aqueous liquid had been added to the alcoholic liquid.

36—What is the objection to storing rubber goods in a cold place?

Cold hardens rubber goods, and many water-bottles and fountain syringes, particularly those of the cheaper grades, when folded and left in a cool place, will crack if opened quickly. Variations in temperature should be avoided, as sudden and decided changes may ruin an entire stock.

37—How many cubic centimeters in a quinine can or container having a rectangular base 4 x 5 inches, and a height of 6 inches? Show work.

1966.4476+ cc. The volume of a can having the dimensions of 4 x 5 x 6 inches is 120 cubic inches ($4 \times 5 \times 6 = 120$). Since there are 2.54 cm. in one linear inch, then in one cubic inch there are 16.387064 cc. ($2.54 \times 2.54 \times 2.54 = 16.387064$), and in 120 cubic inches there would be 1966.4476+ cc. ($16.387064 \times 120 = 1966.4476+$).

38—What occurs when a piece of sodium is thrown on water?

The sodium moves rapidly over the surface of the water with a sputtering sound, fumes are evolved, the water is decomposed and hydrogen and sodium hydroxide are produced ($Na_2 + 2H_2O = 2NaOH + H_2$).

39—What are some agents which will frequently remove iodine stains from the hands and utensils?

Iodine stains can usually be removed from the hands by wetting them with ammonia water or a solution of sodium thiosulphate.

40—What is meant by saying a drug is indigenous to a certain country?

Plants growing in their native countries are said to be indigenous to these regions.

41—Why is syrup of wild cherry sometimes dispensed as a vehicle for tincture of digitalis?

Syrup of wild cherry is said to render tincture of digitalis less likely to produce gastric disturbances.

42—What occurs when the inner surface of cascara sagrada bark is moistened with a solution of potassium or sodium hydroxide?

It assumes a red color.

43—What is malt?

Malt is the grain of barley, Hordeum distichon, partially germinated artificially, and then dried.

44—What are compressed tablets?

Compressed tablets are formed by forcing the dry granulated substance into lenticular-shaped disks under high pressure.

45—What is the appearance of silver nitrate?

Silver nitrate occurs in the form of colorless, transparent, tabular, rhombic crystals, becoming gray or grayish-black on exposure to light, especially in the presence of organic matter.

An Illinois Woman Pharmacist.

Miss CORA MILLER.

Miss Cora Miller, the winner of the first prize in the February contest of the Quiz Master's Department, received her early education in Pana, Ill., graduating from the high school of that city in 1904. In the fall of 1905 she became a student in Saint Mary's College at Notre Dame, Ind., and in June, 1908, received from that institution the degrees of bachelor of science and graduate of pharmacy.

Soon after leaving college she obtained employment in the drug store of A. S. Mitchell, of Springfield, Ill. In January, 1910, she resigned that position and returned to Pana, Ill., where she is at present employed in the drug store of F. A. Gossmann. Last January, Miss Miller was successful in passing the examination for assistant pharmacist in Illinois, and she, no doubt, will soon be an applicant for the license of registered pharmacist in the same State.

46—What effect does metallic mercury have upon most metals?

Mercury tends to unite with most metals, forming amalgams.

47—Which of the official cinnamon barks occurs in the form of long tightly rolled quills?

Ceylon cinnamon.

48—What purposes does resin serve as a constituent of plaster masses?

It renders the plaster masses more adhesive, and has some action as a stimulant.

49—What are the chief medicinal constituents of hydrastis?

The alkaloids hydrastine and berberine.

50—What is the English translation of the following prescription, and what are the metric equivalents for the quantities of each ingredient?

℞—Bismuthi subnitratis .....gr. XV.
Phenolis .....gr. IV.
Adipis lanæ hydrosi ..... ℥ ss.
M.S. More dicto utendum.

Take of

Bismuth subnitrate	0.971+ gm.
Phenol	0.259+ gm.
Hydrous wool-fat	15.552+ gm.

Mix and label. To be used as directed.

The Era Course in Pharmacy.

THE ERA COURSE IN PHARMACY is a home study course in pharmacy, which is divided into ten parts with recitations and examinations by mail. Thorough instruction is given in General Chemistry, Theoretical and Practical Pharmacy, Botany and Materia Medica. New classes are organized each month, and now is an excellent time for students to enroll. The cost of the course is ten dollars, and each student, upon matriculation, is given gratis a year's subscription to the Monthly ERA. A prospectus will be sent by the publishers of THE PHARMACEUTICAL ERA to any one who appplies.

Current Progress in Surgery in The Century.

Dr. Howard Lilienthal, attending surgeon to Mount Sinai and Bellevue Hospitals, New York, contributes to the April *Century* a paper on current progress in surgery. This, it is announced, will be the first of a group of similar papers dealing with the work of the world in many fields of endeavor and achievement.

Crude Drugs Exhibit Presented to Brooklyn C.P.

Dr. William Muir, chairman of the board of trustees of the Brooklyn College of Pharmacy, has announced the presentation to the college by Eli Lilly & Co. of an exhibit of all the crude drugs and some of the fluidextracts.

HUMAN SUBSTITUTION DETECTED IN VERMONT.

Mix-up in Identity of Two Men From Maine Cleared by Shrewd Members of Board of Pharmacy.

BARRE, VT., April 20.—Having the best laugh on the Vermont State Pharmacy Board has ferreted out what it believes to be a case of fraud on the part of one of the candidates for druggist's license at the examination in Montpelier recently, by having someone else, schooled in the knowledge of drugs, take the examination in his name.

D. F. Davis, secretary of the board, received a letter from E. J. Dougherty, of Bangor, Me., who wrote that he wished to take the examination before the Vermont board. An application blank was sent for him to fill out and on the day of the examination a man supposed to be Mr. Dougherty appeared and took the examination, passing it.

In the application blank he had stated that he had been in the drug business in Maine for 14 years and had never taken, or tried to take, the examination before the Maine board. This statement aroused the suspicion of W. F. Root, of the board, that there must be something wrong, and he decided to start an investigation as to why the man had never before tried to get a registered druggist's license.

FRANK W. DUDLEY, of Chicago, president of Illinois Pharmaceutical Travelers' Association.

On the day of the examination a man giving his name as Dougherty was called before the board and questioned as to the reasons he had not taken the examination before. He told the board that he had intended to do so, but never got around to it, and he finally decided to come over to Vermont and take the examination, where, if he failed, his friends on the Maine board would not know of it. Vermont exchanges license certificates with Maine, and if Dougherty had received his diploma from this board he could have exchanged it for a license in Maine without having to take the Maine examination.

Secretary Davis wrote to President Charles Davis, of the Maine board, who lives in Bangor. President Davis replied that he knew Dougherty and told some facts about him. President Davis also wrote that Dougherty had recently left the city in company with another man by the name of J. F. Riley, who was a college graduate and had passed the examination before the Maine board.

He sent a description of the two men, and his description of Riley, it is said, answered identically the description of the man who had taken the examination under the name of Dougherty, with the exception that he had a smooth face, and President Davis described him as having a mustache. President Davis was communicated with and he found that Riley had returned there without his mustache.

The Vermont board compared the handwriting of the two men and found that the writing of the man who had taken the examination and the one who had signed the application were presumably the same, and that the writing of J. F Riley, who took the examination before the Maine board, was the same as that of the man who took it here. Handwriting of Dougherty was also secured, and it was found to be entirely different from that of the person who took the examination. The hotel registers in Montpelier were investigated by Secretary Davis, and it was found that Riley and Dougherty both registered at a hotel there that day.

Secretary Davis said that the board was now certain that they had established a true case, but they could not do anything in the way of prosecuting the men here, as the latter were in Maine. If the Maine board wishes to take it up, the Vermont board was willing to give it all possible assistance.

Decatur This Year's Mecca for Illinois Pharmacists.

Extensive preparations are being made by the pharmacists of Decatur for the annual meeting in that city on June 14-17 of the Illinois State Pharmaceutical Association. The Illinois Pharmaceutical Travelers' Association which has contributed greatly to the success of previous meetings, will again be in evidence in making the event a red letter affair.

BLACK FACE DRUGGISTS MAKE A GREAT HIT.

Social Club in Chicago Reproduces Drug Store Scene in Clever Style at its Second Annual Show.

CHICAGO, April 20.—The second musical minstrel show of the Social Drug Club of Chicago given at the Association Hall was a grand success. The entertainment was given to a full house and the black face druggists received a big ovation. Part one of the entertainment was devoted to jokes, songs and dances, and part two was a "one act musical mixup," the scene being laid in a corner drug shop. All those present voted that it was a first class performance in every respect, and proved that the men behind the drug counters had some real talent among them as far as comedians and high class vocalists are concerned. The participants acted as if they had grown up behind the footlights.

The drug store scene was very clever, in which all of the well known figures that drift in and out of a store were introduced, and the daily routine of a druggist was portrayed true to life. There was the lounging policeman, the gabby girl who never buys anything but a telephone slug, the traveling salesman, the seedy down-and-outer, the Chinese laundryman, the pestiferous youngster who upsets the postal card layout in his attempt to learn how to skate on rollers, base ball fans, the chronic kicker, and the man who happened to stop a swiftly moving automobile.

In the musical part the soloists were A. L. Romme, A. Umenhofer, J. A. Hottinger, P. Hyman, H. W. Eddy, G. W. Mathison, R. D. Keim and Master Charles Foucek.

Druggists' Night at Theater.

CHICAGO, April 20.—More than 1200 druggists and those connected with the drug trade of Chicago will participate in a "druggists' night" at the Olympic Theater on Monday, May 16, at the presentation of "The Fortune Hunter," Cohan & Harris' drug store play that has enjoyed an unusual run in this city. The affair will be given under the auspices of the Social Drug Club and the Chicago Retail Druggists' Association. L. P. Larsen, president of the C.R.D.A.; B. A. C. Hoelzer, president of the S.D.C., with Isam M. Light and J. P. Crowley, other officers, and Dr. M. H. Pritchard, chairman of the entertainment committee, are in charge of the arrangements.

The play is distinctly "shoppy" as far as druggists can hope for and it goes without saying that the critics among them will not be able to pick many flaws in the "set-ups" and staging of this popular comedy.

"Chain" Stores are Agitating Chicago Druggists.

CHICAGO, April 20.—A new campaign against the invasion by the United Cigar Stores Co. with a "chain" of drug stores will be launched with the coming of C. H. Goddard, secretary of the American Druggists' Syndicate, who is expected here this week. Meetings will be held to discuss the most logical plan of procedure for the protection of the residential and country druggist whose interests are affected by the installation of the "chain of stores."

"You can readily see," said Matthew White, secretary of the Chicago Wholesale Drug Co., to the representative of THE PHARMACEUTICAL ERA today, "how such a plan will affect the druggist in the residence district and the pharmacist in the small town. They would fall the first victims of the tobacco trust if this 'chain' scheme goes through, and we propose to meet and decide upon a plan of action as soon as Mr. Goddard arrives. It stands well in hand that a resident can wait until the morrow to come downtown to buy his meat or cigars or whatnot, but in the question of drugs it is an entirely different matter. When the latter are needed they are needed badly. The small druggist who toils from early morning until late at night must have protection against a plan whose interests are inimicable to our own. We propose to unite all doctors, druggists and chemists for our mutual protection."

The Soda Fountain and Candy Counter

Buffalo Pharmacist Caters to Automobilists and Sells Fountain Drinks Until 2 A.M.

Buffalo, N. Y., April 20. —"Business at practically all soda fountains in Buffalo closes either at midnight, or even before, but we intend to keep ours in operation until 2 o'clock in the morning."

This was the statement made by Clyde Kipp, who recently assumed charge of the handsome fountain in J. H. Hilligas' drug store at Elmwood and Potomac avenues. This is one of the finest fountains in the city, and being in the fashionable residential section of the town enjoys distinctive patronage. The keeping open after midnight will be an innovation that is believed will prove profitable.

"Our soda fountain trade from 12 to 2 o'clock," continued Mr. Kipp, "during the warm weather will be worth our best effort and attention. For instance, many Buffalo autoists are now aware of our plans and will surely visit us late at night or early in the morning, after long country road drives.

"These automobilists are good spenders. Naturally we are alert to their wants and will see to it that we have on hand a supply of all the latest creations in the beverage line that are to be found at a modern fountain like ours. It is a good business proposition to cater to liberal patronage. Our store is commodious and we have a large seating capacity. With our extensive line of drinks we shall be able to meet the requirements of these people during the warm summer months.

"I shall give the early business my personal and undivided attention. Good results are bound to accrue."

The daily and early evening business of the Hilligas fountain is steady and consistent. Strict attention is given to it by a competent corps of servers and soda fountain men. A picture of the Hilligas fountain appears on this page and Mr. Kipp appears in it clad in white. The advantage of this new system to be established by Mr. Kipp may be seen from the fact that the fountain is in close proximity to the parkway drives and the boulevard that runs from Buffalo to Niagara Falls and which is extensively patronized each summer evening by the automobilists of Buffalo and vicinity. The absence of saloons in this vicinity makes the soda fountain especially popular. The cleanliness of the fountain and the skill of the attendants are two essentials that Manager Kipp positively demands, consequently each patron is a repeater.

"We want skilled men to care for our patrons," said Mr. Kipp. "I don't believe in employing young schoolboys. They have not acquired the faculty of knowing the wants of customers. This cheap policy often proves harmful to the business."

Mr. Kipp came to Buffalo last July with an enviable reputation for knowledge of the fountain business. He was formerly with E. R. Petty, of Newark, N. J., and the Evans drug stores in Philadelphia. He originally came to this city to work for Cahoon-Lyon fountains. Mr. Kipp has many fancy drinks that he has created. One of his most popular ones is the Carmicitia Kiss, which is sold at 15 cents and is composed of strawberry and chocolate ice cream, sliced bananas, whipped cream and maraschino cherries. Mr. Kipp makes his own syrup for use at the Hilligas fountain. His latest signs are : "Little Maud Adams' Dessert, 15 cents"; "Pineapple Melba, 15 cents"; "Carnation Float, 15 cents"; "The Turk Circle, 15 cents"; "Idle Thought, the Best Yet, 20 cents"; "Frozen Roman Punch, 10 cents"; "Jack Straw Flip, 15 cents."

Pharmacist Brown Enlarges Soda Facilities.

The Brown Pharmacy, at 146 Woodward avenue, Detroit, has been converted into a refreshment emporium under the same management. The stock of drugs has been moved to the other store, further up the avenue. In place of the counters and show cases, Mr. Brown has installed tables, which, together with the stools at the soda counter, provide ample accommodations. The location is one of the choicest in the city, being convenient to all the theaters, and the after-the-play trade has increased enormously since the change was made. The interior has been prettily decorated. Mr. Brown makes a specialty of light lunches, at popular prices, and the service is first class.

Formulas.

Just 1311 formulas are given in the new edition of the Dispenser Soda Water Guide. Every fountain operator needs it.

FORMULAS

In this department will be found each month a number of soda fountain formulas in addition to the complete and varied assortment published every month in the Soda Fountain, which journal contains much other information of value to druggists who own and operate fountains, serve lunches or sell confectionery.—Editor Era.

Orange Frappe.

Half fill a glass with shaved ice, then add in the order named, 1 tablespoonful of powdered sugar, ½ ounce orange syrup, 2 dashes lemon syrup, 1 dash prepared raspberry and ¼ ounce solution of acid phosphate. Fill the glass with carbonated water and stir well; strain into a mineral water glass and serve.

Strawberry Shortcake Frappe.

Purchase a cake of "angel food," 18 inches long. Cut it into thin slices, put a slice on a plate and on the cake place a small cone of cream; cover with strawberries and top off with whipped cream. If a suitable cake cannot be obtained, use Nabisco wafers.

Appetite-Ease.

Use a long shallow saucer and on it place a good sound banana split lengthwise. At one end of the banana place a No. 20 cone of vanilla ice cream and at the other end place a similar sized cone of combined chocolate and strawberry ice cream. Over the latter sprinkle chopped English walnuts and top with a maraschino cherry; over the vanilla ice cream sprinkle a copious supply of malted milk, and top with a creme de menthe cherry.

Nomelz Sundae.

Take a small dipperful each of vanilla ice cream and orange ice and place them on a long dish. Over these pour a small ladleful of chocolate syrup and top off with whipped cream and cherries beaten together. Serve with two Nabisco wafers. Price, 15 cents.

High School Sundae.

Take three portions of vanilla or chocolate ice cream (No. 16 disher) and place them in triangular form on a flat ice cream saucer; then place some whipped cream in the center and dust over with finely chopped walnuts, or a maraschino cherry may be used, if preferred. Price, 15 cents.

Nut Pudding Sundae.

Put into a pan one quart of good marshmallow sundae syrup and color pink with a good coloring; add 6 or 8 ounces of ground nuts, mix well; then add 4 ounces of figs previously cut fine and again mix all well together. To serve put a cone of ice cream in a sundae dish and pour over it a ladleful of the above syrup and top off with a maraschino cherry.

Cream Puff.

Into a glass put half an ounce of ice cream and 1 ounce of orange syrup and well beat together; fill up with the glass nearly full with carbonated water (strong fine stream), finishing with an ounce of ice cream around the top of the glass.

Dail Punch.

Fill a 3 gallon punch bowl, using 1 quart of cherry syrup, 1½ pint of nectar, 1½ pint peach syrup, 2½ ounces solution of acid phosphate and 1½ pint banana syrup; squeeze in the juice of 3 oranges and 3 lemons, stir well and strain; then add 3 bananas, finely sliced, and 3 pounds of ice. Serve in 8-ounce glasses with chipped ice.

Frisco Sundae.

On a piece of wood four 3 inches square, placed in a fancy dish, put a small ladleful of orange frappe and a small ladleful of pineapple frappe. On the orange frappe place a red cherry and on the pineapple frappe place a green cherry. Around the edge put alternately a banana previously sliced, and over the entire dish sprinkle walnuts. Serve with a lunch napkin.

Fruited Nut Sundae.

Place a cone of ice cream in a sherbet glass. Over this place a ladleful of sliced bananas (fresh) and a ladleful of crushed pecans. Then over all place a large spoonful of whipped cream and top off with a few fresh strawberries or a maraschino cherry.

Coffee Cabinet.

Into a 10-ounce glass put 1 ounce of coffee syrup, 7 ounces of milk and shake well. Add a cone of coffee ice cream (16 to the quart), and top off with a spoonful of chopped English walnuts. Price, 10 cents.

Anarctic Mirage.

Strawberry syrup, 1 ounce; orange syrup, ½ ounce; vanilla syrup, ½ ounce; claret syrup, ½ ounce; shaved ice, 2 ounces; place in a 12-ounce glass, fill with carbonated water and top off with whipped cream. Serve with a spoon.

Polar Crest.

Colonial punch syrup, ½ ounce; orange syrup, ½ ounce; strawberry syrup, 1 ounce; white of 1 egg; shaved ice, 3 ounces. Place in glass, shake, strain, toss and serve.

Golden Dream.

Shaved ice, 2 ounces; orange syrup, 1 ounce; vanilla syrup, 1 ounce; orange pulp, 1 tablespoonful; cream, 1 ounce. Serve in a 12-ounce glass, using carbonated water, fine stream, enough to fill.

FINDS IT GOOD POLICY TO PLEASE CHILDREN.

Attention Given to Grownups, Out of the Usual, Also Brings Patronage to the Considerate Druggist.

Editor The Pharmaceutical Era:

Your editorial comment and article published in the February ERA were read with much pleasure. The remarks of Mr. Samuel B. Davis (page 151) show a "true ring" and a knowledge of human nature. In the matter of showing consideration, kindness and courtesy to children, he has struck the "key note" which makes for success. In our Brooklyn stores we adopted about the same policy as outlined by Mr. Davis. These were what might be termed "neighborhood stores." Children will long remember harsh treatment on the part of a store proprietor or his employees. They also remember very well kind treatment accorded them. During the time we had our stores in Brooklyn, one of which was purchased in 1895 and the other about two and a half years later, especially the first store, our experiences showed the good results of treating children in a kindly manner. This first store we retained eight years and had an opportunity to note the effect. Children who were 10 when we started became young women and men before we disposed of this store. Others who were somewhat older, but still boys and girls, were married and became our customers for their household needs.

This store had been established for seven years before we purchased it. Our sales grew from $11 a day to over $100 a day, each year showing a material increase over the previous one. This I attribute in a great measure to the fact that we tried to take good care of the children.

In our store at 140 Nassau street, New York, we have adopted a somewhat different method of pleasing our customers, practically all of whom are "grown-ups," who are susceptible also to the giving of small items which are useful at home. These consist of samples of various manufacturers and also of our own preparations. The method of this distribution is to place the sample or samples in the package of the customer when making a purchase. If this is done assiduously, quite pleasing results are obtained. Yours, very truly,

A. G. YEOMANS.

New York, March, 1910. (of Reid, Yeomans & Cubit.)

Coca-Cola Case to Be Hard Fought.

WASHINGTON, April 20. The forthcoming action of the United States against the Coca Cola Company will probably be the most far-reaching and vigorously contested suit brought by the government under the Pure Food Law. It is said that both sides are making unusual preparations for the action, and leaving no point neglected which may be used to advantage. Many fine legal and chemical points will be developed, and the final judgment will probably establish precedents upon several points which have thus far remained undecided. It will be a battle of legal and scientific giants waged in behalf of gigantic interests, and the outcome will be one of grave import for the food and drugs interest as well as for the government.

Appeals to Healthy, Gets Sick Anyway—Candy a Central Attraction.

St. Louis Pharmacist Works on New Theory in His New Palace—Rest Room for Men as Well as Women—Fountain Will Dispense the Best in Beverage Line.

"The Palace Pharmacy is an appeal to the healthy as well," is the way W. Van Sickle announces his purpose in opening a beautiful store at Finney and Grand avenues, St. Louis. "I know that the majority of my customers are well most of the time, and as this store is located across the street from the Odeon, the center of music and opera, and near big churches, besides being at a car crossing and having high school and private music scholars by the scores near me, I am determined to make my appeal to the healthy. The sick I'll get. But my new store is fitted out with the idea of making everyone who comes into it feel better. To some persons, principally druggists, rows and rows of shiny bottles with neat labels and vari-colored drugs in bottles is a beautiful thing, but I am convinced that the public is not very much interested in these bottles and labels. I have noticed that patrons come to the counter, ask for what they want, perhaps glance around at the bottles because there is nothing else before them, and then let their glance stray off to something in boxes in a show case, such as candy, cigars, soaps, perfumes, brushes and a dozen and one other things, and soon, if the display is right, I get a question, 'What is this worth?' or something to that effect, and I make a sale. Now my new store here is to be full of this sort of appeal to the public—you see everything pertaining to drugs, that is, those things used in prescriptions, is in the rear of the store, entirely behind the prescription case."

WILLIAM M. SMITH,
in charge of fountain in new St. Louis Pharmacy.

This store has also a patent almost noiseless composition floor, dark red, restful, and clean. The finish is in white ash, a near Flemish green. The cases are full glass. Enclosed telephone booths are at each side of the prescription case. On one side is a rest room for women and at the other a rest room for men. In the women's room is a separate closet hidden by a swinging door from a wash room and table with large mirror where comb and brush and such other toilet articles as the fair use are furnished for the convenience of customers. This convenience for both men and women is expected to commend itself to the crowds of theatergoers and base ball fans.

"You see," said Mr. Van Sickle, "the lid is on in St. Louis on Sunday. I am prepared to give all the relief I can. These rooms have hot and cold water. In addition, see my fountain. The front has a 16-foot sheet of marble, with dome of solid silver and rear bar of German silver. The style is 1910 iceless. Yes, I'm sure my idea of appealing to the healthy is the thing. Now, this case over here is for a florist. Flowers add to the attractiveness of a drug store. I believe in having your goods on show. For instance, while my humidor holds 13,500 cigars, I have 4500 where a man can't help but see a big spread the minute he enters. It's the same way with the candy case. It's in the center of the store, not quite as prominent through the soda season as it will be later after warm weather, but customers can't go anywhere in the store without passing the candy case, before, behind, or on either side. Banked from the floor up in glass, candy will sell. I am paying a professional to dress my windows. Gums, two packages for a nickel, are one of my leaders."

Alfred Schoenich is prescriptionist, and C. A. Wells and Sylvester Baker are apprentices. William M. Smith is the soda dispenser. He has had ample experience.

"One of the specialties I have suggested and which has been in effect in this store," said Mr. Smith, "is the making of our own soda, crushed fruits and syrups. We have a soda laboratory, and since Mr. Van Sickle has expended $15,000 in making this store attractive, I'm trying to make the goods that go out over this fountain bar attractive enough to win several thousand back this season. I've started off with a salad sundae which is a hit. No, I can't tell what's in it. I make it a rule to keep my discoveries secret until the proprietor has gained the advantage coming to him from it, and then when it is time to have another mystery which delights the public, I'm willing to let the other boys in on its predecessor.

"I'm going to build up a good men's trade. Men like more flavor in the drinks they take than do women. I have not found many who like the sting when they have called for a drink with a soft syrup in it. Adulterating syrups, watering them, or being stingy in serving them makes nothing for the store—makes against it. If you give a man just what he wants, and have something else a little different for him when his taste goes back on him, you have a regular customer, and he's the fellow to tell every man he sees. Men are more gossipy about such things than you might imagine. It's nothing to hear one say to another, 'George, this is better than the dope we got over at ——'s.' I don't want any man to say that about this fountain.

"The women's trade we always have with us, some at five cents and some at ten, and the five-cent customers demand a bulging nickel's worth, while quality may count in the larger glass. I've found I can please both by quality, neat, quick service, and the little touches, such as a cherry here, a sprig of green there, a change in the kind of nuts, a thicker syrup for some, a thinner for others, and a number of such things. I'm going to try a mint specialty which ought to take, for I know how to make the flavor last."

Soda Fountain Notes.

—ON the recent occasion of the first anniversary of the opening of Platt & Walker's new pharmacy in Schenectady, N. Y., each patron of the soda fountain was given a carnation and each patron of the drug department received a box of candy. There was a concert afternoon and evening.

—CHARLES P. WHITE opened his new drug store in the Wallace Building, Main street, Stroudsburg, Pa., last month. It is conveniently arranged and up-to-date. A soda fountain, with tables and chairs for sundae patrons are features.

—FIRST iceless fountain for Rock County, Wis., has been installed in the Pioneer Drug Store, Evansville. An additional room adjoining has been secured for the dispensing of ice cream and candy, in addition to soda water.

—ITHACA (N. Y.) people are greatly interested in the handsome new fountain installed in the Christiance-Dudley pharmacy in that city. The mirror is especially attractive.

—CHARLES W. EATON, Richmond, Va., has placed a soda fountain in his new branch pharmacy at 2406 East Broad street.

—ONE of the most beautiful fountains ever seen in Waterloo, Iowa, has been opened by the A. C. Smith Drug Co. It is of iceless construction and 1910 model.

—VAUGHAN-ROBERTSON DRUG CO., Richmond, Va., is exclusive agent in that territory for the J. Hungerford Smith Co.

—AT Winter, Wis., a fine new soda apparatus has been added to the equipment of the Winter drug store.

Labeling Artificial Flavors at Chicago Fountains.

CHICAGO, April 20.—The new law which requires that dispensers of soda water who use artificial flavors shall label their flavors accordingly, and also that they shall not use any coloring matter or preservatives which are condemned under the Food Law, brings to the mind of the shoppers that the month is a continuous April Fools' Day when they read the following signs:

"This Strawberry Flavoring is a Fake."

"There is no fruit in our raspberry flavoring. Try it."

"We use no natural fruits in any of our flavorings."

But the more seriously inclined of the soda dispensers held the matter not so lightly and, in cases where they were not living up to the "pure food" requirements, had such facts plainly marked on their fountains.

Flowers in Fountain Advertising.

There is a significant tendency in our national life exemplified in the desire to consider. It is somewhat vague gently, unobtrusively and artistically refining the nation, viz., [illegible] through their increased use. The [illegible] in the cultivation of flowers for sale, a natural accompaniment in the breadth of their distribution, and on the other hand, a decrease in cost, with an equalizing of seasonal production. There is something peculiar in this growing love for flowers. In no sense is it a fad, it is not confined to class, does not tend to the bizarre, and it must therefore represent a growth in national culture. It is reasonable to conclude from such a showing that the uses of artificial or natural flowers for advertising purposes offers a medium which appeals and is in harmony with the finer thought of all classes in all places. These conclusions apply with unusual force to fountain advertising, because the fountain, its beverages and their separate constituents, are closely akin to flowers and fruits, in appearance, names, flavors and colors.

A Violet Opening.

If not really the national flower, violets are among the most popular. Through cultivation they have been made to bloom throughout the season, and it follows that their use for advertising purposes is appropriate to any time.

The following describes a "violet opening" which proved eminently successful from an advertising point of view:

Making the Violets.

Cut 1½ inch circular pieces of violet colored French tissue paper. Do not use crepe paper. In each piece of paper so cut make five slits, so as to form five petals. Trim the sharp corners from the petals. A number of thicknesses of tissue may be cut together. Procure several spools of fine iron wire—do not use bright or tinned wire. Cut the wire into 4 inch pieces. Twist a small "head" in one end of each wire. A natural effect may be added, if desired, by very lightly dipping these heads in melted yellow wax. Run the sharp or untwisted end of each wire through the center of one of the five-petal pieces of paper. Curl each petal over a dull metal edge, or slightly crush with the fingers. The result will be a very natural looking "violet." Drape the fountain, store and window with white and violet crepe paper. Fasten violets, singly and in bunches of three or four, upon the surfaces of white paper.

Accessories.

Letter your announcement cards with violet ink or paint on white backgrounds. Feature drinks and sundaes of violet shade. Use candied violet leaves for a special violet sundae. Bring forward and feature all your violet-colored and violet-flavored or violet-scented confections. If in a drug store, feature violet perfumes and toilet or other goods in violet-colored containers. Present each fountain patron with a tiny nosegay of natural violets.

A Daisy Line of Drinks.

From circular pieces of white tissue cut "daisies" by slitting into petals. Arrange them in classes from those of natural size up to those of 8 to 10 inches. For the smaller ones use French tissue; for the larger, crepe paper. Cut wires in the same manner as described above for violets, except that the lengths must vary for the different sized daisies. Cut centers of yellow crepe paper. Run the wire through the yellow center and then through the piece representing the white petal. For larger flowers, make centers of cardboard circles, and after the wire is forced through and clinched, cover the cardboard loosely with yellow crepe paper. For the show window make a "daisy" which will measure at least two feet in diameter. Make the center of a disk of cardboard. Cover one side with [illegible] "confetti" of yellow paper. Make the petals of heavy, white, [illegible]

Suspend the mammoth daisy in the center of the window. Drape the window with leaf-green paper. Arrange the daisies over green draperies. With yellow letters on white card state that "This is our daisy day. All our drinks are 'Daisies,' [illegible]

[illegible] consist of a dipperful of ice cream pressed down on a shallow dish, its center being made [illegible]

Decorate the store and the fountain likewise with green and yellow, and the daisies. Bring forward candies and other merchandise which will harmonize with the general color scheme.

The Feast of Roses.

The needed artificial roses may be made as follows: Cut French tissue paper in circles of graduated sizes of from one to four inches. Take two or three pieces of the same size, fold them once across, then fold, at right angles to the first fold, again repeating the operation, so as to form the paper into a wedged-shape form. With sharp shears trim off the corners and down the sides, cutting through all the thicknesses of the paper all the way. When unfolded each circle will have been cut into the form of petals. The operation may be simplified, if care is used, by folding a square piece of tissue paper over and over and doing all the forming in one cutting.

Take pieces of wire of proper length and bend a head at one end of each. Run one of the smallest pieces of petaled paper over the wire and up against the head. Fold each petal, one upon the other, down upon the head of the wire. While holding the folds of the first piece, slip a piece of the next size petal over the wire, folding the petals down tightly; continue slipping on pieces of increasing size until five or six have been wired and folded, then shake out the folds lightly and curl the outer petals over the metal edge. In this way a very natural looking rose will be produced.

A Dream in Pink.

For "the feast of roses," use only pink flowers. Trim the fountain window and store with pink and white paper. Arrange the pink roses on a white paper background. Letter all announcement cards in pink on white. Feature a "Rose Sundae" with strawberry cream as a base and garnished with candied rose leaves. Feature pink drinks, candies, and as a special serve small, round sponge cakes with pink icing.

General Decorative Uses.

Paper flowers may be advantageously used on many occasions to aid in softening an imperative color selection. Thus, if one is decorating the fountain with college colors, the addition of flowers of harmonizing tones will tend to relieve any flatness the exhibit may have. So also with decorations of colors suggested by any particular holiday or civic event. A vase of crimson paper roses placed upon the fountain will add enormously to the advertising value of any announcement card which may be placed against the vase. Develop floral advertising to improve your environment, and soften the lines of advertising schemes in general.

AMERICAN DISPENSER MAY GO TO FRANCE.

OMAHA, April 20. A. E. Perkins, Jr., soda [illegible] dispenser at the Owl drug store, has received a proposition from Alexandre Duchesne, 10, Rue de Rivoli, Paris, France, to open a new fountain in that establishment. Mr. Perkins has written his terms to the Paris concern and expects to be on his way to "Gay Paree" early in May.

A. E. PERKINS, Jr.

Mr. Perkins is one of the [illegible] soda water experts in the country. He has been in the business without a break for eleven years. He opened the first modern style soda fountain in Boston and through the East is known as an authority on "soft" drinks.

The American soda fountain idea is taking a hold on the French. If Mr. Perkins goes to Paris he will have a class of young Parisians whom he will teach the art of mixing seductive drinks.

[Mr. Perkins has long been a reader of *The Soda Fountain*, the [illegible] journal devoted to that industry, and was one of the prize winners in the December contest in the "Prize Fountain Formulas" department. With his experience and progressiveness it is not surprising to learn that he has received the offer mentioned above.—Ed.]

MOSTLY PERSONAL

Miss M. Cora Dow, of Cincinnati.

"Once There Was One Little Store; Now There Are Ten Big Ones," is a catchy phrase in a neat little booklet giving a condensed "History of the House of Dow," in Cincinnati, on the occasion of its 25th anniversary. "The good people desire to know about us and so we will tell them frankly," says Miss M. Cora Dow, "please forgive the personal note in the bit of history following." Of her father, whose death forced her into business, and of her gradual expansion she tells in a frank spirit that must bring her closer to her patrons, while extracts which are here given present most interesting views of the mentality, habits and traits of one of the most successful business women in the world. Lack of space prevents the use of many details of the growth of the Dow business, which she naively says, "was born in a little shack of a building," but which now includes ten successful pharmacies, besides warehouses, etc., with 163 employees and a payroll of $2000 a week. Says Miss Dow of the "little shack":

Miss M. CORA DOW, Cincinnati, Ohio.

"The place was so small that one could reach the pills with one hand and the striped sticks of candy on the opposite side of the store with the other. Back of the counter was Edwin Burleigh Dow, a fine, smiling man, who had everything but health. He's sleeping out in Spring Grove Cemetery now.

"We'll touch lightly on those days. Thank God, honest poverty is not a crime, for if it were we would still be serving a sentence dating from the old days. We had ambition and no money. The death of Edwin Burleigh Dow made it necessary for a bread winner to appear. So the present head of the House of Dow put a clerk to work in the little store and began the study of pharmacy, graduating with a class of 90 at the age of 19.

"Frankly we did not yearn a lot for pharmacy. We did want grand opera and we had an ambition to stand behind the footlights and pour forth volumes of melody to delighted audiences. But there was the matter of bread winning and so we studied chemistry and powders and pills, and then, as now, enjoy harmony with the crowd, and not from the stage. It is all right, But after 25 years we still confess to an ambition to star in Wagnerian roles."

In an interview Miss Dow said:

"I was young, ambitious and willing to take risks. I had the courage that comes with ignorance of the pitfalls that line the business way. I believed that a drug store could be made especially attractive to women—more than just a place to trade. There is a tragedy connected with most prescriptions and all the good cheer possible should be crowded into a drug store. So I started a store in Race street, near Seventh. I had it fitted with an eye to the feminine desires and prejudices and the women came. I advertised, I sent out invitations. Folks came and then made other visits and the store was a success.

"As to the work question! For four years I ate my meals in the store. I did messenger work, janitor work, bookkeeping and stenography. I had no nights off and few pleasures beyond the joy of seeing a created business grow. Later we moved to Seventh and Race, were a bit lavish with white marble and stained glass, and the store is our principal business place.

"Please don't imagine that we simply found a place and opened a store and then began to count the profits. That doesn't work out in real life.

"We had a desire to do things, and to make business grow by leaps and bounds, and so we were cut raters, from principle. We haven't a word in the world against the other druggis s of Cincinnati. May they live long and prosper. * *

"There was a Dow clerk who had the race horse fever. It is deadly. Once a young man gets it he discharges himself through inattention to his duties and often worse. We have always felt that when a young man begins to realize that life has lost its charm if he cannot don a sporty shirt and pick 'winners,' it is time to bring out the greased plank and slide him as far from his job as possible.

"So this clerk opened an opposition store on some money that he had inherited, put a clerk in charge, and himself went to the race track. Later I noticed a card in the window: 'Assignee's Sale.' I didn't really want that store. I had no place to put the stock. But from force of habit I put in a bid. I was notified that my bid had been accepted and was given two days to move the stock. * *

"At Sixth and Walnut streets there has been a drug store for time immemorial. One man ran it for 52 years. He was a good and honorable man, but he stayed in the game too long. His business was dwindling, and he said that the patrons bought nothing but postage stamps. The corner was all right. A man's progressiveness had gone. The fire was out. He had little but postage stamps worth selling. So we bought. We cleaned, scoured, painted and made the place modern. A good store from the first day. * *

"We opened our own ice cream plant because we wanted to serve ice cream that had a reputation; that we knew was good, that was made on honor. We have had the plant for a number of years. It turns out cream for the Dow stores alone and we pay out as high as $2000 a month for sweet cream alone.

"We gave the people good ice cream soda for 5 cents where they had had inferior ice cream soda for 10 cents. Today we can buy ice cream for 20 per cent less than we can make it, but we still run the factory in the interest of quality.

"One of the elements of the success of the Dow stores has been quality. No seconds of anything for Dow's. The same thing that made us want to use good stationery and put great clumps of expensive flowers on the soda fountains made the desire to sell cardamom seeds of the prize variety instead of spotted, undersized, off-color, half-strength seeds which could have been sold at three times the profit. * * I go to work at 11 a. m., first visiting the uptown office in the Provident Bank Building. Then comes the round of the stores and a talk with individual managers—a sort of general inspection.

"Always there is a hunt for ideas. We want them, more and more of them. We can never tell where they will come from. Sometimes a boy has a good thought—a bright idea—and he is always encouraged to give it to the store manager, and to realize that brains count. I know all of our people. I hire and discharge, retaining that duty, because I believe that it keeps me closer to the employees and centralizes responsibility. We are good friends, we of the Dow stores, and I find much pleasure in watching the development of the boys. I can't be hard on them when they make mistakes.

"At 1 p. m. I am at the warehouse and there I meet traveling men, agents, solicitors, and all sorts and conditions of people. It is the best part of the day, for I get in touch with the world and sharpen my wits by contact. There is another office hour from 5 to 6.30. Then comes dinner, a look at the evening paper, a couple of hours hard work in the uptown office, and then a good book—I don't mean a modern book—a Good book. I'd like to live a thousand years just to be sure of reading all of the really good books.

"I have one hobby outside of music. It is the Humane Society. And I refuse to be in an interview or a Dow book

if there can't be placed there a plea for vacations for horses all over the land. Every horse should have two full weeks vacation every year.

"Recreation? The business is labor and play. Once a year I go away for a month and then get back to work. And I've never seen the time when I was not anxious, thoroughly so, to hurry back to my job.

"What is the secret of the success of the Dow stores? The people who man them. I trust them. They trust me. I have no system beyond the cash registers. The few crooks we have uncovered have not destroyed faith in human nature. When the time comes that the human heart is not an element in the Dow business I want to quit. Dow's has been through several so-called panics. It makes us feel good to realize that whether in the depression of 1907-8, or the year of misery that characterized 1893, at Dow's no employee lost a dollar in salary or had a vacation curtailed. Everybody worked the same as during the good times and, so far as we could, we laughed at panics, even when we knew that we would be compelled to carry some of the scars through life.

"The Dow organization is prosperous. I have little of the social side to my life. I work hard; I meet with my share of the unpleasant experiences, but I'm happy. It is a good life. If I could sell out for a million or two tomorrow I wouldn't know what to do. I think I would buy some more stores, get a desk and a corner, and hunt for happiness through honest work."

—JOHN J. PULSE, president of the Idaho Board of Pharmacy, Grangeville, Idaho, visited New York and Boston during the latter part of April. He was on his way to attend the Richmond meeting of the A.Ph.A. and the Pharmacopœial Convention to be held in Washington. Mr. Pulse talked entertainingly of the resources and area of his State. By way of emphasising the latter fact he said that it took him longer to reach the meetings of the board of pharmacy when held in the end of the State farthest from his home than it did to reach New York from Boise.

—ALBERT M. ROEHRIG, until recently pharmacist at the U. S. Marine Hospital, Stapleton, Staten Island, N. Y., has been transferred to Buffalo. Mr. Roehrig is a member of the New York Branch of the A.Ph.A. and has taken an active part in the work of that organization, being vice-president when ordered to change his headquarters. His resignation from this office was accepted with much regret and as a token of the high esteem in which he was held the members unanimously elected him honorary president of the branch.

—DR. GEORGE D. ROSENGARTEN, vice-president of the Powers-Weightman-Rosengarten Co., of Philadelphia, showed his presence of mind recently when a boy on a bicycle rode directly in front of the automobile which Dr. Rosengarten was driving. Turning the car, Dr. Rosengarten, who was accompanied by his wife, steered directly into a post. Mrs. Rosengarten was cut by the glass from the shattered wind shield, but the boy was not seriously injured. Dr. Rosengarten escaped with a severe shaking up. The car was badly damaged.

—W. C. FARRIS, Barthold H. Vennewitz and John F. Weitz have been in the employ of the Meyer Bros. Drug Co., St. Louis, for many years, Mr. Farris has been in the shipping department for 27 years. Mr. Vennewitz has been in the traffic department since 1879. Mr. Weitz has been with the house since 1883, the greater part of the time in charge of the liquor room.

—WILLIAM R. BATES, of Smith & Bates, Owensboro, Ky., has been elected president of the new Public Drug Co., recently formed to acquire the business of John A. Head, who has retired on account of ill-health after having conducted his pharmacy since 1877. Mr. Bates will continue with the Smith & Bates store and L. L. Carpenter will be the active man at the pharmacy of the Public Drug Co.

—W. W. ALBERS, a well known druggist of Wausau and former president of the Wisconsin Ph.A., accompanied by his daughter, Miss Irene, has returned to his home in Wausau from Seattle, Wash. Mr. Albers was called to Seattle by the serious illness of his daughter, but upon reaching there he found her in a much improved condition and able to withstand the journey to their home.

—DR. WILLIAM JAY SCHIEFFELIN, of Schieffelin & Co., New York City, recently returned from Florida where he spent several days tarpon fishing. He reports his trip as having been highly enjoyable.

—WILLIAM L. LEE, first vice-president of the Philadelphia Association of Retail Druggists, is about again after suffering several weeks with an attack of the grip. Mr. Lee says that he is getting little sympathy among his many friends, as all of them declare that he is looking better than for many months.

—RICHARD M. COLGATE, president of Colgate & Co., was the donor of handsome silver cups to the winners in a recent debating contest at the Hill School, Pottstown, Pa. Mr. Colgate is an alumnus of this institution and his interest and generosity has been manifested since his graduation in many ways.

—CYRUS P. WALBRIDGE, president of the J. S. Merrell Drug Co., St. Louis, has sent in his resignation as treasurer of the Republican State Central Committee. He has several times tried to surrender the office but has heretofore yielded to persuasion and continued to handle the funds of the committee.

—CHAS. F. SCHLEUSSNER, former president of the New York German Apothecaries' Society, is making arrangements for an extended European trip. He expects to sail on May 11 by the steamer Pennsylvania and will visit his daughter who is now living in St. Petersburg, Russia.

—JOHN MCKESSON, JR., of McKesson & Robbins, with Mrs. McKesson, expected to sail from Europe for New York City the latter part of April. They have been enjoying an automobile tour of France, Switzerland and Italy during the last two months.

—STEWART F. VOSS, one of the popular pharmacists of the South Side, Chicago, spent a week recently visiting his parents at Sumption, Ill., and later "filled in" during W. F. Jordan's absence from McClugage's drug store at 63d street and Lexington avenue.

—W. C. MELVILLE, a traveling salesman for the E. A. Lange Medical Co., of Depere, Wis., has been promoted to the position of sales manager. Mr. Melville has been making his home at Chippewa Falls, but in the future will reside in Depere.

—A. L. BUZZLE, formerly a prescription clerk at the A. H. Kneeland pharmacy at Galesville, Wis., has purchased the St. Charles *Union*, at St. Charles, Mich., and will now devote his time to the newspaper business.

—A. J. FRAIZER, Muncie, Ind., has been made happy by the return from Washington, D. C., of his wife, and son Joe. Mrs. Fraizer has been visiting her sister, the wife of Congressman Edmund H. Hinshaw, of Nebraska.

—THOMAS MORAN, who is employed by the Central Drug Co., of Chicago, has returned to his work after spending a ten days' vacation with his sister, Mrs. A. H. Geotz, of Mushwonago.

—J. C. WOLF, of the Haley-Wolf Drug Company, at Fourth and Broadway, Oklahoma City, Okla., called at Meyer Bros., St. Louis, recently, in preparing for the store's opening.

—FRANK G. RYAN, of Detroit, president of Parke, Davis & Co., was a recent visitor in New York, on his way home from a trip to Mexico and the Southern States.

—MRS. J. W. S. TOMKIEWICZ, wife of a well known South Milwaukee druggist, is reported to be recovering from an operation underwent in Milwaukee recently.

—OTTO G. HOTTINGER, one of the most successful pharmacists of Chicago, has returned from an extensive trip which comprised visits to New York, Texas and Mexican points.

—SCHUYLER GROSS, of Lake Mills, formerly connected with C. S. Heimstreet's pharmacy, has been appointed manager of a drug store in Miles City, Mont.

—F. M. SMITH, president, with C. B. Zabriskie, Eastern manager of the Pacific Coast Borax Co., have gone to Europe for a trip, being accompanied by their families.

—W. G. UNGERER, of Ungerer & Co., New York City, recently returned from a business trip which included a number of Western cities.

—GEORGE L. DOUGLAS recently spent several days in New York City. Mr. Douglas is attorney for the Proprietary Association of America.

—ALBERT BOND LAMBERT, president of the Aero Club of St. Louis, has just undergone an operation for appendicitis.

—C. E. VANDERKLEED, chief chemist for the H. K. Mulford Co., of Philadelphia, was a recent New York visitor.

—P. E. ANDERSON, of P. E. Anderson & Co., this city, went South last month on an ocean trip for his health.

—T. H. SHERWOOD, of McKesson & Robbins, New York City, sailed recently for Europe on the Adriatic.

—F. C. FERNALD, of the Dr. Miles Medical Co., Elkhart, Ind., was a visitor in Chicago recently.

—CHAS. GIBSON, of Albany, was a recent New York visitor.

Rikers Win Injunction in the Liggett $250,000 Guarantee Suit.

Cannot Deprive New York and Boston Stockholders Rexall Rights Pending Final Hearing of Action—Liggett's Lawyers Attack Co-operative By-law as Being Invalid—Fine Points of Law Argued in Fight Due to Business Rivalry.

A remarkable incident occurred one day last month in the court room of Vice-Chancellor Howell, in Newark, N. J., when a lawyer in the employ of Louis K. Liggett denounced the newspapers, the trade press and THE PHARMACEUTICAL ERA for printing articles about Mr. Liggett's lawsuits. An ERA representative was the only newspaper man in the room at the time, court having just been called off for luncheon, although the vice-chancellor had not left the bench.

In one portion of the room the Liggett attorneys were conversing together when one of them began to speak above the buzz of conversation. All he said could not be heard clearly at a distance, but as near as his utterances could be gathered he said:

"Our side was not to blame for delays. Why this is outrageous. The newspapers and the trade papers have no business to print anything about this suit like this. The suit has not been delayed by us. They have no right to print such articles."

Striding toward the ERA representative, who was busy making some memoranda, the lawyer advanced, gesticulating and said:

"It is infamous to print such statements."

Appealing to a lawyer on the other side, he added: "You know that is so. It is infamous. You know the reasons." The other lawyer gave no apparent attention to the Liggett lawyer. If he knew any reasons for the outbreak he did not mention them, nor did the Liggett lawyer. The ERA man simply wondered.

No Way to Prevent Publicity This Time.

The proceeding before the vice-chancellor was the hearing in the injunction suit brought last December by the Wm. B. Riker & Son Co., of Manhattan, Brooklyn and Boston, with its allied Jaynes and Bolton companies, against the United Drug Co., of Boston, of which Mr. Liggett is president, to prevent the enforcement of the latter's attempt to force the Rikers to guarantee the sale in 1910 of $250,000 worth of Rexall products or lose the agency for these goods. The story of the suit was given at length on page 59 of the January issue of the ERA. There were few persons in the little court room and nothing disturbed the serenity of the scene until the Liggett contingent discovered that an ERA representative was present. If there is one thing that the Liggetts dislike it is publicity, even of their own side of a case, but this time they could not prevent publicity, for the proceedings of vice-chancellors' courts in New Jersey are not held *en camera*. A repetition of Mr. Liggett's action in excluding an ERA man from a meeting of the United Drug Co. was impossible.

John R. Hardin, former Assemblyman of Essex County, New Jersey, representing the defendant United Drug Co., presented the answer in the case, which was Liggett's denial of averments of the plaintiff. Regarding the Riker ownership of the Jaynes company, operating the Boston stores, Liggett made denial of knowledge of the transfer of the Maine Jaynes corporation to the Massachusetts Jaynes Co., until the present time. It was claimed that the company could not be forced to continue unprofitable relations, even with stockholders. The Riker sales of Liggett candy, for instance, in a given period, had dropped from $2000 to $300. The Rikers had opened new stores, had become business rivals, rather than coworkers and pushed their own goods, rather than Rexall goods. Several affidavits were offered in support of these contentions.

United Drug Co. in a Prosperous Condition.

Albert E. Seibert, counsel for the Rikers and prominent in legal affairs affecting the drug trade in New York and Boston, stated the case for his clients, the Jaynes and Riker companies all being joined as plaintiffs, being owned by the same interests.

Regarding the sale of the Jaynes company, he declared it was managed by Liggett, who was a director in the Riker-Jaynes company until March, 1908. The sale of Rexall candy had fallen off because there was no continued demand for it and other arrangements had to be made. The United Drug Co. was paying dividends and was under no necessity to abrogate its arrangements with stockholders or push its business to their detriment. Regarding the sale of Rexall goods in the Rikers' Newark pharmacy, Liggett had told them to go ahead until Petty, the Newark stockholder, "kicked." That came and the sale was discontinued, except of Rexall goods purchased at retail price of other agents and sold to customers without profit solely as a matter of accommodation.

These statements and others were based on an affidavit made by Manager Cosden, of Rikers. Lawyer Seibert further denied that there had been any substitution of goods, and said that Liggett, in contravention of the exclusive understanding found in the by-laws, had started stores in opposition to Jaynes in Salem and Lowell.

Why Liggett Changed From Friend to Foe.

Getting down to the opening of hostilities averment was made that Liggett wanted to be treasurer of the Riker-Jaynes company and manufacture all of the Riker goods. He was given an order, but the result was not satisfactory, so no further orders were given to him. He also made arrangements for placing the company's bank account. Said counsel:

"Mr. Liggett's attitude thereafter became one of constant criticism and complaint. He had failed to get the treasurership, he had failed to get the manufacturing and he had failed to place the company's account with a bank with which he had loan dealings. It was then that in his hostile frame of mind, actuated by his own selfish interests, he threatened to start opposition stores."

Mr. Seibert read numerous affidavits and it was brought out that the "declaration of war" by Liggett was made at an interview held with John B. Cobb at the Imperial Hotel in New York.

Jones Fuller, of Boston, counsel for the United Drug Co. and brother of the general counsel of the American Tobacco Co., presented a sworn statement by Liggett, who denied any recollection of the bank account incident or of the transfer of the Maine Jaynes company to the Massachusetts corporation.

Mr. Seibert argued that his clients were entitled to the relief sought, inasmuch as they had complied with all agreements with the defendant. Liggett had governed and dominated the company—as he had planned and organized it. There was no denial of the main facts. There was an old contract with the Jaynes company; if still in force there was no claim that it had been violated. But all the plaintiffs wanted was the enforcement of the trade relations between vender and vendee to which they were entitled.

Became a Business Rival of Rikers.

The correspondence between Messrs. Liggett and Cosden, as given in the January ERA, was read.

During the year following Liggett's retirement from the Riker directory, Mr. Seibert pointed out, Liggett acquired from his own company (the United Drug Co.) that company's retail stores and by this act made himself a business rival of the Rikers. There had been an absolute repudiation of the fundamental contract rights acquired by his clients as stockholders. All his clients wanted was their vested rights. They would not insist upon the "exclusive" right to sell Rexall goods, and had in fact waived that right by permitting others to sell Rexall goods in their territory. What they wished was to compel the United Drug Co. to supply them with goods on the same terms and conditions as governed the relations of the company with other stockholders.

Mr. Fuller, in arguing the Rexall side, declared that there was no definite contract and that whatever was set forth in the original by-law could not be of perpetual duration, but was subject to change by the board of directors.

Mr. Hardin offered a technical objection that there were three causes of action instead of one, that the Rikers were merely stockholders in the Jaynes and Bolton companies and as stockholders could not sue.

"Is it not true," asked the vice-chancellor, "that the equity is there?" This was not answered directly, but Mr. Hardin said that the charter of the United Drug Co. did not authorize the co-operative by-law upon which the suit is based; that the by-law was invalid, inasmuch as by its exclusive sale provision it gave to the stockholder the power to regulate the

company's business in his own, instead of in the board of directors.

The plaintiffs seek "to strike out 'exclusive' and 'candy,'" said Mr. Hardin. "How many competitions will there be? The range would be from monopoly to universal competition."

Robert H. McCarter, former Attorney-General of New Jersey, declared that there was no reason which would appeal to a court of equity for severance of relations between the parties to the litigation. After Liggett had ventured into the field with his chain of retail stores he had said to the Rikers that they must buy $250,000 of products a year from the Rexall company. This, perhaps, was not prohibitive, but it was close to a declaration of war and it was intended to be prohibitive. It did not lie in Liggett's power to say what he would, or would not do. The company was organized and carried on as a co-operative concern. The by-law and the course of conduct of the parties up to the time of the "declaration of war" explained the object and purpose of their relations.

Mr. McCarter said his clients had a perfect right to waive the "exclusive" restriction if they desired, but if they held to it the clause could be enforced. There was no restraint of trade involved. It was customary in many lines of trade, hats, automobiles and others, to give exclusive agencies for goods of a particular manufacture in certain localities and there could be no doubt of the legality. This was done to persons not stockholders.

Mr. McCarter disposed of the objection that the Rikers were not holders of record of the Bolton and Jaynes stock, a technicality urged by his opponents, by pointing out that the by-law as to restricting the sale to outsiders, did not refer to stockholders "of record" and that the intent to keep Rexall stock from outsiders was fully preserved by its purchase by the Rikers, who were already owners of stock and were organizers of the company.

Referring to Liggett's "declaration of war," Mr. McCarter told of the "genius" which Liggett had displayed in organizing the Rexall company and praised his powers of organization. He had done more than the vice-chancellor or anyone else could do, but Liggett eventually became "swollen with his great success" and believing the Rikers were getting too big determined to go into the retail drug business himself, becoming their rivals and undertaking to enforce terms meant to be prohibitive against them.

"Liggett was glad to get their credit and co-operation for a time," said the former Attorney-General, "but he was not satisfied with his success. He must buy from his own company the stores controlled by it and go into the retail drug business himself."

During the two days occupied by the hearing President Cosden, of the Riker company, was in constant attendance. Mr. Liggett was in court for a short time, but missed some of the compliments bestowed upon him by counsel.

Vice-Chancellor Howell decided in favor of the Rikers and ordered the temporary injunction to continue until the final hearing in the litigation. Without passing upon the main controversy, he declared it would be unfair to permit the status quo to be interrupted pending final adjudication. Several months will probably elapse before the suit is disposed of.

Sanitol Receivers to Protect Stockholders and Collect Judgment Against Luyties.

ST. LOUIS, April 20.—The judgment of $722,060 against Herman C. G. Luyties in favor of the Sanitol Chemical Laboratory Co.—briefly reported in the April ERA on page 394—is considered here to be a vindication of the course of the minority stockholders.

Within an hour after Judge Williams handed down his decision former Judge Jesse McDonald, one of the two receivers, went to the plant of the company and gave notice that he would take charge and conduct the business as usual. McDonald's associate receiver is Frank V. Dubrouillet, trust officer of the St. Louis Union Trust Co. They were ordered to give $100,000 bond and were empowered to collect the judgment against Luyties and hold it in trust for the Sanitol Co.

The Supreme Court denied an application of Attorney Albert Arnstein for Mr. Luyties for a writ to restrain Judge Williams from enforcing his decision. A motion for a new trial is pending in the Circuit Court, asked on the grounds that the court erred in striking out certain testimony and in allowing irrelevant testimony to be introduced.

Hamilton Gibson, manager of the company, announces that business will be conducted without interruption. One of the first acts of the receivers was to double the newspaper advertising of Sanitol products. Contracts, discount terms, free goods offers, etc., he says, will be continued and no change will be made in the sales policy of the company.

Luyties was not in court when Judge Williams read his opinion, reciting that the Sanitol Co. was organized as the Fairchild Chemical Co. in 1897, with a capital stock of $5000. The name was changed later to the Sanitol Chemical Laboratory Co., and the capital increased at intervals until it reached $[illegible].

Regarding the allegation of the minority stockholders who petitioned for a receiver that the company is insolvent, Judge Williams says: "If by insolvent, is meant that it cannot pay its debts, the allegation is untrue." He continues:

"The allegation of the increase of capital stock from $500,000 to $1,000,000, with the certified statement that 50 per cent of the increase has been paid up, and that $200,000 of the stock was caused by Luyties to be issued to himself in full payment for five formulæ, and that such formulæ are of no value to the company and the transfer of the stock is fraudulent to the [illegible].

"The allegation that before April 1, 1907, Luyties received $[illegible] salary as president of the company, and on that date caused the salary to be increased to $25,000, and the services rendered by him were in no more valuable than before the increase, and that such excess of his salary was fraudulent to [illegible] is a fact.

"When Luyties [illegible] was fixed in December, 1903, Luyties had received $695,000 of the capital stock of the company without payment of anything of value by him.

"As another instance of the reprehensible conduct of this president, it appears that on December 23, 1907, three employees of the company were informed by Luyties that they were entitled to a bonus of $4900 for meritorious services. Checks were drawn by the treasurer of the company and sent to the employees with the request that they be indorsed and returned to Luyties, and Luyties then deposited the checks to his private account and had 490 shares of his stock in the company transferred to the employees at par value. How many like acts were committed by Mr. Luyties it is impossible to say.

"The charge that he made a false statement to the Secretary of State in regard to the increase in the capital stock of the company being paid up, is true."

Judge Williams says in his opinion that in the sale of the building site to the Sanitol Co. by the Brotherhood Realty Co., composed of Herman C. G. Luyties and his brother, F. A. Luyties, there was a concealed profit to the realty company of $25,779, and to Herman C. G. Luyties of $12,889.

Regarding salary, the opinion says Luyties received from December 1, 1903, to April 1, 1907, $20,000, and from April 1, 1907, to November 30, 1909, $66,666, and that he got from the sales of stock, real estate and other sources $629,061.

"Assuming that he still owns 57,000 shares of stock, as he testified," the opinion recites, "I would conclude that he had received a total of $1,199,061.

"Desmond and Bowman were straw men and dummies, and always under the influence of Luyties and ready to do his bidding."

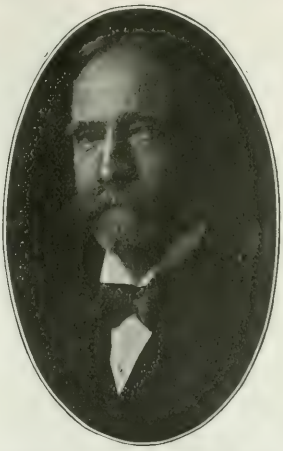
Continuing, the opinion says: "The Sanitol Co. opposed this suit with the same zeal that attended the defense by Mr. Luyties. The Sanitol Co. and Luyties were represented by the same counsel. A judgment against Herman C. G. Luyties on behalf of the company under its present management (H. S. Gardner excepted) would not be fair practice, because the collection of the judgment and the method of its payment could be controlled by the company, which is resisting this suit.

"The execution of the judgment is as essential as its rendition. To order a new election of directors would not be a safeguard to the execution of the judgment.

"It will be necessary, therefore, to appoint receivers, whose business it will be to have a care for the execution of the judgment and to take charge of the affairs of the company, make full inventory of its effects and full investigation of the books [illegible] of the stockholders, and to conduct the business of the company until they are discharged of their duties as such receivers."

Manufacturers See Bright Future for American Perfumery—Will Educate Public.

JOHN BLOCKI, Chicago, elected first vice-president Manufacturing Perfumers' Association.



CHAS. W. JENNINGS, Grand Rapids, elected second vice-president Manufacturing Perfumers' Association.

FRANK B. MARSH, New York, elected president Manufacturing Perfumers' Association.

In his presidential address delivered to the Manufacturing Perfumers' Association at its annual meeting, held recently at the Drug and Chemical Club, New York City, President J. Clifton Buck, of Philadelphia, asserted that there was an era of prosperity before the members, they having passed through the recent tariff adjustment unscathed. He complimented the members of the various committees and the officers of the association for the good work that had been accomplished during the past year; he especially commended the legislative committee, of which Theodore Ricksecker was chairman, for its success in having objectionable features of the tariff act eliminated. He advocated a vigorous campaign of education in American perfumes and to this end suggested that the association make an appropriation. One member had already pledged $500 for this purpose on condition that the members raise $2500. In conclusion, President Buck deprecated the practice of price cutting.

Acting upon the recommendation incorporated in the above address, it was later unanimously voted that the proper committee be authorized to solicit subscriptions to a fund to be used for the carrying on of a campaign of education, and that the association donate 25 per cent of such subscriptions up to $500.

Frederick F. Ingram, of Detroit, as chairman of the committee on freight and transportation and the committee on parcels post, reported that the first-class rate on perfumes and toilet articles to the Pacific terminals is 50 per cent higher than the commodity rate as applied to drugs in general. He recommended the endorsement of the Bennett bill, which besides reducing the rate to 8 cents a pound has other provisions worthy of consideration.

In connection with this report, a communication from Harry B. French, of Philadelphia, was read, in which he opposed the parcels post and asked that a petition which accompanied his letter, to the effect that the members took the same stand, receive the official approval of the association. Mr. Ingram's report was approved, but no action was taken on Mr. French's petition.

As chairman of the special committee for minimizing freight, Mr. Buck dwelt upon the extravagant practice of prepaying freights indiscriminately. From correspondence with the members, he attributed the difficulties largely to geographical position and the fact that perfumes constituted in many cases a small fraction of the entire shipments of many manufacturers. The members of this committee were also undecided as to whether a uniform agreement to fix freight rates would come under the provisions of the Sherman Anti-Trust Law.

Richard Hudnut, chairman of the committee of importations and undervaluations, touched in his report on the satisfactory results obtained in the recent tariff legislation, by which raw materials would be admitted free and the rate on imported manufactured perfumes would be increased. This, he said, would insure for the industry a brilliant and prosperous future. The total imports of alcoholic perfumery and hair, mouth, skin and teeth preparations for 1909, he said, amounted to $1,400,560, an increase of $311,804 over the previous year.

The report of the committee on campaign of education, presented by Joseph A. Brohel, chairman, referred to the keen competition of the department stores, mail order and premium houses, syndicate drug stores, and the fact that the high tariff on foreign perfumes had not cut down their importation.

Edwin H. Burr, New York, chairman of the committee on membership, reported that it was practically impossible to increase the association's membership unless manufacturers of toilet articles, not manufacturers of perfumes, be admitted. The following new members were secured: Active, Allen B. Wrisley & Co., Chicago; Hansom-Jenks Co., New York; associate, Vechten Waring Co., New York, and Kramp & Co., Offenbach, Germany. The report of the secretary, Walter T. Hathaway, showed that the active membership numbered 32, associate 62, honorary 1. John B. Ladd, of Ladd & Coffin, was elected an honorary member at this meeting.

Resolutions of regret were unanimously adopted by the members relative to the deaths of Mahlon N. Kline, of Philadelphia, and Adolph Spiehler, of Rochester.

The report of Treasurer Frank B. Marsh, New York, showed the total cash assets of the association to be $3779.87.

Wilbur H. Hyde, Cleveland, chairman of the committee on trade interests, outlined in his report the experiments being carried on by Dr. R. H. True, of the Bureau of Plant Industry at Washington. Mr. Hyde prognosticated in his report that America, with its varied resources of soil and climate, may become a factor in perfumery plant production.

The following officers were elected for the ensuing year: President, Frank B. Marsh, New York; first vice-president, John Blocki, Chicago; second vice-president, Charles W. Jennings, Grand Rapids; secretary, Edwin Ross, New York; treasurer, A. B. Calisher, New York; members executive board to serve three years, D. H. McConnell, New York, and J. Clifton Buck, Philadelphia.

An interesting and instructive address was delivered to the association by James D. Kenyon, vice-president of the Sheldon School of Salesmanship of Chicago. "South American Exports" was the subject on which Dr. W. P. Wilson, director of the Philadelphia Museum and Argentine consul at Philadelphia, spoke. Mr. Graham, of Allen & Graham, New York City, delivered an address on "Alcohol and the Drawback Clause on Domestic Spirits for Export."

GERMAN APOTHECARIES HOLD BUSY MEETING.

Kommers Follows Routine and Preparations are Begun to Celebrate Sixtieth Anniversary Next Year.

Secretary Gilbert of the entertainment committee was early on the job at the meeting of the German Apothecaries' Society on April 7, for no sooner had President Kleinau called the seventy members to order than he made the announcement that the sixtieth anniversary of the organization would be celebrated in a fitting manner on October 12, 1911, in the large hall at Terrace Garden. He also stated that besides the members of the entertainment committee he had appointed the following colleagues honorary members of the committee to assist in the undertaking:

Ehrenpresident und Grunder des Vereins Gustav Rampsperger, Dr. Wm. C. Alpers, Paul Arndt, Herm. H. Blomeier, W. Bodemann, Wm. J. Brandt, Geo. Bruns, Henry Buch, Aug. Eichl, Dr. Geo. C. Diekman, Dr. G. C. Freiberg, E. C. Goetting, H. Jul. Isow, Carl E. Kessler, Dr. C. F. Klippert, Emil C. Krausche, Geo. Leonhardt, F. H. Premp, Otto Rauhuthhenner, Louis Rhode, Emil Roller, C. F. Schleussner, L. F. W. Selfert, F. W. Stechmann, Geo. C. P. Stolzenburg, S. V. B. Swann, Carl Schur, Aug. Uhl und R. C. Werner.

Treasurer Lehman reported the resignation of several members of the society on account of retirement from business and other reasons.

Communications were read from the Brooklyn Pharmaceutical Society inviting members to the ball to be given by that organization on March 31, and from the widow of the late Dr. William Balser expressing her appreciaton of the kind remembrance of the society in her bereavement.

S. V. B. Swann, chairman of the legislative and trades committee, gave a detailed report of the telephone situation in this city and outlined the status of the several bills which had been introduced into the Legislature.

Three new members were elected—Chas. H. Mierow, J. H. Schell and Julius Kramer, and an application for membership was received from Chas. H. Lowe. The death of H. G. A. Goll, of Brooklyn, an old-time member, was announced by President Kleinau, the members rising to show their respect to his memory.

This ended the business meeting and the "kommers" began, Secretary Otto P. Gilbert acting as "praeses." A thundering salamander for the success of the kommers was followed by the singing of a song composed by Emil Roller and entitled "The Apothecary's Dream." The instrumental music was under the direction of an old-time member of the society, Hellmuth Jarchow, a cello player, his assistants being Fred Landau, first violinist at the Metropolitan Opera House, and Oscar Walther, pianist. Other features of the entertainment were the recitations and songs by the comedian Oscar Stolberg, a second kommers song having for its refrain "Isn't that peculiar?" and three songs by the baritone singer, Hans Merx.

Hegeman Corporation Buys Stock of J. Milhau's Son.

At the recent public auction of the stock and fixtures of the drug store of J. Milhau's Son, formerly located at 205 Broadday, this city, nearly everything put under the hammer was knocked down to the Hegeman Corporation. The latter took over the Milhau prescription files some time previous to the auction. This winds up a business which was established nearly a century ago.

Continuing the Business of J. Jungmann, Inc.

Judge Hand has authorized Harry S. Patterson, receiver in bankruptcy for J. Jungmann, Inc., druggists, New York, to continue the business until May 21. F. W. Hinrichs was appointed receiver on February 15 and the order was vacated on March 1. Since then the corporation has been endeavoring to effect a settlement or reorganization, but up to last reports had been unable to do so.

Pharmacists Vote $100 to Entertain Physicians.

The Retail Druggists' Association of St. Louis has voted $100 toward the entertainment of the members of the American Medical Association who meet in annual convention there June 7 to 13.

Drug Trade News in The Soda Fountain.

Readers of THE SODA FOUNTAIN should know that drug trade news is printed in THE SODA FOUNTAIN around the 15th of each month and costing only $1 a year. If not a subscriber send $1 to D. O. HAYNES & Co., 82 *Fulton street, New York.*

BETTER TELEPHONE COMMISSIONS PROMISED.

Kings County Society Hears Good News and Suspends its Propaganda Work Until Next September.

At the April meeting of the Kings County Pharmaceutical Society, Charles Heimerzheim, as chairman of the special telephone committee, reported that a joint committee consisting of representatives of this society, the N.Y.R.D.A., G.A.S. and other pharmaceutical organizations, had visited Mr. Hiss, of the New York Telephone Co., at Long Island City. They enumerated their various difficulties, each chairman having his say. Mr. Hiss said that three telephones were being worked on, as well as a collapsible booth, the latter taking just one-half the room occupied by the present booths.

One of the 'phones being experimented on allowed the admission of 5, 10 and 15 cents at one time, the mechanism being so arranged that the coin could be put in before "central" answers. These features, he said, would save considerable time. As to a higher rate of commission, he thought this could be managed and promised to do his best to settle the question satisfactorily. Mr. Heimerzheim said that a bill had been reported out at Albany placing the 'phone question under the Public Service Commission, also that rates in Brooklyn, according to law, should be equal to those of Manhattan, since the two boroughs were in the same city. The committee was thanked for its report and continued.

Mr. Heimerzheim, as chairman of the trade matters committee, also reported that the propaganda work had been continued during the past month on the same lines as previously. E. A. Lauer, 90 Utica avenue, wrote that the increase in calls for N.F. preparations by physicians had been 40 per cent at his pharmacy. On Dr. Muir's motion, it was voted to discontinue the work until next September.

C. H. Goddard Wins Peroxide of Hydrogen Injunction.

Justice Giegerich, in the New York State Supreme Court, has decided in favor of the plaintiff in an action in equity by Charles H. Goddard, trading under the name of the American Peroxide & Chemical Co. and also acting as trustee for the American Druggists' Syndicate, against the American Peroxide & Chemical Co., each seeking to restrain the other from the use of the name "American Peroxide & Chemical Co." and the word "American" to indicate the brand of peroxide of hydrogen sold. The defendants are restrained from manufacturing and selling peroxide of hydrogen under the name in question, as well as from using the word "American" in connection with the sale of peroxide of hydrogen. The counterclaim interposed by defendants is also dismissed.

New York Board Wins Prescription Cases.

Judgments have been obtained by the New York State Board of Pharmacy, through its attorneys, Steiner & Petersen, against Hugo Rosenthal, 101 Second avenue, Manhattan, for dispensing potassium iodide in filling a prescription calling for strontium iodide; Mandel's Pharmacy, 1271 Second avenue, Manhattan, for twice committing this offence and also having volume of preparation incorrect; Isadore Rummelsberg, 5524 Fourth avenue, Brooklyn, for selling carbolic acid wash in violation of law, and Albert O. May, 589 11th avenue, Manhattan, who filled prescription calling for codeine phosphate with codeine sulphate. Of the accused, only Mr. May appeared and put in a defense.

Receiver for Natural Carbonic Gas Co.

Edward G. Benedict, 79 Wall street, New York, has been appointed receiver of the Natural Carbonic Gas Co., of Saratoga Springs, by Judge Ward in the United States Court. The application was made by Charles G. Stratton, a bondholder and stockholder. The company, it was said, was not insolvent, and had $500,000 invested in the business and in property. The new anti-gas pumping law made the action necessary.

Hegeman Corporation to Open Store in Fifth Avenue.

The Hegeman Corporation will open a new drug store at 34th street and Fifth avenue, opposite the Waldorf-Astoria Hotel, New York City, some time early in July. The store has already been acquired by the corporation, but with the proviso that the present occupant be allowed 90 days in which to adjust his business. Nothing has been made public as to the fountain or other features, nor has a manager been secured.

PRESCRIPTION BELONGS TO THE PRESCRIBER.

Pharmacist Should Retain it for Five Years, for the Protection of the Physician, Patient and Himself.

PHILADELPHIA, April 20.—The presentation of the consensus of opinion of six prominent representatives of medicine and pharmacy on the declaration of the prescription was one of the most interesting features of the April monthly meeting of the Philadelphia Branch of the A.Ph.A. More than a year ago, joint committees of the Philadelphia County Medical Society and the Philadelphia Branch were appointed to consider the prescription from every standpoint and give the benefit of their conclusions to the two organizatons. Professor Remington was the chairman of the committee representing the local branch, with Prof. I. V. S. Stanislaus and Franklin M. Apple fellow-members. The committee from the County Medical Society consisted of Dr. Harry A. Duncan, chairman; Dr. W. E. Robertson and Dr. G. Morton Illman.

The report of the joint committee was read by Professor Remington and after being approved by the meeting, was referred to the County Medical Society. It was as follows:

First—The prescription is an utterance of the prescriber, who alone should direct and control its employment. It should, whenever practicable, be dated and the name of the patient with his or her age, if a minor, should be specified.

Second—Prescriptions are either of limited or unlimited character. A limited prescription is one on which restrictions have been placed by the prescriber, viz., to control the ownership, to limit the privilege of renewal, to state if a copy shall be given by the pharmacist compounding it, to direct the disposition of the prescription, and thus control all of the aforementioned rights. These restrictions should be specified over the signature of the prescriber. Limited prescriptions should be employed by the prescriber when writing for a medicinal substance commonly called a narcotic or habit-forming drug. The physician, when delivering a restricted prescription, should impress upon the patient that it is an order for medicine required only for the time stated and present need, and the attention of the patient should be directed to the character of the restrictions thereon.

An unlimited prescription is one which has no restrictions placed thereon by the prescriber, all rights being waived by the author. An unlimited prescription should be used when the copy of the prescription is directed to be placed upon the label of the container of the finished preparation.

Third—The pharmacist who prepares the medicine should retain the prescription for reference as a record of his services and for a period of time—not less than five years—for the protection of the prescriber, the pharmacist and the patient and all restrictions placed upon the prescriptions must be respected by the compounder thereof. The attention of the patient should be directed to the nature of the restriction in a prescription by affixing an appropriate notice on the container of the medicine.

Fourth—A copy of a restricted prescription should be written upon a special blank upon which is clearly stated the nature of the limitations, and if such direct that no copy of the original shall be given, none should be issued except upon the written request of the author.

All copies of prescriptions are made without recourse for possible error.

W. A. PEARSON,
chairman scientific section Philadelphia branch of the A.Ph.A.

The programme included the reading of a most interesting and exhaustive paper by Dr. F. E. Stewart, member of the committee on patents and trade marks, and former chairman of the committee on national legislation of the A.Ph.A. His subject was "Patents and Trade Marks in Medicine, and a Consideration of Domestic Medication as Affecting the Public, the Physician and the Pharmacist." So thoroughly did Dr. Stewart cover the ground, showing the rights and privileges of the members of the sister professions as between themselves and in relation to the public, and the lines for mutual advancement, that subsequent speakers declared themselves at a loss to present any new feature.

Dr. S. Solis-Cohen put forth rather an original thought when he suggested that the next step from a legislative standpoint was to bring the manufacturing pharmacist under the law and make him prove his ability to carry on that business. He declared that such a course would go far to obviate the present difficulties of the practicing physician. Later the members were given an informal reception and luncheon by the Scientific Section at the French Club.

ATHLETICS IN PHILA. C.P. CURRICULUM.

Important Innovation Result of Efforts of Professors Kraemer and Bridgeman—H. B. French President.

PHILADELPHIA, April 20.—The board of trustees of the Philadelphia College of Pharmacy has instituted a new era in pharmacy by its decision to give athletics, commencing with the opening of the fall term, a regular place in the curriculum. While the details have not yet been worked out, it is proposed to employ an efficient instructor, fit up a gymnasium and make athletic exercises for several hours each week of the college term obligatory. Students will be subjected to a physical examination and exercise along the lines they need will be prescribed. The athletic association of the college will co-operate by securing an athletic field and encouraging various branches of sport and team work. The successful culmination of the proposition has been largely due to the efforts of Henry Kraemer, professor of botany and pharmanognosy, and his assistant, J. J. Bridgeman.

The alumni of the college will receive a letter, asking the recipient to become either an active or a contributing member of the athletic association. The former costs $5 annually and the latter $2, but an active member will receive a card which will entitle him to attend all games and athletic contests held under the auspices of the association. It is hoped in this way to secure the financial support necessary to support the various athletic teams and secure regular grounds for these events.

The members of the college have elected the following officers: President, Howard B. French; first vice-president, R. V. Mattison; second vice-president, Joseph L. Lemberger, Lebanon; treasurer, Richard M. Shoemaker; recording secretary, C. A. Weidemann; corresponding secretary, Dr. A. W. Miller; curator, Joseph W. England; editor of the *American Journal of Pharmacy*, Henry Kraemer. The following were elected to membership in the board of trustees of the college: Dr. Samuel P. Sadtler, William L. Cliffe and H. K. Mulford.

AN EXCITING BASE BALL GAME.

New Yorkers Played Well, but Lost by 7 to 3 to Philadelphians.

PHILADELPHIA, April 20.—Representatives of pharmacy and the drug trade generally in this city and vicinity took off April 12 to witness the most important event—from an athletic standpoint—in pharmaceutical history—the base ball game between the teams representing the New York College of Pharmacy and the Philadelphia College of Pharmacy. The latter won by the score of 7 to 3—they could not have done otherwise, for in addition to very clever work, the players were threatened, cheered and pleaded with alternately by a crowd of more than 500 "rooters." The visitors had no cause to complain of the applause which greeted their efforts, for the spectators were absolutely fair, but it was the home team that was exhorted to do its best—and it did.

New York came over with a band of nearly two-score of supporters, among whom were Thomas F. Main, the secretary of the college, and W. B. Simpson, clerk, who organized the team; Prof. Joseph P. Remington, dean of the Philadelphia college; Howard B. French, president, were as enthusiastic as any in the local delegation. Professor Remington threw out the first ball and the game was on. The Philadelphians scored two runs in the first inning.

Following the game, the players boarded a train at Tabor, where the game was played, and upon their arrival in the city, marched down Market street to Green's Hotel, where they were the guests at dinner of Professor Remington and H. K. Mulford. Later the New Yorkers, escorted by a large delegation of their new-made friends, boarded a train for home, promising to turn the tables when the return game is played in New York. This will probably be some time in May.

KINGS COUNTY MOURNS DEATH OF O. C. KLEINE.

Adrian Paradis Chosen to Succeed Former President as Treasurer and Resolutions of Regret Adopted.

Oscar Clarence Kleine, formerly president of the Kleine Optical Co., and for many years a prominent member of the Kings County Pharmaceutical Society, died suddenly April 14 aged 55. A heart disease. He was for two years a trustee and member of the board of trustees of the Brooklyn College of Pharmacy, with which institution his connection dated from its beginning, and at the time of his demise was an ex-officio trustee. He was deeply interested and actively engaged in the work of the New York State Pharmaceutical Association.

Mr. Kleine was born in New York, but since 1861 made Brooklyn his residence. Leaving school at 12 years of age he obtained his first employment with the *American Agriculturist*. He was later apprenticed to a barber. As an interpreter he assisted the apothecary at the East Brooklyn Dispensary in waiting on its German-speaking patronage. In this way he discovered his liking for drugs. He became a registered pharmacist and assumed charge of the dispensary. In 1891, Mr. Kleine opened a store of his own in Brooklyn. He is survived by a widow, daughter and four sons. Of the latter, two have chosen their father's profession, Martin Kleine being connected with Eli Lilly & Co., and Edward Kleine operates a pharmacy in Brooklyn.

At a meeting of the Kings County Pharmaceutical Society appropriate resolutions were adopted regretting Mr. Kleine's death. Adrian Paradis was chosen to succeed him as treasurer. This made necessary the election of Frederick E. Kalkbrenner as a trustee and Joseph J. Vetter as censor of the Brooklyn College of Pharmacy.

Horace Benton, of Benton, Hall & Co.

CLEVELAND, April 20.—Horace Benton, of Benton, Hall & Co., wholesale druggists, died recently in Florida, where he went for his wife's health. He was 83 and she is 79 years old. Change of water and climate caused his fatal illness. Mr. Benton was born in Chardon, Ohio, and after college came to Cleveland, with two brothers establishing the firm of Benton Bros., which later became Benton & Dunham, then Benton, Meyers & Co., and finally Benton, Hall & Co. In addition to his widow two sons and two daughters survive him.

George P. Smith, of the Gibson Drug Co.

ROCHESTER, N. Y., April 20.—George P. Smith, vice-president and manager of the Gibson Drug Co. and a prominent worker in the National Wholesale Druggists' Association, is dead of congestion of the lungs. He was originally identified with the Walker & Gibson Drug Co., Albany. Although only 41, he had become prominent in the trade and had hosts of friends. A widow and daughter survive.

Henry G. A. Goll, of the German Apothecaries.

Henry George Amandus Goll, aged 58, a former president of the German Apothecaries' Society, and for 35 years the proprietor of a drug store at Tompkins avenue and Hopkins street, Brooklyn, died last month of apoplexy. He was a native of Frankfort, Germany, and is survived by his widow, Mrs. Clara Goll; a daughter, Joanna, and two sons, Robert Goll, of Brooklyn, and Oscar, of Tombstone, Ariz.

Mrs. Farrand Was Widow of a Prominent Wholesaler.

DETROIT, April 20.—Mrs. Olive M. Farrand, widow of Jacob S. Farrand, in his day a leading wholesale druggist of this city is dead. Mrs. Farrand was born in Vernon, Ohio, in 1821, and descended from Puritan and colonial stock. She married Mr. Farrand in Hudson, Ohio, in 1841, and afterwards resided in Detroit. Until incapacitated, Mrs. Farrand was prominent in charitable and philanthropic work. She was the mother of William R. Farrand, Jacob S. Farrand, Jr., secretary of Farrand, Williams & Clark, and Mrs. Richard P. Williams, wife of the president of the same firm.

Obituary Notes.

—Edward H. Cameron, who went from Buffalo, N. Y., to Denver in 1880, is dead, aged 58. A widow and married daughter survive.

—Geo. B. Wallace, aged 57, of Bridgeton, member of the New Jersey Ph.A. since 1874, member of its executive committee and former first vice-president, died recently in Florida, whither he went for his health. He is survived by a widow and three children.

—BENJ. S. KRADWELL, secretary of the Kradwell Drug Co., Racine, Wis., was found dead under a trestle recently at Vail, Iowa. He was en route to Idaho for his health and probably fell from a train.

Dr. JAMES WALKER SEATON, who had attained some note by his scientific acquirements, is dead of apoplexy. He had been in Louisville for 58 years, most of this time in the drug business.

—MRS. FRED C. DODDS, wife of the secretary of the Illinois State Board of Pharmacy, died recently in Springfield. General sympathy was expressed for the bereaved husband.

—W. S. AKRIDGE, proprietor of the Piney Woods Drug Co., Pelham, Ga., is dead of a murderous assault. A. P. Spence, traveling man, Atlanta, was arrested on suspicion.

—H. S. PITTS, formerly of Palo Pinta and Thorpe Springs, recently ended his life with carbolic acid, shortly after buying a drug store in Sherman, Tex. A widow survives.

—CHAS. BUCK, representing the Whitall Tatum Co. in Maryland, was recently accidentally asphyxiated by gas in Baltimore.

—DR. JAS. M. AYRES, 71, former Cincinnati druggist, G.A.R. man, ex-U.S. consul, etc., is dead at Johnson City, Tenn.

—ISAAC T. COOPER, 65, Cooper & Son, Worthington, Ind., is dead. He was a Civil War veteran. Widow and son survive.

—CHAS. H. SLOCUM, pioneer, Superior, Wis., is dead, aged 64. Fell on a slippery sidewalk. Widow and three children.

—FRANK O. BROWN, druggist, Mason, Odd Fellow, married, who went from Wichita to Santa Fe four years ago, is dead.

—WM. GIDDINGS, Utah pioneer, is dead in Ogden. He was born in Iowa 64 years ago. A widow and son survive.

—WM. H. BUTLER, for 25 years a druggist in Brookline, Mass., is dead, aged 53. A widow and son survive.

—LUCIEN O. LOVELAND, Muskegon, Mich., died a week before the date set for his wedding. He was 56 years old.

—GEO. CATLIN, 67, formerly a Chicago manufacturer, died in San Antonio, Tex., where he had gone for his health.

—JOS. W. COLCORD, 67, Lynn, is dead. He was Civil War veteran and member Massachusetts Ph.A. and N.A.R.D.

—EDWARD G. EGGE, of New City, N. Y., is dead following an operation. He leaves a widow and six children.

—JOHN W. COOPER, Hancock, Mich., is dead of morphine. His wife, who also attempted suicide, recovered.

—ROBERT K. KROUT, 83, retired, pioneer druggist of Crawfordsville, Ind., is dead. Seven children survive.

—LOUIS WELLER, 39, since 1884 receiving clerk for Muth Bros. & Co., Baltimore, is dead of pneumonia.

—D. W. STRAYER, 50, of Strayer Bros., Marion, O., is dead in Los Angeles, where he went for his health.

—B. H. OVERBECK, Jr., for 30 years in the drug business in Cincinnati, is dead. He was a Mason.

—DR. GEO. A. EVANS, practicing physician and druggist, Brooklyn, N .Y., is dead, aged 65.

LUTHER B. HAYWARD, prominent in Cambridge, Md., is dead.

—GEO. H. PAYNE, Lincoln Drug Co., Lincoln, Neb., is dead.

—GEO. B. BROWN, ex-postmaster, Winchester, Mass., is dead.

—F. A. WILLIAMS, Ionia, Mich., is dead. A widow survives.

—A. E. HISS, Chicago, Ill., ended his life with morphine.

—JOHN C. HAUSER 39, Baltimore, is dead of pneumonia.

—EDWARD B. SCHLEMAN, 56, retired, Louisville, is dead.

—ROBT. T. HOLDERNESS, Fordyce, Ark., died recently.

—ALBERT A. ANDERSON, Mercer, Pa., is dead, aged 40.

—FRANK D. POTTER, Allegan, Mich., is dead, aged 45.

—J. GOVAN CAMM, Lynchburg, Va., is dead, aged 60.

—JOHN P. STEDMAN, retired, Albany, N. Y., is dead.

Missouri Ph.A. and Ph.T.A. Meetings.

The Maryville meeting of the Missouri Ph.A., June 14-17, will be its 32d annual convention. Ex-President Ed. G. Orear, of Maryville, is secretary. President William K. Ilhardt, of St. Louis, reports that his committees are all at work and anticipates an interesting programme. Prof. Francis Hemm is chairman of the committee on papers and topics. Dr. James H. Beal, of Pittsburg, will be a special guest.

The Missouri Pharmaceutical Teachers' Association will hold its 18th annual meeting at Maryville, June 16. President D. R. Donovan, of Kansas City, expects a large attendance.

New York Branch of Parke, Davis & Co. is Now Installed in New Business Home.

OSCAR W. SMITH.

As the present issue of the ERA goes to its readers the New York branch of Parke, Davis & Co. has just moved into its modern new building, of which an illustration is printed on this page, together with a picture of the New York manager, O. W. Smith, who has been connected with the company for 20 years and to whose energy and industry the growth and prosperity of the branch are due, in part at least. The branch began 29 years ago in a small way in Cedar street, with an office staff of six and two travelers. Now in the new building at Hudson and Vestry streets 200 persons are employed in the office and warehouse, besides a staff of nearly 100 travelers—not including the staff of the recently discontinued importing department.

It was in February of 1881 that the company made its modest entrance into the New York drug market, and the invasion by a Western concern was at that time considered somewhat audacious, as Western manufactured pharmaceuticals then were little used in the East. Parke, Davis & Co., however, were pioneers in drug standardization and the management possessed the courage of their convictions. The Cedar street quarters soon became too small and more spacious offices were taken at 60 Maiden Lane, where an entire four-s ory building was occupied. Soon larger quarters were required and the branch moved to 90-94 Maiden Lane. The development of the business, however, during the last four years was so rapid that the new building at Hudson and Vestry streets became necessary.

The new home is a modern eight-story steel and concrete structure occupying about 75,000 square feet, more than twice as much room as in the quarters just vacated, contains all modern conveniences, including two freight elevators, passenger elevator, electric dummy, speaking tubes, telephones, mail chutes and other devices.

The new building admits light upon three sides and the offices are located on the sixth, seventh and eighth floors, so that the working staff will be located in airy, sanitary quarters that will be as nearly ideal as possible.

Parke, Davis & Co. extend a cordial invitation to all their friends in the drug trade to visit the new establishment, which can be reached by taking the Ninth Avenue Elevated and getting out at the Desbrosses street station, from which point the building is only two squares distant. A room has been set aside for the convenience of out-of-town visitors and especially those coming from abroad, where every convenience will be placed at their disposal.

No manufacturing operations are conducted here, all goods being manufactured in the laboratories in Detroit and Walkerville. At the latter point many of the goods for export are manufactured, being shipped in bond. This feature is one in conjunction with the rapidly developing export business. The Spanish department of the Eastern office now consists of 25 office assistants and a dozen travelers. The staff includes correspondents who are thoroughly familiar with the Spanish, Portuguese, Italian and other languages, and it is a very interesting feature of the New York branch.

Every consideration has been devoted to providing the best possible facilities so that the Eastern business may be handled with the least possible delay. Telegrams for biological products receive instant attention, not only during office hours but at night and on Sundays and holidays, arrangements having been made to handle such telegraphic orders through a local druggist. This feature is regarded as especially important as frequently anti-diphtheretic serum and vaccine virus is required for immediate use.

Manager Smith has jurisdiction over all New England, New York, Pennsylvania, New Jersey, Florida and, what covers an infinitely larger area, all of South America, Central America and other Spanish-speaking countries.

Kentucky Druggist Murdered by His Son-in-law.

LOUISVILLE, April 21.—S. E. Welch, a prominent druggist of Berea, Ky., was shot and killed April 19. Grover C. Fish, his son-in-law, was arrested charged with the crime. Mr. Welch was one of the leading citizens of the town.

NOTE—A, advanced; D, declined; C, correction; N, new.

See page 518 for Price List Changes and page 520 and following pages for Prices Current.

NEW YORK, April 25.—Continued quiet conditions have prevailed in nearly all sections of the general drug and chemical market, but the undertone is fairly steady and price changes are few and only of ordinary importance. Opium quotations remain unchanged, but it is claimed the inside figure can be shaded. Quinine is without new feature and steady. Glycerin is slightly easier. Manufacturers of castor oil have advanced quotations on all grades, and Norwegian cod liver oil is stronger with a better inquiry. Uva ursi leaves are slightly higher and cables confirming previous reports of strong foreign markets for short buchu leaves have been received. Quince seed is easier and Carthagena ipecac is lower under a light demand. Angostura beans are somewhat higher with quotations showing a wide range. Jalap is easier, owing to free offers to arrive at concessions from previous prices. Both the Carnauba and bayberry varieties of wax have been advanced.

OPIUM—Is moving slowly and chiefly in a routine way, and the market has a quiet appearance, although the tone is steady, with quotations slightly advanced over those of last month. Jobbers are asking $5.95@$6.10 for natural, $6.95@$7.10 for granulated and $6.95@$7.10 for U.S.P. powdered. The arrivals of opium in Smyrna to April 2 amounted to 1920 cases against 2044 cases on the same date last year. The present stock in Smyrna is 375 cases.

QUININE—Is easier to move with only a limited consuming demand and the market has a quiet appearance, with a steady undertone and manufacturers' prices being maintained on the old basis of 14c. for bulk in 100-ounce cans. Cables received on April 19 report the bark shipments from Java during the first half of April as 330,000 kilos. At the Amsterdam auction on April 15, 1400 kilos were sold at an average price of 10.37 florins, against 10.41 florins at the previous sale.

COD LIVER OIL—Norwegian is firmer in sympathy with a stronger position abroad, but quotations remained unchanged at $28@$30 per barrel and $1.00@$1.10 per gallon, as to brand and quality. Official figures regarding the fishing called on April 18 were as follows: In Lofoten 1910, 13,700,000 fish, producing 11,480 barrels of oil, as against 16,700,000 fish, producing 17,210 barrels of oil in 1909. In all other districts (1910) 34,000,000 fish produced 24,535 barrels of oil; in all other districts (1909) 37,000,000 fish produced 35,150 barrels of oil. The total production to April 18 is placed at 16,245 barrels less than that of last year.

UVA URSI LEAVES—Have met with a good demand and quotations are fairly firm at 10@13c. per pound in usual jobbing quantities.

QUINCE SEED—Is easier under freer offerings and light inquiry and quotations have been reduced to $1.00@$1.15, as to quantity and quality.

IPECAC—Carthagena has fluctuated in price considerably during the month, but at this writing is easier under a light demand and more or less selling pressure. Present quotations are $1.40@$1.50 per pound for whole and $1.50@$1.60 for powdered. Rio is firm and scarce with quotations advanced to $3.00@$3.15 per pound for whole and $3.10@$3.25 for powdered.

ASAFETIDA—Stocks are almost exhausted and the inquiries are in excess of the supply. Prices are firm at $1.15@$1.20 per pound for extra select; for good to fair, $1.10@$1.15 is asked.

HAARLEM OIL—Is in fairly good demand with business of average volume and available supplies being gradually reduced. The ruling quotations are $4.00@$4.25, as to holder.

TONKA BEANS—The Angostura variety are again higher owing to continued scarcity and jobbing quotations have been further advanced to $1.60@$1.70 per pound, as to quantity and seller. Para are also firmly held with only small lots available. The market is entirely bare of crystallized Surinam.

BUCHU LEAVES, SHORT.—Continue to show a hardening tendency under the influence of increasing strength abroad and light available stocks at all points. Quotations have been advanced to 75@85c. for whole and 85@90c. for powdered.

BALSAM TOLU—Is scarce and firm with jobbers quoting 30@38c. per pound.

CUBEB BERRIES—The market continues to advance, owing to scarcity in primary markets, and a further advance seems likely, as berries of good quality are difficult to obtain except at higher figures. Dealers are quoting 50@55c. per pound for clean, sifted, and 55@60c. for powdered.

JALAP—Is easier under the influence of freer offers of forward delivery and prices have been marked down to 30@35c. per pound for whole and 35@40c. for powdered.

CASTOR OIL—American is firmer in sympathy with stronger markets for beans and manufacturers have advanced quotations 1@c. per pound on all grades. Jobbers now quote 12@14c.

CITRIC ACID—Manufacturers have advanced prices 3c. per pound and jobbers now quote 39½c. per pound for kegs and 40@47c. for less. In sympathy with this advance all citrates have been marked up.

OIL GAULTHERIA—True leaf oil is in demand and scarce, jobbers asking $6.30@$6.50 per pound.

FLAXSEED—The market is decidedly higher and the prospects are that it will advance still further. Jobbers now quote $9.00 per barrel for whole clean seed, but have made no change in price for the ground, which remains at 6@7c. per pound.

BAYBERRY WAX—Is in better demand with the market firmer in sympathy with the stronger position of carnauba wax. In consequence dealers have advanced their prices to 25@30c. per pound. There is said to be some buying of carnauba here for export to Hamburg, but none is offered from primary sources of supply.

Take Advantage of Our Advertising

This year, we are going to spend $150,000 in advertising Diamond Dyes.

This advertising will appear in 46 women's publications throughout the United States and Canada.

Many of these publications will go into the homes of people right in your neighborhood.

The women next door to you and all around your store will read these advertisements.

And you can be sure that after they do, they'll want to use Diamond Dyes.

Every printed word will be the best sort of salesmanship.

For all these women will learn of the countless superiorities of Diamond Dyes. They will learn why Diamond Dyes are called the "Standard of the World." And they will learn why Diamond Dyes are the only safe dyes to use for any purpose.

DIAMOND DYES

Our advertising is giving you a wonderful chance to get new business.

All this new business mean *additional* profits. Profits that you can depend on for all time.

You are safe in recommending Diamond Dyes, for they are the only dyes that can be used with absolute safety to the material—

Because they are the only dyes perfect in formula, positive in action, certain in results.

And, on this account, every package of Diamond Dyes sold over your counter will make a lasting customer and win new ones.

Co-operate with us in this advertising.

Recommend Diamond Dyes to your customers —put the Diamond Dye card where it can be seen always—and you will reap the profits this advertising will bring you.

You can please your customers by carrying a full assortment of Diamond Dyes and recommending their use—

For they are the only dyes that will please and satisfy your customers with the splendid results they give.

FACTS THAT WILL HELP YOU

Always be sure that your customers get the right kind of Diamond Dyes for the material they intend to dye. For while it is almost impossible to fail with Diamond Dyes, if the directions are carefully observed, it is imperative that the right dyes be used.

Frequently customers want to know why one dye won't do for any kind of materials. Then tell them this:

Wool, silk and like materials are made up of animal fibres, while cotton, linen and mixed goods are composed of vegetable fibres, which are entirely different in composition and slower to take up the dyes. And the only way to get absolutely sure and satisfactory results is to use the kind of dyes especially adapted to the fabric. This is supported by the authority of all the most eminent dye-chemists.

If care is taken to secure the proper dye, there is positively no reason for failure. For dyeing at home with Diamond Dyes is just as simple, as sure of success, as washing a shirtwaist.

But be sure to explain carefully the reasons for the separate dyes, for every imitation that is sold undermines the confidence of your trade in the possibilities of home-dyeing and kills possible profits.

Try This At Your Fountain

Grape Juice With Cracked Ice

Fill a phosphate glass with good sized lumps of ice. (*Not crushed or chipped ice.*) Pour in Walker's Grape Juice, filling the glass to the top. Place the glass on a small china plate, with two or three crisp crackers, plain or salted.

This is but one of the many attractive specialties described in our book of grape juice recipes for the soda fountain. Write for a copy to be sent you as soon as off the press. It is filled with new ideas.

The brilliant clarity and rich color of Walker's Grape Juice gives to any drink made with it an attractiveness impossible with other grape juices. Walker's is pre-eminently the fountain brand, and will multiply your sales of grape juice drinks. Keep a supply for sale by the bottle too. It's the great home beverage. Your jobber can supply you.

Walker's
GRAPE JUICE

"It's Clear Because It's Pure"

The "Ten Pin" Bottle

Quantity Discounts	5 Case Lots,	5 and	5%
	10 " "	10 and	5%

MARCHAND'S
MEDICINAL PREPARATIONS

If you, Mr. Pharmacist, had devoted over *a quarter of a century* to the manufacture of five high grade preparations with only one standard of purity and uniformity, wouldn't you feel they were better than those made by a newcomer?

Then, is it any wonder we are proud of *our* preparations?

We were the first to manufacture Peroxide of Hydrogen (Marchand's) for medicinal purposes—that was thirty-one years ago—we are the PIONEERS.

PHYSICIANS KNOW

That MARCHAND'S PEROXIDE OF HYDROGEN (medicinal, 15 Vol.) is superior, because it is 50% *stronger* than the ordinary U.S.P., 10 Vol., and because it contains *NO ACETANILID*, and is absolutely free from any impurities.

That HYDROZONE (30 Vol.) is *THREE TIMES AS STRONG* as the ordinary preparations, and that it is the *most powerful of all germicidal agents*, yet is *absolutely non-poisonous.*

That GLYCOZONE ($C_3H_6O_4+C_8H_8O_3$), because of its remarkable properties is of signal value when applied to inflamed mucous membranes or other tissues. It is especially serviceable in acute and chronic forms of gastritis, intestinal catarrh, gastric ulcer, etc.

HYDROZONE AND MARCHAND'S PEROXIDE OF HYDROGEN (Medicinal) are put up in the best quality of flint glass bottles, for the reason that flint glass is not so brittle as amber glass. This, in connection with Marchand's improved process of manufacture, reduces the risk of breakage to a minimum.

When a prescription or a request comes to you for **MARCHAND'S PEROXIDE OF HYDROGEN (Medicinal), HYDROZONE, GLYCOZONE, MARCHAND'S EYE BALSAM** or the **DREVET MFG. CO.'S U.S.P. H_2O_2 Official**, see that it is dispensed and no attempt made to urge anything else upon the customer.

Your profit is **LARGER** than it would be if you urged the sale of an inferior article.

MARYLAND ENACTS PURE FOOD AND DRUG LAW.

Based on Federal Act. Enforced by Health Board and Becomes Operative on the First of July.

BALTIMORE, April 23.—The most important bill recently passed by the Maryland Legislature at its recent session was the enactment of a Pure Food and Drug Law, which follows in the main the provisions of the National statute, departing therefrom only in such particulars as are called for by the peculiar conditions in this State. The measure has been signed by the Governor and will go into effect July 1. The Act provides:

That it shall be unlawful for any person in the State to manufacture or sell or offer for sale any article of food or drug which is adulterated or misbranded within the meaning of this Act, and any person who shall violate any of the provisions of this Act shall be guilty of a misdemeanor, and for each offense shall, upon conviction thereof, be fined not to exceed $100 or shall be sentenced to not more than one year's imprisonment, or both fine and imprisonment, in the discretion of the court:

Provided, that no article shall be deemed misbranded or adulterated within the provisions of this Act when intended for export to any foreign country and prepared or packed according to the specifications or directions of the foreign purchaser when no substance is used in the preparation or packing thereof in conflict with the laws of the foreign country to which said article is intended to be shipped; but if said article shall be in fact sold or offered for sale for domestic use or consumption, then this proviso shall not exempt said article from the operation of any of the other provisions of this Act.

The term "drug" shall include all medicines and preparations recognized in the United States Pharmacopoeia or National Formulary for internal or external use, and any substance or mixture of substances intended to be used for the cure, mitigation or prevention of disease of either man or animals. The term "food" shall include all articles used for food, drink, confectionery, or condiment by man or animals, whether simple, mixed or compound.

A drug shall be deemed adulterated when sold under or by a name recognized in the United States Pharmacopoeia or National Formulary and differing from the standard of strength, quality or purity, as determined by the test laid down in the U.S.P. or the N.F. official at the time of investigation. But such preparations may be of a different standard if this fact is plainly stated upon the bottle or package. A compound, however, may not fall below the standard set forth on the label under which it is sold.

Foodstuffs are to be deemed misbranded if they fall below the professed standard or quality under which they are sold. In the case of confectionery, if the goods contain terra alba, barytes, talc, chrome yellow, or other harmful mineral substance or poisonous color or flavor, or other ingredient deleterious or detrimental to health, or any vinous, malt or spirituous liquor or compound, or narcotic drug, they are misbranded.

Foods are to be considered misbranded if any substance has been mixed and packed with them so as to reduce or lower or injuriously affect the quality or strength; if any substance has been substituted wholly or in part for the article; if any valuable constituent of the article has been wholly or in part abstracted; if it be mixed, colored, powdered, coated, or stained in a manner whereby damage or inferiority is concealed; if it contain any added poisonous or other deleterious ingredient which may render such article injurious to health; if it consist in whole or in part of a filthy, decomposed, or putrid animal or vegetable substance, or any portion of an animal unfit for food, whether manufactured or not, or if it is the product of a diseased animal, or one that has died otherwise than by slaughter. Food products, however, when prepared for shipment, may be preserved by some external application in such a manner that the preservative is necessarily removed mechanically, or by maceration in water, or otherwise, and directions for the removal of said preservative shall be printed on the covering or the package.

The term misbranded shall apply to drugs or articles of food, when the packages bear any statement, design or device regarding such article, or the ingredients or substances contained therein which shall be false or misleading in any particular, and to any food or drug product which is misbranded as to the locality where it is manufactured or produced.

[illegible] to be deemed misbranded if they are an imitation of or offered for sale under the name of another article, if the original contents of the package have been removed in whole or in part and other contents placed in such package, if a package fail to bear a statement on the label of the quantity, or proportion of any alcohol, morphine, opium, [illegible], heroin, [illegible] synthetic [illegible] antipyrin, alpha or beta [illegible] acetanilide [illegible] chloral [illegible] or any [illegible] preparation of any such substance [illegible] except that [illegible] may be exempt from this [illegible] dispensed [illegible] upon [illegible] prescriptions [illegible] physicians [illegible] regular practice [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] drug stores are subject to all the regulations [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible]

IN THE KING'S NAME

HOLLAND WOULD LIKE MORE OF OUR GOODS.

Head of Big Sales Organization in Amsterdam, Here on Trip, Talks Interestingly of Opportunities.

[illegible] largely in goods exported from this country to Holland. Mr. Sanders is a close student of trade conditions and is optimistic in his views of the opportunities for American exporters to increase their sales in his country. While here he talked interestingly concerning trade affairs and in conversation with an ERA representative presented considerable useful information.

In Holland there are 1400 chemists and 600 druggists; the former can sell all kinds of drugs and medicinal preparations, but the latter can sell only patent medicines, a privilege which [illegible] restrictions of sale except as here noted. The duty is 5 per cent on medicines containing no alcohol and 2 shillings a liter on products containing more than 5 per cent of alcohol. This applies also to soaps and perfumery. There are 4000 barbers and perfumers, but of these only 400 maintain shops of any importance. There are 250 dentists.

A feature of the Sanders organization is keeping in touch with the doctors, of whom there are 2000, about 1200 being engaged in private practice. For this purpose three canvassers are employed to call on the doctors and records are kept for reference and future use. Sanders has trade connections with five wholesale houses and 900 chemists, in addition to 360 druggists. There are no co-operative or chain stores in Holland.

The population of Holland is given as 6,000,000. There are 70 towns with more than 10,000 inhabitants. Amsterdam has 600,000 and Rotterdam 400,000 population. There are few English or American residents, but there are many tourists of [illegible] newspapers and the people are invariably subscribers, even the workingmen being regular readers. Evening papers offer the best field for advertising campaigns, and Sanders has conducted several of them for [illegible] Such a campaign, conducted with reasonable thoroughness, would cost about $15,000 a year. The Dutch like foreign-made goods. They do not appear to be wealthy, but the people in the streets are comfortably clad and the poorest laborer is able to smoke a cigar.

Among the agencies now in the hands of the Sanders organization are those of Burroughs Wellcome & Co. and Horlick's Malted Milk. An extensive establishment takes care of the trade and there is, in addition to a retail store, a warehouse where 30 girls are employed for wrapping medicines and doing work in connection with the distribution of goods. Sanders also employs five travelers.

Both chemists and druggists in Holland are willing to give their windows to displays of goods and Sanders has arranged for more than 150 exhibits of this description of a single article. Druggists, having larger window space, are inclined to [illegible] Sanders employs a window dresser for this purpose.

Mr. Sanders is extremely well posted upon matters of advertising and the distribution of goods and can tell an inquirer in a moment all about the cost of distribution, the most effective methods, postage rates, labels, bill posting, trade marks, freight rates, business customs and other things that would be of value to an American desirous of cultivating the trade of the people of Holland, or her colonies, or both. The colonies, which [illegible] include the Dutch West Indies and the islands of Sumatra, Java, Borneo and others.

Alcoholic Patents May be Rated as "Beverages."

ALBANY, N. Y., April 20.—Proprietary medicines which [illegible] may be sold as beverages under the Liquor Tax Law if compounded with a certain [illegible] to the Assistant Attorney General. The decision of the Assistant Attorney General [illegible] combining more than a [illegible] per cent of alcohol [illegible] medicinal purposes, such as beverages and [illegible] of the Liquor Tax Law [illegible] cure certificates authorizing sales of liquor without a prescription, to be issued by [illegible]

MISBRANDING ALLEGED AGAINST BOSTON FIRMS

Headache Remedies, Pie Filling, Maple Butter, Nutmeg Extract and Fruit Preparations Named in Suits.

BOSTON, April 20.—A sweeping series of [illegible] were filed in the United States District Court here on the 13th against a number of manufacturers, under the Pure Food and Drugs Law. The [illegible] are among the most notable in the city. They are:

The [illegible] for an alleged misbranding of certain [illegible] to which it contained more than 30 per cent corn syrup not [illegible]

[illegible] for an alleged misbranding of mixture [illegible] which it contained less than 30 [illegible]

Joseph Middleby, Jr., Inc., for an alleged misbranding of [illegible] syrup, when it contained more [illegible]

Cramer Drug Co., of the South End, for an alleged misbranding of [illegible] for headache and neuralgia by stating that the preparation contained [illegible] which the government denies.

[illegible] for an alleged misbranding of [illegible] powders, in not giving the quantity and proportion of acetanilid.

Paul Manufacturing Co., for an alleged misbranding of "Concentrated Flavor of Orange," whereas the government alleges that it was not concentrated flavor of orange, but dilute extract of orange. Another charge against the company is of misbranding "Egyptian Deodorizer and Germ Killer," by stating that it is "a perfect fumigator and destroyer of disease germs," which the government denies.

D. & L. Slade Co., for an alleged misbranding of "pure extract of strong nutmeg, two ounces net," in that it is underweight.

Vermont Farmers' Co., for an alleged misbranding of maple butter, in stating that it was made of genuine Vermont maple, cane and corn syrup, when such is not the case.

Will Destroy Seized Drugs and Medicines.

WASHINGTON, April 20.—The Treasury Department has issued a regulation as to the method to be used in the disposition of small shipments of medicinal preparations found to be in violation of the Food and Drugs Act and not relabeled. The decision, in the form of a letter to the Collector for the port of New York, is in part as follows:

"The Secretary of Agriculture expresses the opinion that it would not be advisable to sell such goods without proper labeling, and that it would not be practicable to attempt to label the goods properly for the purpose of selling the same. The Secretary adds that the most satisfactory disposition to be made of such articles would be to destroy the same at the expiration of the ninety days provided by statute."

New Home for Consolidated Drug Co.

The Consolidated Druggists' Realty Co., the holding company which is being organized to provide funds to invest in a new building for the New York Consolidated Drug Co., now located at 297 Pearl street, New York, held a meeting on April 28, the reports of the temporary officers showing a bright outlook for the success of the company. Chas. F. Schleussner presided. Treasurer Frederick Schaefer stated that 100 stockholders had already subscribed about 25 per cent of the proposed capitalization.

Changes in a Wisconsin Wholesale House.

MILWAUKEE, April 20.—Eugene Yahr, treasurer of the Yahr & Lange Drug Co., has resigned because of ill-health. Max Rosenthal, for many years a stockholder in the company, has increased his holdings so that he is now equal owner with F. T. Yahr and has been elected treasurer. F. T. Yahr retains the presidency of the company and L. A. Lange remains secretary. Eugene Yahr, former treasurer, is now recuperating at a sanitarium at Waukesha, Wis.

New Plant for Sheffield Dentifrice Co.

Sheffield [illegible] is building a large new plant at New London, Conn., which will be completed in the way. The structure is being built in two halves, so that there will be no cessation in operation. When finished the old plant will have disappeared. *Fame* recently reprinted one of the Sheffield ads, which are carried in the New York subways, elevated and surface cars as a model of good lettering.

New Location for Passow & Sons.

Passow & Sons, manufacturers of soda fountains, having purchased the [illegible] building 542 to 548 Madison street, near Halsted street, Chicago, have arranged to occupy it with their Chicago show rooms and offices about May 1.

FINE PROFIT ON A FINE PRODUCT

Here's a Zymole specialty you ought to know more about—

ZYMOLE HAIR TONIC

Very handsomely put up, large 6 oz. bottle with sprinkler top retailing at 50 cents—costs you $3.00 a dozen

It's a worthy product, too, very effective against dandruff, and a most delightful hair dressing.

Quickly wins the favor of the customer, for, like other Zymole specialties, Zymole Hair Tonic is a repeater.

Include a dozen or half-dozen in your next order to your jobber—or to us. You'll find it a good investment.

Manufacturing Pharmacists Philadelphia, U.S.A.

BUSINESS NOTICES

$10,000 Label Book for 2 Cents.

In this day of extraordinary facilities for artistic printing there is really no good excuse the druggist can bring forward for using unsightly labels, cheap-looking cartons or ugly wrappers for any purpose. In fact it has been positively demonstrated that in the attractiveness of the label and distinctiveness of dress of the package depend to a great extent the sale of a pharmaceutical specialty. The same argument applies to the labeling of all articles which are sold over the druggist's counter.

A neatly printed and artistic label is an index of the character of the pharmacist and also of the goods he sells. The Merchants Publishing Co., Kalamazoo, Mich., the largest manufacturers of labels in the Middle States, have something to say on this subject in their advertisement on another page of this issue which every druggist should read. They also tell how you can get a Label catalogue which cost them $10,000 to compile and print for 2 cents. They state that by buying your labels direct from the manufacturers you can save money. Read their ad. and send for their catalogue.

C. T. Miller New President Ray Chemical Co.

DETROIT, April 20.—Recent changes in the Ray Chemical Company holdings have resulted in the retirement of President Cornelius N. Ray, who will devote himself to the management of the C. H. Little Company, dealers in builders' supplies. On leaving the position he held for so long the officers and directors of the company presented him with a dinner and a suitable memento as a token of their appreciation of his past services.

Charles T. Miller, the new president and manager, who was formerly treasurer and manager, has been with the company since its organization and is well known in Detroit. Gustavus D. Pope remains as the vice-president, while J. B. Schlotman becomes the treasurer, and Superintendent H. A. Burnett the secretary of the company. These officers, with Messrs. Willard Pope, F. T. Ducharme and Dr. Carl S. Oakman, constitute the board of directors. The last named will have entire charge of the work relating to scientific questions and matters of a medical and professional character. The laboratory staff has also been strengthened by the addition of H. T. Graber, a pharmaceutical chemist and graduate of the Boston Institute of Technology. The reports presented at the annual meeting showed that the company had enjoyed a successful year and was meeting with an increased sale of its products.

Trite and Clever Sayings on Ad. Topics.

You can lead a horse to water, but you can't make him drink; And you can print advertisements that won't make people think.

But it is the other kinds of advertisements that principally concern the Wagstaffs, of Atlanta, authors of a bright booklet entitled "Ad. Briefs," wherein these enterprising experts enunciate the principle that "the science of making a poor business good and a good business better is called Advertising." Throughout the booklet there runs a lively vein of terse fact, mixed with sugar-coated advice and timely hints that cannot fail to interest everybody who advertises or intends to do so. It is quite likely that the Wagstaffs, if addressed at 218 Brown-Randolph Building, Atlanta, Ga., will mail a copy to any ERA reader who sends a request for this unique and attractive publication.

Selling Eddy Razor Strops Profitable.

The Eddy Company, Worcester, Mass., have a new advertisement in this issue which tells of the merits of the Eddy Razor Strop. This strop is one of the best on the market, gives satisfaction to the user and pays a good profit to the dealer who makes the sale. Prices range from 25c. to $2.50, and every strop bearing the Eddy Company's name is fully guaranteed, no matter where or by whom it is sold. Read the ad. and send for catalogue and price list.

BUSINESS NOTICES

Huyler's Metropolitan Sweet Chocolate.

Huyler's [illegible] in all of the leading newspapers, magazines and trade papers throughout the entire country and the dealer who sells it gets the benefit of [illegible] already established. Its sale not only gives the dealer a good profit but it gives customers satisfaction. The manufacturers present three cogent reasons why you should promote the sale of Huyler's Metropolitan Sweet Chocolate. Read their advertisement on page 440 and if your jobber can't supply you with the goods write to Huyler's, 18th street and Irving Place, New York City, and please mention the ERA.

Big Advertising Appropriation for Coca-Cola.

The Coca-Cola Co., Atlanta, Ga., state that the popularity of coca-cola is demonstrated by the fact that nearly 4,000,000 gallons of coca-cola syrup, equivalent to 435,815,750 glasses of the beverage, were sold last year, which, figured at a profit of 3 cents per glass, yielded the dealers who sold it the enormous sum of $13,074,472.50. To further push the sale of coca-cola the manufacturers have made a $600,000 advertising appropriation and they say that now is the time to put in your supply for the coming season. Read their advertisement and send for their booklet, "The Truth About Coca-Cola."

The Newer Euthymol Preparations.

Additions to the well-known "Euthymol Family" invariably command attention. The group now numbers close upon a dozen, the most recent acquisition being Euthymol Smelling Salts and Euthymol Shaving Soap—preparations which, although but a short time upon the market, appear already to have taken a firm hold upon the popular fancy. Euthymol Smelling Salts consists of fragments of ammonium carbonate [illegible] and emit a vapor of marked pungency and strength. The container is air-tight, having a close-fitting glass stopper, thus conserving the odor, which would otherwise be much sooner exhausted. They are highly recommended in fatigue, headache, fainting spells, car-sickness, etc.
